FINEST SUPPLIES FOR PENMEN AND ARTISTS

All goods go by mail postpaid except where express or freight is mentioned, in which case carriage is paid by purchaser.

Zanerian Fine Writer Pen—The best and finest fine writing pen made—best for engraving, card writing and all fine script work. Gross $1.00, 1 Doz. 30c., 1 Box 50c., 10c.

Zanerian Ideal Pen—One of the best pens made for general penwork—business or ornamental. One of the best pens for beginners in penmanship. Gross 75c., 1 Gross 25c., 1 Doz. 10c.

Zanerian Business Pen—A smooth, durable, common sense business pen. For unadorned business writing it has never been excelled, if equated. Gross 75c., Gross 25c., 1 Doz. 10c.

Gillott’s Principality No. 1 Pen—A fine writing pen. Gross $5.00, 1 Gross 25c., 1 Doz. 12c.

Gillott’s No. 800 E. F. Used largely for drawing purposes. Gross $1.00, 1 Gross 25c., 1 Doz. 10c.

Gillott’s Lithographic Pen No. 290—One of the finest pointed drawing pens made, 6 pens 25c., 3 pens.

Gillott’s Crown Quill Pen No. 699—Very fine points. 6 pens 25c., 3 pens 15c.

Koenncken Lettering Pens—For making German Text, Old English, and all broad pen letters. Set of 12 numbers 1, 2, 3, 4, 5, 8, 9, 10, 12, 25, 3 and 50 double pens. 25c.

Double Holder for Koenncken Pens—Holds 2 pens at one time 10c.

Zanerian Oblique Penholder—Hand made, rosewood, 12 inches long and most beautiful and perfect holder made. 1 holder 50c.

Excelsior Oblique Penholder—The best low priced oblique holder made. Many hundreds of these have been sold.

1 Holder 10c.
1 Dozen 50c.
10 Gross 25c.
1 Gross 10c.
1 Box 5c.
1 Doz. 2.50
1000 25c.

Straight Penholder—Cork tipped and best for business writing, flourishing, etc. 1 holder 10c.

Blank Cards—White bristol with finest surface for fine penmanship.

100 25c.
500 by express 75c.
1000 by express $1.40

Black Cards—Best made for white ink.

100 30c.
500 by express 75c.
1000 by express $1.40

Zanerian India Ink—A fine drawing ink and best for preparing script and drawings for photo-engraving 1 bottle 36c.

Arnold’s Japan Ink—Nearly 1/2 pint bottle 40c.

White Ink—Very fine. 1 bottle 40c.

Writing Paper—Finest 12 lb. paper made. 500 sheets per ream, ruling wide and faint.

1 ream by express $2.15

Writing Paper—Same quality as above mentioned but 9 lb. paper, 1 ream by express $1.85

Practise Paper—Best for the money to be had. 1 ream by express $1.40

Send samples of paper.

Envelopes—100 Envelope 40c.
100 fine white 40c.
1000 either kind by express $1.50

When you need anything in our line write us for prices, as we can furnish almost anything and save you money.

Cash must accompany all orders. Prices are too low to keep counters, remit by money order or stamps for small amounts.

COLUMBUS, O.
Ohio Commercial and Special Teachers' Association

Meeting Sept. 28 and 29, 1900, Held in Sandusky City Business College, Sandusky, Ohio.

Sandusky was chosen as the place for holding State meeting, as it affords every one an opportunity to visit on Lake Erie and islands and enjoy the water, beautiful scenery, and historical places, such as Johnson's Island, Perry's Cave (Put-in-Bay), etc. Again no member or teacher can remain away with an excuse of excessive railroad fare, for all roads running into Sandusky have a reduced or excursion rate good for time, three, eight and thirty days limit closing September 30, thereby giving every progressive and wide awake teacher an opportunity to attend the meeting and feast upon the excellent program which has been arranged.

Hotel rates have been secured and by presenting membership tickets of Association, teachers will secure a very desirable rate.

Following is the program:

**Organizaition.**
- Pres.: J. F. Barnhart, Akron.
- Vice Pres.: Miss Ella K. Bartholomew, Springfield.
- Treasurer: W. W. Patterson, Canton.
- Secretary: Mrs. Jennie Downum, Mansfield.
- Executive Committee: E. E. Bush, Sandusky; C. A. Bliss, Columbus; Mrs. Belle Wilcox, Dayton.

**Program.**

Friday Afternoon—1:00 to 2:00—Visiting Schools.
2:00 to 5:00—Boating.
5:00 to 6:00—Visit to State Soldiers' and Sailors' Home.

**Evening Session.**

Temple Hall 7:30.

Music—Chorus.

Wherein are Shortened Systems Alike—H. D. Mueller, Cincinnati.

The Development of Art—Miss Allegra Focken, Toledo. (This lecture will be illustrated by 50 stereopticon views, showing the development of art from its beginning in early Egypt down to the present time.)

What is a Standard in Penmanship—J. S. Merrill, Urbana.

Report of committee to formulate a plan for course of study, etc.—C. M. Bartlett, Cincinnati; T. W. Bookmyer, Sandusky; W. W. Patterson, Canton; A. D. Willt, Dayton, Committee.

Boating includes sail upon Sandusky Bay and Lake Erie, trip to Cedar Point and Johnson’s Island. Members wishing to visit Lakeside, Put-in-Bay or Islands can do so at a trifling expense.

**Round Table Topics.**

General Discussion.

"Needs of Modern Business School."

"How to Systemize Shorthand and Typewriting Instruction."

"When and How to Begin Color."

"When to Begin Movement in Grades."

"What can be Done with Actual Business in Public Schools."

"Pencil Painting—How to Teach it?"

Saturday Morning Session.

Sandusky City Business College.

9:00 to 10:30.

Solo—(a) "The Robin Sings in the Apple Tree." MacDowell. (b) "The Blue Bell." MacDowell. (c) "Lullaby." Mrs. James Andrews.

Welcome Address—Supt., H. R. Williams, Sandusky.

Response—A. D. Willt, Dayton.

President's Address—J. F. Barnhart, Akron.

"Business Penmanship—Present and Future." J. P. Jones, Marion.

"Position Writing." Jerome B. Howard, Cincinnati.

"Discussion—W. S. Rogers, Sandusky; Cyrus W. Field, Akron."

Afternoon Session.

1:00 P.M.

Solo—"Forest Song." (from Robin Hood). Mrs. James Andrews.

"Our Brothers Across the Border." Prof. T. W. Bookmyer, Sandusky.

"The Relation of Drawing to Other School Subjects." Prof. Frank Allen, Cleveland.

"Discussion—Miss Alice Gillispie, Zanesville; Miss Helen Frazer, Columbus; W. F. Gilmore, Canton.

"Methods of Teaching Simplified Penmanship." Miss Emily Gottesmann, Youngstown.

"Discussion—C. E. Town, Zanesville; C. G. Cayhoo, Bucyrus.

Exhibit.

In response to a suggestion offered at our Columbus meeting, last May, a few will be set apart for the display of work.

Professors and commercial teachers are urged to bring exhibits covering various departments of their work represented in association.

**A Good Word from Mr. Gustus.**

The announcement that the PEXMAN, ARTIST AND BUSINESS EDUCATOR is going to become a monthly, will be hailed with great joy by its many thousands of admirers all over this country. You are doing a great work in this line, and I trust you may reap your reward.

J. E. Gitsche, Gustus School, Moline, Ill.

Encouraging Words from E. M. Barber

Office of The Appraiser of Merchandise, Port of New York, N. Y.

June 12, 1900.

Messrs. Zanier & Blesker.

Columbus, Ohio.

Gentlemen:

This is an age of expansion, of improvements, and of progress. The announcement in the current number of THE PEXMAN AND ARTIST concerning the addition to your paper of a department of Business Education proves that you are fully abreast of the age. I hasten to tender my hearty congratulations to you, upon recognizing the opportunity for making an invasion into a field that was just ready to be invaded, and upon the sagacity that you have shown in the securing of Mr. E. E. Gaylord, as editor of this new department.

With a less able editor I should have serious doubts of your fulfilling the following prophecy, which I quote from the announcement before me:

"Our aim is to present the commercial branches on a broader basis, in a more logical, instructive, and interesting manner, and with more care in editorial oversight, than has ever been attempted in a similar journal. Surely, that is high ground upon which to pitch a prospective editorial tent, but I believe that Mr. Gaylord is endowed with that kind of executive equipment which will prove that you have made no mistake as to the proper attitude for the editing of the new editorial essay.

I bespeak for the new periodical a bright future, and I sincerely hope that it will receive the substantial support of that large and growing body of progressive commercial teachers to whom your published prospects will appeal with especial force.

Sincerely yours.

Edgar M. Barber.
HELPFULNESS

The object of these lessons is to be helpful to the home student as well as to the student working under a professional teacher. My aim will be to instruct by word and copy and to enable. Practicability will be the watchword, legible, rapid writing the end, and concise instruction and intelligent practice the means. I can insure a good handwriting to all who follow the instructions given.

STIMULANT FOR IMPROVEMENT

To the individual practicing from these lessons without the aid of a personal teacher of writing and making the most improvement between September, 1900, and July, 1901, certificate will be given. To the school following most closely these lessons as revealed by specimens from students sent from month to month and making most improvement, a certificate will be granted. These certificates will be engrossed in the form of diplomas and represent my best fresh from the pen writing, lettering, and flourishing. Submit in your very best hand the following words: Writing is a utilitarian art, and can be acquired by proper practice. Date, sign, and send same to me before you begin practice upon the lessons.

POSITION

Positions involve three things: body, hand, and paper. The body should lean neither against the chair-back nor the table.

The former brings on drowsiness and the latter brings on ill health. The illustration expresses my idea of a good position.

The hand and pen are illustrated herewith. The former should glide upon the side of the first joint of the little finger or upon the tips of the little and third fingers. The holder may point over the shoulder or elbow, or between the two.

The paper should be held about as in No. 2 in the illustration. It may be held more nearly parallel to the table as in No. 1, or to the forearm as in No. 3. The angle of the paper is a very important factor in determining the kind of movement to be employed, slant and style of writing, etc.

MOVEMENT

There are three general movements employed in writing, known as finger movement, arm (by some called muscular) movement, and combined movement. The latter is the one most desired, yet the arm movement is the one that needs to be taught. But little finger action is necessary in these lessons. Arm movement will be the basic movement, with such modifications as I shall direct.

Finger movement is easy to acquire but tiring and too limited for quantitative writing. Arm movement is difficult to acquire but durable and comparatively easy when mastered. Combined movement is a union of the foregoing.

MATERIALS

A good quality of foolscap or letter paper, a cork-tipped, straight holder, medium, smooth-pointed pens, free-flowing ink, and a blotter for underneath the writing hand are the necessary articles for practice. A clear head, a watchful eye, a willing, untiring hand, are also much needed articles.

CREATION AND CONTROL

The muscles that open and close the hand are situated between the wrist and elbow. Those which cause the forearm to act like a hinge at the elbow are situated between the elbow and shoulder. The ones which move the whole arm from the shoulder are located above and about the shoulder. The last give freedom and grace to writing while the first assist in the details. Movement is controlled primarily by the mind, the same as it is created. It is controlled also by outside agencies, the forearm and hand rests. These limit, if used wisely, the otherwise reckless action of the arm. The little finger should slip freely, particularly in the upstrokes and from left to right. The forearm rest in front of the elbow should rest while the pen is on the paper, but shift to the right three or four times in writing across the page. If the paper is held nearly parallel to the desk the elbow must be shifted oftener than if held parallel to the forearm.
No. 1 With the arm resting on the muscle in front of the elbow and without any action of the fingers, begin making the retraced
ovals in the first line, aiming to make them freely and uniform in size, shape and slant. They should be made at the rate of
about 180 revolutions per minute. Now do not think you ought to equal the copy in a few minutes’ practice. Remember, perseverance
is one of the essential elements for success. After filling systematically from one to a dozen pages of this form, and after you have
made a decided improvement, proceed to the exercise in the center. This will be considerably more difficult and will be somewhat
disconcerting at first. Make it about one-third of the way across the page, then raise the pen and shift the elbow a little to the right
and proceed as far again. “Line upon line” is the rule here as elsewhere; until improvement is noticeable. The third line will be easy,
if the others have been mastered. Use no slow, sluggish, cramped, or finger action. The hand should glide easily on the little finger
in these exercises. Keep a sheet of your first practice for future reference, and perhaps, amusement.

No. 2 The little ovals in the first line should be made at a high rate of speed, from 250 to 300 revolutions to the minute. In all except
the first exercise, the little finger should glide toward the right, but it need not slip much up and down. The fingers should
not be used in any of the work on this plate. The elbow should serve as the center of action. The forms on the fifth line cannot be
made as rapidly as the preceding ones. These little, elementary exercises and forms are the foundation of good writing. Master them
and you will succeed. Be sure to make a strong distinction between turn and angle. See how rounding the turns, and how sharp
the angles. The last form given is difficult but must be mastered, if you would succeed as a good business penman. Make it less
rapidly than the others, but not slowly. Make from 90 to 100 to the minute. See that upper and lower turns are the same. Don’t use
the fingers. Be critical, be observing, be painstaking. Examine all forms carefully and closely. Don’t be easily satisfied.

No. 3 Trace over the n slowly with a dry pen. Then draw it slowly with ink. Recognize the fact that it has one angle and three turns.

Never make it with any other and it will always be an n and never a u. Practice one page of the n’s singly, then joined, and then
spaced widely between the letter as shown on top line. Turn the letter upside down to discover whether you are making all turns the
same. Avoid the common faults as indicated in this oblong cut. The first form resembles u, because of indeterminateness of turn and angle. The
second resembles r or two final s’s. The last looks like v, and is the result of finishing with a jerk
more principle. Use an easy, gliding, semi-rolling movement in these letters and words. Little or no finger action is necessary. Make
the n’s at about the rate of one a second, and the m’s in proportion. Keep angles and turns distinctly, always. Practice wide spacing
between letters (not in letters) for freedom, ease and grace.

No. 4 This plate shows how to practice. It represents a fragment of a page partially finished. One thing at a time is as true of this
as of other things. Practice carefully page after page of each form given in this series of lessons as illustrated in this plate
and success will crown your efforts. The muscle can be trained only through activity of the right kind. Remember that only the
right kind of practice produces improvement. Past practice is time and effort wasted. Be sure you have the right before you go ahead.
And it will take much practice to produce substantial results. The big muscles are stubborn and must be drilled daily, carefully and
perseveringly. See that the pen and hand move easily to the right, and that turns and angles are unlike in each letter.
No. 5 Study shape and relative size of the capital and small a. Make both with an easy, rolling motion. The little finger should slip freely in making the capital, but it need to slip only in going from letter to letter in the small a. Finish the capital with the pen in motion, but pause slightly in finishing the small letter. This little oblong illustrates two common faults in making the small a. The first is the result of using a movement too similar to that used in i, and the second is the result of dropping the finishing stroke too far. Avoid these tendencies by always curving the first down stroke, by closing it at the top, and by going direct to the right with the finish. The first form resembles r, and the last resembles a. Keep the finish of the capital high so that it will not resemble i. The hand may roll on the little finger in making the capital. Study spacing between letters in the word "onion," and see what ease and freedom you can write it. Write this word about fifteen times in a minute.

No. 6 The i is composed of one angle, one turn, and one dot. The latter should be placed a little above the letter and not to the right of it. Make the i in the center at the top) with a semi-rolling movement. Pause slightly at each letter in the wide spaced exercises. Never loop the i or it will resemble r, and never make an angle at the base or it may resemble an e. Maintain turns where there should be turns and angles where there should be angles, and legibility will follow, no matter what speed is employed.

The u contains two angles and two turns, and is therefore a double i, minus the dots. The r is the same as the u, plus a finishing stroke of the nature of a closed loop or dot. Pause slightly in making the finishing part. The first form in the accompanying cut resembles u as much as u because the turns and angles are similar. The second form resembles a because of the irregularity of the down strokes. The third form looks like i, and is the result of making Avoid these illegible tendencies as you would any other bad habit. Illegible writing is more the result of carelessness and ignorance concerning these details than lack of skill.

Write all of these forms without finger action, except in the finish of the u there may be a slight finger emphasis. Practice the last line to overcome finger movement, and to cultivate ease and freedom.

No. 7 The c starts toward the left rather than downward. Use a rolling motion from start to finish; no finger action and no pauses are necessary. Be sure to curve the first stroke. This can be done only by starting with a circular motion. Remember that in free writing the forms are but pictures of motion. If the forms are poor, the motions are poor. The motions may be poor because of lack of training and because of poor directions from the head due to imperfect percepts of the forms of letters. Make sure that you see clearly the proportion and shape of the letter you desire to make. To secure this definiteness of percept, trace slowly over the large form with a dry pen, and then draw it slowly. It is an established fact that we can, with but little practice, draw any form we can see clearly in the mind. This can be done even with the left hand. Of course such forms will be jagged, but they will "tell tales out of school" (mind). Be sure you see definitely, then practice systematically, persistently, intelligently. Arm movement is what you need to use throughout this plate.

Criticisms. Will be given freely to those who send specimens of their systematic, careful practice. Such specimens should reach me not later than the fifth of the month. Address such specimens to Zaner, Columbus, O., and inclose return postage if you wish specimens returned.
Lessons in Professional Business Writing

BY H. B. LEHRMAN, CLEVELAND, OHIO, WITH SPENCERIAN BUSINESS COLLEGE

In preparing these lessons no attempt has been made to cover a complete course in writing, but each lesson shall contain enough to assist any devoted student to higher and better results.

Lesson No. 1 contains all the one space letters, so by practicing on this lesson you will completely cover the letters which are used most in writing. The letters should be studied so that you may practice in the right direction. You have no time to waste on false notions concerning the construction of letters.

In letters i, u, n, m, v, w and x make the down strokes straight to the base line before you turn and establish a uniform slant for all your letters, and distinctly separate the letters in each group or word.

Follow the copy—this means in form, shade, size, slant, etc. Put in considerable time on each letter. Avoid the habit of taking up new copies before you have accomplished anything in the way of better results from your last copy. When you will once learn to stick to a copy until you can see some improvement in your work you will then be on the road to genuine success in writing.

It takes time to train the eye and muscles, so do not imagine that you will learn it in a few days, but keep at it day by day and you will become master of a good business hand within a reasonable length of time.
ALL MATTER FOR THE BUSINESS EDUCATOR SHOULD BE ADDRESSED TO THE EDITOR, E. E. GAYLORD, BEVERLY, MASS.

Salutatory

The Field
In entering the field of special periodical literature, it is thought that this department is not necessarily poisoning upon the preserves of any of the excellent journals now published in the interests of commercial teachers. They each serve their purpose admirably, but penmanship is to Business Education as a part is to the whole. Methods of teaching penmanship have been set forth in well known journals, to the benefit of hundreds of teachers and thousands of pupils. Why cannot the same thing be done for each of the other branches included in a broad business course?

Its Extent
What is a broad business course? Not to go into details, it is a course including the subjects with which a man must be acquainted in order not only to record business transactions properly — sometimes called the technique of business — but also to originate business transactions. As this takes us into practically every field of human industry, the range of topics discussed in this department shall not be limited to subjects now taught by commercial teachers in either private commercial schools or commercial departments of public schools, nor yet to the departments of commerce now organizing in some of our foremost universities, for Business Education has received, in this country, practically no attention, as compared with its development in Europe.

In order that our readers may understand the cubic dimensions of this great subject, the views of business men, as well as those of teachers will be presented. The well informed business men of this country are thoroughly awake to the importance of this factor in the great problem of future trade development. It is only within a few years that our manufacturers have gone into foreign markets to compete for business with the commercially-educated agents of German, Belgian, Austrian, French, and Italian manufacturers. The result, though astonishing to the salesmen who were used to selling goods in none but home markets, was not so disastrous as might have been expected, owing to compensating conditions.

From the Business Manager's Desk
This department shall be kept in close touch with business colleges, and discussions of problems peculiar to this class of schools shall receive especial attention. Office details, relations of manager to pupils, to parents, to business men, to teachers; systematizing correspondence, names of prospective students, students placed in positions, calls from business men, etc.; methods of discipline; methods of advertising; relations to public schools, etc. — these are suggestive of what may be expected.

In General
Briefly, this department will present methods of teaching, articles on subject matter to be taught, descriptions of schools and their work, and discussions of questions of direct interest to live commercial teachers everywhere. I shall welcome suggestions and criticisms.

The publishers are known to practically every commercial teacher in this country. They have established a national reputation for fairness, originality, toleration, and the catholicity of thought that is the hallmark of a liberal mind. They have, with characteristic liberality, agreed to give to this department every possible advantage, placing no fetters upon its editor, and limiting the space devoted to the department, only long enough to test the desire of commercial teachers for a broadly representative journal.

Trusting that I may have the cordial cooperation of all commercial teachers, I am,

Fraternally,
E. E. GAYLORD,

The Buffalo meeting had a fairly good attendance, but the Milwaukee meeting was not large. The Washington gathering was, in numbers, a flat failure; and, although the session in Los Angeles was better attended than the one in Washington, the Charleston convention is again a practical failure.

There are at least three causes of these undramatic meetings. First, there has been really no community of interest between the Business Educators' section and the N. E. A. Secondly, the programs have been made up late, or were insufficiently advertised, or were not attractive enough to induce poorly-paid commercial teachers to travel hundreds of miles to listen or take part, at a time when money is hardest to get. Thirdly, one interstate or national meeting a year is about all that the average teacher can afford to attend — the genial representatives of publishers, the editors, and the 'jiners' are excepted, for of course they have money to burn" — and, as their needs are better met by our two large, independent associations, they prefer to attend the meetings of those associations.

We suggest that the Business Educators' section of the N. E. A. be discontinued or else taken hold of vigorously by commercial teachers in the public schools, whose interests are more nearly consonant with those of the larger body.

LATER — Mr. Stenger's excellent report shows that excellent papers were read — to empty seats; and the foregoing suggestion as to management was carried out.

October Number
The limitations of our space forbid our carrying at one time all of the interesting lines of work we have planned, but that only adds to the possibility of variety. Our October number will contain Mr. W. J. Amos' monthly review of periodical literature in its relation to commercial geography. This must prove of great assistance to ambitious teachers of this fascinating subject.

We shall have illustrated articles describing the work of our great private business schools, the commercial departments of some of the most important public schools and universities, and the most notable schools of Europe. The first article will appear in our next number.

'The Commercial High School Course," a singularly vigorous paper read at Charleston by Mr. William E. Doggett, Principal of the Commercial High School, Brooklyn, will appear in the next number.

Teachers of Business Arithmetic will be interested in a series of four articles on Rapid Calculation, the first of which will appear in the October number. These are prepared by Mr. Charles S. Clark, recently of Shoeaker & Clark's Fall River (Mass) Business School, now of the Rochester Institute of Science, Rochester, N. Y. Mr. Clark is a specialist in the teaching of this subject, whose work is well known both in the East and in the West.
American Commercial School Exhibit at the Paris Exposition

In the Educational Exhibit of the United States at the Paris Exposition of 1900, the Commercial Education of our country makes an important showing. Although the space allotted to educational exhibits is relatively small, yet, within the limit assigned to our work, it is given a very clear and creditable presentation of the distinctive features of business education as conducted in the United States.

Early last year, Mr. Howard J. Rogers, who has general charge of the exhibit for education and social economy, expressed a desire for a worthy presentation of commercial education and appointed Mr. John R. Carnell of the Albany Business College to act for him in collecting and forwarding proper material. Mr. Rogers desired that an actual representation of his students be represented in the work shown, and in accordance with this desire, the following schools were chosen: The Packard Commercial School, New York; Albany Business College, Cleveland, Ohio; Hills Business College, San Francisco; Soule's Commercial College, New Orleans; and Spencerian Commercial College, Cleveland, Ohio; Heald's Business College, San Francisco; and Spencerian Commercial College, New Orleans. The material exhibited consists chiefly of students' work in bookkeeping, arithmetic, penmanship, correspondence, commercial law, shorthand, and typewriting, together with photographic reproductions of views of the various school buildings, school rooms and equipment. Most of the students' work is bound in handsome volumes, and the pictures, reproductions of views, are mounted on large cards and displayed in a wing-lan frame, similar to those used for school displays at the Chicago Exposition. Each school in sending the work for the exhibit was required to give a complete representation of its course of study, and so any interested visitor to the Exposition may be able to trace the course of a student's work through any branch of study, from the time he enters an American Business College, until he graduates. No competition in the exhibit is intended, the aim of all the schools being to do honor to the subject of business education in America, by showing clearly and practically what the students in the respective schools have done and are regularly expected to accomplish.
Now that these chosen scholars have undertaken the labor and incurred the expense of preparing the material, not for any substantial benefit to themselves, but for the purpose of worthily representing the cause of business education in general, it is to be hoped that all of us who are privileged to visit Paris this season, will show a corresponding interest by studying carefully the similar exhibits of other countries, as well as our own, and later give to the cause here at home whatever results and improvements which may result from such examination and comparison.

Constitution Notes

Business Section E. C. H.

The Charleston meeting of the E. C. H. was the smallest in attendance of any since the Southern Business EX, but it lacked in numbers it more than made up in quality. It was the frequently expressed opinion of those who are regular attendants that a larger number of prominent educators were present than was the case at the EX, which was assigned for the small crowd. The hot wave which overspread the entire country a few weeks previous to the meeting kept many, who had already made plans to attend, from1 attending, even from the states of Texas and Alabama, less than half of those who engaged reservations actually went. The attendance from the territory immediately benefited by the meeting was the smallest in the history of the Association. Charleston was selected because it was felt that much missionary educational work could be done and the leaders in the South pledged a membership from the southern states of 2,000, less than 500 of whom favored us with their presence.

The new President of the E. C. H. is Dr. James M. Green, Principal of the State Normal School, Trenton, N. J., who introduced to the audience at the closing session, he indicated three points at which our educational system need strengthening, the second of which was material. This is our land and more and more becoming a distinctly commercial land. Our exports are now entering the markets of all the nations of the world, and by those who interpret the national thought, recognize that it is largely upon commercial enterprises. Yet it is true, as will appear if we study the curricula of the schools, that economic and commercial branches are rarely set for instruction in any thorough manner. What is the meaning of price and value? What is the meaning of cooperation and what are its possibilities? What is the meaning of business? What are its advantages and what are its dangers? These, and similar questions, are not sufficiently answered to the youth of our land. Those who observe our great social agitation cannot help wondering if the virtue of the questions involved, more light is needed.

The officers of the Business Section for the ensuing year are: President, William E. Dougget, Commercial High School, Brooklyn, N. Y.; Vice-President, Willard J. Wheeler, Birmingham Business College, Birmingham, Ala.; Secretary, Edward W. Nizzi, Principal School No. 3, New York. In conformity with the custom of the other sections, the program will be under the direct supervision of the President.

For the first time in the history of the E. C. H., one of the sections—Physical Culture—failed to hold a meeting, owing to the fact that none of the officers or persons who were to give papers were present. It was reported that the section was in the city, and he lived there. The Business Section was handicapped in that none of its officers was able to be present, but no section in the entire Association was more interesting or more discussion of the program as originally published. Of the fourteen persons assigned places on the program, only two disappointed. This speaks well for the care with which the program was arranged by Mr. Stevenson.

Several signs attracted the attention of the visitors. These are:-

1. The new cemetery at Magnolia Cemetery a large signboard informs the passer-by that a certain firm furnishes funerals for societies, an enterprise which, evidently thinking it might result in a unique device, announces "Hot jokes on ice," the most astonishing notice was that displayed in front of an up-town joint kept by an old negro woman and her young husband; every item on the menu was the trade mark adopted by the enterprising restaurateur. In the window appeared this notice: "Cheap rates for de teachers; regular meals fifteen cent, but them not hav cab no habbed." 

The opening session of the Business Section was conducted by D. W. Springer, owing to the absence of the officers. A. L. Stokes, President Richmond Business College, Charleston, was made Chairman, and Allan Davis, Principal Business College, Washington, Secretary. Fifteen States were represented by the following persons:

The above list shows a greater territory represented by those enrolled than has the registration at any other gathering of business educators. New York to California and Minnesota to Florida, is a combination hard to beat.

Many of the delegates embraced the opportunity offered of making an original investigation of the State Dispenary System which South Carolina enjoys as the result of the vigorous efforts made by ex-cop, now ex-warden. Many things were found in its favor, although it must be admitted that it has not entirely succeeded in doing away with the evil effects of the liquor traffic. The State Dispenary System is to be regarded as the State and county treasuries, it is the only state in the Union where a man can systematically lessen his taxes by patronizing the bar. Far did it say? Dispenary is the proper term for, except in the Idaho tigers, which are operated in some of the larger cities in violation of the law, all that you can do is to buy a bottle of your favorite beverage, and take it with you to the place where you desire to quench your thirst. Drinking is not allowed on the premises. The general sentiment that the scheme had diminished the evil traffic, was uniformly maintained. It seemed doomed to an early death, however, unless two changes are made in the law as it now stands. The profits that go to the county are carried to the bank, instead of entering the pocket of the liquor traffic. The fear is to become more distasteful every year to the better class of citizens and they are demanding changes. The State Dispenary System is a vast political machine to such an extent that the statement was frequently made that it was impossible to get any person who had any standing outside of the political ring to accept any position connected with the system. When the law was first passed, business men could be induced to accept places on the various boards, but not so now.

Ordinary addresses of welcome are unnecessary and commonplace. Not so those at Charleston. The historic memories of the place were largely used in the opening exercises of the general body. Our late war hero has changed the average Southerner toward his Northern brother. That opening meeting was a patriotic love feast. The speeches, by representatives of both sides of Mason and Dixon's line, were historic, and sentiments and were received by the audience with overwhelming enthusiasm. Yankee Doodle, Dixie, and America were each rendered by the First Artillery Band amidst seated average schoolmarshals. The welcome accorded the Business Section was especially cordial. Mr. Stokes, in his remarks upon taking the chair, said a few words, and said: "The business man of today cannot afford to teach his employes what to do, and hear the losses sustained from their acts while learning, because while he is teaching them and making the better of him. He wants employes who know what to do; employes who can assist him in conducting his business; employes who will be a help instead of a drawback." 

In his remarks, the President of the Charleston Cotton Exchange, gave a very vivid address on behalf of the business interests of the city. A quotation from his speech which will stick in everyone's mind at the crack of time there is but one word—now. In this age of enlightenment, progressiveness, and sharp comparison, the seeking of opportunities and turning them to account, biding them to some purpose, is a great secret of success. You are presenting these opportunities in your daily work to the seeker of knowledge and preparing the mind for the battle of life. With all that we say, we believe that whenever we meet in the future, the kind hand of friendship will be extended, and the flood gates to our hearts will be thrown wide open.

Cheesman A. Herrick, Commercial High School, Philadelphia, treated the subject, "The Content Educational Value of the Curriculum for a Secondary School of Commerce." He pointed out that no one who has high ideals as to what the school can do for the youth in a practical way. After referring to the struggles for recognition in the educational world of other interests, he said: "Scientific and industrial education have won their battles, we need not discuss them, but a new claimant now presents itself for educational recognition—a claimant
that reckons with a new vocation—that sees sociology as sculpture to another set of social activities. We should have less regard for the old, we should have less hope for the future, if the new were not challenged and discredited. Education for business life—and the terms are used in a broad sense, meaning both education and life—is just now awaiting the statement of its case. The speaker showed that higher education could properly deal with any subject, while it was almost universally conceded that the element of vocation should enter very slightly if at all into the elementary school. A detailed discussion of the subjects which should constitute the course of study was made, which showed that the writer approached the curriculum from the standpoint of the political economist.

Should our Colleges and Universities Educate Men Especially for Business? Woodruff D. Anderson, Department of Commerce, University of South Dakota, said in part: 'This question resolves itself into a question: (1) Should young men receive higher commercial education? (2) Should this be given in colleges and universities in preference to special schools? Statistics collected by John Carlton Jones and H. E. Kratz and the speaker, shew 59 per cent, of professional and 25 per cent, of business men are college men. Only one man in one hundred is college trained. Thus we see: Business men's chances of success are increased twenty-five times by college education, while a professional man's chances are increased fifty times. We have only one seen one sid. Mr. Carnegie and Mr. Olney both think young men are better without a college education if they intend to be business men. Many first-class business men tell the boy to go to work instead of school. A Greek maxim says: 'Teach the boy what the man needs.' Faroult, Hannibal, Alexander, Napoleon, Carnegie, and commercial schools, are gaining in export, but the trend is always back, to be a commercial nation we must produce and distribute. Economics may give the laws of production, but does not treat the "machinery of commerce." The industrial schools will teach production, but the commercial schools must teach distribution. Business schools prepare men for office work. Commercial high schools prepare for local managers and salesmen. The college educates proper management, engineers, corporate managers, foreign agents and consuls. If the government controls the corporations, the managers will be needed just the same. The United States manufactures one-half as much as all Europe does. Our factories are increasing rapidly. We must have better salesmen to dispose of the goods. Our consuls must have better diplomatic ability and political service do not prepare for diplomacy. Germany, Belgium, and Austria require consuls to be graduates of commercial schools. We must do the same, if we would compete with them.

The second question is: Should this higher commercial education be given in our colleges and universities in preference to special schools? If the course is to be planned and taught by classical or scientific professors, it will be a farce. If it is planned by educational business men and taught by specialists, it will be a great success. Farmers and business men support both State and private colleges. They have a right to demand business education for their sons. Commercial courses must be added to colleges to keep women from outnumbering the men. Commercial expense can be saved by letting commercial students attend some classes already in the colleges and use the college libraries and apparatus. Both classical and commercial students will be better. Education combines meditative and active enjoyment. It unites trade, business, and professions. It unites art and industry. Inventions have intensified man's life. This education will increase his power of activity. It will do more than anything else to make business stable and destroy illegitimate methods of advancing and lowering prices of products.'

Willard J. Wheeler, President Birmingham Business College, Birmingham, Ala., presented one of the best papers of the meeting on: 'On the Study of Advertising.' He spoke of the impressive impact of the liberality of the advertising of business schools as compared with others. He thought newspapers giving special write-ups, program advertising, etc., very unprofitable, but commended the use of newspapers and magazines with an established circulation, novelties, and personal influence of former students. He believes in publishing a good catalogue. A live school paper, etc., Mr. Wheeler evidently understands how to promote the interests of a good business school.

'The necessity for advertising any business, or any profession, is generally recognized, and all professional men and all business men advertise: If not in the public print then in other ways, for all publicity is advertising. Another liberal school has never been the most liberal of all the school advertisers, and to this fact is largely due the success of these colleges, for by this means the advantages of a business education have been placed before the fathers and the mothers of this country, and, as a result we find these schools in every city of importance, and the schools full of students and prosperous. These satisfactory conditions are due primarily to the fact that the business colleges have given the business training needed.

A business college is, first of all, an educational institution, but having secured good teachers and having arranged the proper curriculum, the progressive business college man naturally advertises.

All advertising that pays is good advertising—are any kinds of advertising, however, which do not return 10 per cent, of the amount expended. Among the most popular of these unprofitable mediums is the fake newspaper, which makes a specialty of write-ups. All program advertising is another poor way of spending good money for advertising. No one can say just what methods will pay. We must all make some experiments.

Advertising in newspapers and magazines of known circulation is the very best means that the school advertiser, as well as the general advertiser, can employ. These journals go direct into the hands of the people and the advertisements, if properly written and displayed, are sure to be read.

Novelty advertising, or the sending out of calendars, rulers, etc., is a very good adjunct to newspaper advertising.

Personal advertising must not be overlooked. Above all other forms of advertising is the good work spoken by a present or former student. If we do good work in our school rooms our schools will flourish, but they will flourish much more if we do good work and advertise.

Before commencing advertising of any kind the school should prepare its catalogue, which should be a true representative of the school, as complete as possible and typographically perfect. The catalogue must be supplemented by personal letters, booklets, leaflets and pamphlets.

Every college should publish a paper, monthly or quarterly. This is the best paying of all the advertising mediums. Among other good mediums are cards in the street cars and an occasional use of outdoor signs.

Advertising is not an exact science. Some will succeed and some will fail. The subject of advertising is a great study, and no one man knows all about it, and, however much a man may know about the subject, what he does not know would make a larger book than what he knows.

In conclusion, have a good school to advertise, and advertise it, and if you keep everlastingly at it, success is yours.'
One of the unusual features of the Charleston meeting, so far as the Business Section was concerned, was the fact that all of the speakers had carefully prepared addresses on the topics assigned them. This was even truer of those who were to lead in the discussion. Mr. Smithfeld, Pres. of the Business College, Richmond, Va., followed Mr. Wheeler, of the High School, who had good ideas on advertising. Allan Davis, High School, Washington, D. C., opened the discussion of the papers by Messrs. Herrick, Anderson, Doggett and Rowe.

The paper read by W. E. Doggett, Principal Commercial High School, Brooklyn, will be printed in full in the October number of this journal.

I consider that the two greatest elements of modern business penmanship are legibility and rapidity. These two are blood relations and cannot be separated in the discussion of this subject. So far as my knowledge goes there is not a copy-book published or produced by any of our best institutions that is not sufficiently legible for any purpose for which writing is used. As to the business college graduates, we find that they use an arm movement, and that the writing and movement used out of school is practically the same as that used in the rooms of the business college.

"Essentials of Modern Business Penmanship," was the topic assigned Mr. F. E. Haebler, of Fairbank, Minn., formerly of Polytechnic Institute, Brooklyn. He emphasized the importance of individuality in making letters, spoke of some causes of illegibility, and gave full information on the "run to seed" movement theory, and urged wide spacing rather than excessive practice on oval exercises. The paper was a very practical one, and was heard with much interest.

"What are the essentials of modern business penmanship? The first essential I wish to mention is, as of old, legibility. We cannot get away from this. The sole object of writing is to record thoughts in such a manner as to recall them readily. But, while legibility still holds the first place in importance, the degree of legibility has undergone a marked change. When we speak of legibility now we do not mean absolutely accurate and painlessly drawn-out letters. Every letter should be formed accurately enough so that it is unlike any other letter. Each letter in the alphabet has at least one strong mark which sets it apart from every other letter. Point out and emphasize that mark, and little or no time need be devoted to form study. Take 'a' as an illustration. The only other character which resembles it and which causes illegibility is 'o.' The cause of the illegibility is in the omission of the straight downward stroke. It should be done at the last part, three strikes, in 'a' are merely the letter 'i' he will never confuse 'a' and 'o.'" Point out in a few words that part which gives its letter individuality and use the writing period for ease of writing, which is given as another essential, is the outgrowth of a free movement; it is the test of the proper movement. The hand becomes tired and cramped because the muscles used are too small and too weak. Various methods have been employed to develop this much-prized muscular movement, I have no sympathy with the run-to-seed movement theories. The Run-to-seed movement theories was that of practice. The greater part of the practice period should not be spent on intricate and meaningless movement exercises. As a great deal of time is wasted in the practice of the letters alone, so likewise in the practice of useless movement exercises. I never knew a student who could not, after a very short time, use this movement in words and sentences, provided wide spacing was used. Oval exercises are useful, but they should not be used exclusively. The student should be taught as far as possible and as long as possible along the line of the work which is expected of him in actual business life. Begin with wide spacing and the proper movement is used immediately, then by degrees lessen the distance between the letters until the correct spacing has been reached. Connected letters are also excellent movement exercises, indeed they should, to a large extent, take the place of movement exercises. But by far the greater part of the time should be devoted to the practice of words and sentences. We must continue with our own style. We have nothing to learn in writing from abroad. To preserve it as a national writing and to press the national stamp deeper upon it we need but to adhere to the essentials of good writing: legibility, rapidity, and a suitable style, and we lead the world in writing as we do in commerce, invention and civilization.

Principal Edward W. Stitt, of New York, had made a careful and painstaking study of the subject which he presented, "School and Business Arithmetic.

"A careful review of the requirements in arithmetic of thirty of our prominent cities shows that in many cases the present demands are altogether excessive. Such subjects as partial payments, compound part-

EDW. W. STITT.
business papers are used, as they are as much a part of the material equipment as the ledger, journal or cash book, and it is impossible to give the student a practical knowledge of accounts unless the records are made from the business papers.

Next year’s meeting will be held in Detroit or Cincinnati, probably the former. Both cities are centrally located and a large attendance is assured at either place. Business educators, especially those engaged in public school work, and the numbers is increasing each year, cannot afford to overlook the advantages accruing to the profession from the Business Section of the N. E. A. While it is not as large an organization of business educators as the Federation or the Eastern body, it is nevertheless true that it has done more to bring the cause of commercial education to the front than has any other one agency. Its meetings are held in various parts of the country and in every instance the locality where the meeting was held has been benefited. Its proceedings are published with the other sections composing the Association and each member not only receives the papers of his department but those of all the other thirty odd sections. In turn this brings the papers read in our section to the notice of the most prominent educators in the land, and I have been surprised in talking to many of them to find that they have been following the discussions that have taken place in our body with a great amount of interest. The annual membership fee is $2.00 and it would be a good investment for every commercial teacher to take out a membership. An extra $2.00, paid once for all, will place your name on the roll of active members. The advantage of active membership is that you receive all the literature published by the Association from time to time, and your membership will not lapse as a result of forgetfulness on your part, for the Secretary will annually remind you that the yearly dues are payable before Sept. 1, if you were unable to attend the meeting. Membership fees should be sent to Irwin Shepard, Secy., N. E. A., Winona, Minn.

**Commercial Geography.**

**INTRODUCTORY NOTES AND COMMENTS.**

When the editor of the Business Educator secured my promise to prepare a monthly review of the latest and most important developments along the line of Commercial Geography, I had not arranged for a monolithic existence of two months among the wilds of Jersey; neither had I a hint that the mercury would make a jump which would put the oldest inhabitant out of business. As it is, I can give my readers only a few suggestions of the things to come, in this department.

With the opening of the school year, the subject of Commercial Geography will be found in more classrooms than ever before. To tell the truth the subject has been there all the time, but the majority of our friends have failed to see it.

This subject is very unlike any other branch in the curriculum. It is never started at the beginning and like the great world of which it tells us so much, it runs on forever. Text-books that tell us truths today, are worthless to-morrow, and the only thing left for the teacher and student is to read, choose, choose, reject, reject. Our plan is to give a review each month of all the leading periodicals, containing items of interest to the student of Commercial Geography. The student will be enabled to form some idea of the question discussed, and at the same time have placed before him the name and page of the periodical in which such item is found.

To the teacher we propose to give, from month to month, a short discussion of ways and means by which these items of interest may be taught and presented to a class in a logical, convincing manner. Any up-to-date teacher will admit that the greatest need of our pupils is to be so led that they, and not the teacher, will do the teaching and the teacher directs. No subject can be made of more interest to a class than Commercial Geography! If the teacher will merely guide, and let the pupils do the work of research. At the same time, China, for instance, attracting the attention of the world. Now, there is no reason why a teacher should do more for a class than to suggest the subject of China, and then give individual members of the class the chance of interest to look up and report in class. One boy is called upon for "location," another for "physical outline," another for "climates and causes," another for "products and methods of production," another for "transportation," another for "things for present condition," etc.

Note books should be used in class and a careful record kept of all items of importance should be kept.

In cities where it is possible to visit the manufacturing concerns, it is well to take the class through the same and have them explained by a competent guide. I have never found the least objection to a class visiting a manufacturing plant.

The proprietors will usually show every courtesy and furnish a competent "guide." When the students start on a visiting trip they should provide themselves with notebooks, and keep a careful record of the various processes of manufacture, and, if possible, secure samples of the articles in the various stages of manufacture. These may be classified afterwards and used to form the nucleus of a school museum.

If the visit, the pupils should be required to prepare reports, telling as far as possible the various processes of manufacture. I might suggest also, that, as the class advances with the work, various members should be assigned to taking in specimen of the product under consideration.

All of these specimens can be neatly arranged, and in time will become exceedingly valuable. In the case of textiles, for example, samples of cotton, wool, hemp, flax, etc., can be secured and placed upon exhibition.

In my own work I have had pupils visit a cotton mill, for example, and secure specimens, and we would then get a large sheet of bristol board and arrange the specimens, giving a short description of each specimen. These descriptions are written on the type-written paper. Boards will not always furnish them, and so we must provide for ourselves. Every school in which Commercial Geography is taught should be furnished with a few good maps showing transportation areas of production, and locations of industrial centers.

By writing to the Department of Geography we can secure first-rate wall maps of the United States, and then you can take some water colors and mark the areas of production, chief cities, etc.

Frye’s School Geography will give you some good ideas along this line. Secure three or four maps, and color them to show the areas of production. This will greatly assist you in your work. We want to make this department of real help, and to this end we invite correspondence. Ask as many questions as you like. Let us tell you the books to read and the people you shall discuss. Make up your mind to do your best, and if we can help you, command us.

Fraternally,

WM. J. A. Nos.
Peirce School.
Philadelphia.

**With the Compliments of the Postman.**

Canada is losing some of her excellent commercial teachers. Messrs. Nickerson & Enter, who recently purchased the William and Amanda Business College, Williamantic, Conn., are recently from the Dominion.***

***J. C. McTavish, commercial instructor in the Hamilton Commercial School, returned from his vacation in Canada. Mr. McTavish has a well-equipped room for his work, and his students are showing excellent results.***

Mr. Fees, a recent graduate from the University of Michigan, who is teaching shorthand and typing at the Battle Creek High School, has been elected to teach shorthand and typing at the Beverly (Mass.) High School.

[For want of space we have been compelled to omit in this issue, some very timely and terse items. Z. & B.]
**The Pennsylvania Artist and Business Educator**

### The Ohio Association

The meeting in Sandusky, September 28 and 29, ought to be a notable event. The time, the season, the place, all combine to make the meeting a success. Then there are the reduced railroad and hotel rates with Lake Erie thrown in—what more can you want for your money? This is something of this, these are but signs of what important, numerous, and pleasurable as they are, it is the program that is the real thing,” thanks to the hustling chairman of the Executive Committee and the unselfish services of those who accepted a place thereon.

Come let us reason, eat, hunt, and paddle hearted, broader visioned, and more progressive and enthusiastic.

### Give Us a Thorough Clipping—If you think we deserve it.

We believe we have been and are, and intend to continue, laboring about as zealously and unselfishly as most mortals do in the interests of good writing, practical education, and modern art. For this, services, which have been, with the necessary patience, rather than profitably, (though pleasure is the very essence of profit), we believe we deserve a clipping. The question is, do we deserve it? and if so, will you give us your judgment at a special rate if you do not know them.

### Some Good Things

We have in type two excellent articles for the following numbers of THE PENMAN ARTIST AND BUSINESS EDUCATOR as follows: "Vertical From All sides," by Mrs. Jennie C. Dowden, Supervisor Penmanship, Mansfield; Ohio, "Changing From Slant to Vertical; Backhand—Cause and Cure," by J. F. Barnhart, Akron, O.

### A Word to our Readers.

Since publishing the May-June number announcing the enlargement and improvement of the P. A. & B. E., we have received many letters of congratulatory expressions and pledges of support, and best of all, many subscriptions, with the necessary dollars accompanying them. These have all been thankfully received and highly appreciated. We shall endeavor to further evidence our appreciation by publishing the best paper within our means and ability.

If you are in sympathy with the cause for which we labor and which we love so well; if you desire better writing on the part of the many and fine art writing on the part of the few; if you are in favor of more practical and effective education; if you are in sympathy with better art; if you favor dignified discussions along the lines of methods and reforms; if you believe in breadth rather than narrowness; if you believe in giving all sides a hearing without surrendering conviction for policy sake: we most cordially invite and welcome your moral, intellectual, and financial support. We need to receive from you words of cheer or criticism, whichever you believe we must need so as to further the good cause. We need contributions from your brain and specimen and illustrations from your hand. We also need all the subscriptions you can send. Be sure to write for our special offer circular and club rates.

It takes enthusiasm, money, brains and lots of work to conduct a good paper. We hereby pledge you our best efforts for the year. Forward and upward is our motto.

---

**Advertisement Rates**

Made known upon application. Write for them.

**Change of Address**—If you change your address, be sure to notify us promptly in advance, if possible, and be careful to give the old as well as the new one. We lose many papers each week through negligence on the part of subscribers or post-masters.

---

---

**A Flood of Postal Cards**

The last number of THE PENMAN AND ARTIST was intentionally delayed a short time, the object being to more evenly divide the time between its appearance and the issue of this, our first monthly number.

This occasioned a flood of postal cards containing inquiries regarding it, which go to show that subscribers look forward to the receipt of the journal with considerable eagerness. Of course, this is very gratifying to the publishers. All publishers are glad to know that their journals are anxiously desired.

From this on we shall endeavor to mail as near the first of the month as is possible, so that all subscribers will have the journals by the tenth of the month. Persons who fail to receive it by that date, may take us up. They will have in charge the addressing and registering of names are extremely careful, still mistakes will occasionally creep in. We always promptly correct same, however, when notified.

---

**PALMER, PENMANSHIP AND PSYCHOLOGY**

E. W. are favored with the faculty of the Ohio State University, in giving easier to criticism which to the test. That is why we have so few real writers as so many who are all ways ready to pick flaws.

Persons who know Mr. Zaner, senior editor of the PENMAN ARTIST AND BUSINESS EDUCATOR, will not fail to be conformed to know that he is a creative genius—although still a young man, he has already contributed to our cause an immense amount of the most original, helpful, and inspiring work. Each book of the very highest order has come from his hand and brain, and now he has come with an unusually versatile skill almost every branch of penmanship—from the most practical, rapid business writing to the most difficult and difficult pen drawing.

Thousands have written thanking him for the help and pleasure he has given them, some devoting themselves his skill as a penman and artist and others from his instructive, thought-provoking literature. Many hundreds of angels are already to testify with skill or word as to the value of his interaction.

But he has gone farther than the limits of the pen. Naturally a lover of nature, he could not resist the temptation to sketch and paint her, so that she now claims a portion of his time. A little time of landscape, etc., are now springing from his efforts in this direction at the rate of about the three a week, some of which according to old professional artists, show much more than promise. Being penman, artist, teacher, author, a systematic student and an able critic, he has not been long planning, but at just present he has no time left to reply to some of his admirers.

---

**A New Series of Lessons**

Parenthetically, I might add that with this number of our journal he begins another series of lessons for the concurrently writing which, if I mistake not, will attract wide attention, and which will no doubt be followed by a very large number of student. It certainly is a rare opportunity to receive in the most careful in the most best and best efforts in the way of copies.

A decade ago Mr. Zaner, in Penn's Pens, published "Zaner's Theory of Penmanship," which is just now receiving critical attention at the hands of the printers of the Western Pennsylvania, and Mr. H.C. Beauty, a contributor, Mr. Practical business writing, is now more freely and often others of Mr. Zaner that it is now to be expected that Mr. Zaner create Mr. Palmer with criticism. And when he has anything to criticise he will criticise something old, for criticise he will and criticise he must. It seems he simply can't help it, and as well that somone will accommodate him.

---

**Intellectual Scrapping**

In order to help matters along a little I thought best to take a hand, for I confess that I, too, occasionally do a little intellectual scratched match, especially when all is said and done in the most friendly and respectful disagreement. So, whatever I may say, I wish the Zaner and the hair-splitting Beauty to believe that only the most friendly feelings exists on this side and that nothing animosities is intended.
Mr. Palmer speaks of "Mr. Zanner's recent efforts to base the work of the writing master on the principles of current psychology." That is hardly the truth. Let us see. Mr. Zanner did not take any courses in psychology, and he has written nothing about it. Indeed, it is doubtful whether Mr. Zanner ever even read psychology books, if we can assume that he simply made up his own system and trained his pupils to follow it. The best way to understand Mr. Zanner's system is to read the book itself.

WHO IS MR. ZANNER?

A Mr. Zanner has come to the attention of many teachers of handwriting in recent years. He has written a book entitled, "The New Education in Penmanship," which has been widely read and well received. But who is Mr. Zanner? I have found no information about him in any directory. All I know is that he is a handwriting teacher.

IS MR. ZANNER A PSYCHOLOGIST?

If Mr. Zanner is not a psychologist, why has he written a book about psychology? Perhaps he is trying to prove that his system is based on scientific principles. But if that is true, he is certainly not a psychologist. In my opinion, Mr. Zanner is simply making a lot of nonsense about psychology.

MR. BEATTY'S THINKING

Mr. Beatty, another well-known handwriting teacher, has recently written a book called "The Psychology of Penmanship." He has tried to prove that handwriting is a reflection of mental processes. But when you read his book, you find that he is simply repeating the same old platitudes about the relationship between handwriting and personality. Mr. Beatty would do well to study the works of real psychologists, such as William James and John Dewey.

WHAT OTHERS HAVE SAID

There is another thing, Mr. Palmer. I can't quite understand. Some years ago Mr. L. H. Vanston, in The Teacher, wrote, "I believe that Mr. Zanner has been successful in his efforts to improve handwriting instruction."

ONE OF THE BEST

There is no one better prepared to teach penmanship than Mr. Zanner. He has spent many years studying the subject and has written several books on the topic. His carefully prepared lessons and exercises make it easy for students to learn the techniques of penmanship. Mr. Zanner's system is the best that I have seen in recent years.

THE PENMAN-ARTIST AND BUSINESS EDUCATOR

Personally, I am a complete convert to the graphic method of penmanship instruction. It is the most effective way to teach handwriting, and I recommend it to all teachers of penmanship. The United States can boast of some of the best penmanship teachers in the world. But it is true that we need more effective methods of instruction, especially in the elementary grades.

E. W. BLOWSER
Doings of the Profession

H. C. Walker, formerly of the Elmira (N.Y.) Normal School, is now connected with the Spencerian College, Louisville, Ky.

F. H. Kuech has been re-elected for another year as principal of the Zanesville (Ohio) Business Bureau.

T. J. Maxwell, formerly of Warrensburg, N. C., is again teaching in the Bingham School, Melona, N. C.

The Zanesville Business Bureau has secured the position of principal of the Western Normal College, Shenandoah, Pa.

A. K. Burnett, of Ashland, Ill., has accepted a position with the Southern Business Bureau, in the same city.

C. H. French, formerly of the Business College, Burlington, Iowa, has secured a position with the Zanesville Business Bureau, a position with Goodfellow Commercial College, Wilmington, Del.

W. J. Merriman has engaged for another year with Stanley's Business College, Thomasville, Ga., at an increased salary.

W. F. Palmer has charge of the commercial department of the Morningside College, Sioux City, Iowa.

G. L. Davis is special instructor in penmanship in the Southwestern Business College, Richmond, Va.

J. P. Jones, principal of the commercial department of the Business School, has been re-elected for another year at a salary increased in salary.

Mrs. F. H. Davis, supervisor of writing in the schools of Lakewood and Rockville, Ohio, has been re-elected for another year at a salary increased in salary.

F. F. Mersch has been re-elected as supervisor of writing in the schools of Lake and Rockville, O.

J. M. Keizer, formerly connected with the Business Institute, has secured the position of policy engrosser for the Massachusetts Mutual Life Insurance Company, Springfield, Mass.

During the last few months at Ottawa, some of the schools have lost some of their best teachers. Among some of the teachers, the loss of which he lamented, is the Zanerian Diploma and his penmanship library, including a copy of "Portraiture," "Theory," "Cooperation," and "Instructor," in the various institutions of the PENMAN ARTISTS, "Ames' Compensium," the "Spencerian Compensium," etc., and also some of the works are replaced, but others cannot. No volume of THE PENMAN ARTISTS can now be furnished at any price.

J. T. F. Langmuir, penman in the Eastern Commercial College, Muncie, Ind., is building up quite a department of penmanship in that institution. He also gives lessons by mail and faxes orders for cards, specimens, etc.

H. C. Keizer, supervisor of the Winstead (Conn.) Business College, found it necessary to secure larger quarters for his institution. A large building was erected and the building has seven stories. During the past year, he has had a large number of students, with large rooms equipped with desks and modern offices. The penmanship school is making the Institution one of the largest in the state. He also requires entrance examinations.

The B.S.W. book (published at Epsom, Mass.), contains a number of drawings used as headings which were prepared by N. A. Smith, of that place, Mr. S. has always been a progressive and painstaking penman and we think the board of consulates itself that he can hold such a good man in the place.

Cyrus W. Field resigned his position as principal of the longhand department of Miller's Business College, Akron, O., to open a school of shorthand and penmanship of his own. Success to him. We acknowledge receipt of a circular containing specimens of Mr. Field's work, etc.

J. H. Hesselsz, formerly of Philadelphia, has purchased the school known as the Zanesville Business College, Manchester, N. H. Hereafter the institution will be known as the Hesselsz School of Business, Shorthand and Penmanship.

T. G. Little, G. W. Bynies, and J. S. Bynies, of Athens, Ga., will open a commercial school in Greensboro, N. C., in September. The PA AND B. E. wishes them much success in their new field.

F. H. Salters, formerly of Chicago, Ill., is now teaching in Steinmann Institute, Dixon, Ill.

J. A. Coates is principal of the penwriting department of the Southwestern Business College of Kansas City.

Our old friend and former pupil, C. F. B. Schultz, of the Massey Business College, Boston, Mass., has been teaching on penmanship before the students of the State Normal at that place. A recent paper states that he holds over ten different models and movements and the various styles of penmanship. His address was most interesting from beginning to end, and he held the closest attention of his auditors throughout.

J. F. Huttler, a fine penman of Butler, Pa., is now secretary of the Farmers' National Bank of that place.

Through the Zanesville Business Bureau, J. M. Swanston, formerly of Chicago, Ill., has accepted a position with the Union Business College, Quincy, Ill.

W. J. Ames has engaged with Pierce School, Philadelphia, as instructor in Commercial English, as an instructor in Commercial English.

Through the Zanesville Business Bureau, P. A. McEvoy, formerly of St. Louis, O., has secured a position with the Massachusetts Mutual Life Insurance Co., Springfield, Mass., as a policy engrosser.

Mr. K. C. Atticks, of the Baltimore, Md. Business College, has been elected to the position of principal of penmanship in the First Presbyterian Church, State Normal School at Millersville, Pa.

Mr. J. E. Leary, of Kutztown, Pa., recently of the Zanesville, is teacher of penmanship in the Troy, N. Y., Business College, Shields & Tuttle, proprietors.

E. S. Gause, formerly connected with some of the leading schools of Texas, has recently accepted a position with Eastman College, Poughkeepsie, N. Y. Mr. G. is a penman of much ability.

The well-known penman and business college principal O. C. Dorney, of Allentown, Pa., has received his commission from Governor Stone to act as one of the certified business college instructors. Mr. Dorney is also manager of Dorney's Park, a most beautiful spot but 20 minutes from Allentown.

E. H. Doyle has charge of the high school commercial department, Ocean Grove, N. J.

L. E. Stacy, formerly of Spencer's Business College, Kingston, N. Y., is now connected with the Commercial College of McCombs, of Mohawk, N. Y., writes a splendid business hand as well as a very creditable ornamental form. Success to him in the Buckeye State.

J. L. T. Wilds, formerly of Springfield, Mass., has accepted a position with the Charles Commercial College, Brooklyn, N. Y.

E. F. Utterback, formerly of the public schools of Houston, Texas, has been elected to supervise the manual training, drawing, and writing in the schools of Atlanta, Ga. The editors of the PENMAN ARTIST AND BUSINESS EDUCATOR are well acquainted with Mr. Utterback and regard him as one of the most energetic and capable supervisors in the country. The schools of Atlanta are to be congratulated in that work.

R. W. F. Christman, of Hazleton, Pa., Business College, was married on July 11th to Miss H. V. Maunder, daughter of Mr. B. R. Christman, of Hazleton, Pa., Business College, and Miss A. V. Maunder, daughter of Mr. B. R. Christman, of Hazleton, Pa., Business College.

Mr. E. M. chairman of the Henneman's Business College, Springfield, Mass., was married on July 5th to Miss E. M. White, of the same place.

S. M. Funk, of Hagerstown, Md., was married on June 28th to Miss M. M. F. Baker, of the same place.

Messrs. Christman, Rancourt and Dorr are often impressed with the editors, and it pleases us to know that they have taken our advice and secured good partners. Our heartfelt congratulations are hereby extended.
Lessons in Engraver's Script.
Number Four.

BY CHARLOTTE A. HOLL, CHICAGO, III.

Preliminary Remarks.

In this lesson, and in the lessons which are to follow, a section line will be almost indispensable for ruling the pages for the upper and lower extended loop letters and capitals. It can be secured for a small outlay. I use a line made by Queen & Co., of Philadelphia, which is entirely satisfactory. If a section line cannot be secured, then measure off the spacing with a pair of dividers or compass to get it accurate, and rule with a T square. Lines should be about an eighth of an inch apart for ordinary practice. Use a medium hard pencil for ruling and rule lightly so the lines can be easily erased with either a sponge or kneaded rubber.

Allow at least an inch and a half margin on your practice paper which will improve the looks of your work greatly.

The loop is the foundation for the b, h, k, and l and will require much study and practice to master it. Make introductory stroke same as in the i and n, lift pen and make right side of loop, commencing a space above the base line, giving the upward stroke a slight compound curve, continue this stroke until loop is completed; the shade on the loop should commence two spaces above the base line and gradually become wider as it reaches base line; it should be carefully traced at the bottom; finish loop with a delicate shade which should be placed at the top and to the right see copy; this applies to all the upper extended loop letters. Caution: Don't make this shade too long nor too heavy.

The l is same as the loop except the shaded stroke tapers off at the bottom same as the i; the terminating stroke is the same as the i. The first part of the h is the same as the loop, and the second part is made like the second half of the n; the space between the first and second shaded strokes is the same as the space between the two shaded strokes of the n.

The first part of the k is also made the same as the loop; make hair line stroke next commencing one-fifth of a space above the base line and finish with a dot which should be made as heavy as the dot on the c; this stroke can be completed without being lightly crossed and should not be made over a space high; the second shaded stroke is the same as the second part of the n, except it is only half a space in height; it should connect where the hair line stroke commences. The hair line stroke and shaded stroke can be connected with a small loop as in the z. The small loop should have a delicate shade as in the z; this is also the hair line stroke commences. The space between the shade of the loop and the k and the second shaded stroke is the same as between the two shaded strokes of the n.

The h is the same as the l, except it is finished with a dot or loop as in the y and w.

The f is a continuation of the loop and extends below the base line one space. It can be traced at the bottom and made like the modified p, which ends with a hair line stroke. The finishing the shaded terminal stroke are made without lifting the pen; the dot is placed to the left of the shaded stroke and should rest on the base line. The line is usually made only two and a half spaces high. See copy.

Bank Note Script is so called because of the letters being omitted, excepting the i and the shaded strokes made solid and carefully which also makes the effect of a pair. Good strokes should always be of a uniform width; terminals should be drawn straight nor row at the bottom or too wide at the top. The k in Bank Note Script should always be made with a loop.

Criticisms.

G. H. W. Too much space between the oval and second shaded stroke of the n, same fault as in a, good q. This can be remedied by a delicate shade at top of the oval where the second shaded stroke joins the oval. I award strokes of the lower extended loop letters cross shaded strokes too low down; they should cross a trifle below the base line. Small loop in the z should have a delicate shade on the lower left side. The upward stroke of the large loop should be completed making work shows constant improvement and I predict that success will crown your efforts in this direction.

L. B. S. You have not used good ink and paper adapted for Script, consequently you have failed to secure good results in your practice work. You failed to use a top line for a guide, the result is your letters lack uniformity in height, which would seriously mar the effect of a page otherwise uniform. Your shaded strokes lack uniformity which is a fault in Script. Connecting strokes between letters are not uniform enough. I would be more with as n; you make it too wide. Shade on the loop of the z should swell out more to the right. Upward strokes in the lower extended loop letters should be compounded more. Follow instructions regarding material and let me hear from you soon.

H. W. S. You have failed to use base and head lines in your exercises and as a result there is a lack of uniformity throughout your work. The p, o, modified r, s, and w should be heavier. Spacing between the second part of the n, w, and the k should be consistent with the space between the first part; the width of the n governs the space in the first and second parts. If a line modified l is not heavy enough. Strive for uniform shading, as this is one of your weak points. You have an excellent opportunity to perfect yourself in the art of Script Writing and with your determination to earnestly strive for improvement, you are certain success. Thank you for your kind words of appreciation and good wishes.

Students' Specimens
Miss Sue E. Andrews, Supervisor of Penmanship and Drawing in the Duquesne, Pa., Public Schools, whose instructions in penmanship and drawing done by pupils, which disclose that she is doing good practical work.

G. E. Miller, penman in the Iowa Business College, Des Moines, Iowa, sent a lot of specimens, taken up after the usual class drill. Two of the main essentials of good business writing are especially noticeable in these specimens, ease of execution and rapidity. Mr. Miller is to be congratulated on the results he is producing. Since sending in this work, Mr. Miller has accepted a position with the St. Joseph (Mo.) Business University.

Miss Dorothy Goode, of Monroe, Mich., submits specimens of penmanship from the pupils of the public schools, which, in our opinion, are better than the average. We believe she is a successful teacher, judging her by the product she secures. A little more movement we think would be advisable, but not of the "wild and wooly" sort.

The Best
Am very glad to learn that you contemplate entering THE PENMAN AND ARTIST. In my opinion it is the best magazine pertaining to penmanship and drawing published, and with the new department and issuing once a month, I predict a future for THE PENMAN AND BUSINESS EDUCATOR surpassed by no publication of its kind in existence today. Please put my name on your list, for which I enclose postage for one year's subscription.

J. MEYERS
Marshfield, Pa.

BY MISS H. S. LOTHROP OF BOSTON.—
DAUGHTER OF MR. W. H. LOTHROP.
President of the association, delivered a most enjoyable and able president's address. Following, Dr. William Bryan, of the University of Indiana, presented the subject of "Art as a Social Influence." He believed that money should support art education as fully as it supports scientific education.

Miss Ronnie Snow, Supervisor of Drawing of Minneapolis, gave an address entitled, "Color, Nature of Instructed; Purpose, Meaning to be used; Time." She said, "Color is essential because it is the emotional side of art. Many children who find but little that is congenial in black and white work, respond at once to the sympathetic influence of color. Teachers also become interested through color work."

The illustrated evening lecture entitled, "Architectural Compositions," was given by Dwight Beaud Perkins, Architect, Chicago, Ill. This proved to be instructive as well as entertaining. Walter S. Perkins, of the Pratt Institute, delivered a lecture entitled "Saracenic Art and Fatty Palaces of the Moors of Spain."

Mr. John David Kuhn, of Grand Rapids, gave a talk about "Furniture Designing," after which the members visited one of the large furniture factories.

The officers elected for the following year were as follows: President, Miss Wilson, of Davenport, Iowa; Vice President, Miss Florence Ellis, of Grand Rapids, Mich.; Secretary and Treasurer, Miss Doris Marx, of Toledo, O.

Thursday evening a joint meeting of the Western Drawing Teachers' Association and the Michigan Association of School Superintendents was held in All Souls church. Addresses were given by Superintendent George W. Loomis, of the Central Normal School at Mt. Pleasant, and John W. Cook, of De Kalb, Ill.

The meeting was followed by a reception, which was given by the members of the Ladies Literary Club to the visiting teachers and superintendents. The reception was a delightful social affair, and one of the pleasant events of the convention.

"How to Gain Public Support for Art Education in the Schools," was ably discussed Friday morning.

Superintendent J. H. Kaye, of Cadillac, Mich., presented the subject, "Drawing in the service of other School Subjects." Mr. O. W. Woodley, of Menominee, Mich., read a paper entitled "Art Education as a Moral Influence." Mr. John S. Akley's Jr., presented a paper on "The Proper Basis of Teaching the Art of Drawing in Schools." Mr. B. N. Wood, of Niles, presented a paper on "The Place of Art in the Problem of Education."}

The Kessy School, Brooklyn, N. Y., is about ready to move into its new three-story building of its own. The new building is but four doors from the present location of the old school.

From a recent letter from W. S. Ashby, of the Bowling Green (Ky.) Business College, we quote the following:

"We have had a very successful school this year, and prospects for the coming year are indeed very bright. I am principal of the business department, and expect to remain here for the next four years. The trustees of the town are building a magnificent college building, large enough to accommodate fifteen hundred people, and we expect the thousand students in attendance during the coming year."

A local paper gives more than a page notice of the commencement exercises of the Richmond (Ind.) Business College. The orator of the occasion was Alexander B. Kapell, of Chicago. By securing good talent for such occasions and by making the most of the opportunity, it is certainly one of the best ways to popularize the business school and its work.

The Gustus School, Moline, Ill., graduated a class of twenty-seven pupils in July with appropriate exercises. We notice that the Duff System of shorthand has been introduced in this institution.

The Denison (Iowa) Normal and Business College is now located in the hands of L. C. Kinsmeal and W. C. Yan Xess, of whom the DENISON PRESS states that they are two of the best educators of the state. The PENMAN-ARTIST AND BUSINESS EDUCATOR wishes the new management much success.

Regarding the burning of Duff's College at Pittsburg, Pa., we take the liberty of quoting the following from some recent letters from Mr. Duff: "Yes, we lost everything by fire, but a clean sweep, or rather a complete burn-up. Nothing was saved, except the iron safe and the books therein. The furnishings were fairly well insured, but the irreparable loss is so many of our pen pictures, none of which, I fear, I will ever be able to reproduce for want of time and lack of inclination. Many of these productions had a sentiment with them, executed as they were, with youthful ardor and care. I know now in the habits of L. C. Kinsmeal who painted in a prolific manner, but sold his pictures only exceptionally. Life required him to part with them, so much was he in love with his art. While my feelings do not run quite so high, yet I was much attached to them and painted with pride to some things which are now alas! no more."
Mr. J. E. Leamy, whose portrait and penmanship are shown here, was born in West Rutland, Vermont, June 22, 1868. He attended the public schools, graduated from the High School in '96, and from the Rutland Business College in the spring of '96. He taught Telegraphy, Penmanship, and Commercial Branches in the same school three years, from '97 to '99. He spent his summer vacations in doing telegraphy work in railroad and Western Union offices.

In October, '96, he entered the Zanerian and pursued a course of study and practice in penmanship and engraving and graduated in June, '99. On his way home from the Zanerian he was employed as penman and teacher of penmanship for the year at the Troy, N.Y., Business College.

Mr. Leamy received his first inspiration and real instruction in penmanship from Prof. L. J. Eggleson, Rutland, Vt. He is an expert in telegraphy, and as his work shows, is now one of our most skilled penmen. The lessons in ornate writing that he is now preparing will prove to be invaluable to the home-student, and inspiring to the amateur and to the lover of skillful, beautiful penmanship. The indications are that Mr. Leamy is going to be one of the few really fine art penmen of the coming decade. He certainly has it in him to be second to none.

With this skill and ability, Mr. Leamy is as modest as a maiden, and as intellectual and progressive as a teacher need be.

The Teaching of Ornament," by Fred H. Daniels, published by the J. C. Witter Company, 125 Fifth Avenue, New York City, price $1.50, is much a book as would be expected from its creator. From the standpoint of printing, binding, etc., it is artistic and durable. It contains thirteen chapters and 36 pages. The chapter on contents is as follows: Art Education; Primary Grades; General Plan of Work in Higher Grades; Elements of Beauty in Nature and Ornament; The Teaching and Drawing of Ornament; Egyptian Ornament; Greek; Roman; Byzantine; Saracenic; Gothic; Original Design; Color. We take pleasure in recommending the book to all teachers of drawing, for the sake of its artistic and practical material.

"Tales Told by Handwriting," by William J. Kinsey, 302 Broadway, New York, is an interesting and instructive two-page booklet on Expert Detection of Forgery in Handwriting, etc. It is perhaps not too extravagant to say that it is worth its weight in gold. For terms address the author.

"The Sign of Four," by A. Conan Doyle, engraved in the easy reading style of Isaac Pitman's shorthand, published by Isaac Pitman & Sons, 30 Union Square, N.Y., is one of the best books from the standpoint of shorthand we have ever examined. The printing and engraving are excellent. The book should be in the library of all students of this system of shorthand. It contains 67 pages of accurately engraved shorthand notes.

The third edition of ten thousand copies of the "Twentieth Century Typewriter Instructor," by J. X. Kinchbi, published by E. N. Minor, 80 Fulton Street, New York, has recently come from the press. We have not examined a copy and do not hesitate to pronounce it very complete and up to date work in every particular. Nothing seems to be overlooked in the book. Typewriter type reproduced is used entirely, which adds considerably to the value of the work. The publisher claims that its use will positively save the teacher and student much time and labor. We would advise all teachers of typewriting, or all who wish to learn to operate a machine properly, to secure a copy. It can be had by addressing the publisher or at all leading typewriter dealers.

**Publications Received**

"The Teaching of Ornament," by Fred H. Daniels, published by the J. C. Witter Company, 125 Fifth Avenue, New York City, price $1.50. is just such a book as would be expected from its creator. From the standpoint of printing, binding, etc., it is artistic and durable. It contains thirteen chapters and 36 pages. The chapter on contents is as follows: Art Education; Primary Grades; General Plan of Work in Higher Grades; Elements of Beauty in Nature and Ornament; The Teaching and Drawing of Ornament; Egyptian Ornament; Greek; Roman; Byzantine; Saracenic; Gothic; Original Design; Color. We take pleasure in recommending the book to all teachers of drawing, for the sake of its artistic and practical material.

"Tales Told by Handwriting," by William J. Kinsey, 302 Broadway, New York, is an interesting and instructive two-page booklet on Expert Detection of Forgery in Handwriting, etc. It is perhaps not too extravagant to say that it is worth its weight in gold. For terms address the author.

"The Sign of Four," by A. Conan Doyle, engraved in the easy reading style of Isaac Pitman's shorthand, published by Isaac Pitman & Sons, 30 Union Square, N.Y., is one of the best books from the standpoint of shorthand we have ever examined. The printing and engraving are excellent. The book should be in the library of all students of this system of shorthand. It contains 67 pages of accurately engraved shorthand notes.

The third edition of ten thousand copies of the "Twentieth Century Typewriter Instructor," by J. X. Kinchbi, published by E. N. Minor, 80 Fulton Street, New York, has recently come from the press. We have not examined a copy and do not hesitate to pronounce it very complete and up to date work in every particular. Nothing seems to be overlooked in the book. Typewriter type reproduced is used entirely, which adds considerably to the value of the work. The publisher claims that its use will positively save the teacher and student much time and labor. We would advise all teachers of typewriting, or all who wish to learn to operate a machine properly, to secure a copy. It can be had by addressing the publisher or at all leading typewriter dealers.

**A Field of its Own**

THE PENMAN AND ARTIST just received. It is certainly a fine production. I wish to congratulate you on the changes which I note are to take place. I think your paper will cover a field covered by no other paper published, and every person interested in commercial work and penmanship should be a subscriber. J. C. Olson, Pres. Parsons Business College, Parsons, Kansas.
Qualifications of Special Teachers.

No one will question but that a special teacher should be thoroughly qualified in his special line of work. Not only should he be master of what he expects to impart to his pupils, but he should know much more about his subject than he will be called upon to teach.

In order to be a successful special teacher, there are many requirements. Very few of us possess all the desirable qualifications, and some are constantly making mistakes where we might be strengthened by some friendly suggestions.

The special teacher should have a good general education. If he had a collegiate education as a foundation, he would be stronger and would command greater respect by educators, superintendents, teachers, pupils, and the entire community. Some special teachers have disgraced the profession by the lack of even a common school education and seem to have no ambition to get a broader education, or even to speak good English, which is very important, since he comes in contact with small children who imitate him, and in the more advanced grades they will notice his grammatical errors, in a critical way, which will weaken their confidence in his instruction, as well as lower himself in the estimation of his fellow teachers.

Experience as a regular teacher will be of great value, since he will know more of the amount and nature of their other work, and can assign lessons more intelligently and can frequently correlate the lessons.

The teaching of ungraded school will give valuable training in the ability to adapt himself to all grades. The special teacher must adapt himself to all grades and understand the development of mind. He above all others should have a knowledge of child study and psychology. He should not only be able to adapt his instruction to the variety of pupils but should possess the ability to arouse an interest in his particular branch, not only during his presence, but until his return.

The special teacher should have good health, and great powers of endurance, for his work requires more physical strength than a regular teacher, and he should come into contact with the vigorous and energetic, full of cheerfulness and love for the children.

A cheerful and sunny disposition has a tendency to foster in the children all that is good, great and noble. A kind word, a pleasant look, and a composure cost us nothing, so we should bestow these valuable gifts to the children, who will unconsciously reflect to us, bright and happy faces, and will look forward to his visits with pleasure.

He should avoid scolding but on the other hand should commend both teachers and pupils when they have done well, or have made an honest effort.

A truthful word and practice, an evenhanded treatment of all, a just estimation of all, and the capacity to make them feel that each has his place in the school will mark him as the best in the town. Exchange work frequently, so they can compare their work with others of the same grade.

The special teacher has the opportunity of knowing where his weak, as well as his strong teachers. He may know a great deal but must keep it to himself.

Don't be a tattler. If you can't say a good word of a fellow teacher—say nothing. He should treat all teachers with courtesy and respect, and should not associate with one teacher much more than another.

While he should have a certain amount of dignity, he should make teachers and pupils feel that he was their friend and desired to help them whenever possible.

He should have a pleasant good morning for even the ragged little street waif, as well as for the sweet little girl from a luxurious and cultured home.

He should have a personal interest in each child, and should show his approval of the work by a word or look. He should be definite and concise in designating work to pupils and teachers, and should see that it is done. After they have completed the work satisfactorily show them your appreciation.

He should be careful and methodical in planning lessons, and have some educational end in view, and should work toward that end.

The special teacher should be prompt. The lack of this virtue, will bring him into disfavor among the regular teacher quicker than any other.

When he has entered the room he must begin work, and make the recitation business from start to finish. Make teachers and pupils feel that your time is precious, and that you have no time to waste on discipline, or in telling them funny stories.

The special teacher should be neat and tidy in his personal appearance, and his manner or address should be such as to command universal respect, whether he be in the school, on the street, or in society.

While it should not be necessary for him to take charge of the government of a school he should have the disciplinary ability, as he will at times have occasion to exercise this power. My observation has been, if you desire a quiet and orderly school, you should enter the room in a quiet and orderly manner yourself, speak in a clear, and distinct voice, but don't shout—noise begets noise.

Every special teacher should possess an enviable reputation, a genial character, a Christ-like spirit. Bully becomes in contact with the hearts and lives of children who are greatly influenced by his every word and deed.

Children are not slow to discern a true and noble character. How important then that he set before them an example of a loving heart, a virtuous and godly life.

Many are the opportunities to help the children to a higher and nobler life, and thus be the means of preparing them to become better and more useful citizens.

In short, the special teacher should have all the qualifications of a regular teacher, as well as many additional ones, as he should be blessed with a good stock of tact, patience, energy, perseverance, and common sense.

L. L. WEAVER,
Supervisor of Writing and Drawing at Alliance and Salem, O.

A Little Nonsense Now and Then Is Relished by the Best Penmen

"What is your idea of a good joke?"

"Well, any joke that makes you angry because you didn't think of it yourself."

"I have never met," he said, "more than two really lovely women." "Oh," said she, looking up innocently into his face, "who was the other?"

"An artist should have a model wife."

"Have you heard of the man who got shot?" asked one fellow of another. "Got shot? No!" exclaimed the other. "How did he get shot?" "He fought 'em!"

Teacher—"Mary, make a sentence with 'dogma' as a subject." Mary (after careful thought)—"The dogma has three puppies." Kind neighbor (accompanied by a large mastiff, to a little girl very much afraid of him)—"He's a good dog; he never hurts anyone. Don't you see how he is wagging his tail?"

Little girl (still shrinking back)—"Yes, I see; but that isn't the end I am afraid of."
Lessons in Sepia Painting
By W. T. Gilmore, Canton, O.

NUMBER ONE

No lessons were more interesting to the past year in our schools than the sepia painting in the Seventh and Eighth grades; and we shall try to follow out the same line of instruction to beginners.

The outfit was to consist of a half-pan of sepia, which is a small dish of dark brown paint; a number seven brush; a cup to hold water; a flat dish to mix the paint in; a blotter; and of course, some drawing paper, which need not be the regular expensive water color paper, but a good tough textured drawing paper, that has not a glazed surface.

Instead of the sepia, some pupils secured Vandyke brown, some ivory black, and some delph blue; with either, the process was the same. The brush could be a cheap quill; the number seven, together with the paint, was bought of Wadsworth, Howland & Co., of Boston, for five cents each, which was the cheapest I have found yet considering the quality. The best sepia usually costs about twenty cents per cake. The cheaper moist water colors similar to ours are also made.

by the Prang Co., and Milton, Bradley & Co., of Boston.

Test a good brush by soaking full of water, and then with a quick jerk flip out all the water possible, and the hairs should come to a point. Use the point of the brush only in painting. When done with the brush, wash out all the paint, get it full of water, flip it out and draw the brush lightly across the blotter to get the hairs to a point, and put the brush to one side to dry. It is a mistake to dry the brush completely with the blotter or rag. The cake of sepia should be kept wrapped in tin-foil or paper so as to retain a moist condition.

If paint should be put on accidentally it may be taken off before drying, with the blotter. Have the extra piece of drawing paper handy to see how thick your color is. A saucer will do for the little flat dish.

The sketch will indicate the materials needed, and the entire cost need be only about a quarter.

Now for the first lesson. Get your brush full of water; then shake out the surplus water; get it full or partially full of paint; and lift this out onto the little dish. This will likely be a full black of the sepia; put some water in it, taking care to touch the brush to the blotter to keep from getting the water cup "muddy." This will give you a thin tint of the paint. Now try spreading this "thinned-out" color onto the paper, say in the shape of squares or ovals. Fill in several squares getting the color on even and getting a mere tint. After the color is once on the paper, do not keep touching it with the brush; else it will get "spotty" or muddy in appearance, but keep the hands off until it dries. Now dip out a little more paint onto the dish and paint a few squares a shade darker, etc., until you have at least three distinctly different tints or degrees of the color. After a few trials you ought with either black, brown, blue, or sepia, to get from five to eight different tints from the same color. The accompanying pieces are Seventh and Eighth grade work, where the pupil probably went over the drawing the third cost to get the required depth and evenness of color.

To THE EDITOR OF THE SIX-SIR: How the vertical system of penmanship has obtained for five or six years in this age of nature study is quite astonishing even to farmers' sons, who, in their "back woods" log schools learned enough physics to comprehend the parallelogram of forces.

In the ordinary writing, with the hand resting on the hypothenar eminence, and pivoted on the tips of the ring and little fingers, some muscles of the hand and forearm produce a horizontal motion to the right, while the extensor and extensor muscles of the fingers cause a vertical motion. The result of these two motions is a slant to the right, modified according to the quantity of energy expended by the muscles employed in producing the horizontal motion.

JOHN P. WRIGHT, M.D.
NEW YORK, June 6.

New York Sun, June 27, 1900.

[Through the kindness of Mr. W. H. Laflin we received the above clipping which discloses the fact that it took the doctors to prove that vertical was the best, and now it takes the doctors to prove that slant is the best. The trouble with doctors is that they are more familiar with long names than with conditions. The above doctor doesn't know that the shoulder muscles are employed as much or more in good writing as those which govern the fingers. We must take opinions from such sources with discrimination.Editors.]
Art is the external manifestation, by means of lines, colours, movements, sounds or words of emotions felt by man—Erwin.

The feelings with which the artist infects others may be most various—very strong or very weak; very important or very insignificant; very good or very bad.

Art is the connecting link in the chain of great minds; through its language, thought appeals to thought, and sympathy echoes to feeling.

Real art, like the wife of an affectionate husband, needs no ornaments. But counterfeit art, like a prostitute must always be decked out.

Fancy is to art what the perfume is to the flower.

The true artist derives his strength from himself. His genius knows no immutable laws of popular fancy or greedy necessity.

Color is to the eye what music is to the ear. Their appreciation depends not so much upon a knowledge of their science or chemical properties, as upon a feeling within us that manifests itself in spontaneous melody.

To see the aim and purpose of art in the pleasure we get from it, is like assuming (as is done by the people of the lowest moral development, e. g., by savages) that the purpose and aim of food is the pleasure derived when consuming it.

Art is a human activity, consisting in this, that one man consciously, by means of certain external signs, hands on to others feelings he has lived through, and that other people are infected by these feelings, and also experience in them.

Lessons in Practical Vertical Penmanship.
BY E. E. UTTERBACK, SUPERVISOR OF MANUAL TRAINING, DRAWING, AND PENMANSHIP, ATLANTA, GA.

In consequence of Mr. Utterback's move from Texas to Georgia, he has been unable to get his lesson here as he had expected, much to his regret. He writes us that he expects to be on hand for our next issue. In order to tide the good work over, we present herewith some small letter exercises which were written freely, even rapidly, and should be practiced in the same manner. Practically, no linger action was used in their execution, therefore you should use none in your practice. See how easily and freely you can write them. Keep the turns bounding and the angles sharp and the result will at least be legible.

Art Paragraphs
Any actress can paint but only a few can draw.
Nature is the only artist capable of producing a perfect picture of health.
Lessons in Engrossing

BY H. W. KIRKE, 19 TRENCH STREET, BOSTON, MASS.

Number One

For this writing we use Gillott's 365 pen and "Higgins' General Drawing Ink" reduced with water as required. Freshly ground India Ink is much easier to write with but it takes time to prepare it. We use the finger movement for executing this style of writing. A small penholder is better than a large one.

Obituary

Through Mr. S. L. Calwell, of Lincoln, Neb., we learned of the death of Mr. E. H. Ealy, penman in the State Normal School, Cape Girardeau, Mo.

Mr. Ealy was once a pupil under editors Zane and Blaser, and was a gentleman who always commanded the highest respect of both teachers and pupils. His death is a loss to the profession.

In the death of Dr. Charles S. Haley, Vice-President of Heald's Business College, San Francisco, Cal., the profession evidently lost one of its most valuable members. Although not acquainted with him ourselves, the testimony of those who knew him is sufficient evidence to our minds to establish his great worth as an educator and man. His old friend and co-worker, Daniel T. Ames, was selected to pay tribute to his memory.

We have not seen Mr. Ames's obituary, but the following one which appeared in the June number of Heald's College Journal is really a gem from some heart-felt, broad-minded friend. It seems to us that Ingersoll himself could not have improved upon it. It is certainly worthy of a careful reading by all:

Dr. Charles S. Haley

May 28, 1909

But a small number ever find the work for which they are fitted. When they do, the fact is so apparent that the man and the position seem made for each other and the world recognizes the fact. As Carlyle put it, "Blessed is he who has found his work, let him ask no other blessedness. He has a work, a life purpose, he has found it and will follow it."

All the previous years of Dr. Haley's life were a preparation for the office which he filled so long and with such signal ability. His training as a teacher and a physician, his active interest in everything pertaining to California country life, his experience as an orchardist and farmer, his intensely practical characteristics, softened by travel, by study, and a full recognition of human limitations combined to make him the ideal executive.

It is not an easy thing to govern a great school well, and reeducation has not lessened the difficulty. To spur the laggards, to reform the indifferent, to encourage the dull but earnest student, to exercise a firm but kindly discipline, to supervise the curriculum ranging from the simple English subjects to the practical sciences, to judiciously select and manage a large faculty, to keep in touch with the requirements of the business world, and to so order things that all this educational machinery will turn out its due product of well-equipped young men and women, requires a capacity of the highest order. His liberality of thought, broad-mindedness, and keen knowledge of human nature enabled him to do all this with a smoothness that marked him as a master in his vocation.

Dr. Haley was what the world calls a successful man. He was successful because he brought to bear upon his life the qualities that make success; economy, integrity and attention to business. He applied to his own affairs the principles inculcated as a teacher, and all his actions were forcible examples of a business prudence as bitted a business manager of a business school.

One of his strongest characteristics was practical good sense. He believed in letting everyone have the fullest measure of opportunity that money making was compatible with the highest degree of honor and he encouraged everyone to get all they could without injustice to others. Further, he was willing to make opportunities for the unsuccessful where they did not exist. He never closed the doors of the college to any earnestly striving for educational betterment, but whose means would not enable them to pay for the instruction. Many a man and woman, whose feet are now firmly planted on prosperity, owe their success to the generosity that freely offered them an education that at once fitted them for employment. Such instances were very numerous.

From the imperfect standpoint of human vision, the sudden ending of a life of such usefulness seems a calamity. Nothing indicated that the Psalmist's limit had been almost reached. His life had not yet lost the full vigor of maturity. The ripe experience of years had touched him with a greater kindness, the cares of life were all behind, the future was peace and evening shining, in a moment the messenger came and he had passed to the unknown.

The vacant chair will be filled, a ceaseless procession of other students will come and go and the college will continue its work as before, but his memory will live in the hearts of thousands until they too are called to the majority.

Invitations to Commencement Exercises

We wish to thank our many friends for remembering us with invitations to commencement exercises. During the past few months we have received a large number of such invitations. While most of them have not been acknowledged by us, and while we are too short of space to mention them in this number of THE PENMAN ARTIST AND BUSINESS EDUCATOR, we trust that this notice will be sufficient to insure our friends that the same have been appreciated. We now extend our sincere thanks to all.
Columbus, Ohio.

Gentlemen:

I have given you in this a fair specimen of my simplified, vertical penmanship. It is plain, practical, and legible. Its simplicity and legibility has gained for it a valuable position in the practical and business world.

Sincerely yours,

Jeanette A. Krebs.
With the Commercial Artist of Chicago.

Number Two.

BY R. E. HUMMEL.

Represented in the exhibition were all the varieties of work known to the craft. There were "Fashions; Drawings delineating the vagaries of modern wearing apparel; for women and men; Bird's-eye view of factories and their surrounding; drawn with such masterly knowledge of linear and aerial perspective, that many buildings and square miles of territory were perfectly represented in a comparatively small space.

Portraits in abundant number, showing different styles of mechanical and artistic treatment; some were drawn with the exactitude of the steel engraving, while others were executed with the freedom of a pencil sketch. Machines for widely differing purposes were also shown, some in a style of pen drawing, which deserves to be called the purely mechanical, others in wash, with and without the soft and delicately blending effects, such as only the airbrush will give.

A large number of catalogue illustrations were displayed in a certain corner of one of the rooms, such as pictures of dresses and shirts, pianos and parasoles, furniture and fishing tackle, bicycles and beer pumps, prayer books and playing cards, demigods and demi-johns.

The larger drawings attracted most attention, not merely by reason of their size, but because most of them were highly artistic and pictorial. Some were humorous, some were grave, some delighted with subtle coloring, others impressed by strong drawing and vigorous action.

Here the Magazine Illustrator, the Newspaper Cartoonist and the Poster Artist displayed the products of their skill and brain. In other sections could be seen dainty vignettes, exquisite lithographs, headings of all descriptions, cover designs, initials, landscapes, head and tail pieces, etc., surely something to please, or of interest to everybody.

Considering that this has been the first exhibition of its kind in the United States, held by an association yet so young, it was surely a remarkable affair and a great and gratifying success.

Long life and prosperity to this association!
SIR ISAAC PITMAN.

Persons who realize to what extent Isaac Pitman Shorthand is used in this country would hardly believe that it is but ten years since the American publishing house of Isaac Pitman & Sons was established, one would not imagine that so much could be accomplished here in so short a time. But the success of Isaac Pitman Shorthand is not due to the wonderful, but to the immense versatility and the on-hand of its popularizers.

Sir Isaac Pitman, the inventor of phonography, and whose portrait we present here with a few of its benefactors, also possesses that faculty of combining the business-like ability and the skill in the business of producing paper. In order to carry out his system of business writing, he has prepared a three-week course in shorthand and writing. The Phonetic Journal and Pitman's Shorthand Weekly.

Lessons in Practical Writing

A GOOD HANDWRITING IS MORE THAN AN ACCOMPLISHMENT—IT IS A MODERN NECESSITY.

Thoughtful Practice

Nothing is so essential to successful writing as thoughtful practice. This is a lesson all who would write well must learn. Pause, rest between forms and lines in order to see what is wrong and to determine what is necessary to correct the mistakes. Every effort expended should be under the dictation of the intellect. Look, think, act. Follow this order and success is yours. Without acts we have but ineffective intelligence. Acts without thought is expenditure of effort with no return of improvement. The quality of practice determines the improvement. There must be sufficient quantity, but too much quality will defeat quality. Do not fill more than a line without stopping to examine critically the work done and reserving what must be done to produce the desired improvement and reach the coveted excellence. Thoughtful, systematic, painstaking practice is the forerunner of good penmanship.

No. 8 Review No. 2, particularly the upper and lower turn exercise. This exercise should be made with an easy, rolling continuous movement. There should be no spasmodic starts and stops, but a continuous gliding action to the right. The r is composed of two turns and a finish like in n. Be careful to o (see oblong of common errors.) Be equally careful to resemble an r. Avoid looping the finish or it will in finishing the letter and use an easy, forceful, full and efficient position at all times. The x is of n, and a straight line crossing, made upward. This is an easy letter to make if you can make a good n. See how easily and gracefully you can make the last exercises on this plate. Let the arm roll freely at the elbow. To do this, the sleeve, including the under sleeve, should be loose.

No. 9 Review No. 1 thoroughly. These exercises need to be mastered, as they are the foundation of freedom and grace. Study the capital J critically. Note that the oval is narrower than in the O, that the beginning extends above and to the right of the second part, and that the last stroke is nearly straight rather than with a vertical movement. Do not loop the small a needs careful attention. Start it toward or it may resemble n. Do not loop the second part or it liberately than the rest and use a little finger action, if you can make it easier and better by so doing. The little finger need not slip while making the a but it should slip in going from one to the other. Do not raise the pen in this letter and be sure to come direct to the base line with the second part. Keep o and a distinct. Study spacing in the sentence, and use an easy movement.

Critics will be given freely through the columns of The P. A. and B. E. to those who send specimens of their systematic, careful practice. Such specimens should reach me not later than the 15th of the month. Address such specimens to Zane, Columbia, 0, and inclose return postage if you wish specimens returned.

Patrick Flynn sent the best work for criticism thus far received. It came too late or some would have been published. The work is systematic, strong, rapid, and fairly accurate. Keep on and you will become a masterful penman.

Many others have sent specimens to be filed, to show improvement made. We have never had as many start out so enthusiastically as with this course, which bids well to be a record breaker. Now let me have your systematic practice at least a month and I will try to help you. There is no reason why thousands may not learn to write a splendid hand by following the lessons. Results are sure if instructions are followed.
No. 10 Practice the little, retrice circles with a rapid, circular arm action with the little finger resting rather than slipping. The thumb and first finger should not act. You can tell when you are using finger action by watching the joints of the thumb and first finger, to see if they move. Begin the e with an tendecies shown in the little plate herewith. Do twist-like movement. The letter and movement are both a good deal of attention to the word cocoon. This action than any other one thing. It cultivates, at the same time, strength, scope, freedom, and confidence in the arm movement. The last confidence is the secret of success, so is the arm movement. Are you on the road to success? If not, you now know how to get on to it - master the word cocoon.

No. 11 Let the arm roll easily on the muscle in front of the elbow in making this letter. Put the pen on the paper with sufficient pressure to start the ink and make the E with two, quick, oval edcres. No finger action is necessary. Keep small, central, connecting loop small, and the top of the letter relatively large. In joining the E's, pause at the beginning of each opening in this letter or it resembles i. Do not make e loop the e, this will insure legibility, and that is what high rate of speed. The e with the down stroke slightly ing the word Even be careful to maintain a turn at the beginning of r, and do not loop the finish, or drop to the base line with it. Practice the word at the rate of about twenty to the minute. Not that many words each minute, but at that rate of speed. Pause between words to criticise, then go ahead to correct and construct anew.

No. 12 The r is a hunchback i without the dot. Check the motion in making the shoulder of r, but do not stop. Do not hurry in making this letter until you are sure of making it well. Do not make it tall and slender or it may resemble t, and do not sharpen the shoulder or it will resemble a small of common errors. Curve the down stroke of s can down stroke with a rocking, under rolling, quick move this letter than in most letters. Little or no finger c that is similar to the capital E. See little plate sidetally so that it will not look like t. Make the little finger should slip more freely in action is necessary. Keep the r and s unlike each other, and unlike t and there will be little trouble concerning their reading qualities, at last. The word success with the circles will require a free, rolling, motion and quick thinking. Study difference between a and s in rear.
No. 13 The D is a modified O. Begin the letter with a deliberate motion and finish quickly as in O. Do not get it too wide on the base line, and it is unnecessary to begin the first stroke very high. The D's joined make a good movement exercise which may be practiced with profit. The small d is an a of a retrace. The pen may be raised after making out raising the pen. Avoid separating the oval and close the oval. The last d in the little oblong looks didactic should each be written without raising the pen. The fingers may be used some in this letter, in the retrace part in particular. A slight pause at the top aids in securing a good retrace. The word did should be written well from fifteen to twenty times in a minute. The last line is a good one for practice. Watch spacing between letters and words.

No. 14 This plate is given to illustrate speed. Tests in speed are desirable to stimulate interest and to prepare persons for the realities of business. To my mind nothing is more beneficial if conducted rightly, or more harmful if conducted wrongly. The last line illustrates too much speed. The word is not legible. The letters are too similar. It is a scrawl rather than penmanship. My advice is to never go beyond legibility. See how fast you can write to maintain legibility. By that we do not mean decipherability. Good writing is legible at a glance. No one has a right to write illegibly, as it consumes unnecessary and sometimes precious time on the part of the reader.

Let me see some of your best rapid work on the word mean. See how well and how rapidly you can write it. The plate was written at about twenty-two words a minute. The last line was written much faster, but can it be said to be writing? Hardly.

**Speed** This is an age of intense and prolonged activity. The art of writing needs to adapt itself to those conditions. It must be rapid and enduring. Plenty of arm movement is the secret of meeting those demands. Careful, critical observation, and quick, clear thinking are the forces that must stimulate and control this arm movement. Rapid practice not reckless practice or scribbling, is the price of a rapid, legible hand. Well formed letters, proper spacing in and between words, and uniform lines are requisites for commercial penmanship. See how freely, rapidly, and well you can write the sentence in the preceding illustration, being careful about spelling and punctuation at the same time. Learn to be sure by being firm and free in movement, and clear and definite in percent. Think clearly and write plainly and your services will be in demand. The way to do this is to begin to do these things while practicing from these lessons. Learn to observe the details of the copy and to understand every instruction; then push to the front. Application is necessary, if you would win. Let us help you by looking over your practice.

**Comment** I am gratified with the number of specimens received from persons who intend to follow these lessons and compete for the prize of most improvement and for the certificate. It is yet ample time to send in your work for file and criticism. Let me hear from you. See how much you can accomplish this and next year.
Lessons in Professional Business Writing

BY H. B. LEUPHAN, CLEVELAND, OHIO, WITH SPECKMAN'S BUSINESS COLLEGE

In this lesson we have all the loop and semi-extended letters in the movement exercises, and also in the words.

Practice vigorously on the retracing exercises. Many students have not a free movement, so writing becomes monotonous and tiresome.

While the finger movement is used in making small letters it should hinge with the fore-arm movement so that a change can be made from one to the other without breaking even the most delicate curve. Some students rest the hand so heavily upon the desk as to destroy all the free movement they otherwise could have. Your movement should be free enough to make the last letter in the word, "government," with the same ease that you do the first and without readjusting the arm.

Great care must be taken in making every line, as one misplaced word will mar the beauty of the whole line. The down strokes forming the main part of these letters must be made straight; so in making the loop letters above the line make a short turn at the top then straight to the base line before you turn. Cross all loop letters one space above base line, this is very important. Loop letters below the base line should cross on the base line or a little below. See that you always close the oval part of letters D, A, D, G, Q.

Ye Ohioans and Others!

Do not forget that The Ohio Commercial and Special Teachers' Association meets in Sandusky, Sept. 28 and 29, and do not forget to be there. The program was printed in the September number of this journal. Be sure to be on hand and to bring your best uniforms or glasses (the case may be with you). Be on hand to discuss "teachology" and to practice sociology. Surely you can get double your money's worth out of the various intellectual and physical treats in store for all who attend. The R. R. rates will be the most reasonable thus far secured for the Association. Make the convention a distinct success by being on hand. On to Sandusky, Sept. 28, 1900.

C. A. LeMaster of Bartlett's Commercial College, Cincinnati, O., was married to Miss Alice Marble of Rising Sun, Ind., on August 3d.

Publications Received

"One Hundred Seventy-Five Common Sense Lessons in Business Penmanship," published by the Terre Haute Commercial College, Terre Haute, Ind., is a sixty-four page, skillfully written, concisely edited, carefully graded, and profusely illustrated work for practical writing. Address as above for further information and prices.

Lessons in Artistic Penmanship

Number One

BY J. E. LEAMS, TROY, N. Y.

INTRODUCTION

In accordance to the editors' wishes by consenting to conduct a course of lessons in ornamental or artistic penmanship through the columns of The Penman-Artist and Business Educator I place myself in a position where I deem it necessary, especially to the many others in the profession who are more skilful than myself and far more capable of giving instruction along this line.

My pleadings to the editors of lack of time in which to do the work justice have been of no avail, and I have finally consented to carry the work through. I realize how tedious will be my efforts as compared with those of others in the past, but my task is before me and I will do my very best.

THE OBJECT

of these lessons is to aid the student in acquiring what is generally termed a professional or artistic hand, with the determination to succeed. Right here I wish to impress upon those who intend to work from these lessons the necessity of becoming interested in the work, resolving at the outset to carry it through and accomplish everything possible. All the instruction that could be given you in addition to the best of copies would avail you but little unless reinforced by your personal desire to acquire such a hand. If you are thoroughly interested in the work, if you actually wish to become skilful in this line, the battle is half won. The harvest depends upon the seed. You will get out of this just what you put in. No more.

MATERIAL

What I will say concerning material will, necessarily, lead us along a well established track, viz.: it is absolutely impossible to do good work with poor material. So endeavor to procure the best.

You should provide yourself with ink that is suited to light line and black shade writing. I recommend Arnold's Japan diluted with water or strong coffee. Right here let me say that your ink is an important factor in your work, and that you will have to experiment and find out for yourself what is best. It pays to keep it quite thin.

The paper should be of good quality. I use Parson's Super fine, half-inch ruled, "Gillott's No. 1 Principle" or "The Zan- cian Finewriter," are the best pens for this work. I do better work with the "Zan- cian Finewriter."

You need, to complete the outfit, an opaque holder that is properly balanced and well suited to your hand.

PERCEPTION AND PERFORMANCE

There are two things that I wish you, who
First, the right hand. Here's how: Place your right hand, palm down, on the desk. Hold the elbow of your right arm up and out to the side. This will leave the right arm up and out, and your fingers will form a right-angled shape. As you move your right hand, the fingers will form the shape of a right angle. If you do this, you will be able to practice the pen and perfect your movements.

If you have everything ready for practice, please go to the next section on page 112. There you will find instructions on how to use the pen, as well as exercises to help you improve your handwriting. Please be patient and practice regularly.

Remember, the key to good handwriting is consistency. Practice regularly and you will see improvement in your writing.
The need of technical and higher commercial schools becomes daily more marked. Business men of progressive character are everywhere alive to the remarkable opportunities for trade that, in Mexico, South America, China, Japan, and our island possessions and dependencies, are being presented to us.

Germany is one of the most formidable of our business competitors. Commercially, politically, and militarily, she is living now a singularly strenuous life. Her political and military prowess is being exercised in Africa, China, and South America, and her mercantile skill is everywhere in evidence in the field of foreign commerce. Our business agents abroad are continuously meeting her serious strife for trade advantages. Our consuls frequently submit special reports on this subject.

For years Germany has led the world in giving special attention to education along commercial lines. Our business men recognize the danger to which we are subjected by the specially educated, persistent ingenuity of our prepared agents abroad. At the last meeting of the National Association of Manufacturers the following significant resolution was passed:

"WHEREAS, Recognizing that the future prosperity of the United States depends in a large measure on the ability of its manufacturers and merchants to intelligently conduct foreign trade, because of the complex character of the task, and that to secure this end it is desirable to place within the reach of young men facilities for securing comprehensive business education, therefore be it

Resolved, That the National Association of Manufacturers at its fifth annual convention, assembled in the city of Boston on the twenty-sixth day of April, 1899, advocates the establishment of free public commercial and technical schools or commercial and technical departments in high schools, colleges, and educational institutions with a comprehensive course of study, and requests its members to use their earnest endeavors to secure the establishment of such schools or departments in the cities and States which they represent."

Publications of the National Association of Manufacturers. Commercial teachers who desire to keep abreast of the progress of events will be glad to receive for $1.50 per annum the "American Merchant Marine," and "Technical Education from a Business Standpoint," together with reports of the proceedings of the last two annual meetings. There is no charge, but those who write should enclose return postage, and state that they are commercial teachers, mentioning the school with which they are connected. Address Mr. Samson, 48-51 Bourne, Philadelphia, Pa.

These reports give the discussions of eminent business men, on the floor of the convention, in regard to the Nicaragua Canal, Our Merchant Marine, a new Government Department of Commerce and Industry, Sample Warehouses in Foreign Countries, Commercial and Technical Education, Reform of the Consular Service, International Banking, The Metric System, etc.

The successful teacher of the future must get outside of his little round of a few sets of bookkeeping, a few weeks of business practice, and short courses in arithmetic, spelling, and English composition writing - the mere rudiments of the education entitled to be called commercial. Such a teacher will welcome means of larger growth, no matter what the source, nor the reasonable price.

---

**English Consular Reports on Commercial Education**

The British Government has recently been gathering, in recent months, reports on commercial executive officers, reports on commercial education in France, Austria, the Netherlands, Japan, Italy, The United States, Sweden and Norway. No teacher who has the proper spirit of progress in him can afford to do without these clearly written reports. They will be a revelation to some who have preconceived notions of what bookkeeping is today and may not include. Fifty-four cents will pay for a postal money order sufficiently large to have the reports sent postpaid to any address. They are published by Messrs. Eyre and Spottiswoode, East Harding St., Fleet St., E. C., London, England.

---

**Our Convention Report**

We are pardonably proud of the comprehensive report of the Charleston Convention that was prepared for our readers by Mr. D. W. Springer, of Ann Arbor, Michigan. Commercial teachers had to consult our columns for a timely report, because our esteemed contemporaries did not take the trouble to issue any report.

**The Commercial High School**

The article in this number entitled "The Commercial High School Course," is a paper read by Mr. William E. Doggett, at the recent convention in Charleston, S. C., Mr. Doggett has had wide experience in commercial teaching. In his school last year there were more than six hundred boys taught by more than a dozen of the first-class men of our profession. Mr. Doggett's work has been somewhat hampered by its being only a "Department" of the regular Boys High School. As it is now an independent Commercial High School, it will be free from some former impediments. We shall look for the very best results from this school, under the able management of its present principal.

**Times are said to be good.**

**Salaries of Commercial Schools are prosperous.** Teachers are in great demand, but salaries are not commensurate with the increase of receipts, though possibly fairly compensatory for such ability as offers itself. In this connection we shall have an article next month from the pen of the shrewdest of the younger men in our profession, Mr. C. H. Harding. He holds a position of great responsibility, being the supervising accountant of the Appraiser's Stores, New York. In this institution the management is in the home (which fixes the duties to be paid) of all goods that reach this country through the port of New York. Mr. Barber's article is highly interesting.

---

**Commercial Schools in Europe**

The excellent article on the Commercial Education Vienna Commercial Academy in Europe, begun in this number, will be brought to a conclusion in the November number and concluded in December. We hope to show our readers who are commercial teachers that commendable work is being done in worthy business schools in this country is not all there is of Commercial Education. We want them to know something about the magnitude and dignity of the profession to which they have devoted themselves. The Commercial Academy have taken up this subject in earnest, and, with the help of foreign experience, will correct errors, and this country will obtain all of the advantages which can be enjoyed by her foremost rivals, who have special business training in the foremost schools.

---

**Encouraging Words.**

**FRIEND GAYLORD:**

We have just been looking over the first issue of the PENNSYLVANIA ARTIST AND BUSINESS EDUCATOR and it seems to us that you are starting out right in the business department of the paper. Most of the papers published in the interest of business education and are doing better or others. We believe, however, that there is abundant opportunity for a higher grade of work in this part of the field, as well as in the actual school work. We have been discussing publicly the class of schools, such as office details, relation of, among other, at Mr. E. P. White, business men, to teachers; systematizing correspondence, discipline, relation to public schools, etc., will be appreciated. We have very little sympathy with the position taken by schools in some of these matters. The little, petty, dirty things that are done in business to-day should be hit frequently and hard. In this field it is room for a lot of discussion that will be beneficial to the cause of business education, and help to bring it out of the mire of falsehood, up to the standard that we are all proud of. If the tone of this line is what you have in mind, we are with you both and to each other.

We are working hard in our work, and the prospects for the coming year are better than they have ever been before.

Wishing you all sorts of good things, we remain yours truly,

**HERB KRANE & DYKE,**

Proprietors of the Private School of Business, Philadelphia, Pa.
The Commercial Academy of Vienna

"Wiener Handels-Akademie"

CHARLES LOUIS DURT, PROFESSOR OF ENGLISH AT THE ACADEMY OF COMMERCE, VIENNA.

HISTORY—FIRST PERIOD

At the beginning of the year 1856 Herr W. W. Obilis, a manufacturer in Vienna, moved a resolution in the Chamber of Commerce of Lower Austria to the effect that it was desirable to establish a "Commercial General School." The proposal was most favorably received, and a Meeting of Founders, which was held on 19 November, 1856, showed that there was no doubt of the success of the undertaking. In January, 1857, the Austrian Government consented to the formation of an association for the establishment of a High Commercial School in Vienna, and to the collection of subscriptions for this purpose. Thanks chiefly to the exertions of Baron Friedrich Schey, the Association numbered on 27 April, 1857, the day of the First General Meeting, 565 members, and a sum of 3,275 florins stood at its disposal. At this Meeting the statutes of the Association were accepted and the Board of Governors was elected, the first President being Baron Friedrich Schey, who held this position until his death, which occurred in 1861.

The statutes were approved by the Imperial Ministry for Public Worship and Instruction in October, 1857, and the school was opened in January, 1858, in a building in the Renngasse, which the Ministry of Finance had placed at the disposal of the Association. At the commencement there were 59 pupils, but by October, 1858, the number had increased to 170 regular pupils, besides those attending the Evening Classes, opened for clerks and others already in employment.

The Association of the Commercial Academy of Vienna has undergone many changes in the course of time, but the statutes of the year 1857 have remained in the main unaltered. The Academy is the institution of a special Association, not that of a Mercantile Corporation, or of a Town, etc., as is the case with the other Commercial Academies in Austria. The Association consists of:

1. Honorary Members
2. Founders, 1st category ("stifter") i.e., such persons as subscribe 630 Kronen annually for life, or at least 6500 Kronen, paid in, at the longest, six annual instalments; 3. Founders, 2nd category ("Gründer") who contribute a sum between 6500 and 10,500 Kronen; 4. Members who contribute any amount under 10,500 Kronen. All these together form the General Assembly. Only the Founders of the first category enjoy any special rights, they or their legal heirs having the privilege for twenty years of designating a pupil who, if possessing the necessary qualifications, is educated at the Academy free of charge.

The General Assembly elect the Board of Governors, consisting of twelve members, six of whom must belong to a mercantile or industrial profession. The Board choose from their midst the President and the Deputy President for the period of a year, at the expiration of which time they are re-eligible. The Board also appoint the Director and the Professors, as well as the officials and servants, and decide as to their removal from office. The appointment of the Director, of the Professors, and of the Academical Teachers ("Dozenten") is subject to the approval of the Ministry for Public Worship and Instruction. The Board also fix the amount of the school fees, nominate to the free scholarships, and administer the property of the Association. The Director is the executive organ of the Board of Governors, and is responsible for the general teaching and discipline of the school.

The opening of its own School House on 12 October, 1862, was an epoch in the existence and visible sign of the prosperity of the establishment. A second subscription was commenced to cover the expenses of the building in 1860, and in 1871-72 the whole debt was paid off from the surplus arising from the regular receipts of the school. In consequence of these favorable results plans were formed for an extension of the programme of the school, which, however, were not carried into execution until after the death of the first Director, Franz Hauke, which occurred in 1871. This may be considered as the close of the First Period in the History of the Academy.

SECOND PERIOD (1872-1877)

Director Hauke was succeeded by Baron Alois Czedik von Bründisberg, who had previously held a high government office. Under his management the Academy was divided into a High School and a Middle School. Hitherto it had devoted almost its whole attention to the preparation of young men for the banking business, and, in a minor degree, for transactions in goods. Those desirous of studying insurance business, or matters relating to the transit of goods, railways, telegraphs, etc., had to attend the State Schools and other establishments then existing in Vienna for this purpose. On the proposal of Baron Czedik, the Railway Companies now closed their schools, and the Ministry of Commerce, its Telegraph Class, while at the same time the Insurance Companies increased the Academy's revenues by making increased subscriptions for six years, and at the beginning of 1872, classes for these subjects were opened by the Academy, the plan of teaching being laid down in agreement with the parties concerned.

The Establishment now consisted of two divisions: A Commercial Middle School with a three years' course, and a Commercial High School with a two years' course. A Curator was appointed in the person of Baron Czedik, the former Director of the Academy, and the immediate management of the Institution lay in the hands of the College of Professors, who were elected from amongst themselves a Rector.

The Commercial High School was divided into three branches: 1. Banking Business (including mortgage and insurance transactions); 2. Transactions in Goods (including forwarding, shipping, and manufacturing); 3. Means of Transport (Railways, Post-office and telegraphs).

These two departments of the Academy lasted but a short time, the Middle School five years, the High School four years. Various causes led to the abolition of this organization, whose commercial crisis of May, 1876, was followed by financial difficulties in the way of the undertaking, and complaints arose in member circles that the Middle School was an ordinary educational establishment, and not a commercial school, properly so called, so that it only served as a preparatory step for the High School. The public, however, objected to a five years' course, so that at an extraordinary general meeting, which was held in June, 1877, a new organization was adopted, which was then approved by the Ministry for Instruction.

THIRD PERIOD (1877 until the present).

Regierungsrath Dr. Rudolf Sonndorfer, who had been a professor at the Commercial High School, and who had managed the Middle School in the school term of 1866-67, was appointed Director, an office which he still holds, and under which the entire reorganization of the academy was carried out. The financial results of the High School were, as has been stated, anything but satisfactory. Dr. Sonndorfer undertook the management, the Academy was encumbered with a heavy debt. Thanks, however, to his care and

* One Kronen = 1/16 Austrian florin (now abolished), or about 10d. in English money, or 21 cents in United States Currency.
Commercial Geography.

W. L. AMOS, PEIRCE SCHOOL, PHILADELPHIA.

An exceedingly interesting article entitled, "Giant Wheat Farans is found in the August crop," on page 51, of "The Farmer," says that in America boys and girls, this article cannot fail to be of profit and interest. It tells how the immense farms of our northwest were originally organized and how they at last fell into the hands of syndicates, many of whose members have never seen their lands. It explains why wheat must always be the crop of a portion of our country and why the United States will continue to supply the bread oal of a goodly portion of the world's inhabitants.

The description of the harvesters, and the machinery employed, is exceedingly interesting.

There are several figures showing the immensity of the wheat crop in the United States and the cost of producing it may be of interest.

The harvesting machines and sold in the hands of manufacturers would form a solid procession reaching from New York to Chicago, or would construct a fence around England and Scotland. The immense use of the new harvester would reach around the world, and the same would be necessary to haul the crop would make a train 50 miles long. The saving by the use of machinery in each year on American farms would more than pay the National debt of Great Britain.

PURE GOLD AND IRON FROM SAND.

The second article is of interest, and is the most interesting articles of the month, and deserves the most careful consideration.

No teacher has any business with a Commercial Geography class who is not a careful and methodical man. He is in the habit of having a table in his study, on which he keeps a list of his pupils, and no teacher has any place in a school room who can not or will not get his pupil interested in current events.

Have your pupils clipping from the papers, these placed upon the bulletin board or read in class. If your class is large, appoint a "Committee on Newspaper Investigation," and have its chairman report. Assign another committee on "Illustrations," and have these pictures pasted upon cardboard and hung about the rooms.

Have a committee on "Specimens." Have the specimens brought right into the room. Allow the pupils to examine them in their free time, and to have them placed in the "Museum." Have some specimens put up in your room and have the specimens neatly labeled and arranged. Some boards with small nails on the top may be used in the back of a class, if you will like to have it.

Work, think, plan, all the time. If you happen to wake up at night, let your mind devise some plan to get your dull boy brightened. If you have a newspaper reading room, you can so he will stand up for twenty minutes at a time and talk. If you can't reach him any other way, have him come to your house and help you arrange specimens, or gather them for you. Get his confidence, get him to forget self, get him on his feet, get him to talking, and you will have put a new soul into your once tiresome pupil, and, almost at a stroke, will have made a self-reliant, earnest man.

Don't ask very many direct questions. Have pupils look for their knowledge. Encourage good language, and good position on the floor. Discourage the boy who knows it all and wants the floor. Give him his chance, but hold him off when he intrudes another's time. Let the pupils do nearly all the talking. Encourage discussion when it is confined to the subject, and keep in mind the fact that no recreation should pass without the pupils getting together in the form of written work. This fixes the points in the mind, and, at the same time, provides a reference book for future use, if memory fails.

Do not overlook the patient, sympathetic, and dignified. Praise honest effort sympathize with honest work poorly done, and crush everything else.

Addition.

CHARLES S. CLARK.

From a purely practical standpoint there is no suitable subject for a new aspiring office assistant than addition. With offices now being in the counting department of clerical work, it is very much the ability to spell correctly. How often has a man been given a credit that he never received any great credit, but who can not make errors correctable.

It requires no very retentive memory to recall the days when most commercial schools' taken for granted that the pupil knew how to add, and the result was that neither speed or accuracy. This was in the halcyon days of the past, when theory reigned supreme in the business college world, and practice, prosaic, paddling practice—had it been delivered from the office—the place where good grades of a commercial student is composed to do go, if they should get an opportunity to do so.

Today, addition receives its share of attention in every well conducted commercial training school. The theory that graduates should know how to add has been annihilated by the antagonistic fact that they could not do so, and, consequently, the evils of inaccurate addition naturally raised the question as to what it is to be taught.

This gave an opening for the man with a theory. He was not slow to discover that the theory was heard in his advocacy. But the theory is preserved. The pupil is still made the worker. To the latter this paper appeals. The former will criticize it adversely. That is for privilege, and unappreciably forbid our nailing him of his prerogative.

And not discouraged, four figures, addition must be accuracy and speed, in the order of their importance. If the figure is sacrificed let it be speed, for speed. Multiply the importance of accuracy, but do not minify speed. Both are essential, both are important. They differ only in degrees. To teach speed impress upon your pupils the importance of practice. This will be found to be difficult in the case of many, as they believe themselves to be perfect in all things from the public schools. Begin to drill by writing on the blackboard, or any place, just so you are in position to be added. Take a pointer and passing down the line indicate those figures which are to be added. Ask the class to add them in concert; do not add the rows in regular order, but, the pupil who fails to have the exact number of figures right, and commit this to memory, and that in the future you merely want them to read the sum.

After five minutes practice, put down two digits adding figures to the pupil to glance at the three figures and call the sum. Move aim, without hesitation, quickly and accurately for discord incorrect results. When three figures can be handled, give practice in the figures, and continue the practice. Ten minutes each day devoted to this will quickly make an active, wide-awake teacher, will produce rapid results. The tablet for tablet drill vary the problem as much as possible. Problems; three figures deep and four figures wide, may be used for fifteen minutes; then from twenty-five to fifty digits may be used for both speed and accuracy. The problems may be gradually made longer, until the pupil can add with tolerable accuracy, problems consisting of one hundred figures, four figures wide and twenty-five figures deep. When this has been accomplished, take some of the methods explained in any work on rapid calculation and explain them to the class. The "dot" method, register-'

Should a Young Man Go to College?

Last October the editor was walking big game, trying to be a business man of national fame, for an address before the Commercial Teachers' Federation. Mr. C. P. Huntington, the famous author of the Southern Pacific Railway System, expressed some views in an important and timely vein of the death of the multi-millionaire, will be of unusual interest, particularly to those of our readers who teach, among other things, something about the great generation of the industrial armies, the "captains of the sea," as they are sometimes called. He said:

"My little speech in San Francisco, to which you refer, was of course but an outline of my thoughts on the subject of education, as I had not the space nor indeed the inclination to go into the subject more fully on that occasion. I will send you hereafter a printed copy of that speech that you may read and I hope will profit by it. I hope that you will correct any misinterpretation that may have been made of my attitude on that subject.

I would not wish to give the impression that I object to education, but I feel that too much attention to an education that will enable one to get a higher education than that which is necessary. The rules of life are so few and simple that I often wonder why people do not follow them. They will follow the rules for an advantage, and it seems to me that our children should be taught them, for they include right living, the saving of money at the time when you can stand these apparent sacrifices, and, finally, the utilization of the time after the day's work is done, which is important to every young man and young woman. I feel strongly on this subject, be-
cause I have been an indefatigable worker all my life, and whatever I may have gained in the way of wealth has resulted, first, from taking the work which lay nearest to me, trying to do it better than anyone else ever did it, watching the opportunities for self-betterment, giving full weight and measure and taking care that the hours of my leisure were spent healthily, both for mind and body. Almost any man can be comfortable in his old age if he will be careful in his youth, and almost all boys and girls are teachable if we will only teach them in the right way. Very truly yours,

C. P. HUNTINGTON.

In connection with the foregoing, the following extract from a contribution by Mr. Huntington to the September number of Success will be of value. Teachers should clip from the daily papers and from the periodicals sketches of such men as, Mr. Huntington, Mr. F. D. Roosevelt, Mr. Harriman, Mr. Carnegie, P. D.dbContext, and many others, and use them as subjects for school work in English classes, for debates, discussions of current events, etc.

As a tendency in our country, admirable as her institutions are, it is almost heresy to say it, but I do not mind taking the responsibility, for that is one of the things I am used to. I refer to the increase of the number of the names of Anglo-Saxon has easily outstripped all his competitors in those things which make for the commercial growth and the success of nations because he has been, above all others, practical. We have the preparation for professional life requires advanced knowledge, it seems to me that the vast majority of our young people spend too many of their vigorous years of school. The amount of work is insufficient in the practical work of life. The years from fifteen to twenty-one are especially valuable, for they are years of keen observation, individuality, and confidence. In many cases—quite too many, they are spent in cramming the mind with knowledge that is not likely to help a young man in the work he is best fitted to do. How many young men with college educations are standing about for something which will never come, because the work that lies nearest at hand is not to their liking? Somehow or other, our schools which teach young people how to talk do not teach them how to live. People need little, but want much. Since I first went to California, one-third of my mail has been made up of appeals for help, and these calls are equally divided between requests for contributions to help to pay off debts and mortgages which should not have been contracted, applications of young men out of work, who always have my sympathy, and cries for succor from the sick, the aged, the poor, who ask for whatever may be the cause of their sickness or poverty,—and the poor we have always with us. The sons of farmers are forsaking the fields because the cities are necessary to life. It seems to me that, slowly, but surely, there is growing up a stronger and stronger wall of caste with good honest labor on one side and frivolous gentility on the other. We seem not to be outgrowing those things which, when our fathers lived, were called "stereot services, the subjects which have been of the greatest advantage, to him, and state, as well, the points in which he found himself wanting when he went into actual practice. To be sure, I have no personal knowledge of conditions except as they exist in large cities, but I think my conclusions with some amplifications will apply to all localities.

The Commercial High School Course.

Within a few years, much attention has been given by writers on educational subjects, by prominent authorities, to a phase of secondary education, which, before the publication of a report of the United States Commissioner of Education for 1881, had not been held worthy of much consideration. Since the report referred to, containing Dr. James' exhaustive report on schools of finance and commerce in Europe, various commercial courses have been suggested for high schools. Following this, a distinctly commercial high school has been established by Boards of Education of several cities. Next to securing properly qualified instructors for the commercial high schools is the necessity of a proper course of study.

The view which I take of this course is one which has grown upon me during the fifteen years in which I have taught the commercial branches in a commercial high school in the business center of the Union. It is based on the belief that the public school teacher has a public trust, that he is a servant of the state, the public; that it is his duty to study the interests of his patrons at all times; to investigate the conditions and needs of the community in which he lives; and, in preparing a course of study, see to it that it receive attention first, and the wants of the few, second.

With this belief, some fourteen years ago, I began a series of observations which would lead to my being able to speak intelligently of the wants of the boys which were intrusted to my care.

The conditions of my pupils before and after leaving school vary from the sick, the aged, the poor, who ask for whatever may be the cause of their sickness or poverty,—and the poor we have always with us. The sons of farmers are forsaking the fields because the cities are necessary to life. It seems to me that, slowly, but surely, there is growing up a stronger and stronger wall of caste with good honest labor on one side and frivolous gentility on the other. We seem not to be outgrowing those things which, when our fathers lived, were called "stereot services, the subjects which have been of the greatest advantage, to him, and state, as well, the points in which he found himself wanting when he went into actual practice. To be sure, I have no personal knowledge of conditions except as they exist in large cities, but I think my conclusions with some amplifications will apply to all localities.

The Commercial High School Course.

Within a few years, much attention has been given by writers on educational subjects, by prominent authorities, to a phase of secondary education, which, before the publication of a report of the United States Commissioner of Education for 1881, had not been held worthy of much consideration. Since the report referred to, containing Dr. James' exhaustive report on schools of finance and commerce in Europe, various commercial courses have been suggested for high schools. Following this, a distinctly commercial high school has been established by Boards of Education of several cities. Next to securing properly qualified instructors for the commercial high schools is the necessity of a proper course of study.

The view which I take of this course is one which has grown upon me during the fifteen years in which I have taught the commercial branches in a commercial high school in the business center of the Union. It is based on the belief that the public school teacher has a public trust, that he is a servant of the state, the public; that it is his duty to study the interests of his patrons at all times; to investigate the conditions and needs of the community in which he lives; and, in preparing a course of study, see to it that it receive attention first, and the wants of the few, second.

With this belief, some fourteen years ago, I began a series of observations which would lead to my being able to speak intelligently of the wants of the boys which were intrusted to my care.

The conditions of my pupils before and after leaving school vary from the sick, the aged, the poor, who ask for whatever may be the cause of their sickness or poverty,—and the poor we have always with us. The sons of farmers are forsaking the fields because the cities are necessary to life. It seems to me that, slowly, but surely, there is growing up a stronger and stronger wall of caste with good honest labor on one side and frivolous gentility on the other. We seem not to be outgrowing those things which, when our fathers lived, were called "stereot services, the subjects which have been of the greatest advantage, to him, and state, as well, the points in which he found himself wanting when he went into actual practice. To be sure, I have no personal knowledge of conditions except as they exist in large cities, but I think my conclusions with some amplifications will apply to all localities.

The Commercial High School Course.

Within a few years, much attention has been given by writers on educational subjects, by prominent authorities, to a phase of secondary education, which, before the publication of a report of the United States Commissioner of Education for 1881, had not been held worthy of much consideration. Since the report referred to, containing Dr. James' exhaustive report on schools of finance and commerce in Europe, various commercial courses have been suggested for high schools. Following this, a distinctly commercial high school has been established by Boards of Education of several cities. Next to securing properly qualified instructors for the commercial high schools is the necessity of a proper course of study.

The view which I take of this course is one which has grown upon me during the fifteen years in which I have taught the commercial branches in a commercial high school in the business center of the Union. It is based on the belief that the public school teacher has a public trust, that he is a servant of the state, the public; that it is his duty to study the interests of his patrons at all times; to investigate the conditions and needs of the community in which he lives; and, in preparing a course of study, see to it that it receive attention first, and the wants of the few, second.

With this belief, some fourteen years ago, I began a series of observations which would lead to my being able to speak intelligently of the wants of the boys which were intrusted to my care.

The conditions of my pupils before and after leaving school vary from the sick, the aged, the poor, who ask for whatever may be the cause of their sickness or poverty,—and the poor we have always with us. The sons of farmers are forsaking the fields because the cities are necessary to life. It seems to me that, slowly, but surely, there is growing up a stronger and stronger wall of caste with good honest labor on one side and frivolous gentility on the other. We seem not to be outgrowing those things which, when our fathers lived, were called "stereot services, the subjects which have been of the greatest advantage, to him, and state, as well, the points in which he found himself wanting when he went into actual practice. To be sure, I have no personal knowledge of conditions except as they exist in large cities, but I think my conclusions with some amplifications will apply to all localities.
It seems to me, therefore, that any education which a business man has, and which makes him a better business man, is for him a business education, no matter whether it was obtained within the walls of a school or not.

There were successful business men in former generations; there are splendid business men today who never had the special training the commercial high school course offers. To give, through some of them, we have had the advantages of a business college course.

Now it seems to me, there is nothing mysterious in the question, and there has been no great difficulty in arriving at what constitutes a business education. We are merely, beginning to realize its value and necessity today, and the great danger of failure in our commercial courses, lies in our desire to do so much for our pupils that we over-estimate the value of some parts of the course we would offer, and by endeavoring to accomplish too much, fail to provide a sensible, practical, workable curriculum. Our inaudible desire to have a great school, should not obscure the need of having a good school.

Without entering into specifications, I may say that so far as that seems to be the case, the commercial courses adopted by our Boards of Education the past three or four years, have already been adjudged failures, so far as accomplishing the purpose for which they were intended are concerned.

A business education, such as our secondary schools should give, is not nearly so technical as many are wont to imagine, and in my estimation, it is that kind of education which provides the genuine workable facilities which are used in business and which provides that general knowledge which is useful in all business, and in some cases, the particular kind of knowledge useful in a particular business.

Now, I have no sympathy with those who sneer at schools which only attempt to turn out good clerks, and good bookkeepers and good typewriters. Nor do I regard a young man must begin in a subordinate place, oftimes being obliged to accept the first opportunity offered, and, unless he is competent to do well which he is given to do, he has no chance of success.

I have had this deeply impressed upon my mind, after each semi-annual graduation of the school in which I have the honor to serve. I have charged the superintendent, when questioned, to keep our employment bureau, for our school is so well known that we have frequently more calls for office help than we are able to fill, and I cannot fail to notice the disappointment which many show at being obliged to begin in places of slight responsibility.

The grammar school course, in cities, at all events, is defective in thoroughness in many respects: and some of its weak points should be points of strength in business education. There is a vast number in every city, who, because of their circumstances, cannot spend four years or even three, in a secondary school. It seems to me, therefore, that the first duty of the public commercial high school is to extend the work of the elementary school where needed, to show him what he is not provided with which will be of value to those who can stay but a short time in the course.

I do not believe that it is the function of the public secondary school to teach the philosophy of business, nor that, I believe, it is within its power to do so.

The course of study of a public commercial high school, must be exceedingly strong in those subjects which the 99% of those who attend will require (the essentials) and if possible, strong in those branches which will be wanted by the one per cent, who are expected to become bank presidents, officers, managers, etc., promoters of vast enterprises and the like.

The studies of the course may be grouped as follows: English; Mathematics; Science; Languages for Business; Business Courses. Commercial Subjects, taught separately as such, including: Writing; Bookkeeping; Arithmetic; Commercial Law; Stenography and Typewriting.

In the place to which I assign the first place in the commercial high school course, is English; by which I mean the "Art of Expression," in conversation and writing, and on one's feet in public. Right here the work of the elementary school may be supplemented with the utmost advantage to the pupil, for spelling must be taught regularly and systematically. The work of composition should be a part of teaching the boy to arrange his ideas logically and to state them as concisely as is consistent with clearness. The development of a literary style may be left until the third year, and the writing of the pupil must be taught as a part of the work of the third year. The pupil should not fail to the acquisition of a business style. The handwritings of many of the incoming pupils will be so poor, that penmanship, i.e., rapid and legible writing, must be taught as a special subject in the third year at least; and legibility and neatness in all written exercises must be insisted upon by every teacher, and nothing else accepted. The bookkeeping of the first year should be so simple but thorough, the most careful attention being given to the form and use of all the business papers, which would naturally be handled, if the transaction used as the basis of the work the first year.

The principles underlying the science must be dwelt upon with painstaking insistence, and presented again and again in ways which may tax the ingenuity of the instructor, until the pupil has memorized them, and can be applied correctly and without hesitation. At the end of the first year, the pupil should be able to open, conduct and close internal and external accounts. The principles of the need for acquiring general culture as well as the ability to perform the mechanical work of the annamnesis. The work of the second year and stenography should be mainly dictated upon various lines, with a view to acquiring speed. The notes of the pupil should be transcribed by him upon the typewriter, as soon as he has acquired sufficient proficiency to do so.

This work in dictation may be profitably varied by the pupils making their notes directly upon the machine.

Free hand and mechanical drawing should be taught as parts of the course of study.

The work which I have outlined thus far, may be completed, with the exception of...
English, by the end of the third year. It will afford an excellent education in the social sciences, and every pupil who has pursued it faithfully, under the guidance of properly qualified instructors, will have a thorough equipment with which to begin his business life at the end of the fourth year.

I will now refer to the other work of the course, briefly, not because I consider it unimportant, but because I feel assured that most makers of commercial high school courses will give it all the preference to which it is entitled.

The course in History and Civics should include General History with American History and Government as a part of the work of the first year. History of Commerce is appropriate for the work of the third year; while Economics, Political Science, and Modern and Industrial History may constitute the study of the fourth year.

The course in Mathematics should comprise Arithmetic, Algebra and Geometry, in the first, second and third years respectively. In Science, Physical Geography, Physiology, Chemistry and Physics are given to the first year, Commercial Geography and Physics to the second year, Chemistry and Natural Science to the third year, and Industrial Chemistry and the study of raw materials and manufactures to the fourth year.

From the department of languages, I would omit all but the modern tongues and they should be pursued not so much for their literary value as for their possible, practical utility. The value of the work in this department will depend very largely upon the ability of the teacher and his comprehension of the objects to be attained. A choice should be made between Spanish and German to be permitted on entering the course, and that a choice between Spanish and a second language be allowed in the second, and possibly a choice between French and a third language in the third year. In the third and fourth years in which any language is pursued, a part of the work of the pupils should be in business correspondence in that language.

Literature should raise upon me the necessity of bringing these suggestions to an end, though I feel I have only touched upon the essentials and possibilities of my subject. But, let me say, in conclusion, that I believe our most urgent need is the addition of new and remedied courses as new and remodeled commercial teachers.

What is needed in each of our great cities, is a thorough school for commercial teachers. They seem to me to be in demand, based on American needs, and adapted to American ideas, not that I would fail to recognize the splendid results secured in the European schools of commerce, or cast to the winds the fruits of their experience in commercial courses. Far from it. With the appreciation of what they have accomplished, let us make a practical use of what is advantage to us in our particular needs; and, benefiting by the experience of others, we may, as our models, build up, in this country, schools in every way their equal, and, as far as our needs are concerned, their superior.

Catalogues, Etc.

Should ornamental penmanship have a place in our commercial high school courses? That’s a question that now puzzles many commercial high school men when about to issue a catalogue.

There are a few who not only exclude everything of that nature in their advertising matter, but who do not hesitate to do what is absolutely unnecessary for their particular needs: and, in fact, by the use of the term ornamental, they mean to the public that if they made use of it, the public would suppose that they taught it. Yet, they do not hesitate to employ the use of fine, ornamental drawings, and no one accuses them of that.

We think they make a mistake. The truth is, that when the line of art is so attractive to a large number of the young people, as skillfully executed writing and penmanship should it not be used for advertising purposes? Ornamental writing and penmanship can be used more to in induce persons to practice penmanship, and thereby become first-class business writers, than any other method. The best penman of today owes much of their skill to penmanship, which is the most exciting influence of specimens seen years ago. Once the ornamental has captured the imagination of society, it requires a great deal of work to unseat it, and with the hope of teaching the ornamental penmanship even as the business becomes a pleasure.

Colleges of Chemistry, are certainly much to the advantage of their pupils, but they have thoroughly mastered the practical. Then, if he has to do with the subject, an ornamental, encourage him to take up the former. The field of the penman is extensive and promising opportunities, and as those possess a talent for music, penmanship, or in other lines should be encouraged, so should the aspiring pen artist.

The seventeenth annual catalogue of the Collegiate Lettering School, 304 N. W. Delano, Ina, a copy of which we recently received, is quite an elaborate and attractive catalogue. The large pages of enamelled paper, a large number of engravings, and some very good specimens of writing and teachers. The cover contains a very attractive name card and gold. The work reflects much credit on the publishers, and we trust that it will lead to great furthering of the interests of this well known institution.

A very neat and attractive catalogue of the Commercial Business School, N. Y., has been received. The work contains innumerable engravings, as well as several pages of well executed penmanship, and to which credit is due to work of printing in a catalogue.

The Bryant, Stratton & Smith Business College, 302 N. W. Delano, Ina, which we also recently received, is a copy of a very elaborate and attractive catalogue. This institution was established in 1904, and for the past seven years has been managed by Mr. W. A. Smith. The penmanship of the institution is superior to that of the well known penman, O. E. Shaw.

Another of the richest catalogues received at our office was issued by the Golden Rule College, Wilmington, Del. The work is profusely and interest ingly illustrated, and we are sure that the catalogues Golden Rule College very successfully embossed in ornate and fine penmanship in this institution.

The Wartburg Academy, Waverly, Ina, has issued a very attractive catalogue for 1906. The cover is attractive and its pages. A very effective title page and a broad one, which is in script, peels in the institution.

The Wartburg Academy, Waverly, Ina, has issued a very effective catalogue for 1906. The cover is attractive and its pages. A very effective title page and a broad one, which is in script, peels in the institution.

"Plain Facts About Modern School of Business" is the title of a fine catalogue just received from the Golden Rule College, Waverly, Del. The work is profusely and interest ingly illustrated, and we are sure that the works Golden Rule College very successfully embossed in ornate and fine penmanship in this institution.

Another catalogue considerably out of the ordinary is one recently issued by the W. T. Parks and Company, principal and proprietor of the National Business College, W. T. Parks, principal and proprietor of the National Business College, a copy of which we have received, and for that reason the work is considerably different from the average catalogue of the work. It is a most interesting and considerable in the line of rapid business script.

Another catalogue considerably out of the ordinary is one recently issued by the National Business Institute, Milwaukee, Wis.

The work is made up entirely of photos, or illustrations of the work of the institution. The catalogue, which is very effective and attractive, we think a very effective book in the style of the school. The copy that came to our desk was well received by the master, Courteny, and it could be a very effective piece of advertising.

Another catalogue considerably out of the ordinary is one recently issued by the Michigan Agricultural College, East Lansing, Ina, which is beautifully illustrated and contains a large number of beautiful half page photos, large size, and then the people who picked up a copy, for we are always glad to learn what such institutions are doing.

"Employers and Employees" is the title of another effectively gotten up brochure from the Above mentioned institution. This institution is now well known as one of the leading East Lansing, Ina, and "The Portrait of a well known as a high grade one.

The portrait of a well known as a high grade one. It is becoming known far and wide as the best advertising method in the world, the Secret of Success in Advertising. The secret of success is to be more than mere valuable, quick, and simple.

A very knowledge of the penmanship and penmanship and penmanship is a very attractive book in the world, the Secret of Success in Advertising. The secret of success is to be more than mere valuable, quick, and simple.

"The Portrait of a well known as a high grade one. It is becoming known far and wide as the best advertising method in the world, the Secret of Success in Advertising. The secret of success is to be more than mere valuable, quick, and simple.
Mr. Carl C. Marshall, editor of Learning by Doing, Battle Creek, Mich., has pooled his interest with those of Brother Palmer in the editorial department of the Western Penman at Cedar Rapids, Iowa. Mr. Marshall is one of the most original, vigorous, and entertaining writers in the practical educational world, and we congratulate the Western Penman upon the acquisition of his services. On the other hand, we believe he has done a good thing in associating himself with such a hustling, jovial, enterprising man as Mr. Palmer. We wish them the success they apparently enjoy.

A Conundrum to Us.

How business college proprietors, who are unable to pay them what they have, can have the sand, cheer, and audacity to engage others from a distance, and have them pay railroad fare, only to find they have been deceived, we cannot imagine. Can you?

Every now and then we learn of teachers missing good positions by being side-tracked by "promising openings," and "permanent" for the "right man," etc. We put such down as if it was a mighty small potatoes. "There are others," of whom we will speak later.

Is Vertical Doomed?

There are some persons who now seem to be anxiously watching for every word that is said against vertical writing, and who lose no opportunity to spread the news. In their exuberance of perjuria against vertical writing they cry out: "vertical is dead," evidently forgetting that where vertical is now adopted the slant style was once "condemned" also. But, of course, we could not expect such persons to behead the news when vertical is the slant and vertical adopted. That would be news not to their liking.

We have often said, and we say it again, that vertical should not be forced on all any more than the 32° slant should be forced on all.

Some persons take to the vertical—when given an opportunity, as naturally as a duck takes to water. That we know by our classroom experience. And that they hold it when they enter the business world, and write it as freely and easily as other write the slant, we also know to be a fact.

Now, should this inclination be squelched and the slant hardened into them? Certainly, if the antithesis of every way but their own, by right. We say, no. We are utterly opposed to the narrow, one-way-for-all method, and we believe in the God-given individual method of one way for each. Before leaving school and entering the business world each pupil should be given the opportunity of asserting his individuality in this matter—of finding his strongest points—of slanting or vertical which will soon be discarded when life's battles are begun.

We are not in favor of vertical against slant or slant against vertical. We believe that vertical possesses some good points not possessed by the slant, and that the slant possesses some not possessed by vertical. We further believe, that with many persons it makes so little difference which style they use, that with them it is really a matter of taste.

Vertical has taught many, who don't like to admit it, that the 32° slant is an extreme slant, and whether admitted or not, it is nevertheless a fact, that vertical has caused the great majority of penmanship teachers to considerably modify their ideas on this matter.

Come on, slant friends, and state your position. Do you want to go back to the old 32° slant for all, which was the acknowledged custom of writing before vertical made its appearance?

After all has been said on this subject, some persons will continue to write the vertical, and the number will be considerable larger than it has been in the past. They will write it because it suits them and they like it, and the ants will have to worry along in this old world for some time yet before they can get them to quit it.

"Necessity the Mother of invention." As a rule things come when they are needed—when there is a case for something better. In the fifteenth century there was a need of faster writing. As a consequence, the printing press and hand press were introduced. Several years later there was a necessity for faster methods of expressing, recording, and transmitting thought, and as a consequence shorthand, the telegraph, the Spencerian, the telephone, the typewriter and the phonograph, were evolved and invented. Many contrivances were invented to meet the needs that these have met, but somehow they failed. The patent office would indicate that there were innumerable more such want inventions. The Spencerian was not, like the other inventions, a radical departure from previous methods of writing, or an improvement of it. For nearly half a century it served satisfactorily that for which it was intended. But a decade or more ago conditions had so changed that the people began to think that writing was not as plain and speedy as desired, and better than that which had served for over a third of a century was needed. A conscious need was soon recognized by progressive teachers and authors and as a consequence a great many of the things we are now using was proposed for the betterment of the writing of the many. Muscular movement farm movement was proposed by some as the panacea for poor writing, and adopted by its adherents. Simplicity of form and action was proposed by others, and put into service. Vertical writing was another reform, and the one that gained unprecedented recognition. As a prominent penmanship teacher said: "It was not so much because it was vertical, but because the forms were new." Time alone can tell in what extent these reforms will go, or which of them will meet the need under modern conditions. A few things are now apparent. All are advocating and using simpler forms. Some are combining movements and simplicity; some, vertical forms and applying movement to slightly slanting simplified forms, and thus combining into one homogeneous whole the several heterogeneous methods. Thus it is, that of the old the new is evolved and applied a method superior to it. The necessity of plainer, speedier writing will result in such writing. Out of the old there will come a better way. We are not pessimists—are you?
We shall appreciate the thoughtfulness of our friends who send us news items. Any thing in regard to changes of teachers, opening or closing of commercial schools, or commercial department movements looking to the larger questions of commercial education, addresses by public men, on this subject, articles in newspapers, periodicals, or trade papers, bearing upon the subject of commercial training, in short anything that is likely to be in any way interesting to commercial teachers as such, will be gladly received. With the cooperation of our readers, it is hoped that these columns may become very interesting.

Mr. J. N. Mehant, President of the Capital City Commercial College, Des Moines, lowa, has been very sick for more than a year. We are glad to learn, however, that he has so far recovered his health as to take up active work in the office again. Congratulations, Brother Mehant!

Mr. Gisselman, Mr. Crane, and Mr. Williams of the four C's, made an extensive exhibit of pen-work at the recent Iowa State Fair. They are an aggregation hard to excel.

Burdett College, Boston, is enrolling more students than ever before, and that is saying a great deal, for this popular school certainly does not lack numbers.

Mr. J. F. Mosan, the experienced secretary of the old reliable Bryant & Stratton School, Boston, was seriously sick during the spring and summer. We are glad to note his return to his office, ready to push the interests of Mr. H. E. Hubbard's excellent school.

G. E. Crane toured Iowa with the C. C. C. base ball team during the summer. Out of twenty-five games he lost but four. We suppose this to be an advertising scheme. If so, we can only remark that it might not be necessary for a first-class school like this one to resort to a sort of Kickapoo Medicine Company's method of attracting attention.

Mr. S. D. Everhart, the genial gentleman who presides over the destinies of the Commercial Department of the Fifth Avenue High School, Pittsburgh, spent his summer vacation in Europe as the guest of the Daily News of Pittsburgh.

W. J. Lewis, who has charge of the Commercial Department of the Portsmouth (N. H.) High School, spent his summer vacation at Calgary, Canada, along the Canadian Pacific Railway, at the base of the Rocky Mountains. As this is the point of departure of the Edmonton Route to the Klondike, one of Mr. Lewis' friends thought he had "got 'em," and that teaching had lost its charms for him, but it seems that he merely wanted to escape from "conservative old New England long enough to fill his lungs with mountain ozone, and his body with the indescribable energy that makes Western "hustle."

Pierce School, Philadelphia, opened with about one thousand students last month.

The Gem City Business College, Quincy, Ill., has issued a catalogue showing an attendance last year of more than eight hundred students from thirty-three states and ten foreign countries. They expect one thousand and end this year.

From a recent letter from that prince of engraving artists, C. V. Howe, Chicago, Ill., we quote the following: George E. Ruggles, of Worcester, Mass., is spending his vacation with me. In addition, much of his time in our office on the script. I have never seen a more careful artist's admirer of the beautiful art than he is. In a short time he will rank with the very best script artists in this or any other country. With best wishes for the success of the Penman Artist and Business Educator, I remain, Fraternally, CHARLES V. HOWE.

J. F. Cooper has been chosen director of the Commercial and Penmanship Departments of the Denver Colot. Normal College for the coming year. Mr. Cooper reports that prospects for a large school this season are very flattering.

Geo. A. Parker, formerly of the Elyria Business College, Elyria, Ohio, is now principal of the Commercial department of Barna Viita College, Storm Lake, Iowa. He secured the position through the Zamer & Blower Employment Bureau.

E. A. Plummer, formerly of Indianapolis, Ind., has accepted a position with Eliott's Business College, Burlington, la.

The Graham Shorthand School was recently opened in Des Moines. It is backed by practical, successful stenographers, but at a distance, it seems as though the good people of Des Moines ought already to be well served by the three or four large short shorthand schools that have been running there for several years.

The Middletown (Conn.) Business College, conducted by A. J. Harding, is recently closed.

E. M. Olmstead, of Hartford, Conn., has discontinued her school, and will devote her time entirely to reporting.

Mr. R. L. Wilks, of the San Francisco Business College, left the Pacific metropolis, April 18th for a tour around the world, going to the Paris Exposition by way of Hawaii, Australia, and Spain, etc.

Mr. R. H. Burdett, one of the courteous proprietors of the famous Burdett College, Boston, spent the summer in Europe.

Charles M. Miller, the accomplished proprietor of the Miller School, New York, spent hi-s vacation hobnobbing with the energetic president of the Salene (Mass.) Commercial (Continued on Page 32.)
One of our great needs in civilization today is the ability to write more rapidly. Writing at best is too slow. After a fair degree of legibility, the thing to acquire is speed, not merely a mere facility to write a power. As soon as a pupil can write legibly, he is trained to write rapidly. There is such a thing as legibility enough, but no such thing as speed enough. This facility to write a power should be cut off from the letters in the initial stages of teaching handwriting, but the page has a clear cut, elegant and pleasing arrangement. The capacity to write, brings movement into consideration. The shape of the movement of the arm and hand mainly by impulse from the shoulder. It is an easy, true, and natural writing. All of true writing, either slant or vertical, is free, muscular movement, and without which speed in writing is impossible.

**CANNOT TEACH THAT WHICH THEY CANNOT DO**

My experience in teaching penmanship has been almost exclusively in public schools, and has had considerable experience in this particular line of work, however, and one of the most discouraging things I have had to combat is the inability of the regular teacher to present the work as I propose. The average teacher has not been trained in penmanship and consequently cannot teach what they cannot do themselves. An average teacher in a public school is not likely of building, once said to me after I had been working in that school a short time teaching minutes teaching movement to her pupils and insisting upon having it, "Do you expect all teachers to do that?" I was ready and collected to answer that movement myself, let alone teach it. Of course, I don't expect all teachers to do that; "Don't you think you could learn it if your pupils are?" was the next question. "Yes," was the answer, "I could learn it." That brought the question "Can I do it?" And the answer was "Yes, I could do it." I have occasionally there comes into your corps of teachers a bright, quick-witted woman who is capable of understanding everything she has to teach. Such a teacher will see the point and take the instruction with her pupils, enter into the very spirit of your teaching and will make a point of teaching writing, even if she has to go to the expense of buying a book and learning to -less by booking her approval when you may some day wish to speak to her or when you know you were there, if there is a school in the city that will do your work for you in the best way possible.

I do not insist in the upper grades that your pupils' handwriting be just like the models, but in understanding the characteristics to develop. This will come in time.

**A Little Nonsense How and Chen, Is Relished by the Best Penmen**

"Papa, what is a friend in need?" "A man round the corner who yells fire" when a fire is not there, and you ask any good excuse which you can get. It is not a bit of position will cause him to assume the correct position much more quickly than a combined with the ability to be successful as a specialist in public school work we must have the cooperation of our teachers. This means to be popular with your teachers, and in order to be popular with your teachers, you must understand the requirements of the various styles of handwriting and what is the most legible, and also the question, which is the most legible?

**IT TAKES AS MUCH TEACHING TO GET VERTICAL AS SLANT.**

The legibility of either slant or vertical writing depends upon the style of letters and the character of the writing. The three spaced letters, like the capitals and lower case letters of our alphabet, should be used at once to simplify the writing as much as possible. The difference between the letters in slant and vertical writing are very slight. The slant letters are to be made with a capital and horizontal letters two-thirds the distance between the lines and the slant letters can be slanting, the letters of the alphabet are slanted and the slant of the letters is not slanted and the slant of the letters is not slanted and the slant of the letters is not slanted.

**EEDUCATION**

The Penman-Artist and Business Educate
Lessons in Engraver's Script
Number Five

BY CHARLOTTE V. HOWE, CHICAGO, ILL.

The capital stem is the foundation for nearly one-half of the capital letters, and as it is a most important factor in the alphabet, it should receive much study and practice to be able to properly execute it. It should be made three spaces in height except in the G, F, and T. Exercise No. 1 illustrates the compound curve and the shade of the stem. It commences and terminates with a hair line. The second exercise shows how the dot of the stem is made. The first two dots are left open and the last two should then fill. The top of the dot should be one-fifth of a space above the base line. It should be made round but not too heavy. The curve at bottom of stem should be round and full. A common fault is to make it too flat. Exercise No. 3 shows the stem complete. Exercise No. 1 shows the oval in the letters P, H, and K. A common error is to make the introductory stroke-sufficient curve and aim to make the oval full. The shaded stroke to the right of the stem in the P should cross the stem about a space and a fifth above the base line. The shade on the compound curve should commence and terminate with a hair line. The space between the stem and shaded stroke to the right of the stem in the P is greater than the B. The space between lower shade and the stem in the B is greater than the space between the upper shade to the right of the stem. Notice that the small booms in the B and K point slightly downward instead of upward as in the Spencerian forms. The space between the shaded stroke at the top and to the right of the stem in the K is slightly greater than the space between the stem and shaded stroke in the B. The space between the lower shaded stroke and stem of K is less than that of the upper shaded stroke to the P and the space between the stem. The oval in the T and P should be made the same as on the P, B, and K, except they are one space in height while the ovals in the P, B, and K are a space and half proportionately as wide. The oval in the T and P end in a compound curve which should be three spaces and a half in from the left side of the oval. The shade on the compound curve should be placed to the right of the stem and avoid making it too straight or with too much curve. Don't make small spaces round or at small expanse, you will have a hooky appearance. Review all the small letters in the alphabet, especially in the execution of the small letters, that the capitals, for where one is used, it is not possible for the same proportion to make the small letters from one capital.

Criticism.

J. W. D. The principle fault with your work is lack of uniformity in slant, spacing and shading. Only persistent practice and study will enable you to overcome it. Make your letters more round and especially the connecting strokes between the various letters. Rule lines very slightly, then erase them with a sponge rubber. Cross on T is too heavy, try and remove it. Stem while you have made it with a heavy shade. Make your work frequently with the rule and if it does not look just right, try to find wherein it differs from the copies. Do not simply read over the instructions for practice, but study them carefully and strive to apply it in your work. Send me some of your best work on next lesson and apply yourself faithfully on the small letters.

Western Correspondence School of Penmanship.

BOULDER, COLORADO.

ORNAMENTAL DESIGN

Women can learn at home, in their spare time and at low expense, to make salable designs for embroidery, china decoration, carpets and other textiles, book covers, menus, etc., circular free. Students earn while learning. Our course, covering ground as resident art schools, is

Taught by Mail

International Correspondence Schools,
Box 250, Scranton, Pa.
Mr. J. C. Olson, the possessor of the accompanying connotes, was born in Denmark in ’72. In ’94 he came to this country with no knowledge of our language, customs, or institutions and began a new life as cowboy on the plains of Western Nebraska. In ’96 he entered the Western Normal College at Lincoln, Neb., and pursued for three years normal, commercial, and penmanship courses. In the latter he received instruction from Kinsley, Wallace, Lockwood, and H. C. Smith, and developed manual skill. He worked his way through the school by washing dishes, milking cows, waiting on tables and doing janitor work. The next year he succeeded Mr. Kinsley as teacher of commercial work and penmanship in the Normal. The following year he attended the University of Nebraska, paying his way by teaching in a Commercial College at Lincoln. Graduating from the University, he accepted a position at the head of the Commercial and Penmanship Departments, St. Mary’s, Nor. Normal School. After two years of highly successful work he resigned and opened the Parsons Business College of Parsons, Kans. Here he has succeeded beyond his fondest expectations.

Mr. Olson is a living example of success under difficulties. He is a church member and an active worker in the Y. M. C. A. As a penman he ranks among the best. If he were to make that a specialty we believe he could become one of the very few world’s best writers. He is also Vice-President of the National Penmanship Teachers’ Association; also Treasurer Kansas State Penmanship Association.

A FULL COURSE of instruction in rapid and ornamental lettering, for Display Signs, Show Cards and Tickets, engraving Marking Pen, Shading Pen and Brush Lettering. A new field for clerks to increase their earning capacity. My new booklet gives full particulars. Write for it. Address W. A. Thompson, Pontiac, Mich.

Freakish, Frisky Forms.

The Seventh of a Series of Twenty-Four Script Alphabets Illustrating as Many Practical, Unique, Ornate, Freakish, Characteristic Hands.

The forms here presented are not intended for business unless it be the business of card writing. For the latter it is not a bad hand by any means. It is rather a novelty in the penmanship line than a stable article. It is so in all lines. Fact without fancy is too worldly for the best and highest good. People in all professions need relief from routine duties. They need variety and license. License to do as their fancy dictates rather than to dissipate health and morals.

After the day’s work is done, or to relieve the monotony of it, there is no reason why the person possessed of skill may not revel in hook and turn and angle, just the same as the athlete delights to jump and turn and twist and run. The forms given are for the purpose of offering suggestions and for inspiration and inspiration to those who are climbing the penmanistic ladder. Note the intermingling of turn and angle, hook and oval, curved and straight lines. Pauze at most of the sharp angles and curved angles, as by so doing you will be enabled to collect and centralize your best efforts for each succeeding stroke. For it is quality rather than number of strokes in a given time that is desired. See how much refinement of stroke and beauty of curve and oval and angle you can infuse in each form. Let the movement be free and apparently frisky, but under the control of the will and eye. Use the fingers but little. Let the action come from the arm. Let the elbow be the center of action for the small letters—it should act much like a hinge.

Bear in mind that these forms are not broad-and-latter winners so much as record-breakers and reputation makers in the line of professional skill and fancy.

THE ADVANCED TABLET.

1. A Set of PHOTO-ENGRAVED copies.
2. Complete Instructions for pupil and teacher.
3. Thirty-six teachers joined in issuing it.
4. Falmestock, Courtney, Salsor, Harrer, Crane, Backus, Ramsden, Tandy, Fry, Long, Pentez, Fish, Bencs, and others.
5. Twenty-eight large pages 8 x 11.
6. Used this year in McPherson (Kansas) College; Kansas State Normal; Tuscaloosa Institute, Port Denton, Maryland; Aurora (Ill.) College; Spencer’s Business College, Kingsport, New York, and many other schools.
7. Send for terms for Introduction, and 20 cents for sample copy to W. C. STEVENSON, President, Penman’s Publishing Co., Emporia, Kansas.
Frederick. Fischer. Forme.

Lessons in Practical Vertical Penmanship

BY E. F. ETTENBERG, DIRECTOR, MANUAL TRAINING, DRAWING AND WRITING, ATLANTIC CITY PUBLIC SCHOOLS

Being somewhat adverse to accepting excuses for the failure to perform that which, for some reason, has become the duty of any individual I am inclined to think that the readers of the PENMAN-ARTIST AND BUSINESS EDUCATOR will treat, in like manner, any excuse I may offer for not fulfilling my obligations to them. Permit me, therefore, that sickness and business-matters of considerable moment to me made it quite impossible for me to prepare lessons in time for publication.

I wish to acknowledge my great obligation to Mr. Zaner for his skillful work in supplementing such excellent copies and valuable suggestions in the absence of my article.

Proceed your work on this lesson by a review of the direct traveling oval as illustrated on the first plate. When this has been done fill a few pages with exercise No. 9, during which practice stroke or concentrate your mind directly upon the form you are attempting to make. Notice how the strokes are retraced when the forms are reduced to small "a's."

The change in this manner of making a, d, g, q, and o, over the more common habit will soon be obvious to all who give it a thorough and impartial trial. A few ill directed efforts will not be sufficient evidence upon which to formulate a positive opinion.

I have used this form in my own writing and have taught it to the pupils of the intermediate, grammar and high school grades for more than two years, and am convinced beyond a doubt that it is the best method we can use in making these letters.

The fonder we change the direction of a reverse a motion in any physical act the more energy do we expend, and hence the fewer changes we make the less is our expenditure of time and energy. It is much easier to make the under stroke of a direct oval turn than the reverse, therefore we should adopt it whenever we can.

Study the "d" exercise and practice it carefully, thinking the forms while you make them. After the habit has become apparently easy place your watch before you and see if you can make seventy-five of "d's" in one minute. You should gradually increase your speed to one hundred "d's" per minute.

Practice the other exercises in regular order.

Notice that the motion in capital "I" has been reversed from the time honored custom and yet it retains its identity and is made with half the effort required by the old way. The motion is almost identical with that used in "n."

When you come to the word "Madagascar," you will find something that will interest you. Write it well eight times in one minute and increase your speed to twelve words per minute. The speed for the word "Madagascar" may be increased from ten words to fourteen words per minute.

Art Paragraphs

Art in general is the work of man upon Nature, her manipulation of the phenomena with which Nature supplies him.

All Art constantly aspires towards the condition of music.

Whenever Art becomes imitative, it becomes stationary; and, as soon as it is stationary, it dies.

Feeling rather than thought, sensuousness rather than intellectualness, is the essence of Art.

Art lives and grows by the changes it develops, and it is not destroyed by its changes.

Art is primarily the result of the perception and loss of unity.

The imitation theory of Art has a slight truth to begin with, but it presents as with a great error found with.

"Art is Art," says Goethe, "precisely because it is not Nature."

Art manifests whatever is most excited, and manifests it to all. Value, one has no doubt that as we gradually grow wiser we shall discover at last that the eye is a nobler organ than the ear.

Painting is thought conveyed to canvas.

Apel, John Ruskin.

A Genuine Feast

The initial number of the PENMAN-ARTIST AND BUSINESS EDUCATOR reached my hands this morning. In glancing over its profusely illustrated pages, one is treated to a genuine feast of the artistic and useful in chirography, art and business training. I am confident that so meritorious a publication will receive a very cordial reception. Yours with heartfelt wishes for success,

Aug. 15, 1899.

J. E. GUSTIN,

Gustin School, Moline, Ill.

Mr. K. C. Atticks, whose portrait appears above, was born on a farm in York county, Pa., in 1858, where he was raised and received his early education by attending school during the winter months. At the age of fifteen he passed the teachers' examination but on account of his age was not assigned a school. He then attended the normal at Millersville, Pa., and received his first inspiration in penmanship from Mr. G. C. Kaynor, now of Brooklyn, N. Y.

For four successive winters he taught school in his home township, and attended the normal in the summer. In '96 he graduated at Millersville and in '97 he attended the Zanerian, and later on, graduated. In '98 he attended Patrick's Business College, York, Pa., and taught in the English Department for his tuition, expenses, etc. In the fall of the same year he engaged with the Baltimore Md. Business College where he remained two years. His work there was most pleasant and afforded him privileges for self improvement which he wisely employed. To Mr. Norman he feels specially grateful for kindness and instruction given. This year he was elected as teacher of penmanship in the First Penn. State Normal School at Millersville, from which he had graduated four years previous.

The fact that Mr. Atticks secures employment at home is some evidence of his true worth, both as regards ability and character. He is above the average in skill and intellect, and as to character and morality, he enjoys a most enviable record. The profession is certainly the better for his being in it, and we predict for him success in his new field of usefulness. He follows such first class men as Kaynor and Haeberle, but we believe he will not only follow them but fill the position successfully as did they.
Lessons in Sepia Painting

Number Two

BY W. E. GILMORE, CANTON, OHIO

Having learned to spread out or "wash in" the sepia, let us try to get different tints. For this purpose composition pictures are very good. It is supposed you are able to draw well, for this is the first essential. Take different sized slongs and in these draw flowers or other plant forms to fill this space in proper proportion. Study your drawing to see if you have it arranged natural, not too nearly filling the space to be decorated, for this is a sort of decorative scheme for such cover designs and page ornamentations.

In the dogwood drawings, after the outlines are carefully made in pencil, a very light tint of sepia is "washed in," being careful to get it on quickly, and leaving the flower untouched, but painting right over leaves and stems. After this is dry, we mix a little more paint so as to get a slightly darker shade, and paint stems and leaves; after this "coat" is dry, a still heavier black of sepia is painted over the leaves, giving us the three degrees of color. Then the outline is brought out by tracing over the original penciled lines with the color.

The five smaller designs from copies were painted in the same manner by seventh and eighth grade pupils. Note the evenness of tinting on the background of the fret border.

Art Decorations in Public Schools.

The decorations of school rooms with works of art is not a fad or craze, but a means of education adopted in our best schools.

Well-selected pictures for the walls or a school-room have a twofold value: First, they develop a love for the beautiful; second, they serve to impress the lessons taught from text books.

One of the attributes implanted in every human breast is a love for beauty, something entirely outside the realm of utility, something apart from our material existence. The fact that this characteristic is not manifest in all men's lives does not argue that it has been left out in their make up. The universal instinct is not shown because it has not been developed. The majority are trained to recognize only that which contributes to their physical necessity.

In the natural surroundings of the masses there is little beauty to be observed and few opportunities for development. There is but one institution to which we can look to inaugurate a great and lasting reform; to overcome the baneful effects of our crowded lives—the public school. The most valuable period for character building is the first ten years of a child's life. The mental tablet is then clear, the impressions engraved thereon can never be wholly effaced.

In the early spring time of life the germ of promise may be nurtured and developed by the skillful hand aided by suitable surroundings, or they may be allowed to fall into premature decay through ignorance and unfavorable conditions.

Too much cannot be said for the correlation of art with other common school studies. The half-formed, dim idea grows in clearness when presented to the eye. Art makes the commonplace more interesting by approaching it from the imaginative side. Dry historical facts when illustrated with photographs and engravings, at once becomes intensely interesting, and are so impressed upon the mind that they are not easily forgotten.

The drawing teacher would gladly turn to a picture on the wall to illustrate the principle of perspective or where lights and shadows should fall. She cannot accomplish any higher purpose her work, that of leading children by means of their own attempts into touch with minds that have given expression to their high conception in painting and sculpture, without the school environments is such that her efforts are supplemented by the presence of some of the masterpieces of art.

The primary aim of those interested in placing works of art in the school rooms, is not amusement, but entertainment, nor decoration, though the place where the child spends the majority of his waking hours should be made bright and cheerful, homelike and attractive, but to bring the pupils into direct and constant communication with that which will awaken in them a love for all that is beautiful, and the power to put beauty into their own work and their lives.

The many good books, attractively illustrated that have been published in recent years, and through public libraries, placed in the hands of boys and girls, have without doubt, to some extent crowded out the de-moralizing or worthless dime novel, so reproducible of the best there is in art, that now can be obtained so reasonably, will crowd out the meaningless drab and the immoral picture.

MRS. CLINTON MOORE.

—Business Educator, Butte, Mont.
Automatic Lettering
Show Card Work. Number Two

BY G. W. HESS, OTTAWA, I. L.

Materials needed; black card board 1 1/4 inches; marking pens 0, 1, 3; gold, white, and pink ink; and a pencil compass. Draw a line lengthwise through centre of board with pencil. Do same with engraving. Study your layout. Compound curve will be hardest. Set compass to draw circle seven and one-fourth inches in diameter; place compass on a point six and five-eights inches from top of board on centre line and swing part of base line in centre. Change compass to eight and one-half inch circle and place point one and one-fourth inches from right side of board at the very top and swing to right. Same on left side. This gives finished base line as I have it, if you have done as I say.

"Zanerian Alphabets" is made with No. 1 mark pen except "Z" which is No. 3 pen. Above your base lines are 26 parallel lines seven-eighths inch above for top guide line. Make your lettering follow curves. "Alphabets" is three-fours inch high and letters are as wide as high.

All other lettering is with "6" marking pen and is exactly seven sixteenths inch high, except where caps are used which are five-eights inch high over in some cases on your card first, you have height of lettering. Rule head and base lines. Figures are one inch high. When white is thoroughly dry, take some thin pink in marking pen No. 1 and put dots on Zanerian alphabets. The remaining treat with "6" pen "holding up" a straight line across, filling in with gold ink. Use compass for curve lines; also use a ten cent ruling pen for curves and lines with gold. All lettering is done with white ink. Stir your ink with a clean stick. Have ink well mixed and pen clean. The bright student will readily see how he may work this up on white board with colored ink.

For best work on blackboard received up to Dec. 1st, a prize of $1.50 in work is offered. Try it; don't be afraid; ask questions; it's not so hard.

[Mr. Hess informs us that for eighty-four cents he will send a blueprint, full size, of the design with this lesson, showing color scheme, etc. This represents actual cost for printing, mailing, etc. - EDITORS.]
Resolved, That when space is limited and matter voluminous a compact style of script, somewhat like this only letter is desirable and indispensable. We do not mean that any other condensed style of marking or lettering could not be substituted for the writing.

Lessons in Engrossing
BY H. W. KHUB, 117 TREMONT STREET, BOSTON, MASS.

Number Two.
In this lesson take particular care to shade and slope uniformly. Do not make any wedge-shaped shades but endeavor to get a uniform color between head and base lines. Read the last sentence again; it is important that it be kept in mind.

A Short History of Writing.
BY W. H. LOTHROP.
Of the thousands who are using the pen daily but few realize that the development of the hand writing of the present has taken centuries to reach the perfection of the letters of today. From the earliest records to which man has access its progress can be traced step by step, century after century, and from the pictured writing on ancient monuments to the running hands writing of today the transition can be traced. The records that were made early in the Christian era show the beginning of the development of a current hand, and its knowledge being confined to a few who exercised their learning in laboriously drawing or printing the characters representing the letters.

The most marked changes occurring soon after the invention of the Roller Press, and which event has had a lasting influence upon our handwriting.

The Monk who ornamented his text with elaborate and beautiful designs, sometimes in gold and colors, and the regular scribe who engrossed the text of a book, found their occupation gone as engrossers began to teach the art to others where as before the advent of the press, they were continually employed in the preparation of books, charters and edicts that required knowledge as well as skill in the use of the pen. But few could write. The monopoly practica

Bartlett's Bombshell
Mr. C. M. Bartlett, of The Bartlett Commercial College, Cincinnati, O., has issued a large 28-page catalogue of the Department of Shorthand and Typewriting of his institution. We quote the first sentence, which is as follows:

"This pamphlet is issued to present to the public our reasons for maintaining that the Gregg system of shorthand is in existence, and that the Teach System is the best method of operating the typewriter."

It is not often that a school issues such an expressive publication, the main object of which seems to be to "boost" a system of shorthand rather than win students for the institution.

It presents some pretty strong arguments and testimonials in favor of the Gregg system, which will, no doubt, arouse to some extent the promoters of other systems, if they wish to prevent further inroads into their ranks.

THE PENMAN ARTIST AND BUSINESS EDUCATOR takes no sides in such matters, but no matter how we may incline as regards the best system of shorthand, two things we think all will concede: they are, that the "Greggites" are presenting their claims with unusual vigor, and that they are capturing a good many of the shining shorthand lights of the profession.

Let the good war wage merrily on, and let the best triumph.

GILLOTT'S PENS
FOR FINE WRITING
Nos. 1, 75, 101, 604 E. F., 106.

FOR ARTISTIC USE in fine drawings, Nos. 80, 159 (Rose Quill), 602, 652, 600, and 106.

FOR GENERAL WRITING,
Nos. 104, 352, 404 E. F., 105, 107, 106, and Court House Series 104, 120, 106.

FOR VERTICAL WRITING,
Nos. 801, 1005, 1017, 1065, 1066, 1067.

FOR BROAD WRITING,
Nos. 152, 1006, and all others.

FOR DECORATIVE USE TO 12 INCHES HIGH,
Gold Medal Paris Exposition, 1878 and 1889.

AND THE AWARD AT CHICAGO, 1893.
THE MOST PERFECT OF PENS.
Joseph Gillott & Son, 21 John Street, New York.
School. They went to "Jersey's foreign shore" and fished. They allege that they caught half a thousand luckless denizens of the deep, but they do not tell us the price of fish down there. However, they are true sport-men, and never fish for "suckers," either at home or abroad.

Mr. E. Dwyer, recently principal of the Rockton Business University, Brockton, Mass., will be in charge of the commercial department of the West Springfield (Mass.) High School this year. Mr. Dwyer is a Western man, full of vigor and capable of doing excellent work along broad lines.

C. E. Doner, who for several years has been the graceful penman of the Spencerian Business College, Cleveland, Ohio, resigned his position in July. He spent his vacation in New England with Editor Gaybird and last month entered an academy in Granville, O., to prepare for a four years' college course, which he will accelerate through Mr. Doner is a noble young man, of splendid character and singularly winsome disposition, as a professional writer he stands as near the summit as any man need care to go. He will yet be heard from in more influential work.

H. B. Lehman, many years ago a student at the Spencerian, under P. R. Spencer, Jr., has taken Mr. Doner's place. Mr. Lehman has rare skill, and has filled satisfactorily the most important positions in the country: Sadler's B. & S. Business College, Baltimore; Spalding's Business College, Kansas City; and the famous Northern Indiana Normal School, Valparaiso, Ind.

Mr. James Ren, one of the brightest teachers in Packard's, was honored by being asked to contribute to the June number of Success the address he gave at the banquet of the Eastern Commercial Teachers' Association held in Boston last April. Mr. Ren had another article in the July Success entitled "Why Many Fail to Gain and Hold Good Positions."

A new commercial department has been established in the Wakefield (Mass.) High School, and Miss Alice E. Morse, formerly commercial instructor in the Atlantic City (N.J.) High School, will have charge of it.

W. W. Fry spent his vacation at his summer home in Atlanta, Ga.

Mr. K. J. Shoemaker, the able proprietor of Shoemaker & Clark's Fall River Business School, was married to Miss Caroline Sherman Read, of Fall River, June 27th. Everyone who knows Mr. Shoemaker will gladly join in congratulations and good wishes.

Handsome advertising matter comes to our desk from the Polytechnic Business College, Oakland, Calif.; Bliss Business College, North Adams, Mass.; Chandler Short-hand Normal School, Boston; and the four C's, Des Moines, Iowa.

C. S. Clark, whose article in this number of The Business Educator will be read with great interest by every commercial teacher, is now engaged with the New York Institute of Science, Rochester, N. Y. Mr. Clark has sold his interest in the Fall River school to his former partner, K. J. Shoe- maker.

F. L. Haeberle, recently with the Poly- technic Institute, Brooklyn, N. Y., has charge of the commercial department of the Shattuck School, Faribault, Minn., this year.

Miss Lillian Edgerton, formerly in charge of the shorthand department of the Bradford School, Boston, will this year have charge of the commercial department of the Van Lennas (Mass.) High School.

A. W. Dudley, who for many years has been with the Metropolitan Business College of Chicago, has purchased from John R. Sturr, the Marshall Business College of Marshalltown, Iowa. The school will be removed to the Woodbury Building and will occupy the entire third floor, the first being occupied by the First National Bank. This is a very fine new building, with all modern improvements, and has been especially arranged to meet the requirements of the school, but the school anywhere has better facilities. The floor space is 60 by 90. The equipment, though very good now, will be increased and improved. Mr. Dudley will have charge of the commercial work, and his son-in-law, Mr. Carroll R. Johnston, who has had several years' business experience and is now cashier in the General office of the Grand Pacific Hotel, will assist and look after the business affairs. Mrs. Belle Dudley Johnston will have charge of the shorthand and typewriting work. Mrs. Johnston has had several years of very successful experience in a large business office. The school hereafter be known as Dudley Business College.

The Central Business College, Toronto, Ont., have every reason to expect a very large attendance during the present season. Their enrollment for the past year was as follows: Commercial, 300; shorthand, 32; telegraphy, 47; and their average daily attendance during the winter months was about 360. Surely this institution is well patronized.

Have you read our ad, page 15—Western Correspondence School of Penmanship?

Specimens Received

A letter in a splendid business hand and some signatures, etc., in a fine ornamental style, came from A. R. McDewitt, formerly penman in Scio (Ohio) College. He says that the future of their institution seems unusually bright.

Some very finely written cards came from A. E. Klotten, Cortland, N. Y. Mr. Klotten is rapidly becoming one of the masters of the pen.

W. McGehee, a fine penman of Allegheny, Pa., sent a lot of cards written in different styles. His work is good, and we doubt not that his customers are well pleased with his work.

W. F. Gesseman, of the C. C. C. College, Des Moines, la., favored us with a photograph of a large set of resolutions he recently engrossed. Mr. Gesseman is an all-round penman, educator, man.

J. D. Valentine, Jr., Bellefonte, Pa., sent a number of well executed signatures, etc., in ornamental style.

H. C. Franz, penman in the Metropolitan Business College, Minneapolis, Minn., sent a lot of exceptionally well written cards. Mr. Franz is pushing his work up with the best of them.

J. D. Long, Boulder, Colo., sent some splendid business writing on blue paper with white ink.

H. O. Keebling, penman in the Indianapolis (Ind.) Business University, sent a lot of very well written cards of various colors, and a well executed letter in the artistic style. All were written with white ink.

S. C. Bedinger, Kansas City, Mo., a student of C. W. Ramson, sent some good business writing which shows that he is mastering the work nicely.

W. K. Conner, penman in Bridgewater (Va.) College, sent several pages in masterly business writing and some very well written cards in the ornamental hand.

E. S. Heath, Concord, N. H., sent his subscription to THE PENMAN-ARTIST AND BUSINESS EDUCATOR for one year, and also enclosed some excellent specimens of ornamental writing. Mr. H. is certainly one of the best penmen who is not engaged in the work.

A poster or show card design done in colors on dark paper with the automatic shading pen by Mr. G. W. Hess, Ottawa, Ill., is received. It is a fine example of the practical and the pretty combined — of business and beauty wedded into one harmonious, serviceable whole.
Hints on Illustrations, Etc.

BY R. SIGMUND.

A flourishing branch of commercial art is the drawing of pen portraits, for reproduction. The style of pen-drawing must be suitable for reproduction, an account of their good printing qualities, is the careful mechanical style.

On page 75 in Zanez's book, "Portraiture," is an excellent specimen of this style. The portraits, says the one made by R. Sigmund.

The portrait by Banemama is different; it is highly artistic, full of character and a true likeness. We insert this here to facilitate comparison between the mechanical and artistic styles.

The mechanically drawn portrait is in demand. The strong parallel lines are clean and orderly and make my Lady's cheek extremely smooth and free of dimensions.

When drawing a portrait in this manner it is essential to make each stroke count; every line must mean something and must be necessary. The spacing and the left or thickness of the several lines require practice taking care to maintain uniformity of thickness, as I have done in the first trial, not the placing, spacing and thickness of line, the likeness depends, which is of greatest importance in any kind of portrait.

Beginners and others who find it difficult to make a good line, or a single good line, practice making good lines, no shading, just strong lines, then make curves, etc.

Later practice spacing, five, ten, fifteen lines, either straight or curved, each parallel to its neighbor. Take time, exert all energies at every stroke. Perservere and practice for hours every day and in about one or two years you will rank with the few who can draw really good lines.

The large portrait has been but little altered. It is given for style and copying. Those who desire a genuine pen portrait may procure one for 25 cents from R. E. Hummel, 110 Bliss St., Chicago.

BY R. E. HUMMEL.

By the way, I am situated and about the facilties at my command. My office is at 149-166 Monroe St., in the very center of the business district. The left of my office is the largest electrotype plant in Chicago, to the right is an engraving establishment employing at present twelve men. That's why I can watch your work from start to finish. I understand the various processes of engraving and consider myself a judge of Zinc Etchings, Half-tones and Woodcuts. My price for Zinc Etchings is 60c, for square inch, Half-tones $1.60. I will see to it that your copy is right before it is engraved and examine the plates before they are shipped. Let me hear from you.

R. E. HUMMEL.
Mr. F. B. Sweet, whose portrait appears herewith and whose art appears on the title page of this number of the P. M. Y. X. E. E. at the age of nine became interested in penmanship through penmanship journals, and later studied and practiced wood engraving and crayon portrait work. While learning lines in the manufacturing of chalk plate engraving and later did such work on a number of Eastern journals, his specialty being portraits and cartoons. The past year he has been engaged in photographic work, letterhead design, etc.

The title-page design speaks volumes for his originality, fitness, and artistic sense. It is certainly one of the finest ever presented in a penman’s copy, and his business cards and letter heads are unique, delicate, and attractive. Mr. Sweet knows how to apply beauty to business. The title-page heretofore is a combination of pen and ink, opaque water color, and photographic work.

Broadens But Does Not Flatter

I wish to offer congratulations and good wishes for the success of your journal, I like your new issue, and wish you success, dear sir. Your excellent journal is broadens but does not flatten. This indicates a healthy growth. Success in all your enterprises. You can count on some of your present supporters. I shall use your lessons in my school the coming year.

Danville, Ill.

Brown Entertains

The following article was clipped from The Galena Argus Ill., Evening Mail of Aug. 23. It gives a good idea of what the energetic W. B. Brown is doing in shorthand. Mr. Brown is at the head of seven business colleges in the State, and seems to be one of the men who can successfully maintain a chain of high grade institutions.

The Teachers Institute and Gregg shorthand and typewriting at Brown’s Business College closed this morning, with an exhibition by Charles Mahoney, a 16-year-old student of the Gregg school in Chicago. This boy is a bright little fellow, and it is only fair to him to say that he has had no special preparation and had never before been called upon to give such an exhibition. He was first given dictation in shorthand, and took one test at the rate of 36 words per minute, without once looking at the keyboard. He was next blindfolded, and wrote in shorthand on the blackboard 90 words per minute, from dictation or new matter which was handed to Prof. Gregg to read to him. When the shorthand was removed from his eyes he read his notes without an error. He then wrote 130 words per minute at a desk, blindfolded, and read his notes accurately.

The exhibition was given not so much to show the possibilities of the Gregg system and of touch typewriting, but rather to demonstrate their simplicity by showing what could be accomplished by ordinary school room training, even with one so young.

The exhibition was witnessed by several prominent citizens, who pronounce it remarkable.

President Brown left this morning for Paris, and the teachers go to their several homes tonight, for a week’s rest before the opening of the fall term.

Profs. Gregg and Shimer, who have been the instructors, express themselves as well pleased with the results, and satisfied that the shorthand and typewriting teachers of Western business colleges are well prepared to present these two important subjects to their students during the coming years. The teachers are proud in their praise of the week’s work, and the hospitality shown them, not only by President Brown and Principal Caldwell, but by the citizens of Galena generally.

SPECIAL OFFERS

In order to further enhance the rapidly increasing circulation of The Penman-Artist and Business Educator, we now wish to make some extremely liberal offers.

These offers are not intended to be unlimited as to time, and may be withdrawn at any time, so we would advise persons who desire to take advantage of them to do so without much delay.

THE BEST HOME STUDY WORKS YET PRODUCED.

The works described below must not be confounded with the cheap books on the market, many of which are a jumble and reshuffled specimens of all sorts thrown together with no regard to the fundamental principles of fine work. Our books have been prepared at a large expense, especially for the home learner, and unquestionably form the most valuable, up-to-date, and complete series of home study publications ever published in these lines of work.

Each work starts the student at the beginning and takes him over a well graded and complete course of study and practice.

The copies and examples are of the highest grade and most inspiring kind known to our profession, and the instructions accompanying them are so plain and to the point that none can fail to learn and succeed. The results obtained by subscribing for The Penman-Artist and Business Educator, and using it in connection with these works, each number of which contains lessons in every branch of the teachings treated, and these monthly lessons will fire your ambition each time received. In other words, when you receive a copy of the journal each month, it will act as a splendid stimulus to growth with the work with increased vigor. Thousands are now taking our lessons in this way, and we have the first-hand report that they receive. All are making rapid progress and are already beginning to find the expense is but a trifle when compared with the usual charges for correspondence instruction.

With every work you wish to master, subscribe for the journal and secure one or all of the works mentioned herewith in connection with that branch. Then go to work. If you desire a number of the works at one time, write for specials.

**Entirely without doubt, the most elaborate and costly book ever published on this subject. It measures 9 x 11 inches; weighs over four pounds; contains over 200 leaves; gold title and edges; bound substantially in cloth; and printed on the finest heavy paper. The price is $60.00. It contains full page plates in Script, Flourishing (two double page specimens) suitable for framing worth alone 70.00. Alphabets, Headings, Designs, Resolutions, Family Record, Marriage Certificate, Diplomas, Etc. Etc. We have purchased the entire edition of this work and no more will be published. The edition is very limited. Order before all are gone or before the price goes up, which it soon will as it becomes scarcer. We will accept stamps, time or two, but prefer money orders for amounts above one dollar. Do not send foreign payment, stamps, personal checks. All payments to be mailed securely in tube. Postage prepaid.

Have a certain characteristic originality in method, subject matter and arrangement, which has won for them a conspicuous distinction for superior merit in the estimation of commercial educators.

THE BUDGET SYSTEM OF BOOKKEEPING

Came as a revelation of new ideas in teaching the laws and practice of bookkeeping and modern office practice. It has since been accepted as the standard by which all others are measured. It was the first AND TODAY IS THE ONLY SYSTEM THAT WILL PASS THE INSPECTION OF THE PRACTICAL ACCOUNTANT AND BUSINESS MAN. They recognize it because it accurately reflects the actual work of the counting room and office, and imparts such a training as will make it unnecessary for the beginner to unlearn things when he accepts a position.

Lesson in Practical Writing

GOOD PENMANSHIP IS A MONUMENT TO CARE, INDUSTRY, AND PERSEVERANCE.

Care If I were to epitomize into one word that which I perceived to be the one chief essential in and for good penmanship, that word would be care. Carelessness is the chief cause of poor writing, while care is the chief cause of good writing. Be careful, first, to secure the right general movement, second, to acquaint yourself with a simple, strong, legible alphabet, and third, to watch closely details, such as angle and turn, retracing and loop, spacing, etc. Strive to avoid common errors as persistently as you endeavor to acquire good forms and easy, enduring movements. Do all work with as much care as circumstances and time will admit, and never go beyond legibility in speed. You will have to use gray brain matter in learning to write well the same as in learning to shoot well, play ball well, talk well, or do anything well that is as difficult as the art of writing well, and as desirable.

No. 15 Figures are used more and more each day, and their importance increases thereby. Figures should be intensely legible unmistakable. Context in writing aids one to decipher letters, but in numbers each figure must stand on its own merits; it cannot depend upon its neighbors. Study the forms closely; draw them carefully once or twice. Do not begin the figure 7 with a short, upward or horizontal stroke or it may be mistaken for 1. Keep the oval of 6 low or it may resemble 9. Do not curve the final stroke of 2 downward or it may be confounded with 3. The 9 is an abbreviated g. Begin the same as 6. Invert it and it looks like S. Avoid large loops in the center of 3 and 5. Learn to be sure and rapid. Let the hand rest it need not slip on the little fingers in making figures. Use hand rather than finger movement. Take one form at a time and fill pages of it, always systematically, until you can make it unmistakable and quickly.

No. 16 Begin and finish each form with a firm, sure touch, rather than with an elastic, uncertain, spasmodic action. Keep figures in columns by training the eye to take in the columns while making the figures. Make all figures about the same size. The 6 may extend above and the 7 and 9 below the other forms. Begin 2 and 3 the same, and finish the 3 and 5 alike. Figures may be joined but there is no necessity for it, as there is in letters. If you do join them, avoid such combinations as 3 and 1, 5 and 7, etc.

Study and practice the %, @, etc. characters critically and carefully. As they are a combination of letter and figure forms, the movements should be a mixture of finger and arm. Quickness is as essential as plainness, when it comes to business, and that is where these forms are employed most. Therefore write the characters rather than draw them. "Be quick" is a modern business injunction. "Be sure" is as necessary today as before quickness was demanded.
No. 17 Make the compact exercise with a free, arm movement—the forearm working diagonally in and out the sleeve. Aim to produce a gray tint with as few white or blue spaces as possible. The second and third forms need to be made with a free fall \( \text{t} \) with a cross instead of a dot. Do not raise the starting down in order to secure a good retract. Never place the cross after the letter as it then crosses the with wide-spacing. Use some finger action in this letter the word \( \text{titter} \) about ten times in a minute and dot the \( \text{t} \) and cross the \( \text{t} \)'s carefully. See that there are no angles at the bottom in the words given. Finish each word as carefully as you begin it. Use a free and apparently easy movement at all times.

No. 18 Make the exercises on the top line with an easy, rapid motion at the rate of about 15 down strokes to the minute. Use pure compact movement and do not pause at the bottom. Begin the \( \text{N} \) and \( \text{X} \) with a dot or short dash and keep the letters sharp at the base and round at the top. Avoid loops at the base and angles at the top. When finishing the letters above the line, as in joining to small letters, see that they are finished with turns instead of angles at the base line. The \( \text{N} \) exercise should be made at the rate of about 30 \( \text{N} \)'s a minute, and the \( \text{X} \) at about the same ratio. The movements are much the same as in the small letters, only more upanddown and less lateral. Watch the spacing between letters and words on the last line. There should always be a little more space between words than between letters. Use but little finger action in the extended letters; the motions of the arm can be trained to make letters well, easily, and rapidly—the three essentials in a good handwriting.

No. 19 See how uniform you can make the compact, retracing exercise. Use no finger action in the forms on the first line. The \( \rho \) should be made without raising the pen, and with but little finger action. By inverting the letter you will discover that the lower and first part of \( \rho \) is similar to \( \text{d} \). There may be, if extend the letter a space below the second part or it may first part of \( \rho \) resemble \( \text{f} \) of \( \text{f} \)'s as it does in the raising the pen and with considerable freedom and speed, fingers to excess. Much finger action weakens the forms. Be sure to maintain turns—where there should be turns and angles where there should be angles. No other one thing will insure as much legibility. Writing must be legible, and, to be valuable commercially, it must be rapid.

No. 20 Parse at top and bottom of the angular exercise. Make about 60 strokes a minute 35 down strokes. Study the \( \text{W} \) closely. Keep the angles at the bottom open. Do not make the second part low or narrow. Keep second half same width as first half. Do not loop first part at bottom. Keep first down stroke as straight as possible. Write the word \( \text{Win} \) winning with ease and considerable speed, about ten times in a minute. At that rate of speed you ought to get turns where there should be turns and angles—where there should be angles. You ought also to get something more than mere legibility. You ought to get considerable uniformity and accuracy. In the retracing \( \text{W} \), parse at the bottom of the first and second parts, but make the letter with a quick, elastic, graceful arm movement. Watch closely the space between words in the sentence, and strive to maintain uniformity in height and slant of letters. Willingness to do makes almost any art possible and easy. If you are wanting a good handwriting, and are willing to work for it, there is no doubt but that you can acquire it.
No. 21 There is no one way that is best for all, but there is a way that is best for each. As a rule, that individual way is discovered and developed unconsciously while endeavoring to acquire and reproduce a common standard. Some pupils will unconsciously write larger than the copy, and others will write smaller. In a similar manner, some will produce a compact, and others a running, hand. But we sometimes also get into individual ruts that are detrimental to our progress. To enable pupils to get out of these ruts, nothing is better calculated to do so than to practice upon the four styles in this plate. Practice one at a time until you can write it well and freely. After having learned to write large and small, compact and running hands, you will find that you will be able to write the standard style better and easier. This will your own hand be improved by attempting something else. The small hands can be written faster than the large hands, but for some people and some purposes the small hand is too little and the running hand too wide. As a rule it is best to avoid extremity in style as a final product.

The commercial world is demanding as never before rapid, legible penmanship.
Good writing is therefore an asset that no young person can afford to neglect to acquire.

A good handwriting is not unlike a bank account—it is something you can utilize when in need. No other one element of an education is as easily turned into dollars and cents. It is the one thing that charms and convinces at sight. It speaks for itself and its owner in a silent yet effective manner. It tells the tale of perseverance, industry, care, neatness, and skill. Study the above copy. Note the spacing between words as well as between letters. We read by words rather than by letters, therefore do not run words together, on the one hand, or separate them too far on the other. This matter of spacing becomes automatic after the period of learning is passed. Learn to space properly and then you will always space well—it will become "second nature," and that is the test of all good penmanship.

These are clippings from Practice-sheets by Patrick Flynn. E. Lexington, Mass. Are they not business like?

Criticalisms

G. B. III. Your practice is rather slow. Employ more arm and less finger action. Review and perfect the tracing oval in the first lesson. Dash the capitals off rather than draw them. Your movement is too cramped. You are improving.

H. F. W. Your practice is in the right direction. Endeavor to etracte the oval more compactly. Greater skill will result therefrom.
P. E. Mass. You'll do. Pen a trifle course at times. Don't cross your capital practice. Final turn in wide space is too rounding. When striving for accuracy, do not write quite so freely. Ovals did not reproduce well. Ink too blue.

E. H. C. Your ovats are O. K. Your small letters are X. G. Get down to chase, careful, systematic practice in the small letters. Let ovats alone. Work on small letter exercises.

K. P. H. Practice more systematically. Be more decided. Watch turn and angle closely. You begin C too high. Look at copy critically, then at your own C's. You'll see—If you look closely. Come again.

D. C. D. You ride the pen on the down strokes. Let up. Otherwise your work is good. Use a less flexible pen—a coarser one. Your down strokes are rather rigid—the turns are therefore a little angular at times.
Lessons in Professional Business Writing

BY H. E. LEHMAN, CLEVELAND, OHIO, WITH SPENCERIAN BUSINESS COLLEGE

Lesson Number Three

Practice a little while on the movement exercises before you take up the capitals. Your movement must be regular. The best way to regulate the movement is to count one for each downstroke. Touch the paper very lightly with the pen.

When you take up the capitals, make the whole set and then pick out your weakest letters, and keep on doing this until your letters are all the same size and quality. If you find that you are not strong enough in your movement to execute capitals with a pure fore-arm movement and do fair work, then take up the movement exercises frequently until you acquire an easy and free movement. No one ever learned to write a good business hand without first mastering the movement. A quick movement is necessary to produce a smooth line. A slow movement will show roughness and irregularity in the lines.

In making capitals you have some very delicate turns to make and it will be necessary for you to watch them closely. Capitals should be made about three times the size of the small letters, so they can be distinguished readily from small letters.

Do your work neatly. Work with good material. Your desk should be clean and your practice paper should be free from ink blots, finger stains, or any other kind of carelessness so frequently found in the writing room.

The First Prayer in Congress

which is for sale by W. C. Fees of Dunkirk, and, whose advertisement appears elsewhere, is a good example of engraving and is intended to be framed and hung upon the wall as an artistic, historical, eventful piece of literature. We think all would be pleased with it.

I wish I could tell you one and all, just how our finest penmen of today write.
writing as no other living person writes, with position, execution, ideas and results that are your own. Now the object of these lessons is to tell you as best I can how to learn to write, to write as does Courtney, Doner, Cuman, Bloser, Tammlyn and many others who write the ornamental style. Do not imagine that you can master these forms and become skillful in this work in a short time. It takes as to become skillful in any way, and I am confident penmanship is no exception to the rule.

Who will make a success of the work? Those persons who have embedded in them a sincere desire to become skillful along this line. Those students who are awake to the times, and who are moving with the times. Those individuals who are so enthused and interested in the work that they think of nothing else from dawn until dusk. Those persons who have the ambition, vim and determination to persevere. These are the ones who will succeed. So enter into the work, heart and soul.

Now in the beginning, what have you accomplished from Lesson One? Have you deserted that old, unhealthful, cramped position of yours and taken a new one as suggested? Have you created movement enough, through practice on exercises to be able to make them freely and easily? If not, you should before proceeding. Better begin right than wrong you know. If you have, let us proceed.

You should, by this time, be using a free and easy action of the arm, so do not center your thoughts upon the “movement” part of the work, but more upon the “result” part. This movement should now be allowed to take care of itself. It will, unconsciously. Center your thoughts upon the form you are endeavoring to make.

The preliminary exercises at the top of the plate should be mastered before beginning the letters. See that your shades are comparatively short, sleek and fat, and your ovals full, free and graceful. Your shades should be produced with a firm but not spasmodic action. The fingers must not act. Shading requires what we might term a “double” action. Not only must the pen be driven in a circular motion to produce a full and graceful oval, but it must be forced down and up at the same time to produce the shade. It is this “elastic” action that produces the smooth and sparkling shade which distinguishes the work of the professional from the efforts of the amateur. Notice just where the shade should be on each letter. See that your initial and final ovals are horizontal or nearly so. Gracefulness of line and symmetry of form are among the chief essentials of ornamental writing. Forms should be full and well rounded, and lines should be delicately curved to be of the greatest value. The lines, too, should be smooth and delicate yet strong. They should be faint, yet firm. Contrast of light and shade is another essential. It is the occasional brilliant, black shade on the light, delicate line that gives to the work that illumination and beauty. Hence neglect form study. It is most important. Pause after each effort and study your results. Pencil the forms out slowly, and endeavor to ascertain just what a perfect form is. Then try to produce that form freely and easily. Persevere along these lines and you will surely improve. Send on your practice, one and all. I want to hear from all who are following the lessons.

Criticisms

A. H. M., Rome City—Your work shows an ideal foundation upon which to build. Ink not very good. Pen too coarse. Close small 0 and a at top. Send work regularly.

Jennie C., New York—You have not mastered movement exercises in line 1. Your movement is weak and cramped. Put in more time on movement exercises. Come again.

Milner, St. Louis—Your work was best received. You have certainly covered much of the road to success in this line. Let nothing stop you. No suggestions to offer.

E. J. D., Ohio—Ink seems to be too thin, and quality of paper very poor. Would suggest a little more slant right through. Write smaller and endeavor to put more force into your work. Send your latest efforts on Lesson One.
COMMERCIAL EDUCATION

In the Western states regarding the present condition and the probable future development of departments for commercial training in high schools. The field seems to be an inviting one, and commercial teachers, everywhere are watching with interest the growth of this new branch of public education.

The movement is not restricted to any particular section of our country. Bangor established such a department in her high school last year, the only one in the public schools of Maine. Atlanta is setting the pace for the South by opening an important department in her high school this year. Omaha is doing good work, and is to be congratulated that in Superintendent Pease she has an educational executive who believes in the dignity and worth of commercial training on broad lines. Brooklyn has a large Commercial High School, and, besides, very important commercial departments have been opened in her West English High Schools. Philadelphia has, in the Girls’ High School, a commercial department not surpassed in size by any other in the world. More than a thousand girls were registered in it in September. The Central High School conducts a Department of Commerce, under the direction of Professor Cheeseman A. Herrick, a man of scholarly attainments, one who has his educational faith to the possibilities latent in broad training for commercial life. Professor Herrick’s department is large, and is rapidly increasing in popularity. Pittsburgh has in its Fifth Avenue High School one of the oldest and best commercial departments in this country. Cleveland has just opened a new high school in which is a well organized commercial department, and throughout the West the larger cities are offering these courses.

The effect of this movement is, in the beginning, to draw from the classical, scientific, and Normal courses, but as conditions become better understood, the natural proportion is observed. Those who would have gone to college are finding both teaching and college preparatory work, and the most of those who could not go to college take the commercial course as a preparative for college or business life, or as a general training.

The Commercial Course will not greatly interfere with the high standard of scholarship already reached in many high schools, by directing pupils to an apparently less difficult course, unless the course is a short one. Except the pupils who are to take a commercial course be selected from those who have spent at least two years in the high school commercial course, and are not able to do the high school course, the courses be of equal length.

There should be no queaking about the influence of private business schools in inducing young persons to leave their high school work, because, it may be said, they could accomplish in the business school more in one year than could be done in the high school in four years. Such assertions are too absurd to cause any harm. Honest proprietors of commercial schools do not pretend to compete with high schools. They make no defense that they have an inferior course. The high school is giving general business training, the private business school gives special clerical training.

Their fields of labor are absolutely distinct. The business school that gives a young man a good training for the duties of a bookkeeper or accountants is a necessity. The modern commercial department in high schools and universities is a necessity arising from the complex conditions of modern trade and competition. The boy, when he is 16 years of age and the office boy was the possible future partner; now the office boy knows that the stenographer is infinitely closer to the business manager and promotion than as office boy he can ever hope to become. The time is rapidly approaching, however, when shorthand writing will not be altogether so helpful as a stepping stone as once it was, because to be merely a fair stenographer, or even a good one, will not necessitate the broad knowledge that the future business manager must have. As the stenographer is infinitely closer to the business manager and promotion than as office boy he can ever hope to become.

The large, well-equipped right-ly conducted private commercial schools will survive. They must survive, because of the increasing demand for their product. So long as there is a demand of the high school and the university survive, because in its product lies much of the support of the nation in its fierce rivalry with other nations for foreign trade.

We have been, chiefly, an importing nation; we are rapidly becoming principally an exporting nation. Goods are sold abroad, as at home, by agents. These agents, factors, travelling salesmen, etc., must be able to peruse, to convince, to tell a draper’s yarn, in the language of the people. He must know something about their habits, their likes and dislikes. He must know whether they want goods packed in red or blue boxes (strangely enough, it makes a vast difference to some people), whether fast steamer, or by sailing vessel, whether large railroad or ocean freight, etc., which countries, etc., estimated on gross or on net weights, etc., on net valorem schedules. He must know whether the current interest is worth its face in our market; whether he can exchange for gold. He must be acquainted with railroad and water rates, their comparative cost and the relative speed and safety with which they transport goods. He must know enough of internal trade to protect his employer’s rights in a foreign country; in short, he must know much that can be taught only in a university course.

Commercial Teachers for High Schools

To aspire to teach any of the work properly belonging to his department, a teacher is praiseworthy. He ought to consider what it means to take up such work. Letters come to us from teachers who not only are not college-trained, but who are not even trained in the business offices, and who are not qualified to teach all of the subjects included in an ordinary business college course. These teachers desire a position in the public schools, but many of them do not realize that a small faculty and comparison will be turned on them and their work in high school teaching. In Massachusetts, more than in any other state, this new movement is in favor, but, employing commercial teachers, it is comparatively a rare thing to find here a high school teacher who is not a college graduate.

Precééedence of the College Graduate

It is self-evident that a commercial teacher who is not a college graduate cannot expect equally favorable consideration in competition with applicants who have had the larger intellectual training. It is true that many schools are now advised with high-minded people who are not college graduates. But wait five years, until some of the present well-organized university courses in commerce and finance are well under way. The new departments then will not lack the business colleges for their teachers. Besides, positions now held by otherwise good teachers will become conveniently vacant for university trained men. Let this not sound a note of discouragement, except to the unworthy prepared; rather let it encourage those who are determining to obtain the best possible preparation for a high service. We commend to our readers, in this connection, the vigorous article by Mr. E. H. Barber, in this number.
The Commercial Academy of Vienna

"Wiener Handel Akademie"

Charles Louis Hurt, Professor of English at the Academy of Commerce, Vienna.

(Continued from October.)

When Dr. Sondorfer undertook the management, the Academy was encumbered with a heavy debt. Thanks, however, to his care and energy, this debt has been entirely cleared off, and a handsome profit is now realized, which is devoted to the Professors' Pension Fund.

Present Organization.

The Commercial Academy of Vienna is now divided into four departments:

A. A One-Year Course (Abiturienten) for students who have successfully passed through a Grammar School (Gymnasium), or a Realistic School (Realschule), and who wish to study commercial subjects.

B. A Three-Year Course for pupils who have passed through the Lower Grammar School (1 year), the Lower Realistic School (1 year), or the Preparatory Class (C).

C. A Preparatory Class.

D. An Evening Class for young men employed in business.

A. ONE-YEAR COURSE.

The subjects on which lectures are given in the One-Year Course are as follows:

OBLIGATORY SUBJECTS.

Commercial Arithmetic, 5 hours weekly.
Counting House Work, Book-keeping and Commercial Correspondence (Model Counting House), 8 hours weekly.
General Commercial Knowledge, 3 hours weekly.
Commercial Law and Laws Relating to Bills of Exchange, 2 hours weekly.
Political Economy, 2 hours weekly.
Encyclopedia of Technology, 2 hours weekly.
Commercial Geography and Statistics, 3 hours weekly.
Political Arithmetic—Calculation of Compound Interest, Annuities, Mortgages, Pensions, Insurance, etc., 1 hour weekly.

NON-OBLIGATORY SUBJECTS.

French, English, Italian—Language and Correspondence, 4 hours weekly (each language).
Financial Science, 3 hours weekly.
Custom House Laws and Practical Manipulation, 2 hours weekly.
Calligraphy, 1 hour weekly.

CERTIFICATES.

In order to obtain a certificate, the student must pass an examination in all the obligatory subjects, with the exception of Political Arithmetic, and he can also receive marks showing his proficiency in the non-obligatory subjects. Should he fail in single subjects, he can, with the consent of the Professors, offer himself for reexamination after the summer vacation. The Term commences at the beginning of October, and lasts till the end of June.

B. THREE-YEAR COURSE—OBLIGATORY SUBJECTS.

FIRST YEAR.

German Language, 3 hours weekly.
French Language, 4 hours weekly.
The pupils must learn two of these three languages, and may learn the third in addition.

English or Italian, 3 hours weekly.
Commercial Geography, 2 hours weekly.
History, 2 hours weekly.
Mathematics, 3 hours weekly.
Commercial Arithmetic, 3 hours weekly.
General Knowledge of Trade, 1st Half-Year, 4 hours weekly.
Counting House Work, 2nd Half-Year, 2 hours weekly.
Book-keeping, Single Entry, 2nd Half-Year, 2 hours weekly.
Theories, 3 hours weekly.
Chemistry and Chemical Technology, 2 hours weekly.
Handwriting, 2 hours weekly.
Total, 31 hours weekly.

SECOND YEAR.

German Language, 2 hours weekly.
French Language, 3 hours weekly.
English or Italian, 3 hours weekly.
Commercial Geography, 2 hours weekly.
History, 2 hours weekly.
Commercial Arithmetic, 3 hours weekly.
Mathematics, 2 hours weekly.
Handwriting, 2 hours weekly.
Total, 31 hours weekly.

BOOK-KEEPING BY DOUBLE ENTRY, 3 hours weekly.
Commercial Correspondence, 6 hours weekly.
Commercial Law and Laws Relating to Bills of Exchange, 2 hours weekly.
Chemistry and Chemical Technology, 2 hours weekly.
Knowledge of Goods and Mechanical Technology, 3 hours weekly.
Handwriting, 1 hour weekly.
Total, 31 hours weekly.

THIRD YEAR.

German Language, 2 hours weekly.
French Language, 3 hours weekly.
English or Italian, 3 hours weekly.
Commercial Geography and Statistics, 2 hours weekly.
General and Commercial History, 2 hours weekly.
Commercial Arithmetic, 3 hours weekly.
Political Arithmetic, 2 hours weekly.
General Knowledge of International Commerce, 2 hours weekly.
Model Counting House, 5 hours weekly.
Commercial and Trade Law, 2 hours weekly.
Political Economy, 3 hours weekly.
Knowledge of Goods, 2 hours weekly.
Total, 31 hours weekly.

NON-OBLIGATORY SUBJECTS.

1. Practical Work in the Chemical Laboratory, 4 hours weekly, for pupils of the 1st, 2nd and 3rd years. Fee: Kronen 20 per half-year.
2. Practical Work in the Laboratory for the Knowledge of Goods (Warenkunde), 2 hours weekly, for pupils of the 1st, 2nd and 3rd years. Fee: K. 10 per half-year.
3. Custom House Laws and Practical Manipulation of Goods in the Custom House, 2 hours weekly, for pupils of 3rd year. No extra charge.
4. French Language, 3 hours weekly, for pupils of 3rd year. No extra charge.
5. Shorthand Writing in Two Annual Courses of 2 hours each weekly, for all the pupils of the Academy. No extra charge.

SESSIONS.

The School Term begins in the middle of September, and lasts till about July 10th. The hours for obligatory subjects are from 8 A. M. to 1 15 P. M., with a pause of 20 minutes at 11 A. M. and from 4 to 5 P. M. on Thursdays. The non-obligatory subjects are taught in the afternoons.
The Penman-Artist and Business Educator

CERIFICATE.

At the close of each School Year the pupils of the Three-Year Course receive a certificate showing the progress made in each subject. The Final Certificate, which is signed by all the Professors under whom the pupil has studied, as well as by the Director, and which includes the subjects, such as chemistry and mathematics, learned in I. and II. year, but not continued in III. year, entitles the recipient to serve one year in the Austrian army, instead of three years (Einhjährige-Freiwilligewege).

GRADING.

The marks given in this course, as well as in the One-Year Course, are as follows: "Excellent," "Very Good," "Satisfactory," "Sufficient," "Insufficient." If a pupil in the Three-Year Course has at the close of the Term the mark "Insufficient" in two or more obligatory subjects, he receives a Second Class Certificate, and is obliged to repeat the whole year's course. If he receives the mark in only one subject, he is allowed, if his conduct has been good, to offer himself for re-examination in that subject before the commencement of the next school term. If he fails to pass then, he is obliged to repeat the whole year's course. In addition to these marks, marks are also given for conduct, for diligence, and for care and attention in the writing of exercise, conversation, etc.

PREPARATORY CLASS - PURPOSE.

This class has been established, with the sanction of the Ministry for Public Instruction, to enable pupils who have not passed through the requisite classes of a Grammar School, or a Realistic School, to enter the Three-Year Course at the Academy. They receive no certificates; but at the close of the Term they are examined as to their fitness for the Three-Year Course.

PREPARATORY CLASS - COURSE OF STUDY.

German Language, 5 hours weekly.
French Language, 5 hours weekly.
Geography, 2 hours weekly.
History, 5 hours weekly.
General and Special Arithmetic, 5 hours weekly.
Physics, 7 hours weekly.
Natural History, 1 hours weekly.
Handwriting, 2 hours weekly.
Total, 30 hours weekly.
The School Fees in these Courses are 200 K. per annum, an inscription fee of K. 5, and a contribution of K. 100, representing the cost of textbooks required in school.

Evening Classes - for Commercial Subjects.

This course begins at the commencement of October, and closes at the end of April. The subjects taught are: Commercial Arithmetic, General Commercial Knowledge (Handelskunde), Book-keeping and Correspondence, Commercial Geography and Knowledge of Goods. There are at most 50 students in a class, and if sufficient numbers are entered, parallel classes are opened. The classes are held every evening with the exception of Sundays, from seven to nine. Certificates are given of the results of the examinations. The fee amounts to Kronen 40 per annum.

BOOKS.

Almost all the books used in these courses are written specially for the use of the school by Professors of the Academy, and most of them are used in many other commercial schools in Austria, Germany and Switzerland.

NUMER OF STUDENTS.

The number of students frequenting the One-Year Class amounted in the school year 1899-1900 to 142. In the Three-Year Course 697 pupils were entered, of whom 656 remained until the end. In the Preparatory Class there were 64 pupils, and 50 students attended the Evening Class.

ARRANGEMENT OF CLASSES AND REGULATIONS.

The Three-Year Course is divided into four parallel classes for each year, named A, B, C, D. Thus there is an A 1 class, a B 1, etc. Each class is under the special supervision of one of the Professors ("Classenlehrer"), who is responsible for the discipline of the class. The pupils' parents can obtain all information as to their sons' progress, from these or other Professors, or they can apply to the Director, who is ready to receive them in his office every morning between nine and ten. All marks given, and, if necessary, observations as to conduct are entered in a catalogue, of which there is one for each class. Two pages of a catalogue are devoted to each pupil: in these are entered his name, address, etc., and there are columns for the marks in each subject, also showing in which month they were given.

FINANCES.

Applications from men of business want- ing employes are made to the Director of the Academy towards the end of every school year, and students who have passed their examinations seldom find any difficulty in obtaining employment at once.

THE TEACHING STAFF.

The faculty consists of present of the Director, who lectures on International Commerce, twenty-five Professors, nine Academic Teachers ("Docenten") and six Assistants.

THE PENSION FUND.

This fund amounted on August 31st, 1899, to Kronen 665, 316. Pensions were paid during the year to the amount of K. 24,700.

ASSISTING STUDENTS.

Stipends, founded partly by corporations, partly by private individuals, to the amount of K. 3,000, are granted annually to needy and deserving students of the Academy. A fund for the support of needy pupils, and to supply them with school materials, has an income during the School Year 1899-1900 of Kronen 806. This amount is raised partly among the pupils, partly from outside subscriptions. The fund is administered by pupils, chosen by themselves, from each class, under the supervision of some of the professors.

TRAVELING FUND.

A Traveling Fund to enable ex-students of the Academy to study commerce in different foreign countries was founded in the year 1885, at the instigation of Director Sonnböher. The first to contribute was His Majesty the Emperor, who gave Kronen 10,000 to the Fund, and within a year K. 120,000 were raised for this purpose. This year ten Professors of the Academy have received stipends of K. 1,000 each, to enable them to visit the Paris Exhibition, and to report to the Academy on any objects they may see there affecting their respective departments of instruction.

BUILDING.

The School House contains, besides the
large lecture room for the One-Year Class, thirteen class-rooms, each capable of seating from 58 to 64 pupils. In addition to these, there are special halls for the chemical and physical lectures, where experiments can be exhibited to the pupils. Adjoining the Director's office is his private residence.

MUSEUM.

The Academy possesses a large Museum of Merchandise, containing articles presented by friends of the Institution, or purchased by the Academy, which devotes a certain sum to this purpose every year. A speciality of this Museum is the collection of adulterated goods, which can be compared with the genuine articles. A large Sclipticon is also found of the greatest service in instruction, and fresh photographic plates with scientific geographical and ethnological subjects, etc., are continually being acquired. The handsome Entrance Hall of the Academy is fitted up at 11 A.M., with buffets at which the students can obtain their luncheon. In front of the Academy are statues of Columbus and of Adam Smith.

In conclusion it may be remarked that the Vienna Academy of Commerce has a larger number of pupils than any other commercial school in Europe, and that the Director is constantly being requested by foreign governments to give detailed information as to its organization and arrangements. The Academy received the highest distinction, the Diploma of Honor, at the Universal Exhibition of Vienna in the year 1873.

Vienna, July, 1900.

"The Laborer is Worthy of His Hire"

EDGAR M. BARRER.

The following correspondence is submitted as the basis of a few remarks upon the text which appears at the head of this article. The names indicated by the blank spaces can be supplied, if necessary, from the originals, which are in my possession, but for the preachit which is to follow, the identity of the party of the first part may be suppressed without serious loss to those readers of this journal whose sense of humor has not been wholly perverted.

The — College,

Professor E. M. Barber,
Packard Business College,
New York City, New York.

DEAR SIR:

Will you please advise me whether you desire to make a change next year, if so I wish that you would communicate with me at your earliest convenience. The position I have in mind would require your services daily from 9 to 1:30, and four nights each week from 7:45 to 9:45. I am informed that you would make such a change if a satisfactory position was offered you.

With very great regards, I remain,

Yours very truly,

(Signed) ———,

Office of the Appraiser of Merchandise,
Port of New York,
February 9, 1900.

Mr. ———,

DEAR SIR:

Your letter of the 9th instant has been forwarded to me from the Packard School. In reply I have to say that the intensity of my desire to make a change next year will depend largely upon the inducements offered. I will give careful consideration to any proposition that may be submitted to me.

Assuring you of my appreciation of the courtesy included in your communication, I am, Very truly yours,

(Signed) ———,

The ——— College,

Mr. Edgar M. Barber,
Office of the Appraiser of Merchandise,
Port of New York, New York.

DEAR SIR:

Your letter has been received and in reply would say that the position about which you write requires your services from 9 to 1:30, five days of the week, and from 7:45 to 8:45, four nights each week. Of course your work would not be finished at 1:30, school is over for the day at that hour, but we want a man who is not afraid of work, and who would be willing to remain after school hours and help in the general work of the school. This is a position where advancement may be expected, but no person need apply who is not a hustler. We need men who are wide awake and thoroughly abreast of the times.

For this work we are willing to start a man at about $800 per school year of nine months, this payable in ten equal payments.

Very truly yours,

(Signed) ———,

Principal.
The fourth and last letter of this series is not given for the reason that it contained some errors, which at the time of their preparation did not require publicity in this connection. Not being impelled by an irresistible desire to "start" at the quoted figures, I think there is no capital temptation to remark, in passing, that when I engage to do missionary work I like to have it known by that name, in order that proper credit may be reserved for the sacrifice which attends the expenditure of labor in that direction. The person who submitted this proposition seemed to have full confidence, however, in the drawing ability of $800 per year. Now, if that is $800 a year the allowing goal which these candidates have set out to reach? Of course, salary does not constitute everything — reliability, steadiness, contentment, loyalty, efficiency and enthusiasm — things that are not necessarily more so than of a bank clerk, railway superintendent or police magistrate — but no man can wisely shut his eyes to the larger opportunity which an increased salary offers. It is not to be expected that a reprehensible thing for a teacher to accept as large a salary as he can command. In most professions and in business the man who is "thoroughly abreast of the times" commands a better salary than the man who is not.

TEACHER OR STREET-CAR DRIVER

If a thoroughly prepared teacher after a dozen or more years' experience can command a salary of $1,000 a year, and a street-car driver a salary of $1,200 a year, it might be a serious question whether he might not better begin as a street-car driver and save himself some years of intellectual worry. Moreover, it most teachers who have received an education of the times to-day means a great deal more than it meant ten years ago, and it is going to mean a great deal more ten years from now than it means now.

There still lingers, however, a feeling in some quarters that any kind of teacher is good enough to teach in a business college. In fact, many teachers are willing to remain in their present positions of pedagogical proficiency, and a good many business college proprietors are perfectly willing that they should remain there. That sentiment must be eradicated before the better class of commercial teachers will receive their proper recognition.

THE COMMERCIAL HIGH SCHOOL

In this connection it is gratifying to note the progress of the commercial high school movement which is bound to work a change in the condition of our business, education, and my judgment will be for the benefit of everybody concerned. It will result in creating a demand for commercial teachers who have had special training equivalent to that received by teachers of higher mathematics, languages, sciences, engineering, and pedagogy. Whatever the material or commercial high school, it is sure to furnish a stronger incentive to the true commercial teacher who desires to fit himself for higher accomplishment in his profession. The law can and will positively insist that every teacher have the absolute limit of a legible and helplesst things going, which becomes a sort of metallic blizzard when a leg of dynamite is put behind it.

In the clerical world, for instance, it is one of the chief requisites for the man prepared and arranged, but it is a distinctly different thing to open a new set of books, or devise an accounting system, or to organize a large force of clerks and accountants who are not thoroughly trained in the most modern methods. In the latter case, mental powers are required that are possessed by few. The same distinction is found in the case of the man who by education and experience, is qualified to do elementary work of a more or less mechanical character in the regular commercial branches belongs to one class. The teacher who has gained a liberal education, that is, the equivalent of a college education—not necessarily acquired in college, although that is probably the safest and surest place in which to have acquired some of the principles of psychology and pedagogy; who is competent to teach the theory underlying the practice of higher accounting, auditing, banking and finance, who has experience in the actual practice of varied lines of modern business; who has come in contact with many of the best business men and knows what is essential and what is non-essential in modern education, who has made a scientific study of his business both theoretically and practically — that teacher, I contend, belongs to another class and a distinctly different class. These two classes of teachers are not sufficiently differentiated in the public mind at the present time, and the second class does not receive the financial or educational recognition that the difference in equipment of the two classes justifies, though it will, however, that will come more and more into prominence in the immediate future. Consequently, if every prospective commercial teacher was to be conducted from two to four years in a higher institution of learning until he had received a general training in higher mathematics, through trigonometry, at least, been drilled in the physical sciences, chemical sciences, English literature, history, and political economy, the future of commercial education would be amply secured. With that kind of foundation, supplemented by a reasonable amount of "characterization of the business life, there would be no danger from "over-specialization" on the part of the teacher in any branch of commercial school work.

THE SENSE OF PROPORTION

Looked at in the broadest sense, there can be no teacher who should have a longer and more varied preparation than the teacher of the higher commercial branches. How can a man teach which he knows nothing about? There are many people in the world, however, who want to be surveyors without going to the trouble of studying trigonometry, and the results achieved by them are relied upon by those who look from the higher viewpoint. They mistake chain-carrying for surveying. And so there are numberless persons who assume to teach "business," who have not the slightest conception as to what business is or of the requisites of a successful commercial career. Such a teacher goes forth on his errand of education in a way which renders one forcibly of Lamb's characterization of the Gothic sentence as that "in which one sets sail like an admiral with sealed orders,
not knowing where the devil he is going to
immediately in connection with the forego-
ing may not be wise to refer to the
between teaching and telling. Between import ing information and develop-
ing a knowledge of it lies its own in the present struggle for success,
and the most important point for a parent to ascertain with regard to a school is, are
its students allowed to do or are they put under pressure and trained?

The "teacher makes the school" and no amount of pretense can ever make it other-
wise. The vital thing is not so much whose
name is on the school, who are the teachers in the school. And while a good teacher will invariably handle any subject in a manner likely to excite and interest the student, still his success as a teacher must not be measured not by the
character and amount of information he has poured into his students' ears, as by the
attitude of mind and the habits of inde-

COMMERCIAL EDUCATION.

COMMERCIAL CONDITIONS are so kaidiscipic that the information, as such, which the commercial student acquires to-day will be of some
use to him in the conduct of any business. He can rightly learn the details of any
given business only by experience in that
business. As a business man, the thing of most value will be the ability to observe
accurately and to grasp quickly new infor-
mation, estimate it at its true worth, and,
in accordance with round principles, utilize
it to the best advantage in the projection
of the enterprise in which he may be en-
gaged. To this end is the higher end of
that ability is what he goes to school for.

EDUCATIONAL UNREST.

There is, to be sure, a good deal of unrest in the educational mind owing to this agita-
tion of commercial education. Nobody
seems to be quite certain where or when it is going to end. We hear of various plans
being projected to meet the new demand. There is a course proposed for those who
end their school career at twelve or thirteen;
another course for those who get through at
fourteen or fifteen; still another for those at sixteen or seventeen. Will it come to pass that the schools will permit graduation at different stages to meet these
different demands and reserve graduate
courses for those who want "higher" com-
mercial education? It is too early to hazard
a guess.

That the movement is puzzling those
whose traditional theories of education are
fixed, is amply indicated by the follow-
ing extract from a letter to me from a prominent educator:

"I do not think that the penmen and bookkeepers with unmixed sledic powders ever
beating in their hearts sounds of the

time with a stride that is startling. The

Commercial Geography.

COMMERCIAL GEOGRAPHY may be defi-
ned as that branch of geography which is concerned with the working of its
subjects. The fact that there is a dearth of
recognized text books on the subject
should not, in my opinion, present the least
obstacle in the way of one's having all the
material at hand one may desire. To assist

THE QUICKEST METHOD IN THE WORLD

Send us one June (silver) and we will send you the
QUICKEST addition method in the world, or the Secret of Rapid Addition. Every bookkeeper, teacher and student should have it.

Send to:

"We have found that in California the business men seeking an office assistant does not inquire how much bookkeeping the student has had, but words his inquiry something like this: "I want a bright, honest boy who is a good writer with the word good for business, quick, and accurate with figures, and knows something of bookkeeping." As long as the business world demands that kind of a boy, why does the student have to spend all the time on bookkeeping to the neglect of penmanship? We are going to quit it, and I hope many of the schools will follow the example."

A. S. WEaver,
Principal San Francisco Bus. Coll.

The above indicates that Mr. Weaver is endeavoring to supply the business-communion of the judges, prove worthy of recognition, and get a distinct advantage over those who do not. Then why not give more attention to the subject? The majority of business schools do not have the business students who do this little along this line. Good penmanship speaks to the judges on sight and can see that much of a person's qualifications before he can see or know much else. A good hand means industry and care, too essential business qualifications—Editors.

Some Timeous Questions.

Editors PENMAN-ARTIST AND BUSINESS EDUCATOR: We have been teaching the vertical system of writing, but we have come to the conclusion that we must make a change or at least adopt a new method of teaching. The objections urged against the vertical system are that it makes slow writers, and second, that our pupils when they grow old enough to adopt an individual hand do not continue the vertical, but a mixture that is neither one thing or the other. What is your advice as to the best style of writing, but we are convinced that to get speed we must adopt the arm movement. At what age would you advise the arm movement is taken up? Our pupils ranges in age from six to sixteen.

MISS E. W. WRESLER,
Tablet, Pa.

[First, begin to teach plainness rather than specified slant. Second, cease to teach pupils to draw the forms and begin to teach arm movement. Third, begin movement in connection with the commercial curriculum as pupils are then at the right age to begin rightly and because they will need to write for the following year. Fourth, adopt simple plain, rapid characters, either vertical or slant; neither the extremest round, large, heavy kind which cannot be written rapidly, nor the slant which is far too difficult to control; fifth, teach the legibility rather than accuracy should be the aim. Then require all work to be done freely, and to be written with pupils above the primary grades. Let the judges be more lenient in this regard; the larger the hand that they will use the arm instead of the fingers.—EDITORS.]

commercial Teachers' Federation

Penmanship Teachers' Contest.

At the meeting of Penmanship Teachers' Association held at Chicago last December the contest was arranged. It was decided: Be it resolved that the Penmanship Teachers' Association will have a contest of pupils' work in business-writing and figures, at its annual meeting shall send certificates as follows: one to each of the teachers whose pupils' work, in the estimation of the judges, proves worthy of recognition and three to be designated first, second and third, for the public school teachers, and three nurses in the same manner, to be given to the teachers in commercial or penmanship schools having the best work. The terms of awarding these certificates and the method of selecting the judges shall be placed in the hands of the Executive Committee.

At a meeting of the Committee held at the Ohio Business University, at Fremont, Ohio, the following rules for the contest: The award of the prizes of teachers in commercial and penmanship schools to be based upon work of class as a whole and must represent the work of both teachers of commercial and penmanship classes prepared after September 1, 1900, and to consist of at least one page of writing in business writing, writing the solid text, or commercial correspondence; page of figures; and the rules governing the exhibition of the teachers of public schools are now being made. The work to be submitted will be one of the most successful and enthusiastic ever given. It is the hope of the Executive Committee that a large number of teachers will exhibit at the Detroit meeting and that this meeting will be one of the most successful and enthusiastic ever given.

The judges to decide this contest will be chosen at the convention.

Narrowness Not Necessary

ZANESVILLE, OHIO, Sept. 26, 1900.
FRIENDS Z. & B: You will please send enclosed one dollar to pay the honorarium, and then I'll be ready, commencing the expiration of last year, I can't tell you how much pleasure it gives me to note the rapid strides that you are making with your publication. I only hope that you will not allow the additional work to eat into the time you should allow to study for your being a great work in our professional world, and I am sure that I will not be cheated out of the time I have spent with your work, when I say we hope you will continue to publish. I know that we as artists, by keeping up the old fogy ideas, and in their steady plant more progressive ones; to show, by example, that it is not necessary to be narrow, cranky or remain stagnant and keep us from the speciaList out of arts. Take for example this past year of the courses you have taken has been foremost in the fight to prevent it from having every fair trial, but for all they have done it has worked a good reform in penmanship, and has taken them a little way, consistently with all kind of writing.

I sincerely hope that you will still be as successful in the future as you have been in the past, only that the financial will be the same way, and I know your success will be complete.

Very truly yours,

C. E. TOWNE.
A commercial department has been opened in the Peabody (Mass.) High School, and E. L. Shurtleff, principal of the School, Boston, has been chosen as instructor.

The students and faculty of the four C's, Des Moines, Iowa, recently held their annual meeting, at which time hundreds of persons were enrolled in the popular business school.

A. H. Heaney, the genial gentleman who presides over the District of Columbia Business School, Providence, R. I., reports an exceedingly successful year for his school.

Brother Heaney has so far recovered that he recently conducted a teachers' meeting in his excellent school. Commercial teachers everywhere would meet with appeal. He has received his knowledge of business methods in business education, from one of the most progressive and capable instructors of the country, and is doing excellent work toward recovery from his long illness.

E. M. Barber, our unceasingly active New York friend, has been elected to teach bookkeeping at the Staten Island Business School. A. R. Kip will also teach in the evening in New York city, and a like number of educational men that should labor thus, but the key to the puzzle is in the new business method.

Exeter Business School has sessions five nights each week. It is a good thing to "make hay while the sun shines." There is a beautiful country exhibit-

Massey's Business College, Jacksonville, Fla., has as its vice-president its principal, W. W. Fry, the well-known President of the St. Louis, St. Paul, and Pacific Railroad Company. He is a graduate of Massey College and a friend of the Institution.

W. H. Hatton, president of Tampa Business College, Tampa, Fla., is having a good year. His school is a favorite with the people.

Wednesday, October 28, the School of Commerce, of New York University, New York City, was opened by Dr. Henry M. MacCracken, the Chancellor. He said: "The establishment of this unique department of a great center of learning is in accordance with the present universal call for the higher commercial culture. It is the culmination of a great idea of President Harper's of bringing into existence of a university college of professional education, and the demand is so great that it could not be adequately met in this one year. It is the aim of the institution to be an adequate and thorough in all the professional teaching of the school, not only in accountancy, but in the courses leading to an administrative life or to the consular service.

Dean Haskins, in a very interesting lecture, "Municipalities, Transportation Companies, and Banking," expressed the hope that municipal officials will support commercial education, which is not only helpful to the municipalities, but to the individual.

G. F. Lord, principal of the Salem Mass. Commercial School, reports that their school opened on September 1st, with an enrollment of more than 100 pupils.

Mr. Bert German, proprietor of the Ohio Business University, Fremont, O., reports that their school opened with an attendance of 100 pupils, and is growing rapidly.

A. R. Kip, formerly the principal of the New York University Business School, has been appointed to the head of the department.

S. M. Funk, formerly of Wolf's Business College, Hagerstown, Ind., has contracted his position with the Peabody (Mass.) High School, Camberlind, Md., for the present year.

W. A. Arnold, of Union City, Ind., was elected a member of the board of education, training department for the J. A. High School.

Mr. Peter, formerly assistant in the Zanesville Art College, but now with the Ohio State University, is the head of the business and commercial department of that institution, and is of business and ornamental writing, which show that he is rapidly pushing his work and that his influence is growing.

P. B. Peterson reports that they have a large school and that his meeting with splendid success in teaching.

R. B. Burton, formerly of Elkhorn, Ohio, now has charge of the commercial department of the Warren, Ohio, High School.

C. W. Field, formerly of Akron, Ohio, has charge of the shorthand and penmanship departments of the Cleveland (Ohio) Business College. The P. A. R. E. I. wishes Mr. Field much success in his new field.

The Wheeling (W. Va.) News of Sep-

This year, the commercial course has been enlarged by the addition of history, science and the sciences as elective subjects. The course in bookkeeping has been improved by the incorporation of the most up-to-date office methods with a new system. A new system of shorthand, the "Gregg," has been introduced. The work in typewriting has been strengthened by the "touch" or finger method of teaching.

The commercial course of the P. K. K. M. High School, Pottsville, Pa., opened its usual Fall Term on October 3d. Owing to the great success of last year's classes, a large number of students have registered for the new term, and the course, but could not be admitted as the class has reached its limit.

C. R. H. L. of the Isaac Pitman Complete Instructor, and the teacher of the Commercial School, recently sold his property to the Isaac Pitman system.

Owing to the great success of last year's classes, the O. K. H. Commercial School has been inaugurated, which has been in existence for 20 years. Among the books used in this dictation course will be Pitman's "Twentieth Century Course in Business Education."
Changing from Slant to Vertical

Backhand Cause and Cure

Those who adopt the vertical have a difficult question to decide and that is whether it should be introduced into the lower grades only or whether it should be adopted in all the grades. There are many schools that commenced in the first and second grades and allowed it to work up through the higher grades while many others changed from the slant to the vertical in all the grades at the start. If the writing is good in the Grammar grades, then there is certainly much doubt as to the wisdom of making a change but if the writing is unsatisfactory then I would not hesitate to recommend a change in all the grades. The objection to changing in the higher grades is that the pupils have formed the slant habit and therefore ought not to be required to break it up, especially as the time may be too short for them to master the vertical before they leave school.

The arguments in favor of a change in all the grades, which might be made as the result of experience, are:

1. It is better to teach only one system and style of writing. A medley will not prove very satisfactory.
2. If the vertical is better than the slant all the pupils should be given an opportunity to learn it.

Novelty Stimulates Interest and Effort

The vertical being new and novel, and the latest "fad" or "fashion," the pupils will take it up with a great deal of enthusiasm and as the change will require earnest, faithful, persistent effort the improvement will be much greater than if the slant had been continued. The illegibility of slant writing is mainly due to its angularity. The pupils in the higher grades who change to the vertical and then go back to the slant again after entering the High School or Business College find that they have gained rather than lost by the change. Their writing is now round, open and very legible and much better than that of the pupils who always wrote slant.

Front Position of Paper is an Extreme

The way to change from the slant to the vertical is to change. As long as the pupils continue with the slant position in the writing lesson and while writing on their slates and tablets they will continue using slant. The front position with the paper parallel with the edges of the desk has been found to be an extreme position but while making the change I think it is well to insist upon this as the rule. The exceptions can be taken care of when they are discovered. No one can tell in advance who they will be. Rulers should be general. They should not be ironed.

Backhand is the Result of Inferior Teaching

One of the discouraging features of the change is the tendency to write backhand. There are some who do not object to backhand. It is difficult to understand why slant to the left is not just as good as slant to the right. There is, however, a great deal of prejudice against it, and the attempt on the part of some teachers to excuse it on the ground that it is unavoidable has injured the cause of vertical writing very much. I know of one large city that abolished it because of backhand. If a hunter aims at a squirrel and misses it and kills another ten feet to the left it is pretty hard to reconcile him to the second squirrel, although it answers every purpose just as well as the first. Backhand is not necessary. It can be avoided or overcome by good teaching. It would be ridiculous to chain that pupils who readily change from left hand to right hand the backward slant can change forward again. Backhand is simply a mistake when vertical is attempted, and it can be as readily corrected as any other error, either in vertical or slant, by discovering the cause. Some of the causes of backhand are as follows:

Causes of Backhand
1. Desk too high for pupil. To remedy, place paper to the right and turn it as in figure 1.
2. Holding the penholder in the direction of the base line.
3. Writing to the left of the median line of the body. This is perhaps the most common error. The writing should always be done to the right and pupils should learn to adjust their paper, books, and slates while writing.
4. Going up too straight on up strokes, especially on loops. The most conscientious pupils make this mistake. The teachers say: "Be sure to write vertically," and the pupils are so anxious that they go up too straight. The loops in vertical as in slant give a great deal of trouble.
5. Holding the right elbow too far from the body.
6. Pouting the penholder over right shoulder, due to the old rule which some teachers and pupils cannot forget.
7. Cramped position of hand, due to lack of drill in movement exercises. The only way to overcome the gripping habit and the habit of bearing on too heavily is by giving movement drills. The slate is responsible for these habits. Metal tipped holders will cause gripping also.
8. Teacher's backhand writing on the board.
9. Writing with the paper too far up on the desk and too far to the right.
10. Paper square in front when it proves an extreme position. In the Grammar grades the position will be similar to that used in slant in many cases.
11. Lack of preparation on the part of the teacher and poor teaching generally.

Pupils can come as near 90° as any other standard

The remedy can always be found. The pupils of course will not all make the same mistakes. Conditions must be carefully studied. The teacher who gives up and believes vertical writing hopeless makes himself ridiculous. Pupils can come as near writing 90° as they can 32° on any other standard.

A gentleman who opposes vertical said some time ago in an article that vertical writers who come to him are allowed to continue the effort in order that results might be observed. He said that those who persisted wrote backhand. In making this statement he simply confesses that he is not master of the situation. He reminds me of the boy who was told to wash a yoke of oxen while the driver went into a store, and the boy watched them until they were out of sight. J. F. Barnhart, Akron, Ohio.
The Fourth Semi-Annual Meeting of the Ohio Commercial and Special Teachers' Association

Was held in Sandusky City Business College, Sandusky, Ohio, Sept. 28, 29, 1901. The attendance was fair, the interest was cordial and enthusiastic, and the weather was fine.

On Friday many members visited the Public Schools where they were shown work that was inspiring, and in a manner that left no doubt as to the efficiency and hospitality of the Superintendent and his assistants, the principals and teachers. All spoke highly of the work in writing and drawing, the subject which was of most interest to the visiting members.

Friday afternoon session begins at six o'clock by Prof. T. W. Bookmyer, in whose rooms the meeting was held, entertained those present by chartering a sail boat and giving them an outing on the lake. This proved to be a most enjoyable affair indeed. Forty minutes were spent in fishing, and in time forty-seven perch were caught, Mr. Mursch, catching the most (41) and Mr. Zaner the least (1). The latter of course declared that fishing was only luck, and not very good at that.

The evening session was held in Temple Hall and was opened by singing, "The Development of Art," by Miss Allegra Fockens, Supervisor of Drawing in the Toledo schools, was the principal feature of the evening. It consisted of one hundred stereoptican views illustrating the development of art from early Egypt to the present. It was instructive as well as interesting, and appreciated by all.

Friday morning session opened with President Barnhart in the chair. Mrs. Downard, the Secretary, was in attendance also, but the Treasurer and Vice-President and Executive Committee were all absent.

Excellent music was furnished in the morning and afternoon by Mrs. James Andrews, of Sandusky.

The "Welcome Address" was delivered by Supt. H. B. Williams, of Sandusky, and the "Response" by Prof. A. D. Wilt, of Dayton. Both were hopeful, earnest, helpful, timely, offhand, addresses, and were cordially received.

The "President's Address," by Mr. J. F. Barnhart, Akron, was a most helpful one, showing the value of organization among teachers in this day of cooperation.

The fifth number on the program, "Business Penmanship - Present and Future," by Mr. J. P. Jones, Principal of the Commercial Department of the College of Ohio, was enthusiastically received. The same will be presented in an early issue of this journal.

"Position Writing" by Prof. Jerome B. How and Commercial, T. W. Bookmyer, was an able technical paper on shorthand. The same was discussed by Mr. W. S. Rogers, of Sandusky.

The Remington typewriter company entertained the convention both luncheon and afternoon with an exhibition of touch typewriting by Mr. Meudendorf, a young man fifteen years of age from Chicago. He proved to be an expert writer, writing from minute to minute, without notes, adding, subtracting, dividing, and multiplying, with rapidity and precision. The machine was a strange one and without letters on the keyboard. The operator worked on the machine, over it and straight ahead.

"The Boys Across the Border," by Mr. T. W. Bookmyer, was a most interesting address on the condition of the Association of Commercial Colleges in Canada. The speaker said they were ahead of us in organization and fraternal feeling and urged us to study their experiences.

"The Relation of Drawing to Other Studies," by Prof. Frank Albert, Cleveland, was a straightforward, progressive, earnest presentation of the subject. Mr. Albert is an advocate of Dr. Ross, of Boston, and an able one indeed. The paper carried forth the old principles of color, etc., by Miss Dickinson and Messrs. Mursch and Zaner.

"Methods of Teaching Simplified Penmanship," by Miss Emily W. Gettins, was filled with new suggestions in pen, ink, slate, etc., by Messrs. Mursch and Barnhart.

Delegates were appointed by the chair to represent O. C. A. S. T. Association, at the National Federation at Detroit as follows: Delegates: Drawing, Miss Dickinson; Shorthand, W. W. Patterson; Writing, F. F. Mursch. The one regret of the meeting was the sickness of Mr. E. E. Bush, Supr. of Writing and Drawing in Sandusky Schools, and Chairman of the Executive Committee, through whose influence and unselfish efforts the excellent program had been arranged. Mr. Howard offered the following resolutions, which were unanimously adopted:

"Whereas, this Association has learned with deepest regret of the illness of Mr. E. E. Bush, Supr. of Writing and Drawing, and of his death, this Association will adopt the following Resolutions, and the President will present the same to the Executive Committee, and Prof. C. M. Bartlett will be elected in his stead."

Colleagues were selected as the next place of meeting, which is to be held during Easter vacation week, 1902.

The following vote of thanks was enthusiastically adopted:

"Resolved, that The Ohio Commercial and Special Teachers' Association extend to the people of Sandusky, to the newspapers, to Professor Williams, Superintendent of Public Schools, to Mr. Bookmyer, of the Remington Typewriter Company, to Mr. Andrews, who so kindly entertained us with his singing, to Mr. Bookmyer, the writer of this address, for the exhibition of Touch Typewriting, and to others who have contributed to our pleasure, our sincere and hearty thanks."

MEMBERS IN ATTENDANCE:

C. C. Xoe, Cleveland, Ohio; Cluade A. Barrett, Oberlin, Ohio; D. J. Yocum, Oberlin, Ohio; P. W. Fletcher, Mansfield, Ohio; W. S. Rogers, Cleveland, Ohio; J. P. Jones, Marion, Ohio; J. W. Gettins, Sandusky, Ohio; J. F. Barnhart, Akron, Ohio; Cyrus W. Field, Jackson, Mich.; W. E. Van Wert, Wheeling, W. Va.; W. B. Elliott, Cincinnati, W. Va.; Lenna A. Dickinson, Elyria, Ohio; F. F. Mursch, Lakewood, Ohio; Mrs. K. D. Mitchell, Sandusky, Ohio; Carrie Truesdale, Sandusky, Ohio; R. D. Mitchell, Sandusky, Ohio; A. D. Wilt, Dayton, Ohio; C. W. Zaner, Columbus, Ohio; Mrs. R. B. Howard, Cincinnati, Ohio; E. W. Gettins, Youngstown, Ohio; T. W. Bookmyer, Sandusky, Ohio; Miss Ida M. Massetti, New York; J. W. Davis, Columbus, Ohio; Frank Parme, Cleveland, Ohio; J. M. Loomer, Fremont, Ohio; Charles W. Klopp.

HOME STUDENTS!

Publications Received.

Robinson Crusoe, by Daniel Defoe. Containing the story of Crusoe’s life on the desert island. In Engraved Shorthand. Correspondence Style, Illustrated. Pages, 350; price $1.; cloth, $2.

This work is extremely well adapted for use as a shorthand reader, and, in attractive class bindings, forms a handsome prize volume.

Pitman’s Shorthand Reading Lessons, No. 2, for use with Instructor Part I, and furnishing the learner with reading practice and word building. Price 25c.

Pitman’s Interlined Speed Practice Book, No. 3, Commercial, containing matter corrected for testing speed with alternate ruled lines for writing the shorthand. Price 25c.

The above works are published by Isaac Pitman & Sons, Square, X, Y, and represent an unexcelled in thought, effort, and money. We know of no other firm putting out as many carefully written, printed, illustrated, well printed shorthand publications. Any one interested in shorthand will do well to communicate with the above firm.

Fireside Accounting and Business Training,” by Elmer E. Gardner, published by Fireside Accounting Publishing Company, Battle Creek, Mich., seems to be a most complete and practical publication for the home student. All who cannot attend a business school and who desire knowledge of accounting and business, can well correspond with the publishers whose address is given above. The work is divided into two sections, Accounting and Bookkeeping, and Business Ethics, Commercial Law, and Letter Writing. It is well printed, substantially bound, and eagerly bought.

The Graphophone

The Springfield (Mass.) Union, September 23, 1900, contains a lengthy and interesting article concerning the introduction of Graphophones into the shorthand department of B. J. Griffin’s business school. The following clipping explains the situation and tells what Principal Griffin thinks of it:

“The machine is in a room in company with tables and chairs to accommodate a class of about a dozen. The shorthand exercises of the day, whether book lesson, business letters, or speech, is talked into the machine and then ground out to the pupils. All day long, tirelessly, the little machine toils and feeds the pupils’ minds. The class is divided into four sections and each pupil has a machine. The machine is so constructed that a pupil may listen to his own dictation and study it at his leisure. It is a splendid aid to the study of shorthand.

“The machine is a great blessing to the pupil. It is a standard of comparison and a test of his progress. It is a great aid to the teacher, who can follow the progress of each pupil at a glance. The machine is a real boon to the business school, and is a great improvement over the old-fashioned method of teaching shorthand.”

The above is a sample of the many letters received daily. The company is composed of teachers of penmanship—40 at this time. There is still some stock for sale at par, to teachers of penmanship only.

PRICE LIST.

Advanced Tablet, 16 pages, instructions, 25c.

Newspaper Illustrating.

Assignment Work.

BY F. A. PORTER, CHICAGO, ILL.

Throughout the various branches of newspaper making, there is not one that arouses more interest, admiration and respect than the art department, especially is this so where the work is in the hands of good artists. Poor work is very seldom tolerated, and it can be truly said that these days that very little can be called decidedly bad. The constantly rising standard of merit may be seen on any big illustrated daily. There is no work that carries a greater degree of responsibility than that which comes under the heading of Assignment. That means a certain important space on the paper is reserved to be filled by a certain reliable, trustworthy picture by a man of the same qualifications equal to any and all emergencies. It is well for the aspiring young artist to bear in mind that every pen scratch, dot, line and effort in making a picture will be scrutinized by a curious and appreciative public, and they will not be working for one man only but thousands and thousands separated by as many miles, and therein lies one reward for the ambitious, energetic and faithful student.

Lessons in Practical Vertical Penmanship

BY E. E. UTTERMARK

MANUAL TRAINING, DRAWING AND WRITING.

ATLANTA, GA.; PUBLIC SCHOOL BUREAU.

The longer I teach and the more I study our work the more numerous do I find the opportunities for independent thought and action and the less am I inclined to adhere to an arbitrary method or long established custom. The teachers of the P. A. and R. E. will please pardon me, therefore if, in the course of these articles, I do not follow rigidly the custom of presenting exercises and copies and telling just how I think they should be made, and the speed at which they should be written.

I don't say we really have too many such stereotyped articles or lessons through the Penmanship and other Educational Journals, but it does seem to me that this is an unnecessary amount of repeating, practically a relash of the same instruction withow and then a new thought or idea some times valuable sometimes not, but in all other tiring. I believe that we may sometimes do more good by acknowledging and emphasizing the strong points found in the lessons of a few of our best teachers than by wasting time and paper in unnecessary repetitions. It is with the belief then, that I can do more for practical business penmanship at this particular time by approving or disapproving the work of others than by telling you how to write the letters, that and the other exercises when you have read practically the same instructions many times.

How many of you, whether teachers or students, have read carefully and pondered long over the lessons in PRACTICAL WRITING, by Mr. Zaner? It matters not what style of penmanship you may be learning or teaching, the instructions given and the ideas advanced by Mr. Zaner will be of great value to you. To get real value out of any plan, method or idea we need not necessarily adopt it bodily, but we should adapt it to our particular needs.

And how much have you read the editorials on page 2 of the October number of the P. A. and R. E.? If you have not do read them two or three times and be benefited thereby. Under the heading, "Is Vertical Penmanship," you will find the very essence of truth and good common sense. If you are a student, acquiring a better hand writing, take a hint from this and form more independent in your work. Think a few thoughts for yourself, and try to perfect that style of writing which seems easiest to you. If you are a teacher and still insist upon one way and one style only, try to grow more liberal. By this I do not mean that we should discard system, and teach any and everything. Nor do we should have a well regulated system and good copies to work from, but we should allow a reasonable amount of freedom and a liberal departure from the ideal.

But you say this is strange talk when I am bidding for "Practical Vertical Penmanship." Yes, I see I am working under that head and the few copies I shall give will be, for the most part, vertical. For the past three years I have been teaching the vertical style and have never taught the horizontal style. I think the vertical as the standard or the idea from which to work, but allow a reasonable departure from it as the individual cases demand.

If you do you good, too, to read the article by Mrs. Downend for it is one of those honest, open confessions which hundreds of penmanship teachers should make. It shows a mind capable of being taught by experience or otherwise. A mind ready to accept a new truth, from whatever source, and quite as ready to acknowledge errors of the past. This is the true spirit for both student and teacher. Penmanship, coarseness, is a great enemy to its possessor and a barrier to the cause of education.

There is one point is Mrs. Downend's paper which I cannot pass unobserved, and it is this: "The one thing so particular. I find it difficult to overcome in writing of a great number of pupils, is the tendency to tip the letters backward when trying to write vertical style and still teach it, i.e., we take the vertical as the standard or the idea from which to work, but allow a reasonable departure from it as the individual cases demand.

When I read the above quotation I wondered how many teachers are actually working themselves sick because all pupils do not write vertically or because they do not write the way that particular says. Many there are, no doubt, but the number is growing smaller daily and will continue to grow smaller, for two reasons: First, teachers are rapidly accepting more than one style, and second, they are discovering more readily the "Why's" and "Wherefore's," the cause of results. The prime cause of the handicap of which she speaks is the straight-forward position of the paper. Turn the paper obliquely on the desk, about the same as for slant penmanship, and the strokes will more often be vertical. The tendency to a slant presents itself to the moment pupils begin to write with some freedom and speed, unless the paper is turned with the lines at almost a right angle to the forearm.

Specimens Received

We received quite a number of specimens of penmanship, such as finely written letters, cards, and paragraphs unusually very large, requiring considerable haste in writing, and while we do not expect that we occasionally find it necessary to mention the receipt of specimens that are well worthy of such mention. When this happens, we trust that you will not think that our failure to notice it is an insult, but will regard it simply as being an oversight on our part. We are always ready to receive specimens and to make mention of them, if we have the chance to extend the invitation to all to send in specimens whenever you feel like favoring us.

J. C. Wohlenberg, Clinton, Ia., sent a lot of splendidly written cards.

C. E. Sorber, with the Wilkes-Barre (Pa.) Business College, submitted penmanship in the ornamental hand, as shown in a letter recently received.

John Bums, Fort Oram, N. J., submits specimens of business and ornamental penmanship which show that he can become one of the very finest. He has the material in him.

E. M. Vaile sent a very well executed letter in the ornamental style. He says: "I have found much instruction and instruction in the PENMAN-ARTIST AND BUSINESS EDUCATOR, and think it would be good to your readers to make it the best journal of the kind published.

J. D. Long of the Western Correspondence School of Penmanship, Mendocino, sent a number of very finely written cards. This institution is doing splendid work and should enjoy a large patronage.

Some splendid business writing and some very finely executed cards came from Cyns W. Shull, of the Jackson (Mich.) Business University.

A lot of cards in the ornamental style came from H. F. Podul, Washington, D. C., Mr. Podul is pushing his work upward very rapidly.

Some well written cards, and some very good letters, cards, and paragraphs. I am sure penmanship can be acquired by experience or otherwise, and that the one thing so particular. I find it difficult to overcome in writing of a great number of pupils, is the tendency to tip the letters backward when trying to write vertical style and still teach it, i.e., we take the vertical as the standard or the idea from which to work, but allow a reasonable departure from it as the individual cases demand.

A Short History of Writing.

BY W. R. LOCKHART

Such were the conditions under which the Writing Master began to exercise his profession, and created so much enthusiasm, that private schools for teaching writing were formed, and supported by the wealthier classes. The copies of the early part of the seventeenth century, were made heavy lines upright or vertical, lacking the vim and finish of the modern letter. They were generally embellished with a very elaborate capital letter, and penciled knots, with beautiful text lettering in some of the copies. This style of writing seems to have been fostered by the public for nearly one hundred years, when about 1700, there began to appear text books in which the letters were divided into principal strokes and paving the way for more improvement in the following twenty-five years. In 1706, John Gething, a writing master of London, published a cop book in the text and script referred to above, and in 1708, his copy was engraved for publication.

Missis Tamara and Brown,

Columbus, Ohio.

Dear Sirs: It was with much pleasure that I learned that on the future the Penman and Artist would be a more frequent visitor.

To the Lanceria Publications I owe what little skill I have acquired in penmanship, and they have made my progress with more than ordinary interest.

I am teaching the Standard School in Columbus Academy and last years results prove to increase satisfaction that it meets with approval in business penmanship.

Wishing you continued success. I am,

Very truly yours,

[Signature]

George Shelly, issued an elaborate work, that shows immense strides, made in the art from the time of Gething. This book, and the second part published eight years later also, is full of fine writing, but upon the slant, and was of the English round hand style through the capitals were made with a good swinging movement. "The Universal Penman" published about 1730 by George Rickham, contains the work of about every English penman of any note. But here is a sameness in all the work and lacking the individuality that a collection of work would show today. All the letters are heavy down strokes and speed evidently was not considered in teaching the art. All of the old books are very interesting to examine. Text seems to have held its ground well, but was finally dropped as the later books give more script copies and little of lettering, but flourishes abound, and it seems that to execute them must have been the movement exercises (b) taught. About 1800, however, began a new series of publications that taught writing by dividing the letters into parts. Dean, in 1801, published a finely engraved series of copies with letter-press, but he held to the styles taught in England at that time, and there seems to be no change in the methods of teaching until the Carstairs publication began to find their way to this country. French of Boston published text books after Carstairs' method, and moving on to be a part of the textbooks in text-books, and although before it had rarely been given space it became a chapter in modern books. Steel pens began to influence writing also, and directions for cutting pens were dropped from the publications. Spencer was paving his way to the beautiful system, that bears his name. Danton, in the eastern, was laying the foundation of a beautiful handwriting. The Spencerian style received perhaps the greater share of the public favor from its use in the chain of B & S schools, and its effect is evident in the development of the beautiful, simple, and rapid hand writing taught today. (To be continued.)

Regrets

Mr. C. V. Howe the genial, skilled engraver regrets that he has been compelled for want of employment to omit his letter for this number. The same will appear in our next number. — Editors.

Catalogues, Circulars, etc.

Some novel and attractive advertising matter is being sent out by the Chillicothe (Ohio) Normal, Business and Shortland College. Allen Moore is President of the Institution.

A neat catalogue has been received from the Carlisle (Pa.) Commercial College. Principal L. F. Mount is to be congratulated on his success in building up a first-class institution.

We acknowledge receipt of a finely illustrated circular from H. W. Stone, engraving artist, Boston, Mass. Mr. Stone has his studio in French's Business College and is prepared to execute work of any description on short notice.

W. H. Callow, proprietor of the Elgin (Ill.) Business College, is using a very unique method of advertising. It consists of three or six tickets printed and folded in imitation of the street car tickets used in Elgin. The rubber band which holds them together gives them a still more genuine appearance, and Mr. Callow informs us that nearly every person picks them up. It is needless to say that on the inside is the advertisement of the Elgin Business College.

We acknowledge receipt of a neat catalogue from the Connecticut Business College, Middletown, Conn. This institution, which was originally owned by J. A. Hurlbut, was recently purchased by E. J. Wilcox, and Mr. Wilcox was formerly connected with the public school system.

The Terre Haute (Ind.) Commercial College has issued a new catalogue. The work is neat and attractive. Several pages are filled with well-executed penmanship.

Exceptionally fine advertising matter has been received from the Stewart Business College, Trenton, N. J. It is probably not too much to say that no finer hand has ever reached this office. The catalogue is indeed a very expensive and tastefully gotten up work, with two booklets and a college journal, which accompanied the catalogue, would be very hard to excel. One booklet contains twenty-six half-tone photographs of pupils with a specimen of writing from each one on entering Stewart College and also a specimen on leaving. The improvement shown we confess we have never seen excelled.

The Cameron (Mo.) Business College is sending out some good advertising matter in the shape of a catalogue and booklet. J. C. Whitescarver is president of the institution.

The Northampton (Mass.) Commercial College, has issued a very neat and attractive booklet. Mr. J. L. Hayward, one of the proprietors, was once a pupil of editors Zaner & Bloser, and of course all of our boys are good and succeed.

The School of Commerce, Harrisburg, Pa., has issued a beautiful new catalogue. J. C. Stumberger and the well known pennam, G. S. McClure, are principals of this institution, and are conducting a first-class school. We have had the opportunity of visiting their College on several occasions.

An exceptionally attractive catalogue has been received from the Cream City Business College, Milwaukee, Wis. This institution was opened in 1879 under the management of Mr. W. W. Way, who was formerly connected with the St. Mary's College of the same city. Five hundred students have already been enrolled, Messrs. Way & Brown, who are now the proprietors of the institution, also own the Sheboygan Wisc. Business College, of which Mr. M. W. Blank is principal.

The Mountain City Business College, Atlatoma, Pa., has issued a neat and very finely illustrated booklet.

We are in receipt of a beautiful catalogue from the Terre Haute (Ind.) Commercial College. Waco, Texas, Mr. Tohr also conducts the Institute of Accounts, 123 E. 32d St., N. Y. City.

The Southwestern Business University, Oklahoma City, O. T., has issued a fine booklet stating the advantages of their institution. Messrs. Clark K. Owen and J. M. Hayes are in charge of this educational enterprise.

The Danville (Ill.) Business College has issued a recently printed catalogue. They also publish a good monthly college journal.

Some fine advertising matter in the form of a catalogue and circular came from the Brazil (Ind.) Business University.

Automatic Lettering

Number Three

BY G. W. HECS, OTTAWA, Ill.

We present this month the marking alphabet, a very practical, plain and rapid letter. Your greatest difficulty will be in making the first stroke as in capital "E." Notice how, after beginning, which is a short, though neat curve, we come on a straight line to base. Study these things. This alphabet was engraved some size as made, with No. 1 marking pen. It is also adapted to shading pen. For No. 2 pen, either shading or marking, make twice the size. For No. 3 enlarge about two and one half times.

Now work hard. Get your ink working free. Don't let pen turn in hand. It should not scratch. Try and get a clean, sharp end to all straight strokes. By using adhesive ink in marking pen, you can pour thick on same. Then pour off surplus. Keep your inks in a covered box when using flock or bronze.

We want you to master about four alphabets, so you can make them with various pens, and if you will do this we will guarantee that you will be in a position at the end of this course to do plain, practical and ornamental work so you can make a few dollars out of it. Now work hard and ask questions. After you master these alphabets, we will give you all the work you want.

TAKING TURKISH, VAPOR, OR MEDICATED BATHS.

All the benefits of a HOT SUITING you can have at HOME for THREE CENTS and

They are RESTFUL and REFRESHING, GIVES POWER TO THE BRAIN. Our

new and improved TURKISH BATH CABINETS are AUTOMATICALLY con-

structed, so that you can easily yourself while drinking water and sponge the face."

Write for our Circular, and come and try our BATH CABINETS.

We want energetic MEN and WOMEN to represent us in EVERY WHEEL

Standard Bath Cabinet Co., Toledo, Ohio.
Resolved,

That this style of writing can be extended to a rubber neck, but may be drawn out too much for beauty.

Lessons in Engrossing

BY H. W. KIRKE, IN TREMONT STREET, BOSTON, MASS.

Number Three.

This writing is very much extended in order to make it contrast strongly with the first as well as the second lesson. The ability to handle this style of script well will give you good paying employment, if the public know you can do it. The boy who aims to be an engrosser should master it. Remember it's a long time from the blossom to the fruit, and yet the time will pass rapidly if you work earnestly.

National Commercial Teachers' Federation

Detroit, Michigan, December 26, 27, 28, 29, 1890

PRESIDENT'S OFFICE, PORT DEPOSIT, MD., Oct. 4, 1890.

To the Commercial Teachers and Friends of Business Education in the United States and Canada.

The Detroit Meeting will be the last great gathering of educators in the nineteenth century. The twentieth century is to witness the establishment of commercial education on a par with the classics and science. Are you to be in the front or will you remain in the nineteenth century? The Detroit meeting will help you to get your bearings, will give you inspiration and aspiration, and put you in line with the best in your profession. Will you attend? If so or if probable, drop a card to G. W. Brown, Secretary, Jacksonville, Ill., to that effect, as soon as possible. This is important, as it will bring you a program as soon as printed, and it will enable us to make definite demands regarding railroad rates.

The program has been carefully planned and the committees have been at work on it since May. It is safe to promise a great educational feast at the beautiful city of the lakes, during the last days of the last year in the nineteenth century. The motion made upon the committees for this year was "quality not quantity."

The officers pledge an absolute conformity to printed program; an opportunity to pass from department to department at close of each paper and discussion; a strict observance of scholarly decorum, and parliamentary rules; and expert committees to pass upon the merits of all exhibits of commercial work.

Let all friends of practical education rally round the standard at Detroit.

Sincerely,

W. C. STEVENSON,
President.

Hits the Spot Exactly.

OLEAN, N. Y., Oct. 1, 1890.

ZANE & BLOOM.

GENTLEMEN:—The October number of The American Artist and Business Educational Topics in hand and hits the spot exactly. It is just what I have been looking for, for some time. Its broad, liberal sentiment and logical reasoning along all lines of educational work is to elevate and improve the profession. You are doing a grand, good work for the betterment of humanity, and I wish you the success your effort deserves.

Yours most sincerely,

G. T. WISWELL.

ISAAC PITMAN'S SHORTHAND.

FIRST IN 1837. FOREMOST EVER SINCE.

AN EXPERT OPINION.

"I have been a practitioner of the Isaac Pitman system for many years and believe it is superior to any other. Although I am personally acquainted with many fast and accurate writers among the users of the various Pitmanic systems, I regard this fact as an indorsement for the Isaac Pitman system, because imitation is the sincerest form of flattery." I can, however, truthfully say that I am not acquainted with, nor do I know of by reputation (excepting two veteran Gurney writers—a single rapid and accurate writer who is not a Pitmanic follower) if he does not follow of course that such does not exist, but I do know they are not conspicuous in this vicinity. I am a firm believer in the orthodox manner of teaching and practising Phonography as laid down in the authorized textbook of the Isaac Pitman system, viz: 'The Complete Phonographic Instructor,' and am decidedly of the opinion that any serious departure therefrom will only produce harmful results."—FRANK D. CHREST, Official Stenographer, U. S. Circuit Court, New York.

NOW READY: Pitman's 20th Century Dictation Book and Legal Forms.

Containing genuine letters used in American business offices, covering fifty distinct lines, Legal Forms, and a judicious selection of practice matter for general dictation. Also chapters on Spelling, Punctuation, Capitalization, and Short Practical Talks. This work, which is the most complete of its kind, is specially compiled for the teacher, the beginner, and the advanced student, and all progressive schools without reference to the system of shorthand taught. 256 pp. Price, cloth boards, 75c.; cloth, $1.00. To teachers and schools for examination, postpaid, 50c. and 85c. respectively. Specimen pages on request.

ISAAC PITMAN & SONS, Publishers,
33 UNION SQUARE, NEW YORK.

GILLOTT'S PENS,
THE MOST PERFECT OF PENS.

HAVING GAINED THE
GRAND PRIZE,
Paris Exposition, 1900.

This is the Highest Prize ever Awarded to Pens.
Hearing that Mr. Brown had made a change in system of shorthand, and that he was using one of his own invention of this branch, we requested him to use our columns to let the public know what he has been using, as we believe the great majority of shorthand writers are scribes or account of himself, so to speak, in this particular. The following reply will no doubt be read with interest.

JACKSONVILLE, Ill., Sept. 9, 1900,
Messrs. Zaner & Blaser,
Columbus, Ohio.

GENTLEMEN:
I have been absent for several weeks and just find, upon my return here, your esteemed favor of the 7th inst. I regret more than I can tell my inability to prepare any thing for publication at present. I appreciate the efforts you are making, indeed, have been making for years, in the direction of important ideas concerning the subject of shorthand and business education in general. I have learned with much interest that you are branching out with your publication and have received from your firm, my friend, Mr. Gaylord. It would afford me great satisfaction if I were in position to contribute something for publication. The spirit is willing, but I have begun to find myself too limited in time.

I have not added two more schools to my circuit and now have nine to keep track of. Here are the latest additions.

Mr. Jasper and Mr. Zander have written that our schools have been so favorably impressed with the Gregg System of Shorthand that we are teaching it in all our schools this year. During part of August, Mr. Gregg conducted a Teacher's Institute at our Columbus School, in addition to our teacher's shorthand quite a number of others were in attendance. This little gathering was far greater than anything I had expected, and in all probability will mark a marked and unexpected attention to the instruction. I may hereby warn a short contract, no interest, no pressing of the matter, meeting, some of which may be of a little more interest for the next school year.

I shall leave for Peru in a few hours and am expected in Frankfort within the next week. At this season when the year's work is getting started, I find much more important. However, if I get back in time to publish the weekly New York Times and the opening of our Fall Term, it has opened with a marked increase in the number of students, and we are all, therefore, very busy.

I appreciate most highly the efforts you and Messrs. Zaner and Blaser are making a well known magazine of business education and shall continue to use the publication to the favorable attention of our principles and teachers, and shall be only too glad, if I can, in any way, promote its success.

Very truly yours,
G. W. Brown.

DEAR SIR: A style or kind of lettering frequently needed to acquire it, first learn to make the following: A B C D E F G H I J K L M N O P Q R S T U V W X Y Z 1 2 3 4 5 6 7 8 9 0, then learn to space letters and signs so as to be easily and quickly read. Next learn to do it quickly by continuously trying to do it in a little time each time, but always well.

Use dense and letter-like ink and smooth-pointed pens.

The letters may be made to fit any conditions by using LARGE or small, or wide.

Yours, P. F. Zaner.

From Vertical to Slant. Penmanship in Public Schools

VERTICAL SYSTEM TO BE ABOLISHED HERE
A FAD, MR. JASPER SAYS

The Board of School Superintendents has arrived at the conclusion that a grave mis- take was made in introducing into the schools the vertical system of writing. Now, the evils that will come upon the school will be taught to forget what they learned about penmanship, and considerable trouble be looked for at future meetings of the Board of Education, which has power to adopt an entirely new system of penmanship.

Every school principal in the city has received notice of the act taken by the Board of Superintendents. The notice sent out was as follows:

The Board of School Superintendents, after a full consideration of the subject of penmanship, adopted the following:

If there be, for many reasons it is desirable to unify the instruction in penmanship in the schools of these boroughs; and

If there be, the writing that offers most in the respects of legibility, rapidity and ease of instruction should be the one to be taught; therefore be

Resolved. That the adoption of such a system in all the boroughs of the city at once, and the schools of these boroughs would greatly improve the writing of the pupils, and at the same time would lessen the difficulties of instruction.

JOHN JASPER,
Borough Superintendent and Chairman

In explaining the change yesterday Superintendents Jasper said that the Board of Superintendents merely passed a resolution suggesting the change. Principals were not trained under the old system of vertical system, Mr. Jasper said, and the majority of them would not go back to the old slant system of writing. Writing books or copy books containing the old system would be provided by the Board of Superintendents.

After investigation, said Mr. Jasper, "we found that business people were opposed to employing persons who had been taught to write by the vertical system, which was not good enough for use in libraries, but not good enough for office work." A word that got into our schools like many other faults that have crept in, and strongly opposed to all of these faults.

Mr. W. H. Lathrop favored us with the above. It means much or little, as you choose. The introduction of vertical did not prove a success nor does its abandonment necessarily prove it a failure. A swallow does not bring summer, nor does a whole flock prove the absence of a snow. Some years ago we said that if vertical was abandoned in places where we would be surprised. For it could win under such unfavorable teaching it certainly has its merits. But it has surpassed the most extravagant expectations, and deserves the remonstrance of a thing that wins, but the estimate that public opinion places upon it.

Editors.

Diplomas and Awards Filled in

Address, Zaner & Blaser, Columbus, Ohio.

DEAR SIR: A style or kind of lettering frequently needed to acquire it, first learn to make the following: A B C D E F G H I J K L M N O P Q R S T U V W X Y Z 1 2 3 4 5 6 7 8 9 0, then learn to space letters and signs so as to be easily and quickly read. Next learn to do it quickly by continuously trying to do it in a little time each time, but always well.

Use dense and letter-like ink and smooth-pointed pens.

GREGG'S SHORTHAND

Its success is unprecedented in the history of business education.

As stated in the PENMAN-ARTIST AND BUSINESS EDUCATOR for October, it is "capturing a good many of the shining shorthand lights of the profession."

With such men as G. W. Brown, Chas. N. Miller, Geo. P. Lord, W. C. Stevenson, C. N. Bartlett, D. L. Musselman, and a host of others, singing its praises, it is not necessary for us to say much.

But do not take the word of anybody—investigate for yourself. Impartial investigation always means adoption.

The larger design shows a letter-head with a half-tone portrait inserted. The printing plate was made in two pieces, part is a zinc etching lithogravure, the other part, the portrait, is a half-tone made from a photograph. The half-tone was neatly inserted in the zinc etching after each had been etched separately. This heading requires good printing.

The other design is a novel envelope design, it embraces also a portrait, a pen-portrait, drawn in the mechanical style. The other part, the portrait, is a half-tone made from a photograph. The half-tone zinc etching after each had been etched separately. This heading requires good printing.

The other design is a novel envelope design, it embraces also a portrait, a pen-portrait, drawn in the mechanical style. Printing plate was etched in one piece, and the drawing was made in three distinct parts. The portrait was drawn by itself, three times as large as shown here, the lettering double size, and the tint with the leaves, etc., was drawn and reproduced actual size of drawing. To be able to make one etching embodying the three drawings mentioned, it became necessary to photograph each drawing by itself exactly the size required and then, dexterous hands manipulated the three negatives and combined them into one from which the printing plates was made. The envelopes were printed in light blue, some in a bright copper color, and still others in light green.

The small half-tones show two designs made to be photographed and printed from negatives on celluloid in manufacturing the so-called Photo-Brooches, Buttons and Scarf Pins. The larger design is one of sixteen recently made, and is shown because it embraces five likenesses. It occurred to us that this idea might be utilized by some wide-awake business college proprietor to advertise his institution, by presenting his graduates with either a brooch or a scarf pin, as a token of remembrance, on which the name of instructors and the name of his college were the prominent features. On inquiry we find that this would not be expensive advertising.
THE PENMAN-ARTIST AND BUSINESS EDUCATOR

November 6, 1900

THE COMMERICAL AND FINANCIAL CHRONICLE.

This is a weekly publication and is worth a place on every teacher's desk. It is published at the corner of Pine and Pearl, New York City. The contents for the week ending September 16, were as follows:

2. The Illinois Central and its Progress.
3. Railroad Gross Earnings for August.
4. A Commercial Epitome containing the following:
   a. Cuttings.
   b. Breadstuffs.
   c. Dry Goods.

The article on cotton is worth the price of the paper.

NINETEENTH CENTURY.

"The Burden of Coal," is an interesting article in the current issue of this up-to-date magazine. The writer, Benjamin Taylor, deplores the fact that, because of war and so-called imperialism, the taxpay-er's burdens are constantly increasing; and in the midst of all this increased expense, he is not assisted with an imperative de-

mand from the coal scuttle. Higher prices
mean less comforts, and less comforts a lower grade of civilization.

THE IRON AGE.

The issue of September 16, of this interesting publication contains the following ar-
ticles:

1. Mammoth Lathes for Turning Granite Cobblers, Unnecessary.

ELECTION.

This magazine contains one article of es-
special value to the student of Commercial Geography. The trend of modern indus-

trialism is toward that part of the earth in which the efforts of man meet with the least resistance.

THE NORTH AMERICAN REVIEW.

Alfred von Hagen has contributed an article for the September number of this magazine entitled, "The Commercial Aspect of the Yellow Peril" p. 200 ff. Quoting from Reisch in his "World Politics at the end of the Nineteenth Century," he says: "The Chinese are an active, energetic race. For ages they have developed under the reformation of the survival of the hardiest, trained from youth to subsist on the most unmea-}
ged diet, to get along with but little sleep, and to work patient twelve or fourteen hours each day; these men scoff at difficulties, and exertions, which would, within a year, wear an European to death.

Certainly the student of the world's pro-
gress cannot afford to miss a chance to stu-
y the Chinese.

ECONOMY.

This comparatively new magazine gives great promise in the line of Commercial

Geography. Under the title, "Great American Industries," the September issue gives an exceedingly interesting article under the title, "Oyster Farming." This is from the pen of Kene Bache and is found on pp. 18-20. Read it, if you are interested in an American industry that is worth millions to us every year.

MULLER.

This always interesting magazine contains an interesting article by Ray Stannard Baker, entitled, "The Building of a German Ocean Greyhound." The most inspiring thought in the article is that we can do as good work in this country as is done in Germany.

AISLIE.

This deservedly popular magazine contains two very interesting articles for the current month.

Both of these articles are very interesting and should be read by al who are inter-

ested in the development of our Great West.

This closes the review for the month, and I trust my readers will find the field profit-

able and entertaining.

FINES SUPPLIES FOR PENMEN AND ARTISTS

All goods go by mail postpaid except where express or freight is mentioned, in which case carriage is paid by purchaser.

Zaner FINE WRITER PEN—The best and finest writing pen made—best for en-

grossing, card writing and all fine scrib-

work. Gross $1.50, 25c., 1 Doz……. 12c.

CHICAGO
SPECIAL OFFERS.

In order to still further enlarge the rapidly increasing circulation of The Penman-Artist and Business Educator, we now wish to make some extremely liberal offers.

These offers are not intended to be unlimited as to time, and may be withdrawn at any time, so we would advise persons who desire to take advantage of them to do so without much delay.

THE BEST HOME STUDY WORKS YET PRODUCED.

The works described below must not be confounded with the cheap books on the market, many of which are a jumble and rehash of specimens of all sorts thrown together with regard to their proper presentation as to be of value to anyone desiring to learn a branch of penmanship.

Our books have been prepared at a large expense, especially for the home learner, and unquestionably form the most valuable, up-to-date, and complete series of home study publications ever offered in these lines of work.

Each work starts the student at the beginning and takes him over a thoroughly graded and complete course of study and practice.

The copies and examples are of the highest grade and most inspiring kind known to our profession, and the instructions accompanying them are so plain and to the point that no one will fail to learn, at least the specimen that is given.

The best results are obtained by subscribing for The Penman-Artist and Business Educator, and using it in connection with these works.

Each number of the journal contains lessons in the same branch treated by the books, and these monthly lessons will fire your ambition and are highly pleaded with the work. The expense is but a trifle when compared with the saving charged for correspondence instruction.

Whatever branch you wish to master, subscribe for the journal and secure one or all of the works mentioned herewith in connection with that branch. Then go to work. (If you desire a number of the works at one time, write for special prices.)

Business Penmanship............. Manual of Simplified Script,
Vertical Penmanship.............. Zaner's Complete of Business Penmanship.
Ornamental Penmanship........... Lesson in Ornamental Penmanship.

Have a certain characteristic originality in method, subject matter and arrangement, which has won for them a conspicuous distinction for superior merit in the estimation of commercial educators.

THE BUDGET SYSTEM OF BOOKKEEPING

Came as a revelation of new ideas in teaching the laws and practice of bookkeeping and modern office practice. It has since been accepted as the standard by which all others are measured. It was the first AND TODAY IS THE ONLY SYSTEM THAT WILL PASS THE INSPECTION OF THE PRACTICAL ACCOUNTANT AND BUSINESS MAN. They indorse it because it accurately reflects the actual work of the counting room and office, and imparts such a training as will make it unnecessary for the beginner to unlearn things when he accepts a position.

Modern Publications for Penmen, Artists and Teachers

Our publications are universally recognized as the best guides for penmen. The prices are very low considering the quality and character of the work. All books are sent postpaid by mail or by prepaid express.

Portraiture—The best book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book, luxuriously printed and bound, containing hundreds of examples and explicit instructions. $1.00

The New Zanerian Alphabets—A guide to engrossing, containing a great variety of alphabets, designs, such as diplomas, resolutions, etc., with complete instruction. A substantial book bound in cloth. $1.50

Compendium of Simplified Vertical Penmanship—In book form, and by far the most thorough and complete instructor in vertical writing yet published. 75c.

Manual of Simplified Script—A work containing a thorough, graded course of penmanship, written by a veteran penman and artist, C. P. Zaner, all in the simplified style. For business and student use. Bound in cloth. 50c.

Zaner's Gems of Flourishing—A book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the stroke by stroke how to make the simplest strokes and exercises and finishes with a great variety of designs showing the highest degree of skill yet attained in this art. Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published. 50c.

Progress—C. P. Zaner's masterpiece in flourishing. It represents an eagle, forceful and lifelike, winging himsel through intricate curves and branches. It is on the finest of plate paper, 22 x 28 inches. The original of this design hangs on the wall of the Zaner Art College, and is valued at $100. "It's great," "It's certainly a bird" are some of the expressions many have made on seeing it. Let the reader remember also that it's no Spanish bird, but the American Eagle—that old national bird of ours that now he especially proud. In type 50c.

Light and Shade—A manual on drawing by Mr. Zaner. It contains 128 pages, 47 illustrations, and plain, simple, instructive text. It is just the book for home students need, and what all others who are not at home in drawing need to make them feel at home. Any one can learn to draw by the aid of this book. Only 20 cents postpaid. The illustrations are lithographed from actual pencil drawings and are much finer than photo engravings.

Sample pages of Portraiture or Sketching from Nature mailed for 25c. Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks. Address:

HIGH GRADE BOOK AND COMMERCIAL ILLUSTRATORS.
COLUMBUS, O.
Sureness One of the essentials of good writing is sureness. To be able to produce good, legible characters on the spur of the moment and under ordinary conditions as to height of desk, quality and kind of pen, etc., is the test of business. Plainness, swiftness, and sureness are the three important factors in good penmanship. Failure in any one of these and the result will be failure. You must begin to-day to make the pen count every time you place it upon paper. That means that there shall be no meaningless practice; no careless writing; no scribbling as an excuse for movement drills, if you want to make sure of the product - a legible, rapid, serviceable, business-hand. Aimless practice, slipshod writing, indefinite concepts, all need to be avoided. Need I say more? Practice freely, practice enthusiastically, practice intelligently, and the result is as certain as it is desirable. Do not expect to get a good hand writing in a day. It takes time, but it is worth many times its cost. It is the best investment a young person can make. It is capital that can be put into earning at any time.

No. 22 Let the arm roll and revolve freely in the sleeve in making the compact, narrow oval exercise. Little or no finger movement is necessary if you make the loops short and a rounding turn at the base. The down stroke or back of the 1 need not be perfectly straight, and the crossing may be quite low, and then I shall never look like t. Always your penmanship will at least be legible, word ill without pausing. Write it well times. Indeed, if you are preparing as an to write it perfectly legible forty times in a minute. Try it. The word mill with its wide spacing cannot be written more than about one half as fast. In practicing ill, work for plainness and speed; in mill, work for accuracy and freedom.

No. 23 The I is a difficult letter to make well, as it contains two compound curves. The exercise given is a good one to encourage ease and grace of movement. Master it. Try to make it well rather than rapidly. Never, however, practice slowly. If you are not sure of your precept, draw the letter slowly. Retrace the large ones with a dry pen. Be sure you know the proportions, shape, and characteristics of each letter before you practice upon it. Learning to see is an important part of learning to do, and quite as difficult. Save time and practice by critically examining each copy before practicing upon it.

The L begins like the I and finishes like the A. Do not loop the second part. Keep the first part round at the base or it will resemble H or B. See how easily you can write the sentence, and how well. Finish each word and sentence as carefully as you begin them. This is a habit worth forming. It means success.

bubble bubble bubble bubble bubble
bumblebee bumblebee bumblebee
No. 24 The $h$ is a union of $l$ and $r$. Use a free rolling movement in making the exercises in the first line. The last exercise therein finishing the $h$. Do not loop the finish or it may resemble $b$. The loop need not be as full as in Use but little finger movement. It is not necessary with an easy, non-spasmodic movement, and the result times in a minute. Keep your spelling-cap on the

The word *humblebee* well ten

same time.

No. 25 The $y$ is an easy letter if you have mastered the $U$. Make the loop long enough so as to distinguish it from $U$ and no longer.

Long loops are unnecessary. They require time and effort to make well, and usually considerable finger movement. Short loops can be successfully written without the aid of the fingers, while long loops require more finger action than any of the other letters. Nothing contributes to a uniform, even, regular handwriting as arm movement. Therefore, strive to master it. To do so, see that your position is not cramped and your paper is at the right angle. It ought to be so placed that you can write a reasonably long word with ease without shifting the elbow. In making the letters on the last line, it is allowable to pause slightly between the forms at the little loop. However, it is not necessary with all persons.

No. 26 The characteristics of an $h$ are an extension, usually in the form of a loop, and the second part of $n$. Keep the first part sharp at the base and the second part round on the letter. It sometimes resembles $k$ or $b$, as shown here, first and second part will insure plainness, but the pauses times in a minute and write it well. Not that many to become a rapid, legible penman. Write the word

hush hush hush hush hush

hurrah hurrah hurrah

No. 27 Begin the $j$ with an upward left curve and finish it the same as $y$. It is a letter that is rarely ever taken for any other. Practice the retrace form at the end of the first line as it encourages smoothness and sameness. Joining words as in the sentence is splendid practice as it encourages arm rather than finger movement. It is not very practical as a final product, however, as it requires more spacing between words than where they are disconnected. Try to make the $j$ and $y$ the same size and slant. The arm must act much like a hinge at the elbow in making these forms. Keep a good position of the body. Do not lean against the table or the chair back

No. 28 Toil is the greatest talent after all. It is the one that insures lasting success. It earns success by the sweat of its brow, and then appreciates it. So do not think only a few can learn to write a good hand. All can who are willing to work under the right instruction. Study the general appearance of this plate. Note the spacing in and between words. Then contrast the turns and angles, the $n$'s and $p$'s, $s$ and $a$'s, etc. Find your first faults, then eradicate them one at a time. Discard your faults and good writing will follow. Better not drink tea or coffee, much less beer or whisky. Tobacco can do you no good—it does some harm, sometimes a great deal. Skilled persons notice the effect much sooner than others. It pays to be on the safe side.
Good penmanship, coupled with commonsense, a common school education, fair intelligence, honesty, and industry, will do more to secure and hold a good commercial position than any other one thing.

The above represents a compact hand and may be written advantageously by many. You may prefer and write it better than the more running hands and if so there is no reason why you should not be allowed to use it. It represents economy rather than extravagance in penmanship matters. It is a good hand for accounting. The little finger slips less freely in writing this hand than in the more widely spaced hands. Adopt, adapt, and develop that which you like best and can do most easily. There is no one way for all. Find your style, then make a success of it. Or better still, make a success of any hand, and style will creep in in spite of you.

Criticisms  C. V. B.—Practice more systematically. Stick to the copy. Too many angles in your letters. Watch the details. Your movement is too wild though of the right basic kind—harness it.

K. P. H.—Close your o's—curve first stroke more by starting it to the left rather than downward. Omit shade on r. Capitals too large for the small letters. Work is good otherwise.

O. H. J.—You write well—splendidly under the circumstances. You ride the pen on the down strokes. You ought to practice more on each lesson. The quantity you do is not enough to increase the quality very much.

HARRY—Your practice reveals unusual improvement. You can become better than a good penman. Close your o's. Make no angles in the top of m. Make loop in e and I fuller.

E. J. K.—Sharpen your p's and m's at the bottom, and your n's at the top: you make them too much the same. Learn to distinguish angle from turn and loop from retrace.

P. F.—Don't shade your capital A's. Your touch is a trifle heavy and your pen worn. Better not close capital A at top. Strive for greater accuracy rather than greater freedom, for the purpose for which you desire penmanship.
Simple, Sensible, Serviceable Characters

The true function of writing is to express and to record that.

A A A A B B B B B B B B
C C C C D D D D D D D D
E E E E E E E E E E E E
F F F F F F F F F F F
G G G G G G G G G G G G
H H H H H H H H H H H H
I I I I I I I I I I I I
J J J J J K K K K X X X X
L L L L L M M M M N N
N N N O O O O O O P P P P
R R R R R R R R R R R R
S S S S S S S S S S S
T T T T T T T T T T T
U U U U U U U U U U U
V V V V V V V V W W W
X X X X X Y Y Y Y Y Y
Y Y Y Y Y Y Y Y Y Y Y Y
Z Z Z Z Z Z Z Z Z Z Z Z

To make these forms successfully, discard semi-angular, spasmodic, rigid, inflexible movements and employ, instead, easy, rolling, graceful, gliding, flexible ones. Keep the capitals low and wide, the loops full and short, and the short letters rounding. Turns should be round and full and angles sharp and retracing. Aim at plainness first, then speed, then beauty of neatness and simplicity. Let the hand rest, glide, and roll or revolve upon the little-finger rest. Employ arm movement—finger action is less necessary in this than in any other style of penmanship. It is the coming hand because it is intensely legible, unusually easy, and quite rapid. A goodly number of styles are given—select the ones you like best and adopt them for your rough-and-ready writing. If they do not improve under conditions that are destructive to the usual, semi-angular, tall-loop style, we will acknowledge the corn and say so publicly.

Appreciative Letter from Mr. Crandle

The best evidence of my appreciation of your most excellent paper is expressed by the one dollar which I enclose for my subscription. Please notify me when my time expires, so that I may renew.

Lessons in Artistic Penmanship

Number Three

By J. E. Leamy, Troy, N. Y.

If there is any one thing that will carry you to the top in this work quicker than anything else it is what I would term "honest" practice. I use the word "honest" simply to distinguish conscientious practice from careless, indifferent practice. No doubt, many of you have by this time noticed how much more you gain and how much better you do when you are compelled to "get out" your best when you sit down to swing away with that don't care feeling. Perhaps during the latter practice you occasionally get a form that opens your eyes, yet as a whole you do not begin to improve as much. Therefore, each time you make a letter or a word do it with an object in view. In other words, every time your pen passes over the paper put behind it your best efforts. This kind of practice, re-enforced by a free and easy movement, cannot
help but carry you through rapidly. Remember, too, that in order to practice "fom estly," it requires two things: namely, an accurate knowledge of form, and a free and easy movement. These are the two main requirements. If you have them you are fortunate, but if you have them to get, do not despair. There may be more satisfaction in having them than in having them to get, yet you will find more pleasure in the getting than in the possessing.

Now do not sacrifice the small letters for the capitals. Keep in mind that the former are of chief importance, and that your success as a penman will be far more certain and permanent if you write the small letters uniformly well than if you dash off large breazy capitals at the expense of the small forms.

LOOPS.

Thus far I have said nothing concerning the angle of the paper and the position of the arm. If there is a place in the work where the angle of the paper is liable to effect your results, it is in making loops both below and above the line. The loop letters are usually considered difficult, but I do not think you will find them so if you observe the position of the arm and paper in making them. Many of our enthusiasm on the "purely formal" movement advise some finger movement on loops but I do not think it necessary. If you keep your arm at right angles with the connective slant and make the loops with the arm, using considerable hinge action I think your results in the end will be far better than if you hold the paper and arm on about the same slant and endeavor to use finger action in their construction. Now do not understand to say that loops cannot be made successfully and well by the latter method. They can, but I think it takes much more training and time to master them by the latter method than by the former. You must discover for yourselves just what movement of the arm, hand and fingers produces the best results, and then use that movement. You may have some trouble in getting the crossing up as far as the baseline but it should be there or nearly so. Do not stop the pen at the bottom, but keep it moving. Endeavor to make all your loops about the same size, and be very careful about their slant.

HOW TO MAKE T, D, AND P.

Begin the loop the same as you would an i, but instead of reversing the motion at the top and returning to the base line as in the i, the pen should be raised from the paper, thus forming a short, curved stroke. At about three spaces above the base line let the pen strike the paper firmly enough to force the points apart, and then start toward the base line, raising it gradually and swiftly from the paper somewhere between the head and base lines. Then add the finishing turn and stroke. But it is not yet complete. It must be "retouched." This is done by leveling the top and sharpening the corners.

The d is made so similarly to the t that additional instruction is not necessary.

Let the little finger slip freely in making the first two strokes of the p. After making the up stroke come below the base line with a "rush," and stop abruptly, the pressure of the pen on the paper will be sufficient to check the motion. Square the corners as in the t and d, and finish like an n.

Now in writing words do not be afraid to lift the pen quite frequently. Be "cute" about picking the stroke, and endeavor to leave no trace of such work. This raising of the pen so frequently may seem to many detrimental, nevertheless it is done for the finest of them. In truth, it is this very reason why many do not write better.

They are told to use "pale turkey" and not to lift the pen, yet they are told to do many things that the instructor could not do if he tried. It is simply another case where theory and practice disagree, and where precept is better than example.

Send your latest efforts.

Critics

John S. P., Maine: Put in more hard work on simple movement exercises. Work shows that you have not yet mastered them. Be more careful about the turns, both upper and lower, in small letter work. Send your latest efforts on lesson one.

Miller, St. Louis: If you continue to improve the coming months as you have in the past, your work will soon be beyond criticism. You are a little weak on small letters. Lines not quite smooth enough. Tops of small m and a rather inclined to be too pointed.

E. J. B., Ohio: Glad to receive your second work on lesson one. It shows a great improvement over your first efforts. Uprights on all small letters too slanting. Do not shade every letter. Just an occasional one. You do well.

E. G. F., Vermont: Glad to know that you are again "swinging." I like to receive work from my old pupils. It brings back recollections. Would advise more short right through small letters. Keep all down strokes near the same slant. Small y is poor. Send me your best efforts on lesson two.
possibly dishonesty is not more common today than formerly, but recent glaring instances of it emphasize its presence, and, incidentally, a fundamental duty of commercial teachers.

A few weeks ago a young bank clerk in Kennebunkport, N. Y., disappeared, and an investigation showed that $50,000 of the bank's money had gone into sporting life in New York. Only a few days later, the great dailies ran striking headlines over an almost incredible tale of stealing. The note teller of the First National Bank of New York had "stepped out to see a man," when he saw the bank examiners at his desk, and the examination of his books showed that about $50,000 of the bank's money had been contributed by this trusted employee to racing and gambling in Saratoga, and to a scale of living, at his home in Mt. Vernon, far beyond his salary.

While the officials of the First National Bank of New York were catching their breath, E. S. Dreyer, a private banker of Chicago, was taking a flying trip to Italy, to serve a ten years' term for depositing another bank, as his personal funds, to apply on a personal loan of $50,000, money that belonged to the Park Board, of which he was president. The bank failed, the money gone, and Mr. Dreyer pays for his inability to discriminate between his own and other people's money, by boarding at the state's expense for several years.

Fresh in the minds of all these men was the story—six months old—of the conviction and penitentiary sentence of President Cole of the Globe National Bank, Bos- ton, and of a Vermont cashier who had "stolen" his books, to cover his obligations for a friend who was hard up. Illustrations, unfortunately, are too numerous to make their further citation here profitable to our discussion.

A Lesson for Teachers

The lesson to be drawn is not, in our judgment, that we teach more bookkeeping, but that we do more to build good character. It is said to be supposed, nor is it a fact, that the majority of these cases result from defective systems of accounting. They are the product of insufficient moral training, excessive temptation, and carelessness on the part of superiors.

Our young men go to the theater, the poolroom, and to late supper too much, and to dance halls, too much, and in too many cases, for too long a time. Young men and women are influenced and similar uplifting influences too little, to develop a healthy moral vertebra.

With many of them, good clothes and a gay time are the sole aim and end of life. It is not strange that other things being equal, business men prefer to get young men from the country rather than from the city.

School Influence

Barring the influence of mother and home, there is no influence more lasting or effective than that of a noble teacher. It is an interesting fact that biographies of notable men always contain a prominent reference to the influence of some teacher in their youth. Example of the subject, Dr. F. E. Bunnell, of Brown University, said, the other day, that the teacher is himself a concrete representation of all the virtues he can teach. The pupil, in short, is what the teacher says he should be clean in his personal habits, upright in character, a man of exalted ideals.

It is ignoble, hypocritical, degrading, for a school principal to lead in the religious or other influence of the pupils in his daily history, his tone, his looks, his actions. It is not in the minds of his students an impression of earnest sincerity, shame upon the school, a blight, which will do harm in a loud voice, and with a long face, preaches to his students about the value of punctuality in meeting obligations, when his teachers cannot pay their rent because he is paying out all of his September income for soliciting advertising matter, and trusting to luck to get enough to move through to the date to which the amount of a school of young and forcibly and successful teacher than is present. Do not set a bad example.

Bad Examples

The school principal who, in his printed matter, deliberately misrepresented the facts in regard to the attendance, equipment, faculty, range of study, and of standards of work in his school, is giving his students the first lesson in an art of which the professional bookkeeper is a master past. When he sends out smooth tawny fakirs to tell plausible tales of "common" success which possibly one student in fifty achieves, he is teaching that young person that, in the language of the "Honorable," Richard Croucher, "he is looking out for his own pocket all the time;" and we might add that such a character as little as the Tammany boss how he gets his business, which his faith in human nature is shattered, or many tears of disappointment are shed, or he goes out to practice his lessons on the community. When he gets the parent of the prospective student to sign a contract, not caring much then whether the student comes to school or not, and when he forces payment on contracts for which equal value has not been given, the student's natural inclination toward good practices has been greatly strengthened.

Noble

No one, who, at the Federal Character Banquet in Chicago last winter, heard the matchless tribute paid by W. X. Ferris to his former teacher, the late president of the Oswego (X. Y) Normal School, can ever forget it. What an influence that was! Think of the men and women whose ideals have been fitted and whose lives have been quickened by even this one product of that Normal School. But to do good work does not require one to be president either of the Oswego Normal School or of the Ferris Industrial Institute. One wonders where that prince among the leaders of young men, L. M. Thornburgh, got his bent toward the true foundation work of teaching. Hundreds of young men—the writer has talked with some of them—have become practically indispensable morally through the influence of this one teacher, whose ideals are high, whose motives are pure, and whose heart is altogether in his work. But the personal application need not be necessity, though there are many good examples that could be cited.

There is, we regret to say, another class of teachers.

A High Standard

Fellow teachers, let us realize our responsibility to God, to our students, to the higher cause for which we work. Let us not forget that it is an awful thing to help, even so remotely, in forging the chains of unrighteous habits with which to fetter the limbs of the young, who should go forth to conquer wrong and evil. May we not undermine the foundations of character, laid in tears and prayers at home.

Teach more bookkeeping, if you will. Expose the methods of defrauders, if you can. Show your pupils how to protect their own interests from unscrupulous employers; but have a care that you do not turn loose on the business community someone whose nature potential evil—unrestrained by any thing you have done for him—has been raised to the third power by the intellectual education you have given him. Remember that "an ounce of prevention is worth a pound of cure." Cleanse the fountain at the head. Raise high the ethical standard of your school and of your life.

An Exercise in English

A little ingenuity on the part of a teacher of English will provide a great deal of work for pupils. Here's a suggestive exercise made up by choosing irregular verbs whose past participles are often abused. The pupils write out the sentences, supplying, in the blank, the past participle of the italicized word, which is to be omitted in reading the sentence. Follow this with exercises on parts of speech and on verbs, in the past tense, and on verbs that need to be discriminated.

Consult a good dictionary, if you have any doubt about the correct form for the
past participle of any of the following italized verbs:
1. He tres - sick. He has been sick.
2. They have bare - the Honorable John Sherman to his grave, in Mansfield, Ohio.
3. Overseers had beat - the slaves cruelly.
4. Count Von Waldersee has begun - operations in China.
5. Theodore Roosevelt had had - his followers keenly excited. When Putnam's dam was destroyed because the Conemaugh dam was burned.
6. The young man has wisely choose - uprightness with poverty, rather than
7. The man in the little city of Nazareth.
8. They have hung - John Brown's body on a sour apple tree.
10. Franklin had know - poverty.
11. The teacher had put - the book on his desk.
12. The work of President Monroe has been many years.
13. Garfield's monument was lay - in the hearts of the people.
14. You have mistake - the directions.
15. Father Time, in recent months, has been
16. The river has been full of many a shining sheaf of ripe, golden grain.
17. Bucephalus was ride - by Alexander the Great.
18. The old bell-ringer of Independence - "Hall had struck the clock - out such momentous tidings.
19. The sun is rise - the importance of the occasion.
20. The rain has been dry.
21. We had never see - Mt. Blanc.
22. His purpose has not been shake -
23. Our manufacturers have seek - foreign markets.
25. Many eminent men have sit - in Congress.
26. We were show - to Whittier's "Garden Room."
27. The rain had soaked his wooden clothes, and they were much shrunk -
29. The Maine had sink - in Havana harbor.
30. Thousands were slay - on the field of Gettysburg.
31. With the coming of day, the jackals of society will have slink - out of sight.
32. Whatsoever a man hath sow - that shall he also reap.
33. And many a word at random speak may sodde or wound a heart that's broken."
34. General Leonard Wood found that he had sprained an ankle a few weeks.
35. A large sum of money was take - from the Bank of England by an American.
36. No one has sirim - the Whirlpool Rapids of Niagara.
37. Marconi has arrive - successfully to win fame as the inventor of wireless telegraphy.
38. President McKinley has swear - to defend the Constitution.
39. The children were placed in the swing, and were swing - for half an hour.
40. A great deal of property and have been take - by the soldiers in the attack on Tien Tsin.
41. "Not till Time has tear - out half the book of life do we see how few remain.
42. Every good citizen will see that his influence is throw - on the side of good government.
43. King Winkle was wake - after twenty years.
44. "The Recessional" was write - by Kipling.
45. More carpets are weave - in Phil adelphia than in any other American city.

Commercial Geography.
A Monthly Review of the Best Things For the Student and Teacher.

WILLIAM J. AMES, PRINCIPAL SCHOOL, PHILADELPHIA.

The periodicals for the month of October are full of good things for the advancement of our work in commercial geography. There seems to be a tendency on the part of publishers to keep their subject in one form or another before the people. This tends to make me think that if commercial geography really occupied the second-rate position some of our good friends would have us believe that we would not be filling their pages each month with matter of this sort. Believe me, when I say that so long as commerce and its development are the basic causes for world-action, just so long will the study of commercial geography be of prime importance and interest to young Americans. Don't feel discouraged if your pupils are, at first, more of less apathetic. Put the good things of the world into the closet and try using some of the daily papers and magazines. Write to the Chief of the Bureau of Foreign Commerce at Washington and ask him to send you some material. If you do not get the finest text-books you have ever seen, you may call me whatever you like. After you get all the material together, it is a good plan to lay out the work in such a manner as will best interest your class. I cannot guide you in this matter, because I don't know your environment and pupils.

The following list of magazines is not arranged in alphabetical order, but it is to be hoped that the earnest teacher will not find this of great moment:

FRANK LESLIE'S
1. "China. A Survival of the Unfittest." This is an article of intense interest to the Commercial Geography student. It should be read in class and fully discussed.
2. "Race for the Chinese Market." This is really a wonderful article and one cannot look at it without reading it to your pupils or placing it where they can read it and then give them a test to see that they read it.

MUNSEY
1. "The Greatest Fighting Machine of the Age." This is an inspiring article because it emphasizes that if our country would lead in the commerce of the world, we must be able to back our claim.

2. "The Crises in China." This is an interesting article because it shows the facts to others, should be able to tell us all about the Celestials. Read it by all means.

3. "The Annihilation of Space." An inspiring article by the editor of the "Manchester Guardian," who publishes in Baltimore, Washington, Pittsburg, Boston and Buffalo. The following year, when China's commerce is the center of the world, will be within five hours of the metropolis. It is a wonderful article and a wonderful piece of writing. This is a wonderful article by a wonderful writer. Mr. Manchester is one of the best examples this country has produced of what a young man may accomplish; and his articles are always full of that imperious force which has given him the position of a great publisher of up-to-date magazines.

4. "Italy and Her Makers." This is a timely article, in view of the fact that half a dozen of the world's nobility most recent.

OVERLAND MONTHLY
1. "A-Seen in a Logging Camp." This is an interesting article, well illustrated. When we think that the trade in lumber reaches all parts of the world, it is easy for us to understand the importance of this article.

THE NEW ENGLAND
1. "Early Traffic on the Connecticut." This is an interesting history of what should be the most prosperous locality in New England. It is to be hoped that the government will assist the good people of the Connecticut Valley to develop the country of this important stream and thus make it possible for the towns along its banks to ship their manufactures direct to the markets of the world.

THE FORGE
1. "Is Timber Fashionable?" A timely article by the highest authority. It is certainly a question of serious moment when we consider the importance of the great forests of this country. We must increase our native supply to meet the demand from abroad. No expense is too great, and whether the destruction of our forests would pay for the food products to increase in value.

THE LESSON OF THE MAIZE KITCHEN AT PARIS. This is a well-written article and of much importance to those interested in one of the leading products of our country.

THE IMPERIAL COLONIZATION AND PREFERENTIAL TRADES.
1. A timely article on the problem of trade expansion. It should be read by all interested in the foreign trade of the United States.

THE COAL SUPREMACY OF THE UNITED STATES.
We are not losing any time in "carrying coals to Newcastle," and it is hoped that the government will provide things in store for our coal fields. Read this article.

HARPER'S
1. "The Waterways of America." An article of great value in the study of commercial development of the United States. The paper is well illustrated and should find a prominent place in every commercial geography scrapbook.

THE CHAT TESTED
1. "The Knaves of Nautilus." The old order changing, yielding place to the new, and God fulfills Himself in many ways. Last one good custom should corrupt the world.

TO MY MIND, this is the finest article that has appeared in any magazine I have read this year. It deals with all the actions of the nations since the beginning of the century, and the writer, not to buy a copy of the magazine and have the class read the commercial geography make a thorough study of it. This article is chosen for a portion of the "Reading and Discussion course" for the current year, and has a large list of prepared questions.

THE NATION
1. "Our Expanding Trade in Oceania." This is a fine article for our anti-imper-
The Renman-Oilist and Business Educator

The彭男-Oilist and Business Educator

The彭男-Oilist and Business Educator

It is, however, a matter of great surprise that in so many of the important cities of our country the course in arithmetic still continues to be in the hands of teachers who have never had the benefit of a thorough preparation in the subject. The reasons for this are many and varied, but the most common are the lack of interest on the part of the children, the difficulty of the subject, and the lack of proper methods of instruction.

The彭男-Oilist and Business Educator

However, the discussion of the various kinds of problems which modern pedagogical leaders have denounced as being unnecessary to young students, I have made a careful study of the arithmetic requirements of thirty-five business cities in the country, including most of those having a population of over one hundred thousand. The assigned work was carefully examined and I discovered that in many cases the requirements are more than is necessary for proper business preparation, and yet the pupil who desires to continue in the high school or college, is not inculcated with the proper mathematical spirit by this false demand.

Most careful teachers will probably admit that below the high school the following subjects are unnecessary: Partial Payments, Commercial Propartnership, True Discount and Higher Mensuration. The following table will show the relative percentage of cities in which the above subjects are not simply omitted but actually required:

<table>
<thead>
<tr>
<th>Subject</th>
<th>Percentage of Cities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Compound Partnership</td>
<td>33%</td>
</tr>
<tr>
<td>Compound Proportion</td>
<td>45%</td>
</tr>
<tr>
<td>Higher Mensuration</td>
<td>56%</td>
</tr>
<tr>
<td>True Discount</td>
<td>63%</td>
</tr>
<tr>
<td>Equation of Payments</td>
<td>70%</td>
</tr>
</tbody>
</table>

The percentage of which may be called non-essential subjects varies from 33% to 70% of the requirements. This would be beneficial to the school districts if it should lead to minimum requirements more nearly in accord with the demands of the times.

When it is remembered that there are over one million children engaged in business in this country, and that nearly half our total population over the age of ten years, is busy in some mercantile pursuit, it will be admitted that careful attention should be paid to the requirements which business occupations demand, and that proper minimum standards should be decided upon after careful deliberation. Statistics prove that out of every hundred children who study arithmetic in the high school, two college, and ninety-four leave at various ages to go into some form of business. Urgent efforts should therefore be made to equip these pupils for the amount and the kind of arithmetic needed.

MINIMUM REQUIREMENTS

There will probably be considerable discussion as to what may be proper minimum requirements, but careful consideration of the previously mentioned courses of study lends me to the following conclusions:

1. Arithmetic should be a part of the regular routine in the high school, two college, and ninety-four-year-old school.
2. The standard of drill and review must be constantly emphasized, not only for the pupil who is to enter business, but also for the pupil who is taught arithmetic as a basis for further mathematical knowledge.
3. The mass of the pupils, however, need only have such instruction as they need for their arithmetic, not for mathematical development, but as a means of earning their livelihood.
4. Simple cases under denominate numbers of the practical tables, and easy applications of percentage and proportion, will doubtless include the most advanced work which any fair minimum course will require.
5. Textbooks are to be used with caution, they can be made helpful or harmful, according to their use or abuse.
6. To the fourth year, the main efforts should be to secure rapidity and accuracy of result, and the work should be confined to the fundamental rules and a brief course in miscellaneous applications.

SIMPLIFICATION

A relief from the present excessive requirements in arithmetic leading to an effort to prepare for proper business equipment, is found in the establishment of commercial high schools, to the development of the school system, and an innovation which most of the larger cities of our country have hastened to adopt. The trend towards the movement is also shown in the methods which their children were very successful in preparing young men for a mercantile career, that they have an established place in the educational system of our nation.

With some schools the pupils are of an advanced age, and their acquiring power sufficiently developed to enable them to grasp such subjects as the Metric System, Compound Partnership, Equation of Payments, Compound Proportion, True Discount, and Higher Mensuration. The following table will show the relative percentage of cities in which the above subjects are not simply omitted but actually required:

<table>
<thead>
<tr>
<th>Subject</th>
<th>Percentage of Cities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Compound Partnership</td>
<td>33%</td>
</tr>
<tr>
<td>Compound Proportion</td>
<td>45%</td>
</tr>
<tr>
<td>Higher Mensuration</td>
<td>56%</td>
</tr>
<tr>
<td>True Discount</td>
<td>63%</td>
</tr>
<tr>
<td>Equation of Payments</td>
<td>70%</td>
</tr>
</tbody>
</table>

The percentage of which may be called non-essential subjects varies from 33% to 70% of the requirements. This would be beneficial to the school districts if it should lead to minimum requirements more nearly in accord with the demands of the times.

When it is remembered that there are over one million children engaged in business in this country, and that nearly half our total population over the age of ten years, is busy in some mercantile pursuit, it will be admitted that careful attention should be paid to the requirements which business occupations demand, and that proper minimum standards should be decided upon after careful deliberation. Statistics prove that out of every hundred children who study arithmetic in the high school, two college, and ninety-four-year-old school, the average pupil has reached his fourteenth year, he is probably finishing the seventh year of school and is about to complete the final term of his grammar school course, and is preparing to enter a high school, or to commence business.

In the course of the past few years, I have frequently received letters of inquiry from the parents of my pupils, stating that the methods which their children were not different from those employed by themselves that they could render them no efficient help. I therefore determined to discover to what extent business practices are being applied to the high school, and also to what degree our curriculum might be reduced by limiting the instruction to those subjects which the business men found most necessary.

Therefore, I have received letters of inquiry covering the above points to the heads of the representative business houses in New York. The plan received the hearty approval of a number of our merchant princes, bank presidents, and Commissioners of the Board of Education, including John Wannamaker, R. H. Macy & Co., President Miles M. O'Brien of the Board of Education, Hon. Samuel B. Little, President, Joseph D. Kittell, Pres. of the Nineteenth Ward Bank, and Supt. John Jasper. Their cordial endorsement and the use of their names stamped my investigation as being not simply theoretical but practical and useful.

REPORTS FROM SIXTY LINEs OF BUSINESS

So that I might be assisted in making proper generalizations from the replies, and also that I might succeed in reaching a larger number of various lines of industry, I made the following classification of occupations:

1. Wholesale Merchants.
2. Retail Merchants.
4. Traders.
5. Skilled Artisans.
6. Professions.
Importers believe agents. Miscellaneous. Limited have presented from the sixties: arithmetic presents difficulties that it seems hopeless to expect adequate use of the same in school. The most we can hope to do is to properly prepare the pupils for further study this subject, to put the importance of a thorough knowledge of fractions, and also leading them to attain the power to "think in percentage."

Retail Merchants in all branches of trade seem to agree that the attitude of all the arithmetic a boy needs is the practical ability to handle quickly and correctly the four fundamental rules.

Manufacturers and the business world are of the opinion that the ability to calculate interest accurately and quickly, and to handle trade discounts to advantage, constitute the necessary equipment, outside of the fundamental rules. All agree that the time spent in what is called the "Problems in Interest" finding the Rate, Principal, Time, etc., is wasted. Almost all the business use of interest is in what is called the "First Case," namely, to find the interest or amount.

Mechanics seem to have very few methods except those which are now usually taught in our grammar school. The great majority is calculated approximately, as the mechanic has figured so often in his special line on certain classes of work, that he reaches the results most naturally, and would, otherwise, therefore to greatly enlarge the plan and scope of approximation in our school work, and in many of our problems, we should insist that prior to the complete solution, the solution should be carried to the approximate result. It is only in the larger contracts that mechanics do real figuring. In small jobs, they rely on their experience to strike the price about right, or else they have calculated, make it up as the one next on the page.

The answers received from the plasterers, painters, paper hangers, etc., were somewhat difficult of generalization, and in a paper of this limit, their full significance cannot be given. There was harmony on our school methods, but in many cases, technical solutions were sent to me, which would be of considerable value in business, but would not be desirable as part of our regular school instruction.

In Accuracy

Probably the greatest drawback to successful work in arithmetic at the present time in our elementary schools, is the inaccuracy of the children's work. The pupils have not learned how to interpret the problem is correct. They forget that accuracy of result is really the basic principle of this science of quantity, and if there be an error in calculation, the value of all is vitiated.

Nothing is more discouraging to a class, than after having carefully and indelibly led up to a new process, and by drawing satisfactorily upon the pupils' former knowledge, to have gradually brought him to a comprehension of the new, then when he proceeds to make a test to determine results, to discover that a large proportion of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have glaring errors of the class have gle
to the most complex relations, before declina-
tions are taken up. In others, denominate
numbers are taught for a full term, and the
poor children have ad nauseam all the prac-
tical requirements. Possibly the next term, percentage
may be the center of attention. It is far
better to carry on several topics at once,
and therefore after the preliminary stages
of fundamental arithmetic and decimal
fractions should be taught coordinate-
ly. Very soon percentage should also be taught
as a parallel subject, for the scholars should
be led to see that all three processes are
related, and will with pleasant variety result, but what is more important,
if the scholar is compelled to leave school
at an early age, he may have acquired the
fundamental nature of a large part of arith-
metic. If the above method is followed,
each process should be approached in such
way that the child need only grasp the
main outlines, the more important details
being reserved for superior grades.

Perhaps another mistake very commonly
made is for the teacher to assist the pupils
to too great an extent. They are not to be
columns taught by what has been called the "teaching process" or "honouring" the
child should rest and give the children a
chance to assimilate the instruction.
Frequent reviews therefore become neces-
sary. For some reason, however, a teacher
always endeavored to diminish the require-
ments in arithmetic, even though the
science, geography, history and language
lessons suffer in the effort. Perhaps super-
intendents and principals themselves are
at fault in this. Even making an inspection
of the class in arithmetic alone, and allow-
ing that to be taken as a standard for the
other subjects. The teachers are therefore
often in the habit of not giving their boys
the arithmetic examination and the
higher result, the logical training of the
mind, suffer in proportion.

Let us hope that the dawn of the coming
century may witness a new Renaissance in
arithmetic, and that with better methods,
more intelligent teaching, and courses of
study more fully adapted to the children's
future, there may be a wonderful improve-
ment in the result. Thus, at last, that time
may be saved for other branches, and yet this very
important department of school work may
justly do all that is demanded of it, first in
the practical duties of life, and secondly as the
natural forerunner of higher mathe-
matics.

Starting a High School Class in Bookkeeping.

WILLIAM H. EDDY, COMMERCIAL DEPT.,
ENGLISH HIGH SCHOOL, PROVIDENCE, R. I.

When I attempt in cold blood to set down
the manner in which I start a class in book-
keeping, I have confided, though vividly,
many of the experiences of students, giving
out textbooks, arranging programs, making up
divisions, and so forth indirectly, in the
midst of which I devote a few spare
moments to teaching something about book-
keeping. After a few days, order takes the
place of chaos, but by that time the class is started.

WORK OUTLINED.

Nevertheless the road which it is to travel
has been marked out from the beginning, and
the teacher does his best to keep his sheep
from straying outside of it. At the round-
up he takes account of stock, drives in the
stragglers, and starts afresh.

METHODS OF TEACHING.

Differing conditions demand different
methods. At a given "year" a day throughout the year has to suffice for book-
keeping and penmanship. These "hours"
may vary from forty to fifty-five minutes in length,
and it follows that most of the work must be done outside of school. Without direct super-
vision from the teacher. This period of
class work must be devoted largely to expla-
nations and quizzing. For, if pupils are not
encouraged to think, the reason for the
processes they follow, they become entirely
mechanical in their work, doing it without
thinking at all of the principles that under-
lie it. These conditions make individual
work necessary. The more pupils it is hard,
if not impossible, for the teacher to make
thirty different explanations, and, if
for him, it is hard for the student.
Even if it is possible to have two periods in
succession day, the amount of work is inferior
to class work. It is simply impossible to
dwell on the explanations long enough to
have them sink into the brain of the average
high school student.

WHO IS FOR PRACTICE?

Shall we go on theory or practice? We must remember that our students do not
know ledger paper from a check-book, nor
a journal from an invoice. Everything is
new, and one new thing at a time is enough. Hence I believe that the practical set,
with its accompanying business papers, should not be the first thing used. The multiplicity
of details confuses the pupil, because he has in mind no general principles by which the
tasks he meets are classified. He sees the
sights on his way, but does not know
where or why he is going. The basis
of all bookkeeping is debit and credit, and
these are most clearly brought out in
the account. The account then is naturally the
first thing to be studied. In some respects the
cash account is a good one to begin with,
but, on the whole, I prefer to begin with the
personal accounts.

FIRST STEP.

I would begin then by explaining that
business transactions consist of exchanges of
things that have value, between two dif-
ferent persons, and that bookkeeping is a
record of these transactions. Suppose the
student is to make the problem complete.
Now, if he lets the other person have some-
thing, that person should be charged
with it, or in bookkeeping language, debited.
But if the student receives something from
the other person, the record should show
that the student owes him for it: that is,
the person should be credited. This point
needs full explanation and illustration, much
more than the idea of debit does. Children
are often going to a store and getting things
charged. But they are not used to the
idea of credit. They think the store-keeper
when paid "crosses it out."

COPYING MODELS.

This is about as far as I can get in one
lesson. Next comes the distribution of
ledger sheets, with ledger columns dif-
ferent. Then let the students copy
some of the models in the text-book, Copy,
to give accuracy and prevent mistakes at the
outset. Then have them write out accounts
from the transactions. Insist on the utmost
accuracy and neatness, and have all work
below par rewritten. First impressions
and standards count for a great deal.

After the idea of credit is once grasped,
the next step, the next, and then merchandise,
the practice of bookkeeping.

When that is done, begin journalizing,
and run through a brief and simple set, add-
ing the principles of debits and credits.
When this set is satisfactorily
completed—and the greatest stress should be laid
upon the mechanical part of the work—take
the second set, with bigger business papers, and
the scholars are fairly started.

It will be seen that I put theory before
practice. Learning by doing is the only
worthwhile way, but the doing must be pre-
ceded by some directions as to what to do. Give a boy a saw and a block of wood, and
the chances are that he will ruin the saw, if
he doesn't take a finger off also. A little
instruction and example will help him consider-
ably.

BOOKKEEPING A SCIENCE.

From the beginning to the end, the scien-
tific side should be kept steadily in mind. Bookkeeping is an art, to be sure, but it is
so perfect an art, it is so perfect a science. It is not inductive, primarily, but
deductive, and as far as possible should be
taught deductively. Indeed, for school
purposes, it is no mean rival to geometry as a
means of teaching deductive
powers. But, aside from that, I am persuaded that the student who thoroughly under-
stands the theory of accounts has a
great advantage over the one who is trained only in the practical details. The latter has but
a few precedents that may or may not apply.
The former has the clue to the whole lay-
bright.

Program of the
National Commercial Teachers' Federation.

Fifth Annual Meeting Fifteenth Annual
Meeting Penmanship Teachers' Association
in the Fitchburg College of Business, Detroit, Mich., Dec. 25, 26, 27, 28 and 29, 1900.

General Officers for 1900

Wm. C. Stevenson, President, Port De-
posit, Md. J. E. King, Vice President, Des Moines, Iowa, E. R. Daniels, Vice Presi-
dent, Des Moines, Iowa. G. W. Brown, Sec-
retary, Jackson ville, Ill. EXECUTIVE COMMITTEE

Carl C. Marshall, Chairman, Cedar Knolls, New Jersey. A. W. Good, Vice President, J. W. For-
ster, M. J. A. sturdy, Secretary, Evanstons, Ill. EXECUTIVE COMMITTEE

Jerry B. Galley, Chairman, Fremont, O.
J. E. Fish, Chicago, C. E. Town, Zanes-
ville, O.

Officers of the Federated Associations
BUSINESS TEACHERS' ASSOCIATION

J. C. Walker, President, Danville, Ill.
D. W. Springer, Vice President, Ann Arbor,
Mich. J. A. Hinners, Secretary, Lansingville, N Y. EXECUTIVE COMMITTEE

FEMINITY TEACHERS' ASSOCIATION

Chas. C. Grinnell, President, Chicago, Ill.
Olst, Vice President, Parsons, Kansas.

Hart Geroghen, Chairman, Fremont, O.
J. E. Fish, Chicago, C. E. Town, Zanes-
ville, O.
Announcements

RAILROAD RATES—The Executive Committee of the National Commercial Teachers' Federation wishes to call the attention of school officials and Commercial teachers generally, that during this week, and for some time to come, there are reductions in the rate of one fare round trip, plus $2.00 membership as is the usual rule. It is rare that such a reduction for Commercial teachers is to be obtained in the inter-state lines, and it is recommended that the opportunity be taken to secure the rate of $1.00 per plate, which is now being offered.

The rates are as follows:

1. Detroit, Mich., to New York, N. Y., $1.00 per plate.
2. New York, N. Y., to Chicago, III., $1.00 per plate.
3. Chicago, III., to Boston, Mass., $1.00 per plate.
4. Boston, Mass., to Detroit, Mich., $1.00 per plate.

The rates are effective on tickets purchased during the week of December 25th, and are to be in effect until January 1st.

To the Old Guard

The "Old Guard" consists of the veterans of many years of service. The object of this section is to give the Old Guard a chance to make a record for themselves. They have been in the profession for many years, and their contributions to the advancement of Commercial Education have been substantial.

1. J. B. Johnson, President, Rochester, N. Y.
3. W. C. Stevenson, President, Chicago, Ill.
5. J. B. Johnson, President, Rochester, N. Y.
7. W. C. Stevenson, President, Chicago, Ill.
9. J. B. Johnson, President, Rochester, N. Y.
11. W. C. Stevenson, President, Chicago, Ill.

The "Old Guard" has always been a valuable asset to Commercial Education, and their contributions to the profession have been significant.

To the New Breed

The "New Breed" of Commercial teachers are the younger generation of teachers who are just entering the profession. They have been taking advantage of the opportunities offered by the profession, and are making a significant contribution to the advancement of Commercial Education.

2. W. C. Stevenson, President, Chicago, Ill.
3. J. B. Johnson, President, Rochester, N. Y.
5. W. C. Stevenson, President, Chicago, Ill.
7. J. B. Johnson, President, Rochester, N. Y.
11. J. B. Johnson, President, Rochester, N. Y.

The "New Breed" are the future of Commercial Education, and their contributions to the profession will be significant.

National Commercial Teachers' Federation

Detroit, Mich., Dec. 26, 27, 28, 29, 1900

The following have accepted assignments to the National Commercial Teachers' Federation:

1. J. B. Johnson, President, Rochester, N. Y., the President of the National Commercial Teachers' Federation.
2. A. H. Brown, President, Grand Rapids, Mich., the President of the National Commercial Teachers' Federation.
3. W. C. Stevenson, President, Chicago, Ill., the President of the National Commercial Teachers' Federation.
4. A. H. Brown, President, Grand Rapids, Mich., the President of the National Commercial Teachers' Federation.
5. J. B. Johnson, President, Rochester, N. Y., the President of the National Commercial Teachers' Federation.
6. A. H. Brown, President, Grand Rapids, Mich., the President of the National Commercial Teachers' Federation.
7. W. C. Stevenson, President, Chicago, Ill., the President of the National Commercial Teachers' Federation.
8. A. H. Brown, President, Grand Rapids, Mich., the President of the National Commercial Teachers' Federation.
9. J. B. Johnson, President, Rochester, N. Y., the President of the National Commercial Teachers' Federation.
10. A. H. Brown, President, Grand Rapids, Mich., the President of the National Commercial Teachers' Federation.
11. W. C. Stevenson, President, Chicago, Ill., the President of the National Commercial Teachers' Federation.
Mr. Barber’s Article,

Entitled “The Laborer is Worthy of His Hire,” which appeared in the November number of this journal, called forth more letters congratulating the author and publishers for its presentation than anything of like nature for a long time. These would indicate that Mr. Barber is worth hearing from and that it is such as he who are placing commercial education upon such a high and secure plane.

The Penman-Artist and Business Educator

Vol. VI. No. IV. Whole No. 20
Columbus, Ohio, December, 1900
SUBSCRIPTION RATES.
1 subscription, $1.00. 2 to 3 subscriptions, 85 cents each. 4 to 10 subscriptions, 75 cents each. 10 or more subscriptions, 60 cents each.

ADVERTISING RATES—Made known upon application. Write for them.

Change of Address—If you change your address, be sure to notify us promptly (in advance, if possible) and be careful to give the old as well as the new one. We lose many papers each issue through negligence on the part of subscribers or post-masters.

You Can Enter a Favor

Upon the profession and upon the editors of THE PENMAN-ARTIST AND BUSINESS EDUCATOR, by letting us know what you would prefer to have presented from month to month. Do you wish fewer or more con-science editorials? Do you desire more or less space given to business education? Are you in favor of more or fewer copies in business writing? Do you favor more articles and fewer letters, or more letters and fewer articles? Are you in favor of more fine illustrations, or do you prefer the practical to the artistic? Would you favor a course of lessons in bookkeeping by one of the leading business educators? Do you think we should modify our plan of giving about one-fourth of our space to each of the following: Business, Art, Penmanship and Miscellaneous matters? Drop us a line right now expressing your opinions freely. A postal card will do. Let all speak at once this time. Do not be afraid to criticize. Please favor us immediately. Our aim is to present the most helpful and inspiring work our lines of effort afford, and this we can best do only when we know the wants and needs of our reader.

Detroit!

The Commercial Teachers’ Federation which meets in Detroit, Mich., Dec. 26-29, both promises to be the most successful meeting indeed. While the full programs of all the departments are not yet completed as we go to press at this date (Nov. 10), yet enough has been done to indicate the least that is in store for all who attend. And as near as we can determine the meeting is going to be a big one. The city of Detroit in itself is worth seeing, to say nothing of the opportunity to rub up against the “big guns” of the profession, both socially and intellectually. No wide-awake, progressive teacher and friend of practical education can afford to pass it by. But if this be true of the truly progressive, how about the sleepy, self-satisfied, stick-in-the-mud, stay-at-home fellow? The truth of the matter is, all who possibly can need to attend. Detroit is our Mecca this week. Make early preparations for your journey.

Che Coming

The rug should vertical prove but a passing fad or fancy (a thing not probable) there are two things which will become dominant for the writer of the near future which would not have become such at least so soon, had vertical never been proposed. The first of these things is less slant, and the second is more notability. We consider one as something definite and round. To these qualities will be added simple, bold, plain, easy, rapid forms. The writing of the future must be, as compared with the writing of the past and some of the present, plain, rapid, easy, and individual. This, we believe, is a secure foundation on which to base instruction in schools, both public and private.

A Little Nonsense Row and Chon is Relished by the Best Pennmen.

his Physician

A gentleman once felt to question the medical man’s prescriptions. The doctor answered that he defied any of his patients to find fault with him, “I believe you enjoyed the gentleman, for they are all dead.”

ALONE.

A young widow put up a costly monument to her late husband, and in her inscription she said: “My grief is so great that I cannot bear it.” Seven months later, however, she returned to the monument. “What precious words the inscription!” she said; “yet it is difficult by adding one word to it ‘alone.’”

MICE PIES.

Going shopping, my mother one day, Tommy said: “Ma, haven’t I been a good boy since I began going to Sunday school?” “Yes,” said she, “and I suppose you pleased the mother foofly,” “And you trust me now, don’t you?” “Yes,” said Tommy, “but when you spoke up the little innocent, what makes you keep the mince pies locked up in the pantry the same?”

SMOKING.

An Irish lady, in a party which was discussing the virtues and evils of smoking, inquired of all the ladies what the habits of people indulged in it. “I don’t agree with that,” said a gentleman, “for my father, who smokes every blessed day of his life, and he is now 50 years old. I never knew he cried the lady, impudently: ‘If he hadn’t smoked, he would probably be 90 by this time!’

Why Vertical is Here

Many seem to think vertical is here because publishers have books to sell. The same argument (for it is not reason) holds against publicizing slanting forms. Publishers do not create demand but they try to be the first to supply demand with the best that is demanded. When the public recognizes a new idea, he prefers the idea. So it is only the best, lowest levels to supply their best in these lines. Each publisher tries to outdo all the others by getting out something better than the rest. “The best” is their policy. They do not all, nor always, get it, but it is their financial interest to have the best. They are not moralists, but business concerns. They try to get good tools and methods to get out moral, practical, and timely publications because they know such publications sell better than others.
John W. Mannel is now teaching in the commercial department of the Clarion (Pa.) State Normal School.

G. S. Henderson, late of Holmes Business College, Portland, Oregon, instructed us to add the following news item to XESS EDUCATOR, to 253 W. 35th St., N. Y. City. Mr. Henderson is an accomplished potter.

R. C. Bay, a recent Zanerian pupil has accepted a position as teacher of penmanship and bookkeeping at Mannel's Business College, Akron, Ohio.

L. Madaras, who has charmed more persons with his fine penmanship than any other boy of his age or style, has his palm days, is now taching the art in five institutions, and has every reason to keep him very busy, and makes him much the same as that of the supervisor in the public school.

H. W. Patton, formerly of Genesee, N. Y., is now teaching in the commercial High School, Philadelphia, Pa.

M. A. Conner, recently of the Meadville, (Pa.) Colioge, is now principal of the commercial school at that city, in connection with Mace College, Alna, Mich. Regarding the PENMAN ARTIST AND BUSINESS EDUCATOR, Mr. Conner does not hesitate to give his opinion. In a recent letter he states: "Certainly it is one of the few, if not the only one, I read wholly. Its growth is remarkable."

Two years ago, when F. J. Klock opened the commercial department of the Atlantic City, (N. J.) High School, he had thirteen students. Now he has forty-three in his department. This speaks well for Mr. Klock. He has also been able to get the statistics of French work.

S. C. Bedinger, a student of C. W. Kunsman, and late of Kansas City, Mo., has accepted a position with the Western Business College, Spokane, Wash.

H. W. English, late of Chanhognak, Pa., now has charge of the commercial department of the Mt. Carmel (Pa.) High School.

J. E. Freed, formerly of Danville, Ind., is now graduated of the Logansport (Ind.) Commercial High School.

K. W. Carter is now teaching in Nelson's Business College, Memphis, Tenn.

J. R. Hutchinsen, a fine business penman, is teaching in the Iowa Business College, Des Moines, Iowa.

Anna M. Hall, of McConnellville, O., is now supervisor of writing and drawing in the public schools of that county. Her office is quite a manufacturing center in the pottery line, having some twenty or fourteen potters which make all kinds of ware of the common utensils to very handsome finished goods.

W. H. Bedford is now teaching in the central Business College, Toronto, Ont. He reports a good attendance.

C. W. Wolfe, formerly of Wolfe's Business College, Mt. Vernon, Ind., is now connected with the Saratoga (N. Y.) Business College.

S. B. Fahnstock reports that their school, McPherson College, McPherson, Kansas, opened with about forty-five per cent, greater enrollment than last year.

"We are having a much larger attendance than in other years," writes W. H. Callow, of the Elgin (Ill.) Business College.

McEvan's Business College, Knoxville, Tenn., is booming. We quote the following from a recent letter from Principal McAllen: "I have just removed my school to a new quarters... The school is situated on the main street of the town, where I have a spacious building, that is 36 x 70 ft. with a basement, built of stone, and in the front 15 x 70 ft. and an additional room that I can use for school purposes 30 x 30 ft. The room contains an electric light fixture, and so far as I have seen, the finest school of its kind in the state. It has increased more than 100 per cent, in patronage during the past nine months.

F. F. Healey, who last year had charge of the bookkeeping and accounting in Fenchurch Business College, Boston, has been getting out some new and attractive work in that line of work.

The University of the State of New York has just issued a work that will be invaluable to every teacher and bookkeeper. It is the Certified Public Accountant, Ithaca, N. Y., is now in charge of the Williamport, (Pa.) Business College, of which he is assistant principal, and a capable teacher and reliable business man. We predict great success for his school.

H. W. Stone, the versatile artist who is in charge of the art department in Fenchurch Business College, Boston, has been getting out some new and attractive work in engraving.

The stem of the I should be made with more curve than the ordinary stem. The second shaded stroke is made as heavy as the stem; it should cross the stem about a space and a fifth above the base line; avoid making it too narrow. Finish I at the top where the hair-line stroke runs over to the right of the letter, with a delicate shade to give it strength. Two forms modified are given for practice.

Commence J same as L, giving it plenty of curve. The shade of the stem should be made two spaces above base line, and extend a space and a fifth below the base line; the loop of the capital J is the same as in the small j, except it is a trifle wider. The second shaded stroke is made last as in the I. The J is wider at the bottom than at the top. Add the delicate shade at the top same as L, and also a light shade on the bottom of the loop to the left same as in the small j. Two modified forms are given for practice.

L is considered one of the most difficult letters in the alphabet. I usually make it without lifting the pen. Shade on the introductory stroke should commence high up and should be short and not as heavy as the main or second shade of the letter. Make introductory stroke with a free swing to produce a smooth line. Avoid making the loop of the L too narrow, and don't make the stem or second shaded strong with too much curve as is the common tendency; the loop at the bottom is made very narrow and is finished with a delicate shade which is placed on top of the loop, and is a space and a fifth long. The loop at the top is shaded same as small I.

S is made the same as the L except it is finished with a dot at the bottom of the stem same as P, B, K, T, and F. Shade loop at top same as L.

First part of G is same as L and S. Shade on the stem is short, and commences about two spaces above the base line, and terminates about two-fifths of a space above base line. Loop is same as in L and S. The pen is lifted at the termination of the second shaded stroke, and again at the termination of hair-line between second and third shaded strokes; hair-line between second and third shaded strokes should be slightly compounded to the right, and traced with the third shaded stroke.

Third shaded stroke is finished same as S, with the dot.

**Criticisms.**

J. M. D., I would suggest that you spend more time on exercise No. 1. Lesson No. 1 which will aid you greatly both in form and movement. You have not carried out my criticisms on some of your letters, especially the t, which you cross too heavy. Compare your shading and you will notice that it is far from being uniform. Only careful study and practice will enable you to overcome this fault. Let me hear from you again.

J. D. V. Your ink is faulty, which spoils the effect of your work. Script is too heavy for width of spaced lines. Try to shade more lightly and you will find it will improve the looks of your Script fifty per cent. Slant in capital I is too straight, make it with more curve.

Enase pencil lines which will further improve your Script.

**Publications Received.**

"The Teach Writer," by J. E. Fuller, published by The Philippiographic Institute Company, Cincinnati, Ohio, is one of the latest and, as we consider it, one of the best publications upon the up-to-date subject learning typewriting by touch.

"Like Expressions" by A. B. Black, published by Scroll Publishing Company, Chicago, Illinois, is "a compilation from Homer to the Present Time" of similar sayings in prose and poetry. Mr. Black is an evidence of a penmeet knowing something besides penmanship, as he is a penman as well as an author. The work certainly possesses merit. Cloth, 112 pages, gift side stamp, price, 50c.

"Gregg's Shorthand Reading Book No. 1," The Gregg Publishing Company, Chicago, Ill, price twenty-five cents, contains forty pages of typewriter text and shorthand engraved notes. The text is introduced to be usually interesting and practical.

"Modern and Up-to-date Shorthand" by M. A. McMillen, L. L. B., Knoxville, Tenn., is a very concise and novel publication, yet pocket in size, and substantially bound. The text as well as the engraved shorthand notes are in phonetic spelling, and a good plan as well. The book is neat, not sold. Address the author.

**Vertical and Slant.**

**In loving juxtaposition.**

These copy slips are arranged for classes of both vertical and slant writers. They were published for the exclusive use of classes now in session at the Washington Business High School. More than 500 copies were sold the first day of issue. Nothing of this kind was ever before attempted. The copies and exercises form a unique, handsome, and convenient form for student and teacher. Send 35c (postal note) and a copy will be mailed you, postpaid.

PAUL A. STEELE, Author and Teacher, Business High School, Washington, D. C.
S. M. Blue, a view of whose whiskered but youthful face appears above, preferred to wait until his penmanship became truly professional before allowing any of it to appear in penmanship journals. Now, since he has made his debut, we predict that his masterful and inspiring work will be in constant demand, and we are glad to announce that, from this on, something from his pen will appear in almost every number of the Penman-Artist and Business Educator.

While his best efforts in the line of business and ornamental script are probably not excelled by any other pennman of our time, the accompanying signatures represent his first attempt in using India ink. Thick India ink, which must be used in preparing fork for photo-engraving, so as to get the best effects, is so different from the other ink penman use, and so much more difficult to handle, that it always proves to be a stumbling block to the young penman; and of course no one can do himself justice with it at first. Then again, when preparing work for engraving, young penman usually get "scared" or "rattled", as they term it. While Mr. Blue is not exactly one of the "scary" kind, still we are free to say that the work presented herewith does not show his highest skill.

Mr. Blue's early life was that of the average farmer boy. On leaving the farm he entered the Ohio School of Business, Dayton, O., paying for his tuition by doing junior work. He then came to Columbus and entered the Zanerian Art College. He made himself useful from the beginning, doing anything there was to be done. He now assists in the office and is also assistant teacher, and is making himself so valuable that we should dislike very much to see him go. He will remain here, however, at least a few years.

Mr. Blue is small in stature, being only five feet, five inches in height, and weighing only 102 pounds; but he can throw a very heavy shade with astonishing ease.

He is now arranging to take a course in English in Thompson's Preparatory School of this city in connection with his other work. Like many others have done, he intends to use his penmanship as a means in securing a great education. His great aim in life, however, lies along penmanship lines.

He is young yet and unmarried, although we understand that more than one young lady has an eye on him.

He enjoys fair health, is a young man of good habits, a hard worker, and possesses much ambition as was ever stored up in an equal amount of brain and brawn. He must be another Madarasz. Nothing short of the championship badge for at least ten years will satisfy him.

His skill, is purely the result of Zanerian Methods of Teaching, and he is but another example of the fact that they produce the very highest results in both business and ornamental penmanship.
Program of the
Kansas State Penmanship Association
Holton, Kans., Dec. 8, 1900

MORNING SESSION, 9 A. M.
1. Music
2. Address of Welcome—E. X. Johnson, President, Campbell University, Ashtabula, O.
4. Penmanship at Haskell Institute—C. E. Burch, Haskell Institute, Lawrence.
5. Is Psychology Beneficial to Learning Penmanship?—L. H. Hansman, Great Western College, Discussion:—E. L. Greenleaf, Abilene; E. E. Kopel, Lawrence.

5. Music
6. How I Start a Class in Writing—C. H. Hallstock, Campbell University, Discussion—General.
10. Motion to Introduce the Pen in Public School Work—W. W. Conner, Whiting, Kansas, Discussion—General.

Obituary

Professor Everett E. Salser

On the evening of October 8th, at Emporia, Kansas, Professor Salser passed away from a heart trouble. For the last several years he has been teaching penmanship in the department of penmanship and bookkeeping at the Kansas State Normal College. Last spring, on the resignation of Professor Stevenson, Mr. Salser succeeded him in the position. During the summer, he took the course in the Chicago University and began his duties in Emporia, in September, in excellent health.

Few young men thirty years of age possess the natural ability possessed by Mr. Salser. His work as a teacher in penmanship is superior, and he was loved by a large company of young people who received instruction from him.

As secretary of the Penman’s Publishing Company, as teacher, as friend, as confidante, and as a true gentleman, his place will not soon be filled as he filled it.

Many hearts are longing for the loss of a teacher whose name will never be forgotten. He is gone, yet we know that the remembrance of his children is triumphant and undisturbed.

W. C. STEVENSON.

Enclosed find $1.00 for the PRACTICAL ARTIST AND BUSINESS EDUCATOR one year. You are publishing a class journal of which the profession may justly feel proud.

J. P. Wilson, Seattle, Wash.

MARION NORMAL COLLEGE.

MARION, IND., Sept. 25, 1900.

Mr. W. C. STEVENSON,
President Penman’s Pub. Co.,
Emporia, Kansas.

DEAR SIR:—

I am in receipt of your advanced pamphlet of penmanship work to-day, and have carefully examined it, and think it the most complete, practical and suggestive work I have ever seen in that line. I have, however, every publication and special work on penmanship, and I sincerely believe yours to be the most practical of all. I have two very large classes in penmanship, and shall have occasion to use your valuable publication. Thanking you for the complimentary copy, I am,

Yours very truly,

O. W. FORD.

My Don’t Get M. X. College.

Positions, large salaries.

PROF. J. C. STEINER,
LEXINGTON, KY.

Perspective as a science is almost an inexhaustible subject, inasmuch as its uses, rules, and principles with their various definitions, which now fill hundreds of volumes, would make it an unnecessary waste of space to attempt a discourse on the subject here. To acquire all this knowledge is not essential to the success of a newspaper artist, nor even to the best of book and magazine illustrators, but in its practical form as applied to good drawing, it is absolutely necessary that elementary perspective should be studied. Elementary perspective is that part which treats of the two little subjects known as the Horizon line and the Vanishing points. Any good book on perspective (available in all public libraries), will enable one to master its teaching in a few hours. The next important thing is observation. There are students who, being self-conscious in his or her power of observing, are blind to the things they look at. No doubt they look, but they do not see, for when they see they draw; it is one and the same thing—look, see how, and reason why.

This is a pen sketch of Mr. F. A. Porter (made by himself from a mirror reflection), whose lessons in newspaper sketching are now appearing in this journal. Mr. Porter was born in Canada, came to Chicago at the age of three, and will vote this fall for the first time. After completing the grammar course in the public schools he began work in a wholesale dry goods house. While thus employed he spent his odd minutes and evenings sketching street and freight yard scenes, public buildings, river docks, etc. Nature has been his principal school, and inclination his teacher.

Mr. Porter divides his time between newspaper illustrations and illustrating books of fiction. As his work in the lessons herewith indicate, he has splendid ability, both natural and acquired, for one of his age. In deed, we see no reason why he should not be one of America’s leading artists a few years hence. Mr. Porter has an enviable start and we wish him all he and his talents deserve.

**Commercial Man Wanted**

WANTED—An all-round commercial man of experience, who is capable of managing a Business College. Must be able to furnish good references. Good salary to the right party.

**FREE! FREE! FREE!**

This special offer will last only a short time. Send me 15 cents and I will send you one dozen unexcelled cards written fresh from my pen. Your money refunded if equalled. A flourishing specimen furnished free with order. Lessons by mail cheap.

F. E. BALD, Penman.

P. O. Station 46.

**FREE NIGHT SCHOOLS**

Information with reference to running successful evening classes in bookkeeping, either as a college or as an individual, which may result in winning you numerous friends and making you many dollars, will be received by addressing

PROF. E. E. GARDNER,

Battle Creek College, Battle Creek, Mich

You should state definitely your situation and intentions. Also enclose stamp.
Automatic Lettering

Number Four

BY G. W. HESS, OTTAWA, I.L.

To make sea foam, we use No. 2 shading pen and pink ink, making small letters one inch and "caps" one and three-quarter inches high. This is right-size for all letters made with No. 2 shading or marking pen. Please remember it, too.

You have been instructed how to make scrolls, etc. Now you might try making same with No. 2 marking pen, white ink on black board as explained in October issue; you might also use same pen with adhesive ink and apply block to same, while ink is still wet.

The card, early winter styles, we first letter the words with the marking pen, paying no attention whatever to shades. Winter is made with No. 2 marking, early and fall with No. 1 marking, using black ink on center line, red for other two.

When your black is thoroughly dry, with a No. 2 or 3 plain pen reshape lower half of winter using pink ink and then when through with lower half reshape upper in same manner, using a bright yellow.

Our lesson on Amercan Alphabets did not show up as well as we expected, but we would like to impress on you the fact that with the marking pen in all sizes and shadings 1, 2 and 3 you can do the best and most practical work. The business world demands a letter that can be read at a glance, and many shaded letters made with other pens than those named, are not plain. In future lessons, barring a few alphabets, we will endeavor to show you in a few ornamental pieces and show cards, that practical and also lettering of a high order can be done with this pen.

For the benefit of many teachers who will take issue with us, we will say that at Detroit convention we will have a small exhibit.

In October issue note by editors should have been 8 cents in stamps.

Now try your hand on sea foam and then go out and sell it to your barber for a quarter.

E lessen in Practical Vertical Penmanship

By E. E. Utterback, Director Manual Training, Drawing and Writing, Atlanta (Ga.) Public Schools.

The first word in this plate of copies is a good movement exercise as well as a review of principles previously presented. Begin by writing the word six times in one minute. Do not raise the pen nor move the arm rest until the word has been finished; then dot the i's and cross the I's. Work on the capital S at a moderate speed until the motion becomes easy. Start with a very short line or dot and do not be afraid of making the letter too crooked. Bring the curve in the lower part as far to the right as the beginning of the upper part. Write the word "Saturday" from ten to fifteen times per minute.

The capital L is nearly the same as S, the principal difference being in the curvature and direction of the downward stroke. Study and practice the letter carefully, attempting to make the loop at the base nearly horizontal. The word "Lagging," notice the difference between the two connecting g's and discover the reason for the difference.

PLATE III.

Individuality Individuality L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L L 20

Lessons in Sepia Shading

Number Four

BY W. F. GILMORE, CANTON, OHIO

After carefully outlining the quince and then shading it with a medium hard pencil, at first a thin tint of paint is quickly spread over the whole drawing as in figure 1; the pencil lines will probably show through. Next place quick a streak of thick sepia on the shaded edges as indicated in figure 2; then rapidly as possible take all the paint out of the brush by touching it to the blotter, then dampen it, and spread this black streak of sepia gradually over toward the light side of the drawing, watching to touch the brush to the blotter often to keep it from dragging the full black color clear across the drawing. Do this blending very carefully, full by little strokes along the edge of the thick paint, as was done to get figure 3.

Of course this streak of black color must be started to blending before it begins to dry else it will leave edges showing through the most carefully after work.

After blending, let it dry before touching it, and then if not satisfactory, try another wash or "coat." While waiting for the right hand side of figure 3 to dry we work at the blending on the leaves or on the stems. Follow this plan of washing in one tint over another, getting the lightest coats on first, and the very darkest spots last, but remembering all the time that one "coat" must be dry before attempting to put on the next.

Art Paragraphs.

Art not less eloquently than literature teaches children to reverence the single cloud, the hillside.

Art may make a suit of clothes, but nature must produce a man. Hume.

Art may err, but nature cannot miss. T. Overbury.

Art rests on a kind of religious sense; on a deep, steadfast earnestness; and on this account it unites so readily with religion. Goethe.

The world without art would be a great wilderness.

Art is noble, but the sanctity of the human soul is nobler still. A. W. Winter.

He that seeks popularity in Art closes the door on his own genius; as he must needs paint for other minds, and not for his own. Washington Allston.

Genius does what it must and talent does what it can. Owen Meredith.

In morals, as in art, saying is nothing, doing is all. Renan.

Sculpture is the art of discarding superfluous. A. Canova.

Nature is God's. Art is man's instrument. Sir T. Overbury.

Genius unexhausted is no more genius than a bushel of acorns in a forest of oaks. Henry Ward Beecher.

MT. MORRIS COLLEGE, ILL.

CARD WRITING A SPECIALITY

Cards written in any name, either plain, medium or colored, at 25 cents per dozen. Colored cards, written in white ink, all the rage. 25 cts. per dozen. Fifteen years experience. Handsome testimonials. A trial order will convince you that we are leaders in the profession. Envelopes of our Art Work, Supplies and Lessons by correspondence FREE.

Touch Typewriting

A new edition of the "Complete Guide to Typewriting," containing full instructions and practice lessons in touch typing, after the very best and latest methods, is being issued. If you have not seen the "Complete Guide to Typewriting," send for it. It may be used for either the touch or sight method. It is the newest, the most practical, the best thing on the market. Price, 30 cts. To teachers for examination, 5c. Address:

MEHAN & McCauley,
Des Moines, Iowa.
Specimens Received

P. K. Fulmer, Rockaway, Pa., renewed his subscription to the PENMAN ARTIST AND BUSINESS EDUCATOR and enclosed some specimens of writing, flourishing and lettering which show much more than ordinary talent.

Mr. Harry Gurnett, pupil of Prof. W. S. Astley, of the Bowling Green, Ky., Business College, sent a pen drawing of a building showing unusual talent for one of his age, which is but thirteen years.

F. S. Heath, Concord, N. H., throws a quill of more than ordinary dash and grace. The specimen before us is quite beautiful.

Miss Cora A. Young, Forest City, Iowa, writes an unusually practical hand as evidenced by the specimen before us. She is introducing simplified writing with good results in the schools.

Marvelously fine, describes the character of Round Hand Script recently received from Mr. George Edward Ruggles, of Worcester, Mass.

Cards and letter received from J. F. Caskey, Marion, Ohio, reveal that he is possessed with more than ordinary skill. His writing is very beautiful indeed.

R. C. King, principal of the commercial department of Cedar Valley Seminary, Osage, Iowa, writes an ornamental hand that possesses some points of excellence that are hard to classify. The height of touch, delicacy, and seeming ease of execution. We were also delighted with a full page letter, the effect of which is very pleasing.

W. W. Fry, Deland, Fla., surprised us with a specimen of ornamental penmanship, it being much finer than we were aware he could execute. The specimen indicates that Mr. Fry could easily become a master in the ornate, if he were to make that a specialty.

E. A. Mason, Burnt Corn, Ala., sends some cards written in the artistic style.

W. S. Chamberlain, penman in Eaton & Burnett's Business College, Baltimore, Md., and an old friend of the editors, sent a list of twelve subscriptions to the PENMAN ARTIST AND BUSINESS EDUCATOR and with it a very well written letter in the ornamental style. Mr. Chamberlain does a regular business, broaching and pen work in business in connection with his teaching.

A page of very good ornamental writing has been received from C. R. Tate, of the Birmingham (Ala.) Business College. Mr. Tate has made splendid improvement in his hand during the past year.

O. E. Bull, penman in Brent, Straton & Smith's Business College, Warren, Ohio, sent a letter in the ornamental style that shows marked improvement.

S. McVeigh, of the Bliss Business College, North Adams, Mass., is turning out pupils whose writing almost ranks with that of many best penmen. In one specimen from W. G. Carter and E. F. Whitmore, both students of Mr. McVeigh, shows that they have been receiving a high order of instruction, and also that both have the material in them to become as fine as our land possesses. Mr. McVeigh also enclosed some good business writing movement exercises, etc., from students, Warren B. Hume, Thos. Heslin, Mary Flagg, and Paul H. Miner.

Some of the easiest vertical writing we have ever seen recently came from the pen of Mr. C. E. Thomas, supervisor of writing in the Zanesville (Ohio) Public Schools.

Herbert W. English, principal of the commercial department of the Mt. Carmel, Pa., high school, sends specimens of writing done by pupils which indicate that they are on the right road to successful handwriting.

Recent Adoptions of Isaac Pitman's Shorthand

The Isaac Pitman phonography and "Complete Phonographic Instructor" has recently been adopted in the following schools and colleges in Kansas City (Mo.): Kansas City Normal Training High School; State Agricultural College; Fort Collins, Colo.; West Side High School for women; New York City; Hartley Y. W. C. A.; New York City; Home Correspondence School, Springfield, Mass.; Baptist Female University, Raleigh, N. C.; Mount Pleasant Business College, St. Louis, Mo.; Western College (Cal.) High School; Milford (Me.) High School; Westfield (Ind.) High School; Redding (Cal.) High School; Hesser and Storer (Chicago, Ill.); Normal College; Bashara City, Va.; Dansville (Va.) Commercial College; National Park Seminary, Forest Hills, Md., and High Schools of St. Cloud, Minn., and the School of Commerce, St. Louis, Mo.

A High Note

BURLINGTON, IA., Oct. 5, 1900,

MR. E. E. GAYLORD Bevery, Mass.

DEAR FRIEND GAYLORD: There came into my possession a day or two ago a copy of the PENMAN ARTIST AND BUSINESS EDUCATOR, the contents of which struck me as being too good to miss. I was doubly interested when I noted that the Business Department is under your editorial supervision. I am delighted to know that you are striking a high note in the interest of business education. Keep right on along that line and five years hence business education will be on a much higher plane in this country than it is today. That article on the "Commercial High School Course," by Mr. Doggett is worth more than the price of a year's subscription to the journal. I will see to it immediately that my name is placed on the subscription list of the publisher. Very cordially yours,

J. A. WHITE.

Commercial Dept., Burlington High School.

PENMANSHIP FROM THE MCKINNEY (TEX.) PRACTICAL BUSINESS COLLEGE.
Lessons in Engrossing — By H. W. Kibbe, 181 Tremont Street, Boston, Mass. — Number Four.

Some months ago we prepared a few lessons in engrossing for this publication and its editors have expressed the wish that we continue them indefinitely, offering its current funds in remuneration. This is enterprise beyond what we have ever known of a penman's paper, and we accept the offer. We shall bring to the execution of this task a modest amount of skill, many years of experience, and an earnest desire to be helpful to those who shall peruse these lessons.

In this lesson we give the capitals and small letters of the hand illustrated in the three preceding lessons. Considerable practice is required before uniformity in slope can be secured without slope lines, which may be used at first. The fitter movement is largely used in the execution of this hand, but any person who aims to be an engrosser without acquiring a mastery of all the movements used in writing and flourishing will work at a great disadvantage.

The large oval in Dis the most difficult to execute and will come in for larger share of attention. In making a large stem as it occurs in B, F, etc., it is quite difficult to complete the curve when raised on base line and outline for which purpose the pen may be done. By a large stem we mean one an inch and a half or two inches long, and the difficulty is mainly in bringing the pen from the heavy shade required to a hair line.

It is not desirable to lift the pen at turns for putting shades, but a clean hair line is required, and if it cannot be secured without lifting it must be done. In run last line of copy we have illustrated not intentionally this difficulty in writing a heavily-shaded hand, and in r on the same line we have cleaned out a similar thick line preparatory to patching, at which the engrosser must be an expert, for the man who does not know how to avoid making a hair line of times. In forming the upper loops we usually lift the pen at head-line, form an angle and cover it with the shade on the downward stroke. The little dot at top of r should be put on with a second stroke after making the shoulder. For an illustration of these points see copy.

METHOD OF LEARNING BUSINESS WRITING.
No刷oshes, Plain, Rapid. 48 or Young
quickly learn to write.
SPECIAL TALE OFFER
In order to advertise and introduce the "E-ZY Method" we will send to any well recommended persons at each Post-office in Lessons for $1.00. Regular price including the "E-ZY Method" Compendium $1.50. The recipients of these Lessons will be asked to recommend the Method to their friends and to send a specimen of writing. To convince you, we say keep the 58c. until you have tried the Lessons. Send 25c for the "E-ZY Method" Compendium and Instructions so you can begin your lessons at once. No Free Lessons or Samples given away. The above offer is limited to not more than three persons in each community.

ISAAC PITMAN'S SHORTHAND.
FIRST IN 1837. FOREMOST EVER SINCE.

I have been a practitioner of the Isaac Pitman system for many years and believe it superior to any other. Pitman is the only system acquiring universal recognition and acceptance among the users of the various Pitmanic systems. I regard this fact as an indorsement for the Isaac Pitman system, because "imitation is the sincerest form of flattery." I am, however, truthfully say that I am not acquainted with, not to know by reputation (excepting two veterans, T. R. Pitman, and H. T. Pitman a single rapid and accurate writer who is not a Pitmanic follower. It does not follow of course that such do not exist, but I do know they are not conspicuous in this vicinity. I am a firm believer in the orthodox manner of teaching and practicing Phonography as laid down in the authorized textbook of the Isaac Pitman system: The Complete Phonographic Instructor, and am decidedly of the opinion that any serious departure therefrom will only produce harmful results." — FRANK D. URIS, Official Stenographer, U. S. Circuit Court, New York.

SECOND EDITION IN PRESS.

Pitman's 20th Century Dictation Book and Legal Forms.

Containing genuine letters used in American business offices, covering fifty distinct lines. Legal Forms, and a judicious selection of practice matter for general dictation. Also chapters on Spelling, Punctuation, Capitalization, and Short Practical Talks. This work, which is the most complete of its kind, is specially compiled for the teacher, the beginner, and the advanced student, and all progressive schools without reference to the system of shorthand taught. 256 pp. Price, still boards, 75c; cloth, $1.00. To teachers and schools for examination, postpaid, 15c. and 50c respectively. Specimen pages on request.

ISAAC PITMAN & SONS, Publishers,
33 UNION SQUARE, NEW YORK.
Business Writing – Present and Future.

READ BEFORE OHIO COMMERCIAL AND
SPECIAL TEACHERS’ ASSOCIATION
AT SAKKOSKY, O.

Why should we say “business writing” at all? Why distinguish between business writing and any other kind? Is not all writing, more or less, business writing? Where shall the line be drawn? A young man in the office writes to his “dearest,” and she responds in kind. Is not this “business?” Surely the thing is, and too often the young man finds it to be a very serious business.

Few people engage in the work of writing, unless there is some business connected with it. Of course, it may be more or less important, and more or less of a commercial nature, or it may be purely of a social or friendly character, and yet it is business writing, or as near it as the writers are capable of approaching. The form and style of the letters do not matter materially from the strictly commercial consideration. I mean by this, that few people cultivate more than one style of writing, and that, to them, is business writing.

PENNEYS RESPONSIBLE FOR CONFUSION.

There is a class, however, that does cultivate variety, and that is the class known as the penmen. He writes to his wife one day and another day, and yet, he keeps the same name to himself; the responsibility for much of the confusion which exists in the field of penmanship today, and which exerts a strong influence for poor writing.

PREACH ONE THING AND PRACTICE ANOTHER.

The average penman, and with him most of the penmanship publications, preaches the doctrine of business writing, and then proceeds to give illustrated lessons in any thing but business writing. The primary aim of the work is lost sight of, or is buried in an avalanche of promiscuous sculled movement drills.

LEGIBILITY, NOT MOVEMENT, THE CHIEF CONSIDERATION.

The first requisite of any writing, business or otherwise, is legibility. Yet, we are so secure this no sacrifice is too great. All other considerations, such as speed, neatness, movement, etc., are secondary, for if legibility be absent, the writing is useless, no matter what the speed or movement employed. Upon what does legibility depend? Is a question that some of our penmanistic lights are trying to solve at the present time. Does it depend upon hair lines, graceful curves, clear, legible form, and a few other embellishments in the way of an initial or final flourish? Does it depend upon the inclination to the right of a line drawn toward the right? Does it depend upon the speed or movement with which it is executed? I do not believe it depends upon any one, or all of these. The elements of legibility are, first, distinctness of lines; second, the correct positions of lines; and, third, joinings. The first is secured by the use of a course pen and a firm touch. The second and third govern form, and are acquired by study and practice. But some one says, “This is not movement, necessary, but it is not the chief consideration. It is a means to an end only, and the end is legibility.” Formally, when men cut grain with a sickle and threshed it with an instrument called a “flail,” it was regarded quite an accomplishment to be able to handle the latter so as to get the best result. A man could develop plenty of movement, but unless the movement was properly controlled and directed, it sometimes proved disastrous, not only to himself but to his co-worker. The same may be regarded very important that no more movement be developed than could be controlled and directed, and I believe the same rule will apply to the matter of writing. I do not think the means should be exalted above the end sought.

WHY NOT VERTICAL?

In discussing the subject of the “Future Handwriting” before the Federation of Commercial Teachers in Chicago at the meeting held in 1890, Prof. W. N. Ferris said: “The future hand writing will be unshaded, simple in form, of medium size and slant.” Let us examine this statement a little. Is it true that the future handwriting must slant? It may.

PALMER, VERTICAL, AND MUSCULAR.

It was not my purpose to discuss in this paper, the merits or demerits of vertical writing, but since the handwriting of the future is under consideration and Prof. Ferris says it shall not be vertical, I think the discussion cannot be so far away. The question is vertical, or not, if it answers the requirements of the business world better than slant? In the same article quoted from above, Prof. Ferris said that any intelligent man, who could write in the vertical style, could write in the slant style, in a week’s time, by practicing two hours a day, learn vertical. He declared that this was a sober, carefully made statement. If the above statement is true, it is a very strong argument in favor of vertical, for we will all admit that the slant cannot be learned in so short a time. Further testimony for the vertical is furnished by the editor of the Western Penman; though I should not it is gratuitous on his part. Quoting from Prof. Palmer: “Muscular movement, thoroughly developed, admits of the easy execution of rapid, plain writing on any slant, forward, back, right, left, or between the lines.” This is a very unexpected observation by the chief anti-vertical advocate, and is all that the vertical people have been contending for. That is, that the vertical can be written rapidly, and with a free movement. These points conceded by the opposition, no further ground for contention is left, and the way seems open for the harmonious advance in the world of giving the rising generation the best handwriting, and one that will meet the requirements of an existing business world.

PEOPLE WILL DiffER.

There has been, and is now, too much unfriendly criticism of our boy’s penmanship and a hostile style of writing. People always have differed and always will, but there should be harmony as to the essentials, even if we cannot agree as to the details. All writing is either rapid, legible, or not; and the question is, which are the fundamentals, upon which all agree. The order in which they are acquired, and the degree of each acquired, are not so important, and will vary with the individual.

Do business men oppose vertical?

The statement that the business world will have none of the vertical, needs some explanation. It has been said that a “half dozen men” do not think it equal to a bracketed face, and when some of our most influential friends say that the business men are opposed to the vertical, and that the teachers are condemning it, they probably mean that some business men and some teachers do not like it. But the effect of the statement is misleading and not in accordance with the facts. School boards, as a rule are composed almost entirely of business men. The school syllabus as a vocational subject is found, but he too should know the demands of business properly well. But bankers, merchants, bookkeepers, business managers, in fact, the very highest class of business men, admit that the vertical is not only of great utility, but is the only one which will be required in the public schools that vertical has its strongest hold. Does this indicate that business men oppose vertical handwriting? We in the public schools have not as yet sent many vertical writers into the business world. They do not fit the student for business pursuits, or at least not many of them do. Commercial courses are being organized in some of our high schools, but it can hardly be said that they are represented in the world of business by many graduates at the present time. For these reasons, and others that I might give, I do not believe that the work has been condemned by business men, nor do I think it will be after the test of experience. I believe it will meet all the requirements of business if properly learned and practiced, and that people are the causes of not only vertical advocates, but of Brothers Ferris and Palmer as well, that it can be written easily, rapidly and with a free movement. Add to this its great legibility, and we have an ideal system of business writing.

With such men as G. W. Brown, Chas. M. Miller, Geo. P. Lord, W. C. Stevenson, C. M. Bartlett, C. L. Musselman, and a host of others, singing its praises, it is not necessary for us to say much. But do not take the word of anybody, investigate for yourself. Impartial investigation always means adoption.

The Gregg Publishing Company,
57 Washington Street,
CHICAGO.
Mr. E. C. Eirich, the original of the accompanying countenance, is a native of Van Wert, Ohio, and last twenty-two years old. He received his first instruction in art in the Zaneian, and has since studied in Academy of Fine Arts of Philadelphia. The work herewith presented from his pen reveals that he is destined to be one of our really fine artists. Like all true and talented artists, Mr. Eirich is as modest as a maiden, as concerns his own ability. He is ambitious to become a landscape painter, and his shrines for inspiration are nature, Turner and Inness. Truly, he has selected great and enduring sources from which to procure his ideals, and to which to turn for truth and beauty.

Mr. Eirich spends most of his time in Philadelphia doing work along commercial and illustrating lines. During the summer he comes in contact with nature by taking trips on his wheel. The past summer he started at Philadelphia and stopped in his old home of Van Wert, traveling northward through Eastern Pennsylvania, New York, westward through New York, and southward in Ohio. Next season he expects to go from Philadelphia to New York, to Boston through the Berkshire Hills, to Montreal, and a side trip to the White Mountains.

With his sterling worth, unflagging zeal, unconscious talent, strict morality, and good sense, we predict for Mr. Eirich a creditable position among American artists.
has been promised a number of excellent papers for Saturday's program.

**Proposed Program for the Private Commercial School Managers' Association**

**At Detroit**

1. "How far may the Course of Study of the Private Commercial School be profitably extended in time and scope?" Mr. W. G. Brown, Jackson, Ohio.

2. "The Case for the Private Commercial School toward the Public Commercial School," Mr. G. A. Granum, Minneapolis, Minn.

3. "State Supervisors of Private Commercial Schools," Mr. W. C. Wright, Brooklyn, N. Y.

5. "The Admission of Periodicals of Private Commercial Schools to the Mail at Pupil Rates," Mr. N. G. Goldley, Wilming, Mass.

Mr. Kariet Spencer has been asked to open the discussion of Mr. Brown's paper, Mr. Mehlin of Mr. Granum's paper, and Mr. Eison Spencer of Mr. Wilt's paper. The discussion of these three papers is to be "free for all."

The consent to serve of all the gentlemen whose names are given has not yet been secured, therefore, the announcement of them at this time might be premature, but I have considerable faith that the gentlemen will take part.

**Proposed Program.**

**The National Shorthand Teacher's Association.**

**WEDNESDAY, DECEMBER 28.**

**AFTERNOON SESSION.**

3:00 Reception and Enrollment of Members.

**THURSDAY, DECEMBER 29.**

**MORNING SESSION.**

9:00—President's address, W. L. Muskie, Springfield, Mo. Report of Secretary L. A. Arnold, Chicago, III. Appointment of Committees, Unfinished Business, New Business.

11:30—What shall we do with our Full Pupils?—Miss I. Francis H. Norrick, La Crosse, Wisconsin; Miss Cora Parsons, Kalamazoo, Mich.

**AFTERNOON SESSION.**

1:30—"Shorthand in the Public Schools," A. J. Taylor, Indianapolis, Ind. Discussion—J. B. Howard, Cincinnati, O.

2:45—Question Box—Collection—J. Clifford Kennedy, Dec Moines, La.

3:30—General Session of Federation. Lecture on "The History of Shorthand," Illustrated with Stereopticon, Norman P. Heffley, Brooklyn, N. Y. (Time to be arranged later.)

**FRIDAY, DECEMBER 30.**

**MORNING SESSION.**

**AFTERNOON SESSION.**

1:30—"Shorthand Speed.""(a) "When Shall Speed Practice Begin?"—Mrs. L. McKee Van Duvee, Buffalo, N. Y.

(b) "Kind and Amount of Dictation," W. W. Patterson, Canton, O.

(c) "Tools and Materials,"—Mrs. J. D. Brunner, Marion, Ind.

2:30—Indexing, 2:30 Model Dictation Class.

3:30—General Session of Federation.

**SATURDAY, DECEMBER 31.**

**MORNING SESSION.**

9:00—Address—"The Stenographer from the Employer's Point of View"—H. M. Sturtevant, Detroit, Mich.

10:15—The Business Training That Should be Given Students in Connection with Shorthand and Typewriting"—W. L. Majors, public school, Dayton, Ohio. Discussion—W. S. Rogers, Sandusky, O.

11:00—Question Box—Collection—J. Clifford Kennedy, Des Moines, La.

11:30—Penmanship Exhibit.

12:00—Adjournment.

**Program for the Penmanship Teacher's Department of the Federation.**

The program for the Penmanship Teacher's Department of the Detroit meeting has not been fully completed owing to unavoidable delays caused by failure to hear in time from some who were expected to take part on the program. However, many have already responded and some excellent papers and illustrated talks, followed by discussions, will be given.

The committee urges every penmanship teacher to bring pupils specimen book in the contest, the rules governing which, are given elsewhere in the PENMAN-ART and BUSINESS EDUCATOR.

H. B. GERMAN,
Chairman Executive Committee.

There is a greater demand today than there has ever been before for persons who are thoroughly qualified to teach writing, drawing, and the commercial branches.

The increasing number of private commercial schools and commercial teachers of writing and drawing. These positions can be had by the competent.

Commercial schools have a large number of teachers of penmanship and the commercial branches than ever before, because they have more pupils.

Then in the lines of illustrating, engraving, designing, etc., there is much more work to be done at this meeting than ever before. Why not consider the matter of taking a three, nine, or twelve month's course in the Zanerian Art College? The programs were well planned, and we hope more of the line work mentioned will be published.

Regarding the practical value of such a course, many hundreds of former pupils are ready to testify. The Zanerian Art College is very liberally patronized, and is one of the most successful institutions in the country in securing profitable positions for its pupils.

Rates of tuition are no higher than they have always been. Good board and room can be had at a very reasonable figure.

Large finely illustrated catalogue of the school, worth one dollar, free to interested persons.

**Zanerian Art College,**

COLUMBUS, OHIO.
FINESTE SUPPLIES FOR PENS, MEN AND ARTISTS

All go by mail postpaid except where express or freight is mentioned, in which case carriage is paid by purchaser.

Zanerian Fine Pen—The best and finest fine pen made—best for engraving, card writing and all fine script work. Gross $1.00, 4 Gross $3.50, 1 Dozen...12c.

Modern Publications for Penmen, Artists and Teachers

Our publications are universally recognized as the best in the market. They are very low considering the quality and character of the work. All books are sent postpaid by mail or by express.

Portraiture—The best book ever published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book, luxuriously printed and bound, containing hundreds of examples and explicit instruction

$1.50

The New Zanerian Alphabets—A guide to engraving, containing a great variety of alphabets, design, etc., with complete instruction. A beautiful book bound in cloth

$1.50

Zanerian Theory of Penmanship—A thought-provoking work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should read it. A book of 176 pages, cloth binding

$1.00

Sketching from Nature—A most beautiful book that teaches how to sketch from nature. It contains a large number of specimens with fascinating text and instruction. Let this book go on ahead and learn to see and sketch nature. Bound in cloth

$1.00

Lessons in Ornamental Penmanship—A work in slip form embodying the $10 mail course formerly given by us, with some extra plates. A thorough and complete work for home learners.

$1.75

Compendium of Simplified Vertical Penmanship—In book form, and by far the most thorough and complete instruction for vertical writing yet published.

$1.00

Manual of Simplified Script—A work containing a thorough, graded course of photo-engraved copies from the pen of the master penman and artist, C. P. Zaner, all in the simplified style. For rapid business it possesses many persons believe this style of writing unequalled.

$1.00

Pen Studies—a portfolio of twenty-four pen drawings, consisting of circles, octagons, birds, fruit, scenery, etc. It begins at the beginning showing how to make the simplest strokes and to gradually evolve the finished design.

$1.50

Zaner's Genius of Flourishing—a book devoted exclusively to the most artistic of flourishing. It begins at the beginning, showing how to make the simplest strokes and exercises and finishes with a great variety of designs, showing the highest degree of skill attained in this art. Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published.

$1.50

Progress—C. P. Zaner's masterpiece in flourishing. It represents an eagle, forceful and lifelike, giving itself through intricate curves and branches. It is on the finest of plate paper, 22 x 28 inches. The original of this design hangs on the wall of the Zaner Art College, and is valued at $100. "It's great!" "It's certainly a bird" are some of the expressions many have made on seeing it. Let the reader remember also that it's no Spanish bird, but the American Eagle— that of national birth and ours that may now be especially proud. In type

$1.50

Light and Shade—A manual on drawing by Mr. Zaner. It contains 47 pages, 376 illustrations, and plain, simple, instructive text. It is just what home students need, and what all others who are not at home in drawing need to make them feel at home. Any one can learn to draw by the aid of this book. Only 25 cents postpaid.

The illustrations are lithographed from actual pencil drawings, and are much finer than photo-engravings.

Sample pages of Portraiture or Sketching from Nature mailed for 2c stamp. Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks.

Lessons in Practical Writing by C. P. Zaner.

Neatness Writing, if neat, must be uncommonly illegible or slow and cramped, before it becomes unsalable. On the other hand, writing done skillfully but unsystematic and untidy, is not at all in demand. Business does not demand beauty, but few business men will tolerate slovenly kept books. You will therefore be adding dollars to your wage earning and influence winning ability by cultivating an orderly, neat, slightly handwritten. Be careful how you dip ink, slipping neither too much nor too little. Have an orderly desk and a place for your pen—a place where it will not be likely to fall out or roll over your papers or books. These are little things but they prevent blots and blurs. They cost but a little time, thought and effort to acquire, but they stick to one a long while, usually forever. Accidents are rare with skilled, proficient, reliable people. Blots, blurs, etc., are the result of careless- ness and lack of skill—chumness. Keep a blotter under the hand, but do not write coarse enough to require blotting. Nervous people keep mopping the ink from writing as fat people perspiration from the face. The only difference is that the former is sense- less, the latter sensible.

No. 29 The k is composed of a loop or extended first part, and a second part that is much like a small capital K. It is not likely to look like any other small letter but sometimes large. Avoid this common error, and endeavor to maintain it easy difficult as is commonly supposed. Make each part the first part. Keep the first down stroke straight and the knack without raising the pen. Wide spacing requires.

Zeaiously pursue a definite line of careful- ly planned action and success is certain.

No. 30 The capital Z begins the same as N or M and ends like the small z. It may be made with or without a loop at the base line, It is best to keep the loop small, however. Keep the loop below the line small, neither long nor very rounding. The retrace exercise at the end of the first line is beneficial as it encourages steadiness and sureness of action. Watch spacing in and between words in writing the sentence. Practice the words and letters you write the poorest. Review former lessons frequently, always endeavoring to do better than previously. Watch turns and angles closely, never making one for the other. Keep the fingers from acting much. They hold the pen, that is nearly enough for them to do. They can assist to do the rest, but they should not be expected or allowed to do even half. Cooperation is better for all concerned than idleness or overwork.
No. 31 The loop below the line is the same as the one above, except that it is reversed. The crossing should occur near or on the base line. The loop need not be large or long, just long enough so that it will not be mistaken for I, which letter it resembles above the line. Keep the dot over and near the letter, neither too high nor to the right. Do not raise the pen in writing the word, though you are given the words. Write the word jubilee should be written well fifteen times in a minute. Not that many times each minute but at that rate of speed while practicing. When I say well, I do not mean merely legibly.

No. 32 The Q is not unlike the figure 2. It begins like Z and finishes like F. Keep the loop small and the finishing stroke just beneath the base line. Do not stop or pause in making this letter, but use a rapid, continuous motion, easy in appearance. Absorb the thought of the sentences and learn to practice as therein suggested. There is no royal road to good writing—just the plain, old, universal highway of application. Observe the copy and its details, plan a mode of practice, then go to work and realize your wishes. Impulse become realities when they are worked out. You are the one to determine whether your ambitions shall remain such, or become facts. If your desire is to write well, you can convert that desire into good writing by proper effort.

No. 33 Begin y like r and finish it like j. The g is a union of the a and y. Be sure you observe all of the details of angle and turn, quickly written illegibly through failure to observe two turns and the g should always be closed. Tight close the oval in the letter, leads to the first and seen they look much the same though were intended nor large, just large enough to distinguish the letters from the short or minimum letters. Long loops encourage finger action and take time and effort to make; more of all than short, small loops. Reduce extended letters to the minimum if you would attain the maximum speed.

No. 34 The I is a loop and stem combined. It is an easy letter to make. So easy that it may be made either way around. Many people make it the same as an l, except that it has a dot at the beginning and no final stroke upward to the right. The second style is one used by many people.

The I begins the same as H, and is finished much the same as the H without the loop or cross. Keep the two parts close together. Use little or no finger action. Watch your position. See that it is healthful at all times. Do not grip the holder. Hold it firmly, neither tightly nor loosely.

No. 35 Legibility is due to unlikeness of letters (w's unlike n's, etc). Unlikeness of letters is due to a distinction between turn, angle, loop, retrac, and oval. Sureness rather than accuracy, essential.
Writing being an art by which thought is expressed and recorded in material form, should be legible, easy, and rapid, in order that thought may be materialized with clearness, with clarity, and in ample quantities.

Smallness These days of scientific accounting, when much is condensed into little space, it becomes necessary on the part of the accountant to write a small, plain, compact hand. You will therefore do well to see how neatly, how plainly, and how quickly you can write the above well. Use a finer pen than usual, or a new one at least, and see how small you can write legibly. The accompanying hand is but about a thirty-second of an inch in height. You ought to be able to write that small at least. Small writing can be executed in less time than large writing, and with less energy if you possess the necessary skill.

F. H. Y. You are on the right road—travel on. Exercise greater care and more watchfulness for details. Last part of u too angular at top and too narrow. Small n and u too rounding at bottom. Continue to practice freely but endeavor to focus your thought upon control of movement as it is somewhat wild and not too fast and uncontrolled.

H. I. Your figures are first-class. They are about as perfect as they can be to be made quickly. Exercise care in arrangement.

D. W. J. Your work is very skillful. Be more systematic in your practice. You ought to fill at least one page of each copy before proceeding to the next. Retrace small t further. Letters a little angular. Come again.

K. F. H. Close small n. Make small e more rounding. Small n too large for other letters. Your movement and work are very good. Some of it is the best received this month. Come regularly.

C. V. B. Work good in general—right motive power but not yet under perfect control. Small t too angular at base. Speed work is splendid—small n too narrow in your rapid work.

J. E. I. Small n and m too angular at top. Loops too slender and tall. Capitals too light—not firm. Too much shading and too fine lines for business. Small h looks like h. Don't loop t. Practice faithfully from copies.

D. C. D. Down strokes still too heavy. Last part of n and m larger than first part. Work is good and firm and plain. Shade down strokes less and it will become easier.

The above is the first plate of a series of auxiliary copies by Mr. S. M. Blue, assistant penman in the Zanerian Art College. Mr. Blue will present a graded course of copies which will cover considerable ground, and we advise all to practice from them as well as from the copies in our regular lessons.

In this lesson the small letters are presented for practice in two ways: in medium and wide spacing. The mastery of both styles will produce much better results than if but one style is practiced. The wide spacing encourages a free, strong action to the right, and if it is thoroughly mastered it will aid wonderfully in giving a firm and forceful effect to the medium spacing something that is much desired. Practice this lesson faithfully so that you will be ready for the next, which will consist of words made up of these same small letters. Do not miss these plates.
Lessons in Professional Business Writing

BY H. B. LEHMAN, CLEVELAND, OHIO, WITH SPENCERIAN BUSINESS COLLEGE

In this lesson we have the entire alphabet of capital letters. Capitals should be connected with the small letters when it is convenient to do so, but in some cases it is just as well without the combination, but see that you always begin your small writing close enough to the capitals so as to make no break in the spacing between letters which should be uniform.

By Professional Business Writing we mean nothing more nor less than good, plain writing, so if it should be your highest aim to form the letters accurately and never write so fast that you have no time to complete each letter, in fact, no one can become a good writer without paying the utmost attention to the correctness of each letter. In course of time it will be necessary for you to apply speed in order that you may become a rapid writer, but you need not lose the form of the letter: far from it, but apply speed and retain a good substantial form in making each letter. By beginning slowly and familiarizing yourself with the true forms it will be an easy matter to retain such forms in rapid writing if you only keep the standard constantly in mind. It is by far better to devote a little more time to your writing when you write letters or anything else and turn out a respectable piece of work, rather than to hurry over it and be ashamed of your own writing when you are through with it. In nearly all cases where the writer is too much in a hurry he will have to rewrite the whole matter, and, by so doing, spend much more time than would be required to do the work right, going over it the first time. Time and time again the writer has received letters from so-called penmen who made a fair start in writing the letter, but at the close of the same letter it was almost impossible to decipher the writing and then had to guess at the signature. Unless a letter is very important, business men do not stop to decipher poor writing. Time is too valuable. I wish to say to you as a student of writing that success can not come in any other way than by earnest and faithful study and practice.

In regard to the use of capitals, I would say that if you have mastered a style now and then which you prefer to the style used in this lesson, there is no reason why you should not use it, so long as it is a substantial and approved letter. Something the business world can use. I admit, in common with other good teachers of penmanship, that some capitals may be made in at least two styles and the one as good as the other, but permit me to discourage you in the use of odd and mystified styles which are difficult to read. Some penmen are in the business of manufacturing new styles of letters which, as models, are entirely unfit to present to students. Learn to make a sound letter. One which will stand the test and meet with approval everywhere. You will never be a good writer until you get your writing into systematic form, leaving out all curious notions as to perplexing styles. Space enough between the small letters to show each letter distinctly.

H. B. LEHMAN.

Congratulations from Isaac Pitman & Sons

Please accept our congratulations on the improvement you have made in your writing. Oct. 8, 1900.

Lessons in Artistic Penmanship

Number Five

BY J. E. LEAMY, TROY, N. Y.

This is the time of the year for improvement and advancement along penmanship lines. Take advantage of the long evenings and spend as many of them as possible in hard, earnest, honest practice. Later on in the year when the days become longer and the evenings hot, you will not feel as much like work of this kind, and, in truth, you cannot do as good work. So dig in NOW. Remember, your advancement depends entirely upon yourself. As you work, so you climb.

Loops Above the Line

I think you will have but little trouble with the loops above the line if you apply the same movement and principles suggested in Lesson Three for loops below the line. Keep the paper in such a position that the arm will be at right angles to the connective slant. With the paper and arm in this position, you should cause the pen to move to the right and upward. This will necessitate a slight backward and then forward action of the arm in the sleeve in connection with the hinge motion. Without stopping the pen at the top, allow it to turn abruptly and descend toward the line, to be raised from the paper at or near the crossing. Then place the pen carefully on the unfinished stroke and complete the letter. You cannot make loops successfully if your arm is at right angles to the base line without a good deal of finger action. Whereas, with the paper turned as before advised, you cannot use the fingers much, but the muscles of the arm instead. Of course you must discover for yourselves just what position of the paper and arm seems to produce the best results. This you will find by trying the different positions and by placing the paper at different angles.

By close observation you will notice that the down strokes in loops are not quite straight, or should not be so at least. It is generally supposed that they are straight and are usually so taught, but none of our best penmen or engravers make them so. You can raise the pen to advantage twice in making the f, near the crossing coming down and at the base line going up.

Bear in mind that a light, easy, yet firm and delicate movement is necessary at all times. Do not allow your muscles to become so tightened by nervous anxiety that they cannot act, or do not go to the other extreme and allow them to "hump around," keeping them tuned to such a pitch that they will do their very best.

Now don't be afraid to practice quite vigorously at times on the work given. It will help you along if you will double the size of the copies at times, and at others reduce the size a half and double the spacing. The latter style, especially, will put force and strength into your work. After practicing the different styles you should complete your work by practicing the size and spacing given in the copies. Keep your ink and pens in good condition, and avoid using poor paper. Good material costs but little more than poor.

Criticisms.

D. W. J. Spring Garden—I congratulate you on your results under the circumstances. Use better paper. Work shows that your movement is wild and uncontrolled. Shades too long on all capitals. Get more contrast between light line and shaded strokes. Small letters good. Send work regularly. No time just now for specimen work. Sorry.

Wilton, Conn.—See no reason why you can't become a good penman. You certainly have a good start. Try to put more strength and force into your shaded capitals. Get fine lines stronger if possible. Shade on L too long. Drop it lower. Thin ink down. Come again.

E. W. J., Missouri—Glad to hear from you. Your work shows that you have taken quite a stride since last we met. Study last part of B and K more closely. You can improve lower part of capital D. Fine lines seem a trifle weak at times. Do not sacrifice strength for delicacy. In other words, endeavor to "cut" your lines. Add a little gum to your ink.

Jennie C. New York—You have made an excellent start on capitals. Movement seems a trifle weak at times. Put strength and force into your strokes. Endeavor to make all shades shorter. Keep on.

"Z," Manchester—You can become a professional penman if you persevere. You lack freedom, touch and sureness. Arnold's Japan ink, diluted, is the ink I advise.

J. B. W., Hill—Practice indicates that you are working in the right direction. Simply persevere. I fail to locate any serious difficulty. Practice should reach me by the first of each month.

Clinton, Ky.—Capital sparring. Don't hasten small letters the same as in business writing. Pick pen often. Practice seems thoughtless and rapid.

W. B. G. Newark—Use oblique holder. Confidence will come by practice. You did quite well.
Elementary Book-keeping 

Scholars have said, in disparagement of business schools, that they teach, among other things, some merely elementary bookkeeping, emphasizing "elementary," we who teach commercial branches have been disposed to resent this assertion. It indicates a lack of familiarity with the work of worthy business schools, many of which might readily be named. Nevertheless, there is a sense in which this statement made by college men is true. Nothing could more forcibly demonstrate the truth of it than would the attempt to answer the list of sample questions, on another page, given to candidates for the Certified Public Accountants' Certificate, in New York. We believe that they would stagger many commercial teachers.

To be sure, the average business college does not pretend to fit its students for professional work in accounting, such as is done by who make business of expert accounting. Nevertheless, in the best schools, there are always advanced students who would enjoy such a course as our list of questions would require. For them the ambitious teacher who reads these questions will be eager to delve into the books that provide the information necessary to answer these questions.

Certified Public Accountant Syllabus

In 1906, New York passed a law creating the title Certified Public Accountant, and three expert examiners were appointed by the Regents of the University of the State of New York. This board of examiners holds examinations in January and June of each year.

Hitherto, no guide, other than the printed examination papers, has been available, but this year the University is sending out, to those who are interested in these examinations, College Bulletin Number 15, Certified Public Accountant Syllabus. It contains a brief statement of the history of accounting, the importance of modern accounting, and the relation of the public accountant to business men and to the public.

An excellent summary of the topics for the examinations is given. The suggestiveness of these is worth much to any alert teacher.

A valuable list of books on accounting and commercial law is given. Some of them are familiar to our readers. Several are not, and these are chiefly English works. Our British friends are said to be much in advance of us in the science of accounting, and many of our readers will be glad to have an opportunity to obtain unbiased advice as to what books to buy.

The most interesting feature of the Syllabus, however, is the sets of examination papers—eight for each—on the Theory of Accounts, Practical Accounting, Auditing, and Commercial Law. Our sample questions were selected from these papers. Send fifteen cents to Secretary James R. Parsons, University of the State of New York, Albany, New York, and you will get a valuable revelation of the possibilities of accounting, probably not yet touched upon in your teaching.

Henry Miles

The article, "From the Business Man's Point of View," begun in this number, is an address given by Mr. Henry Miles in Montreal a short time ago. He very graciously permitted us to use it. The subject is so much to the point and aroused so much favorable comment in the Dominion press, that we are sure our readers will find it significant of the trend of thought among business men, as regards the school side of business training.

Mr. Miles is the First Vice President of the Montreal Board of Trade, the managing partner in a large wholesale drug business, and the editor of the Montreal Pharmaceutical Journal. He has had a college training; his views will possibly have added weight with some of our readers, who might not expect a college man to look so favorably on commercial education.

The Federation Meeting

The Queen City of the Lakes will entertain, we expect, the largest gathering of commercial teachers ever assembled. The president is a man of great force and of broad training; the other administrative officers are energetic and able teachers. The policy implied by the list of subjects and speakers is a liberal one, as it must be if all classes of commercial teachers are to be affiliated with this national organization.

Business college teachers have done their work so thoroughly, and business conditions have spoken so imperatively, that commercial education has reached into the field of secondary education on one side, and into the realm of higher education on the other. To provide instruction and entertainment that will prove a magnet for teachers of commercial subjects in the public schools, in the private schools, and in the colleges, will require great tact and unusual ability.

Our Common Good

It is for the best interests of all phases of commercial training that the Federation should increase in numbers and influence. The private school proprietor who antagonizes the commercial work of the high schools is making a serious tactical blunder. The professor at the head of a department of business in a college is not so broad as he assumes to be, if he sneers at the business college; it should be called "business school," however, in the interest of sincerity, and as a rebuke to flabby superstitious. The high school commercial department will, to a greater or less extent, be a feeder of both the private business school and the college. Those who drop out before the high school course is finished, the meet of the graduates from schools having one or two year courses, and the less effective graduates from even long courses will resort to the private business schools that maintain a standard high enough to attract their attention. The minority, the best and most promising product of the high school courses, will enter college for advanced work. There is an element of common interest that should hold all commercial teachers loyal to the Federation.

We trust that those who have influence in fashioning the policy of this organization will not lose sight of this fact. The Federation is a voluntary organization. It would be a great misfortune for the cause, and for those engaged in it, if there were to be one organization of business college teachers and proprietors, another of public school teachers, and another of college men. If, in matters of detail, methods of teaching, organization of objects, etc., the classes of teachers differ, as they certainly will differ, let section meetings for each class be provided, where the special problems of each division may be discussed. But preserve, as a whole, an organization that will make it possible for us to meet, exchange views with, and learn the particular methods of teachers of commercial subjects. It is for the common good of our worthy cause.

Rawkness

We trust that this meeting may not witness any such ill-judged oratory (as to which we listened in the discussion of the president's address last year. Such attacks may be entertaining, but, in the view of some of the well informed men who will be at the Detroit meeting, they do not add to the dignity or influence of the organization. With such men as Prof. J. B. Johnson, Dr. C. A. Herwick, and Mr. F. W. Bookmyer on the general program there are, in the administrative policy this year, a breadth and liberality of plan entirely in harmony with the foregoing suggestions. We hope that no inconsiderate comments on commercial training in high school or college, may be made by business college men, justifying the charge of narrowness sometimes made against them.
Commercial Education

HENRY MILES, FIRST VICE-PRESIDENT MONTREAL BOARD OF TRADE

AN ADDRESS RECENTLY DELIVERED IN MONTREAL

The subject that I will speak upon this evening is one of wide importance, and I beg your consideration in introducing a matter on which there exists a diversity of opinion and as to which, also, I feel some difference, not having the advantage of authority for reference. We all know of the lines upon which education is conducted in this country; but few, however, realize the defects that exist. We are apt to be conscious of the existence of a meritorious perfection in some branches of education, overlooking the shortcomings that exist and that can be shown in respect to some of the greatest needs towards fostering the material progress of our country. My words will carry you, I feel sure, to a conviction that the educational system of Canada does not cover all the requirements of our youth, nor does it meet all the demands of modern life.

The institutions of learning ignore commercial education. They afford the least possible assistance to the young men and women of this country for entering upon commercial life. The benefactors—the donors of magnificent gifts to the cause of education—almost without exception have been men who have amassed wealth in business pursuits, and let me ask, why have one and all overlooked the interest of education in commercial branches?

EDUCATIONAL INSTITUTIONS—NEGLECT COMMERCIAL TRAINING

I would arrange the educational institutions of Canada for neglecting an all-important branch of education. I admit the exertion of every effort and energy towards education for the professions—law, medicine, science, and others, as well as theology. Why is it that there is no practical training school for commerce. The merchants, bankers, and manufacturers of today, are, with few exceptions, men of more or less limited education—self-taught for the most part. Expert and able as those in the higher walks of commerce may be—it is not difficult to ascertain that their education has been obtained in the office; in the counting room; in the store. Let me ask why so many years of young life should be expended in tedious observation and practice of menial duty, perhaps to the neglect of the improvement of mind? As the world is fitted to the wider range of education that every business man lives to regret, in after life? Men can, and do make money without education.

Natural ability or fitness leads many to success, but the fact that goal is reached, can be counted in thousands those who, upon one occasion or other, live to feel the absence of that of which they were deprived in early life through a prejudice to commercial provision in our educational system. Early preparation for commercial life which would train, cultivate and refine the mind.

UNIVERSITY GRADUATES WILL NOT BEGIN AT THE BOTTOM

The higher institutions of learning do not, it must be admitted, fit young men for business life. The very nature of the years of study unit them rather for this life. A graduate is too far advanced in years—in the tastes of living acquired in the surroundings of social life and culture to begin at the beginning, and it is not practical to commence at a middle stage under present conditions. The advice of any business man of experience is to parents, "If your boy is to follow a business life, let him commence young—15 or 16 years of age." Now, what does this mean? What is the commencement?

MENIAL SERVICE DOES NOT DEVELOP MENTAL SUPERIORITY

Sweep the office or water closet, polish the brass and windows, dust the goods, clean the shelves, run messages and observe from morning to night. How many of the seniors do, and copy. Learn the particular business gradually. This is practical and all very well as for one side of the question goes, but by the time the lad becomes proficient in the details of his business, he has passed the golden period of his life for study—for the education of mind—the cultivation of thought. An adept in some branch of trade, perhaps, but lamentably ignorant of much that goes to make up the ideal man of business. Natural intelligence is stunted, the mind untrained for position and for general usefulness in the community. The initial stages of the medical profession in years gone by included the cleaning of the doctor's baggy, grooming the horse and driving the practitioner from patient to patient, gathering by the way a knowledge of the profession. The lawyer's apprentice in the same way spent his early years in caring for the office, copying documents, and all manner of observing attendance upon the legal luminaries. Is these professions today, what do we see. Is there not a contrast? Has not everything been provided?

BUSINESS AND PROFESSIONAL TRAINING CONTRASTED

A liberal education accompanies the most careful provision for the practical study. Ordinarily, professors are largely supplied by men high in the active practice of both. The best talent is applied to the education of these over-crowded professions. Theology is not learned by attendance at church, but by the community. An exuberance of sweeping out pens or shoveling snow from the pathways leading to the sacred edifices. How many instances could be cited of the advancement in learning in various branches? How many examples could be given wherein education has improved—following ever the march of science and the demands of life? And what good reason can be advanced for the absolute neglect and ignoring of the requirements of commerce? The commerce of today differs widely from that of 25 or 30 years ago. Commerce, the difficulties of succeeding are ever increasing.

Capital and favoring opportunity was the requirement in the past. Today, brains are more important than capital. The numbers engaged in the trades which every educational opportunity and provision is made are insignificant compared with the followers of commercial pursuits, even if we do not take into account the many thousands in prison, or business enterprises. We can freely assay to the necessity of the physician, the lawyer, the clergyman. The greater the educational facilities for all the professions, the better for the country. Why is it not provision made as well for educating the young men and the young women of this country for commercial life?

WELFARE OF NATIONAL LIFE AT STAKE

As to the best means for covering this want, it is first necessary to convince educational institutions of the existence of the want. It is necessary to first seek to convince the authorities of our universities of the fact that there is an immense field open to their labours and that the material welfare of our national life is at stake upon the awakening to the ability of these institutions to send out to practice many hundreds of doctors and lawyers, and many hundreds as well in the other professions. How much greater would be this satisfaction if with this accorded by the thousands and thousands of merchants, bankers, and manufacturers that they had fitted to take their places in the life of commerce upon a basis equally efficient to that for which they strive to benefit mankind in the direction of their present efforts.

BUSINESS MEN WOULD GIVE FINANCIAL AID

If the leaders in educational matters can be convinced of the existence of this greater field for their labour, the inauguration of the effort in the direction indicated would seem imbued with possibilities. This can be placed before those who are ever ready to devote a portion of the results of business success at the command of the needs of their fellow-men, and it would seem indeed as if there is no lack of such men. Is it not now the time to favor the establishment of commercial courses in connection with the universities of Canada. The man who is at all fitted for business, without education, or with a limited education, would, with the possession of a good sound education and a special training upon subjects that will come up at every turn throughout his business life, be a stronger factor—an infinitely more important unit in the practical business life of his surroundings. The stronger, the more able, are individuals, the greater the a great strength of the commercial community will further the progress of the commerce of our country.

A SUGGESTIVE COURSE OF STUDY

My thoughts on the subject carry me in the direction of an outline of the course that might be pursued, and I will indicate, roughly, a plan that competent authority in a position to proceed practically might amplify. I will prefere the suggestions given in detail by saying that partial courses might be open to those unable for one reason or other to take all. Many young men in business occupation might, with the permission of their employers, devote a few or more hours in the day to the study of special subjects.
Further, certain parts of the courses of study might be made optional, even to those who had the required time at their disposal, as the particular branch of business to be followed might not call for the study of certain subjects. I will presume that the advantage of a fair school education is secured to the age, say, of 15 years. After that age the higher school, therefore, or university should furnish a three years' course, giving special attention to the following subjects:

1. English language, composition, literature.
2. French language.
3. History of the British Empire.
4. History of Europe.
5. History of the United States.
8. Commercial law.
12. Monetary history.
15. Insurance — fire, life, marine.
16. Commercial and commercial relations.
17. Transportation — rail and water, bailing of goods.
18. The manufactures of Canada.
19. The natural products of Canada.
20. The internal trade of Canada.
21. The export trade of Canada.
22. The Customs Act and tariff of Canada, import trade.
23. Stenography.
24. Partnership, company, incorporation.
25. Insolvency, liquidation.

Many of these subjects could only be dealt with satisfactorily by men engaged in active business. Therefore, in connection with a commercial study it would be necessary to arrange for lectures or addresses by prominent men, just in the same way as do the faculties of medicine and law. Neither faculty could control the men they did, were it then not to teach exclusively from theory. The idea I place before you in this paper would furnish great advantages within the reach of kids actually beginning their business careers at a common-school education at the age of 10 or 16 years, and the following of the complete course would enable young men of 18 years of age to enter business employment upon a most desirable basis. Any text-book on geography, or in a course such as suggested would, with little additional practical experience, fit a young man for the higher positions in commercial life. He would be able to take his place as his ability or opportunity might call, with comfort and satisfaction.

(Concluded in February number)

**Commercial Geography Methods**

**WILLIAM J. AMOS, BEER-SCHOOL, PHILA-DELPHIA**

We have a great deal at this time concerning Commercial Geography and what it should be; and there are many who are very little about the 'how' of presenting it. Any subject or any text-book is useless in a schoolroom unless in the hands of a master. By 'master', I mean not merely a walking encyclopedia of geometrical or other information, but a teacher who can tell what he knows, or what is better, can lead his class to investigate what he knows. The teacher who can direct a class how, when, and where to study, is abler teacher than one who prescribes all the work,kind of and sequence, and pours his knowledge into the brains of his pupils.

No subject is so interesting as an enthusiastic teacher cannot arouse interest in a subject which is interesting enough to be presented by a drone.

Just how to become a good teacher of Commercial Geography is a problem which is worrying not a few of our friends at the present time. Not that we are continually receiving this matter. To be a good teacher of this subject, one must, first of all, be perfectly in love with the subject. This begins-enthusiasm. This puts both teacher and pupil into the spirit of being. Having the enthusiasm, the rest is easy. Enthusiasm begats interest, and this means the acquisition of knowledge.

Enthusiasm and knowledge are the key notes usually used in teaching. "lout," says one teacher, "how am I to secure all this knowledge? What am I to read?" Personally, I read all I can. This includes a close study of newspapers, magazines, and pamphlets as well as the "Geographical Review" found in the PENMAN ARTIST in recent months. It is not necessary to read everything in a magazine; you must learn how to select the important. After reading an article carefully, I either clip it for my scrap book, or else take a filing card and register the article, the book, and volume, and place this card in my file under the proper heading. For example, if I am interested in Manila, or Philadelphia, I place my card in a large envelope under the name of "Manila" or "Philadelphia." This permits ready reference and saves having to carry much bulky material. There are some exceptions to this, however. Students become greatly interested in clippings. They soon learn to choose and make their own files.

After reading an interesting article, I usually introduce it to the class, and have the pupils prepare a synopsis. This means that they must think the matter up carefully. These papers are collected and carefully examined. If they are not well written, they should be encouraged to read as much as possible outside of the regular class work. Keep in view constantly that a ready mind gives a ready tongue, and a ready tongue, a ready pupil.

A teacher of this subject will always have perfect control of his class, and perfect class management is always conducive to class attention.

A blundering, ignorant teacher is always found in a room with a motley of disorganized, disgusted, discouraged pupils. To get hold of your pupils and to start them to thinking is the plain duty of every teacher; and until the teacher does get hold of a class, he certainly does not control it.

One of the best methods of interesting a class is to begin a discussion by taking up the things known at hand, and then gradually widening the horizon until the whole subject is covered. For example: if you are in Philadelphia, and located on one of the principal streets, start your work there. Discuss the different kinds of trade conducted on your street; then the city in general; then the State, and then the nation. But begin very small.

In my own case, if you will pardon me, I find that pupils always visit foreign lands with more interest when they are engaged with a cargo of home goods. They are anxious to take charge of the cargo and carry it to distant ports and exchange it for articles found there. I find that they are also anxious to travel by the shortest routes and at all times to take advantage of the best opportunities of trade restrictions, and whatever else may assist them in driving a good bargain.

To develop work of this kind, I ask a pupil to solve a problem like the following: Stephen, a young man, has a bath of his own in Philadelphia, in which he instructs you to load cargo at foot of Chestnut street, proceed to Hongkong, dispose of goods, take on two kinds of merchandise purchaseable there, proceed to Manila, trade to the islands, return to New York; and load cargo for Alexandria, Marseilles, Philadelphia.

Describe your cargo and tell where you secured the goods. Tell what commercial languages you noticed, and name the money of value in each of the countries you visited.

Questions of this kind develop power to think. Not this alone, but the power to arrange ideas in their proper form.

I find that in a class, as everywhere else, variety is the spice of life. It always interests a class to discuss specimens. A piece of cane, a sugar-beet, a bag of cotton, a bit of skateboard, a few grains of coffee, an ear of corn, a bottle of wheat.

There is absolutely nothing in your school room which cannot be turned to advantage. The other day I noticed a boy in one of my classes who was inclined to be restless. I asked him to relieve himself and the class by telling us the story of his new coat, including buttons, thread, and silk. He was wide awake in a moment. He traced the wood for the button hole to the yoke, the wool to the thread, the buttons from the rubber tree to the factory, the thread from field to tailor, and when he sat down, his eyes were flashing with enthusiasm, his checks were aglow with pride, and whole soul was aroused.

Let me emphasize the discussing of every day things. Have the pupils read and then write out their ideas. They love to work if they have a leader; only give them a medicine form.

If your class does not respond, study yourself before blaming the student.

Experience teaches me that our boys and girls must know what is on their shoulders, as well as what is on their clothes, and rightfully be laid at the door of the teacher. How can we ever learn to lead our way into life that manhood and womanhood with which our boys and girls are so richly endowed.

**Sugar Refining**

A. R. KIEP, COMMERCIAL HIGH SCHOOL, BROOKLYN, N. Y.

About 800,000,000 pounds of cane sugar was produced in this country last year, of which only about six or seven per cent. was not refined. The consumption of sugar amounted last year to nearly sixty-five pounds per capital.

To make up the necessary supply, over and above home production, we imported about 2,750,000,000 pounds, nearly all of which was brought into the country in its raw state. The American sugar is refined by the manufacturer of sugar constitutes one of our great industries. In such a line of manufacture many secret processes may be in use, hence the difficulty of seeing and investing in such a line. A sugar refiner has no secrets to divulge, but has prepared from all available sources such general information as will give an idea of the refining process.

**RECENT CHANGES**

It is only so long ago as the early part of this century that good ladies were wont to sweeten their cup of cheer.
ing tea with West Indies molasses, and, within the memory of "ye editor," and others comparatively as youthful, grocers sold mostly a low-grade brown sugar. But changes occur, and we now accept only the snow white crystals of granulated sugar, or equally white cubes.

**PROCESSES.**

The crudest device for refining sugar is to put raw sugar into hogsheads sufficiently open for molasses to drip through. In the course of many days this results in "bleaching" the sugar slightly, but it is still the coarsest sugar refined.

Refiners put the sugar through two general processes. In the first, sand and impurities are removed by passing the sugar, while in liquid form, through charcoal; the second separates the sugar by crystallization from the remaining impurities.

Raw sugar comes to our wharves in bags or hogsheads. It is emptied over a grating and falls through this into a melting pan. The bags are washed with soft water and the hogsheads steamed to remove all sugar. Melting pans are provided with mixing gear which moves steadily as the sugar melts, there are also coils of steam pipes which heat the solution. Frequently "the raw sugar must be crushed before melting.

**THE "RISE AND FALL" OF SUGAR.**

After heating and melting, the liquid is pumped to an upper floor to another melting pan where an expert tests the temperature and density. From this pan the liquid is strained to remove the last particles of course foreign matter and passes to the floor below into the filters. As it first issues from the filter it is quite clear, but liquid which flows through after the filter becomes partly clogged is darker; because of this the liquid is separated. After cleansing a quantity of liquid twice its weight, the charcoal must be "washed," which is done with soft water.

**THE VACUUM PAN AND THE CENTRIFUGAL FILTER.**

The vacuum pans receive the liquid next, and here the sugar is crystallized. Great care is exercised to prevent over boiling, or not boiling quickly enough in order that fine crystals will be formed.

The sugar product is now called marse-cuit. This is passed into a heater with stirring gear, and from thence into a centrifugal machine which revolves from 900 to 1200 times per minute. The centrifugal machine is jetted to retain the molasses and direct it into receptacles provided below. High grade sugars are placed in large machines which revolve slowly, the speed being increased and the size of the machine diminished as the grade descends.

**MAKING LOAF SUGAR.**

When loaf sugar is made, the marse-cuit having a fine, even grain is heated to 155 degrees and run into conical sheet-iron molds. After the retort layer hardens it is broken and mixed with the melted interior. After a time, the loaves are removed to store rooms and placed with the apex down in small holes in the floor, under which are conduits for the drippings. In this place the loaves are trimmed and care taken that the color becomes uniform. The loaves are next placed in a drying oven heated to about 160 degrees.

Moulded cube sugar is made by filling iron molds with marse-cuit, and allowing them to stand until "set." The molds are then placed in a centrifugal machine which expels the moisture and molasses. The next step is "liquoring," flowing liquid over the molds; then the blocks of sugar are removed, and, when cut at right angles, give four cubes.

Pressed cubes are made of an inferior grade of sugar which is subjected to heavy pressure, sometimes being pressed into cubes and again into sticks which are so cut as to make cubes.

**GRANULATED SUGAR.**

Fine, even-grained marse-cuit is chosen for granulated sugar. It is placed in a heating and centrifugal cylinder and it comes from it with some moisture still to be disposed of. It is then dried, and passes out over a sieve, which is graded from very fine, where the sugar first comes upon it, to very coarse, toward the last. The receptacles are provided which receive the different grades. It is now ready to be put in barrels.

Every day vessels are unloading or loading at the Havemeyer & Elder wharves — unloading brown bags containing raw sugar of the same color, or loading with bright clean barrels of the refined product.

**ECONOMY.**

In this refinery the savings of sugar from floors, bags and casks is reduced to a science. The floors are swept and sweepings, together with sugar from broken bags and liquid from washings of the filters, are put through the processes of refining. Nothing seems to be lost.

By the above and similar methods the great "sugar trust" prepares its product.
Some Examination Questions on the Theory of Accounts

FROM THE CERTIFIED PUBLIC ACCOUNTANT SYLLABUS

1. Describe the following and show wherein they differ: (a) trial balance, (b) balance sheet, (c) statement of affairs, (d) real account, (e) nominal account.

2. State the purposes for which series of perpendicular columns are employed in books of original entry, and how those purposes may be distinguished relative to the following conditions: (a) several ledgers comprised in one system of accounts, (b) several departments comprised in one business, (c) several accounts comprised in individual entries.

3. Describe the nature of the following accounts: (a) sinking fund, (b) reserve fund, (c) redemption fund, (d) depreciation fund, (e) contingent fund, (f) investment fund, (g) mortgage bonds.

4. Under what circumstances is a patent regarded as an asset? After a patent has been valued, should such value be considered as permanent? Give reasons for your answer.

5. In the opening of a ledger, what principle should be followed as to the order of arrangement of the accounts? Show the advantages of different plans. Give a form of cost sheet, showing its advantages and how it is made up. Give a form of cost sheet for some manufacturing business with which you are familiar.

6. Mention five classes of ledgers, and describe the peculiar features of each class.

7. In case of discrepancy in a trial balance, how may the accountant ascertain with certainty the nature of the error? Give an illustration.

8. Describe the following securities, and show the essential features of each: (a) common stock, (b) preferred stock, (c) income bonds, (d) debenture bonds, (e) mortgage bonds.

9. State, in the form of journal entries, the following transactions: (a) a note of a customer returned with protest charges, from the bank where it had been left for collection, (b) the settlement of an old and unpaid account in lieu of the balance due, (c) the adjustment of interest accrued but not yet payable on a mortgage, (d) an accommodation paper issued by the firm, when controlling accounts are received as security, (e) the receipt of notes when the stock is sold.

10. What names are given to accounts that represent the excess of assets over liabilities? Differentiate these names in their application to various kinds of businesses.

11. Describe a voucher record for the expenditures of a corporation.

12. As the bookkeeper of a firm that had no articles of partnership, what would be your duty on learning of the death of a partner?

13. How should executors' and administrators' accounts be stated for the purpose of filing in court? What does the summary of the estate usually include? What are the assets, interest, and rents to be treated as principal? Define an intermediate account. What is a final account? With what does the executor charge the estate? For what does he take credit?

14. Recommend, with all necessary explanations, a set of books peculiarly adapted to the business of the firm. What criteria should be considered? What are the additional accounts that should be kept in the books? Give a set of books in the main store.

16. How should the account of a sinking fund be conducted in the case of a manufacturing corporation that bonds its works for $100,000, payable in twenty years, and wishes to accumulate during that period the sum necessary to retire the bonds at maturity?

17. What is a controlling account? Give an illustration of the use of such an account.

"Enthusiastic Try of Florida"

MESSRS. ZANER & BLOSER,
Columbus, Ohio.

Gentlemen: After reading Mr. Jones' excellent paper on "Business Writing—Present and Future," I cannot resist writing along the same line. If you knew how enthusiastic I am on the subject of business writing, I feel that you could gladly excuse me for this passionate moment.

In a measure, I endorse all that Mr. Jones has said. One matter, however, I wish to dwell on, not in the spirit of criticising, but merely to relieve myself, somewhat, of a little accumulated energy.

Mr. Jones raises the question: "Why distinguish between business writing and any other kind?" This question I propose to answer from my own point of view. There should be no other kind, but we know that there is much writing which cannot be classed as business writing. When this is a fact, it is of prime importance that we. who advocate and practice practical writing should have a definite term, and this term, I think expresses just what we mean and what we (should) produce. We designate writing that is executed easily and rapidly without destroying legibility as "Business Writing." Writing which is executed so rapidly that legibility is destroyed, or slowly that style is lost, making legibility alone the object, losing all practical utility, certainly, cannot be called "Business Writing."

Again using the words of Mr. Jones: "The man who with him men of the penmanship, publications, preaches the doctrine of business writing, and proceeds to illustrate by lessons in anything but business writing." Men of this sort remind me of a certain man who would not even hold a mirror, and goeth away, and straightway forgetteth what manner of man he is." I wish that the words of Mr. Jones might bring all professional teachers of practical writing face to face to the actual problem. Teaching one thing and placing as an idol for the thing taught, something entirely different, is deception. Teachers, I know, are not conscious of such practice, therefore, let us have more discussion on real business writing to awaken the profession.

I don't believe in sitting down, and carefully and skillfully executing a specimen of writing and then label it as "up-to-date business writing."

Your plan of putting into print the specimens of penman written rapidly will do much toward establishing a different style of writing as copies for business writing.

Yours truly,
W. W. Fry.

A man once stole a large cake of ice, and got six months for taking things so cool.

The Quickest Method in the World

Send us only one dime (silver) and we will send you the Quickest Method in the World, the Secret of Obtaining Information. Every bookkeeper, teacher and student should have it. BOSTON PEN ART CO., DEPT. P. SOUTH BOSTON, MASS.

Bookkeeping and Shorthand Trusts

There are trusts outside of the large monetary combinations of which so much has been said the past year or two, both pro and con. The trust we have in mind is another kind, and one which concerns every young man and woman who would be successful in securing positions on the best positions in their respective fields. If you cannot be trusted you will scarcely reach the position you are seeking.

You must mean that you shall be honest in handling your firm's money, but it means that you must keep all confidential affairs to yourself. Perhaps few realize the great importance attached to the trust of bookkeepers or stenographers. It does not only mean that you must be a good bookkeeper or stenographer, but also that you must be trustworthy. No man is going to dictate his business affairs to one whom he cannot trust, for such a one he will not have at any price, no matter how cheap. With many firms it is not so much a matter of salary as it is the trust a trustworthy man or woman.

To betray your employer's confidence means dismissal from service or placing you in a minor position, which neither embraces confidential affairs or good pay. So important is the matter of keeping business affairs from others that many lose their places by betraying the least confidence. A young, but through bookkeeper recently lost his good position by telling how much money the firm made. To tell others will do you no good. It will injure both you and your employer.

There are perhaps no other positions which connect so closely the employer and employee. When an important position you get paid as much for your good sense in keeping business affairs to yourself, as you do for the actual work. Be trustworthy, and work ahead.

H. B. Lehman.

Get Certificates to Detroit!

Professor G. W. Brown, Jacksonville, Ill., Secretary of the National Commercial Teachers' Federation, informs us that the Central, Western, and Trunk Line Passenger Associations have granted a one and one-third fare for round trip to the Detroit meeting on the "Certificate" plan. The method of procedure is this: Purchase a first class ticket to Detroit (one way only) and have the ticket agent give you a "Certificate" of such purchase enabling you to one-third fare returning. Providing one hundred certificates are presented for return passage at Detroit, tickets may be had three days before the meeting and two days after the opening of the meeting. Ticket agents can no doubt give further information. Meeting December 26, 27, 28, 29, 1900. An five hundred members are expected in attendance it is thought that there will be no doubt that there will be more than the necessary number of certificates to insure the one and one-third rate of fare.

Get Certificates to Detroit!
Having been honored by the editors of the PENMAN-ARTIST AND BUSINESS EDUCATOR with an invitation to contribute a set of capitals, small letters and figures such as I believe to be best for the first decade of the twentieth century and my reasons for my opinion, I submit the accompanying script forms.

In teaching writing, like the reading of books, there is such a variety of forms to choose from, and such a comparatively brief time in which to become familiar with them, that we are obliged to use discretion in our selection. To the person who has a fixation for beautiful writing and who has an unlimited amount of time and energy to devote to the subject, there are several variations of the different characters that could be advocated with good reasons for their use. But there are thousands of people who have little or no liking for the subject of writing, except from a useful point of view, and but little time to devote to learning it. I think that it is to the needs of this latter class that our style should conform.

While there never was a time when written was not valued as a means of communication and of recording facts, there was a time when the matter of beauty and grace seemed to be considered of chief importance. In comparatively recent years when all men are giving more attention to the more practical side of life, the graceful beginning and ending curves and sparkling shades that were formerly insisted upon for all kinds of writing, have been forced to give way to the more practical in writing. This means that the best style to teach is that one which is easy to read, easiest to learn, and at the same time admits of speedy execution.

In selecting a style of capitals, we should adopt those that represent the corresponding printed character best, can be easily joined to the letter following, and, at the same time, require few lifting of the pen while writing. Another thing to be kept in mind is that certain styles of capitals, while simple in form and admit of rapid execution and are excellent representatives of their respective letters when executed by a skillful penman, are positively illegible when slightly disarranged by the poor writer. Consequently, the style advocated should be so distinct in character, that, even if not made with a high degree of excellence it will still be recognized readily.

The style of capitals given, while not ideal in every respect, possess, in my opinion, many good points. They are about as faithful representatives of the corresponding printed forms as we can have to admit of easy and rapid execution. Some are not ideals: the "Q," for instance, is not satisfactory—often mistaken for a figure 2, but I think it is the best that has been designed yet. I cannot see why the "V" should be rounded at the bottom instead of pointed, unless it is to harmonize with the small "x" which would resemble the small "x" it made angular at the bottom. I favor the style of "Z" given, because it is a better representative of the printed form than the rounded-top "Z." But I emphatically object to the "Z" without a loop before joining to the next letter, because only the skillful writer can make it so that the reader will know what it is.

Many will object to the style of "F" and "T" given on account of their severe plainness and simplicity, but I find them the most convenient of all when I am in a hurry. And they are certainly the easiest of all to make correctly.

There is less variation to be noticed in the small letters. The length of loops is a matter of more or less discussion. While the long loops, which add so much grace and beauty to the writing of the skillful master, should not be advocated in business writing, it seems to me that it is possible to err in going to the other extreme—short loops. The length of loop taken is taken as a standard only, and we need not expect all students to conform to that exact standard in length of loop any more than that they all write on the same slant. Students practicing after two or two and a half space loops see that they look quite short and are very liable to go to the extreme and fail to make enough distinction between loop letters and small space letters, "F's" and "l's," for instance. It seems to me that the well known three space loop is the correct standard.

The abbreviated form of "I" is the easiest to learn; it is neat and plain and occupies less space than the unabbreviated style. I believe in a combined action of the muscles of the arm and hand with the arm resting on the large muscular cushion in front of the elbow. Of course, the action of the muscles of the arm predominates, and no one is a good, strong writer unless he can use these large muscles as the main propelling power in writing. In making figures, however, I am convinced that the action of the hand and fingers should predominate. Try it at a high rate of speed and see what you think.

Nobody can quarrel with me about the slant of writing. Our students are at liberty to write whatever slant seems easiest providing they apply a free movement and produce legible forms. I notice that our vertical writers usually change to the slanting style as soon as they begin to apply the forearm movement.

C. C. LISTER, Baltimore, Md.

This is in reply to your request for penmen to show how fast they can write and what their writing looks like when written at this high rate of speed. Plain writing and a free movement are what we want.

SPEED WRITING BY

MR. LISTER.

(see movement and what we want)
The Penman-Artist and Business Educator

Vertical reformers have made mistakes. Their first mistake was to exaggerate the defects of slant writing as concerns its character, hygiene, etc. Their second and most serious mistake was to adopt extremely round, print-like, abnormally large, slow forms. True, not all vertical forms are such, but the ones first proposed and much praised were not what we have implied. Some have been the semi-angular forms straightened up, and we might add, stiffened up. Some vertical forms are simple and plain without being either slanted or curled. But as means we can learn, vertical advocates are profiting by these mistakes and doing what they can to remedy the demonstrated defects.

Vertical writing has blanched, but it was only by the rock mountains were crossed. It is only by experience that some lessons can be learned. The one who never blunders is never a reformer. The one who is not willing to learn from his experience is the one who is destined to write, and more and more round writing. The degree of slant will be left to the individual, and that is what penmanship was unwillingly to concede before the advent of vertical. "Give the devil his due!" and all that he deserves.

A good handwriting is a life companion — so is a poor one. But how much more valuable is the former? It is pleasurable to do anything well, while it is a task to do it poorly. Care, industry, observation are the qualities necessary to purchase the coin of application a good handwriting. It requires patience with the uninitiated idea that talent and genius are necessary in order to write well, you need to be to mind on such notions before the twentieth century arrives, for it may then be too late. Your record may be the thing that, or you may be too busy to correct it. No more talent is necessary to acquire a good, plain, rapid hand than is necessary to learn to use good English, not as much, or to learn to walk cramped, by a change in position. Of course, if you desire to become an expert penman, you will need the same amount of talent and genius as are necessary to become successful doctors, lawyers, business men, ministers, etc. What you must seek in order to write well is determination, industry, perseverance, care, and intelligence. You need nothing more and you ought not to be satisfied with anything less.

Vertical. The action of a majority of the Board of Education of New York City in recommending slanting writing in preference to vertical, does not seem to be due to any green-banishment of the vertical in other cities. But a few places have discarded vertical, and they have adapted semi-vertical or common promise slant. As a correspondent recently said: "If vertical is displaced, it will be by semi-vertical and not by the old 22° slant, that is as dead as Free Silver."

The convention of New York State School Boards voted that it was wise to continue the use of vertical writing in the schools of the commonwealth. The practice, however, is yet to occur—if it does occur. From what we can learn, vertical advocates, authors and publishers declare that this has been the best year thus far for vertical; and, on the other hand, advocates of the slant (in particular) predict that the end of the vertical "fad" is near at hand. We will wait and see who the real prophets are.

A Request

The publishers intend that all journals shall reach subscribers in first-class condition. If they are not doing so in any instance we should be very thankful to any one for such information. We are not certain whether they may be rolled or wrapped with double fold. We trust that some of our friends will enlighten us. Postal cards answer such purposes admirably. The Penman-Artist and Business Educator being the highest type of a journal yet published in the interests of business education and kindred branches, we cannot afford to have it damaged in delivery.

Lessons in Vertical

Mr. Utterback has been compelled to discontinue his lessons in vertical penmanship because too much work in his new field of labor. He remarks that it is necessary to discontinue the work with us, and therefore we are. But we are thankful for the ones he gave, as they contained more than the usual amount of practical.

We have secured the services of Mr. J. S. Merrill, supervisor of penmanship and drawing in the Urbana, Ohio, public schools, to give some work along this line, and we can promise our readers something practical.

New Automatic Pen

Mr. C. A. Faust, "The Automatic Man," has recently placed upon the market a new automatic pen which you should see and use. A sample for a dime. See his advertisement elsewhere.

Progress and Success

Lebanon Business College, Lebanon, Pa., Nov. 21, 1903.

We are reading with much interest all matters pertaining to the different business colleges throughout this country of ours, accounts of which appear in your paper from time to time, and we infer that business colleges in general are meeting with success. Our college started eighteen years ago with one student and now is the possesssion of high and noble altitudes. Thus students enrolled from all parts of Pennsylvania and from many other states.

Professor Shuler, our business instructor, has secured through the recommendation of your Employment Bureau Miss Edith Shuler, a well-known Graham and Pitman writer. He is the principal of the Commercial Department. He is a noted penman, a good disciplinarian and former student of this college. He is the son of W. M. Bollin, who is a specialist in Mathematics and other English branches of a first-class order. Miss Edith Shuler, a well-known Graham and Pitman writer, is principal of the Short-hand Department and has two assistants. The principal gives personal attention to the general management of the different departments, keeps in touch with the welfare of the students, besides his large office duties.

The students and teachers are very well pleased at the work done by the PENMAN-ARTIST AND BUSINESS EDUCATOR. We wish that the complements of the season and a great success in the new century, we remain.

Fraternally yours,

J. G. Geremick, Proprietor.
The faculty and students of Brown's Business College, Gatesburg, Ill., recently celebrated the tenth anniversary of the establishment of that excellent institution by giving a reception and musicale.

The Fremont (Ohio Daily) News of Nov. 17, 1900, contains this editorial comment on the growth, worth and workings of the Ohio Business University of that city. Mr. Hart German, president, is highly spoken of, which indicates that he is at home in the argot of business. The college is progressive, common-sense, honorable fellow.

Mr. J. D. Alexander, proprietor of the Van Wert, Ohio, Business and Normal College, gave us a pleasant call and reported a good school, and a well-run, progressive, sociable fellow.

Mr. E. S. Gause, of Texas, recently with Eastman College, Rochester, N. Y., has been elected principal of the commercial and business department of the Kansas State College, Emporia, Kans. Emporia is Mr. Gause's old home and the Regents have made the most excellent selection in electing him to the position. We have known Mr. Gause personally for upwards of a dozen years and consider him one of the most substantial, upright, proficient and worthy men of our acquaintance; one whom we esteem second to no other.

Mr. E. C. Eirich, the accomplished young student-artist, has gone South to paint landscapes during the winter. Mr. Eirich has high ability in that line of art and we believe he will realize.

F. R. Courtenay, the accomplished penman of Milwaukee, Henry F. Talman, of Chicago, W. C. Penzely, of Columbus, and Charles M. Varce, of Cleveland, recently gave expert testimony in a contested will case at Ashland, Ohio.

Fielding Schuffield, the veteran skilled and esteemed penman, has been critically ill for several months past, but we are glad to learn that he is improving.

Miss Annie Cavanaugh, of Milwaukee, Wis., has been elected to supervise writing in the Wayneburg, (Pa.) schools, and to teach drawing and painting in Waynesburg College. Miss Cavanaugh possesses a rare combination of business and skill in writing, drawing, and painting.

Mr. E. H. Brock, formerly of Chicago, is doing some local work on the Daily News of New Orleans. Mr. Brock is making rapid improvement and is doing up-to-date illustrating.

Mr. Charles V. Howe, the famous engraving script artist, and Mr. A. R. Garman have opened the new office in Philadelphia. The present address is 332 Vincennes avenue, Chicago.

Our good friend, G. E. Weaver, of Mt. Morris, Ill., is delighting audiences with his "Chalk Talks."

Pierce School, Philadelphia, has nearly 100 students in attendance.

A. S. Fries, principal of the commercial department of High School, has in his department 200 of the 800 pupils that attend that school.

C. B. Ellis, principal of the commercial department of the Springfield, Ill., High School, is president of the Hampden County Teachers' Association, which recently held a convention in Holyoke. Mr. Ellis is a royal fellow, an excellent teacher, a man easily able to give to his department the dignity and influence of which it is worthy.

Concourse is the suggestive title of a bright little paper that comes from the four Cs, Des Moines, Iowa. Its trade mark, four Cs, is represented in a unique engraving, representing the first premium tickets awarded to the school by the Iowa State Agricultural Society. A lesson on local commercial geography prepared by our friend, W. F. Guise, is one of the best things in that line that we have seen. It would be very simple for teachers of commercial geography elsewhere.

Familiar face greet us as we open the last quarterly number of the Student's Companion, issued as an advertisement of the Cedar Rapids Business College, Cedar Rapids, Iowa. Probably the readers of this little periodical have often as the writer has seen, the address of James A. Garfield, delivered before the students of the Institute of Business, Chicago, Ill., written by our朋友 Mr. E. A. Giese, is one of the best things in that line that we have seen. It would be very simple for teachers of commercial geography elsewhere.

The following note in the Review is also interesting:

The Stenographers' Association of the River Plate, sent to us by courtesy of E. R. Blake, of Buenos Aires, has issued an advertisement of the "Eckhert's" type writing machine.

L. M. Thorburn has more than 50 students in his department of the public night schools of Paterson, N. J.

R. O. Hatch is now employed in the post office, engravings department of the Massachusetts Mutual Life Insurance Co., Springfield, Mass. R. A. McDevitt, formerly penman in San Francisco, Ohio, is also connected with the engraving company.

Mr. F. C. Weber, formerly of La Porte, Ind., now has charge of the commercial department of the High School at Santa Barbara, California. He renewed his subscription to the P. A. E. V. Mr. Weber says, "Yor is the best form of propaganda of them all." We appreciate the compliment and extend our best wishes to Mr. Weber in his new line of work.

S. M. Funk, late of the Central Business College, Cumberland, Md., is now located with the Fireproof Mutual Life Inseurance Company, of Philadelphia, Pa., as policy engrosser. Mr. J. M. Craig has succeeded Mr. Funk in the Central Commercial College.

Mr. W. K. Jacobs, of the Elkhart Institute, Elkhart, Ind., sends some subscriptions to the Business Educator, and then writes us as follows:

"I wish to say that we have registered thirty-four new students yesterday, which was the most for one day in the history of the school. I am much pleased with your journal and wish every success, because it is filling a heretofore unoccupied position, and is a real help in supplying a real want."

W. O. Luneg, a recent graduate of the Mountain State Business College, Parkersburg, W. Va., has accepted a position as penman and commercial teacher in the Boise (Idaho) Business and Shortcourse College. Mr. Nelson is a skilled penman and we wish him much success in his new field.

Students Win the Penman-Artist and Business Educator

Nester, Ziner & Blower.

We recently offered two prizes in our penmanship classes—one for the best improvement and the other to the one doing the nearest work during the term. The one receiving the award for the greatest improvement was Mr. S. H. Wills, a student of the College, and Miss Ethel Lash, of this city, did the nearest work; the prizes were one year's subscription each to the Penman Artist and Business Educator, which I wish to begin with the next issue; and the money required amount for the two subscriptions.

"I prize your 'Journal' very highly, and could not get along without it. We are doing excellent work this year.

Yours truly,
T. E. Kerns,
Lewiston, Kan.

A Little Senseless Now and Then is Revisited by the Best Penman.

Three Ends to a Rope.

A lad applied to the captain of a vessel for a berth; the captain, wishing to get him signed on, handed him a piece of rope, and said, "If you can tie this you can tie a ship's cable, and I'll give you a job." The lad did so. The cap'n then said, "If you can make three ends to this rope, I'll give you a job." The lad did so. Then said the cap'n, "If you can do it, I'll make you an officer." The lad did so. The cap’n then exclaimed, "You have done so much now, that I will make you a captain." The lad did so. Then said the cap’n, "You have done so much now, that I will make you a commodore." The lad did so. Then said the cap’n, "If you can make a rope from this, I will make you a commodore." The lad did so. Then said the cap’n, "If you can make a rope from this, I will make you a commodore."

A man once lost his hearing, and went to a hearing aid; but he had not been gone very long until he finally gave up hearing for five years.

Struck Another Match.

A clergyman lost his wife, and on her deathbed they him, "If the light of my eyes has gone out, I will have struck another match!"
Penmanship, Diagnosis and Prescription

Number Five

We have in this specimen the result of careful, systematic, uniform, non spasmodic training. The writer is what might be called a stable or steady fellow—level headed and composed, if you please. And is not the writing of that kind also? See how uniform in slant and how rigidly straight the down strokes are. It was written with a sure, firm, deliberate movement, neither fast nor slow. It is about as unmistakable as script can be to be at all free. The sureness and firmness evidenced in the stroke, it seems to us, is a most commendable feature. A weak-willed, rubber-backed individual could not write such a hand. But if a fluctuating boy were to try to imitate or master such a hand it would have a tendency to make him stronger in purpose and firmer in disposition. The fact of it is, we believe that too much stress is being put upon a "light, elastic, muscular movement," and not enough upon firmness, strength, and sureness. Too many start to make a letter, not knowing where they are going to end. Whereas, there ought not to be any more uncertainty than in taking a step in walking. There is but little of the "happen-sa," or "guess," or "accident," in the style herewith. It is absolutely sure, safe, and trustworthy. And who would trade such a hand for one that was light, elastic, uncertain, and flighty? There is a rigidity in the down strokes that is the result of inherited notions about uniformity and straightness that we do not like. It would be more speedy and legible without but that is due to the times rather than to the individual, for he is one who is likely to profit from this criticism if he should see it.

And herein lies the secret of teaching: to modify and improve by criticism a person's handwriting without disturbing the individuality of the writing away that which he may already have. For all writing, like all individuals, has some good qualities in it. Our theory is to retain the good instead of eradicating it by radical, insane training.

"You Is Just Right"  
KNOXVILLE, TENN., Nov. 30, 1900.  
MESSRS. ZANEK & BLOSER,  
Columbus, Ohio.  
GENTLEMEN: In answer to your editorial, "You Can Confer a Favor," in December issue, I would say that the paper as it now stands reminds me of what I once heard a Cuban schoolmate say to his girl, "You is just right, you is perfect. I love you." Very sincerely,  
Jno. A. MCALLEN.
Instructions for Hexagonal Alphabet, by E. S. Morris, Fairmont, W. Va.

Alphabets of mechanical construction are often used in commercial advertisements such as of tile and slate work. The hexagonal letter presented embodies both strength and legibility, two necessary adjuncts of any alphabet intended for utility.

All the letters were first penciled before any inking was done. This penciling should be done free hand, care being taken to get the blocks as near hexagonal as is possible by the unaided eye. After a form has been begun, it will be found a comparatively easy matter to build it to completion, as there are but few ways in which the blocks can be combined except to render the letter.

By a study of the forms you will discover that the letter I is contained in B, D, E, F, A, K, L, M, N, P, K and F, that the same letter without one of the lower blocks is contained in J and U, and without one lower and one upper block in C, G, O and Q.

The openings in the letters are, with the exceptions of A and Y, two blocks wide. The shading in the first line was obtained by extending the lateral sides of all the hexagons, on the right of the letters, until they formed the diamonds composing the shade. The tinting of the second line was done free hand after the letters had been outlined in ink. The third line was inked solid and the divisional lines of white ink inserted afterwards.

The effect in the last line was obtained, as can be easily seen, by making enough concentric hexagons to fill the blocks.

These forms of finish are a few only of many which may be designed, the number depending entirely upon the inventive nature of the student.

Students’ Specimens

A package of specimens from the pupils of the third and fourth grades in the Urbana, Ohio Public Schools—J. S. Merrill, Supervisor, illustrate that writing is being taught in a creditable and progressive manner. A large number display arm movement of a nature that is of service in all written work and not alone in oval exercises. This is true movement and true teaching.

Mr. E. T. Zerkle, St. Paris, Ohio, favored us with specimens of his pupils’ work in writing which show that vertical can be acquired and written freely and well. He also demonstrated by pictures that water color painting direct from nature is within the ability of the average pupil if presented properly. The coloring is very faithful and reveals much feeling and careful observation.

Specimens of students’ writing from Elliott’s Business College, Burlington, la., J. E. Plummer, teacher of penmanship, are among the very best received by us.

O. K. Welker, teacher of penmanship in the Shenandoah, Iowa, Normal schools specimens of students’ work that are among the very best received at this office from normal and business schools. The work is intensely practical because it is plain, rapid, easy and simple.
Instructions for Practice.

The Engraver’s Script Capital is much narrower than the Spencerian capital. The second shaded stroke should commence almost three spaces above the base-line and extend a half space below the base line. The inside of the D’s only two spaces in height. The first stroke or hook to the right and at the top of the D should be made a hair line and then shaded after the letter is finished; it can be made last and shaded without lifting the pen by connecting with the second shaded stroke at the top. The first and third shades should not be as heavy as the second shade. The modified D is the same as the standard D except the first and second shaded strokes are slightly compacted. The modified Q is the same as the standard Q except the shaded stroke at the bottom which extends below the base line about three fourths of a space. The small loop resting on the base line should be delicately shaded on the left side same as in the K. The oval of the standard G is made as oval as in the P, B and K; the second shaded strokes should commence two and a half spaces above the base line and terminate a half space above base line. The small loop resting on the base line is the same as in the L. The modified D is made as oval as in the standard D. The standard B is considered one of the most difficult letters in the Engraver’s Script alphabet and will require much more study and practice to master than it is required for the C. The B should be made without lifting the pen. The upper oval and the loop are the same as in the L, and should be made a half space above base line; a half space and a space in height; it should be shaded after the letter is finished and avoided shading it too heavily. The modified B is the same as standard B except the main shaded stroke is shallower, and avoiding shading it too heavily. The modified B is shallower than the standard B. The modified D is the same as standard D except it contains a double oval.

Commercial Man Wanted

Wanted—An all round commercial man of experience, who is capable of managing a business college. Must be able to furnish good references. Good salary to the right party.

Address, F. H. Bliss.
Saginaw, Mich.

The First Prayer in Congress

is a 14 x 17 specimen of Engraving by C. P. Zaneck and represents his best Roundhand, Lettering and Drawing. Independence Hall is drawn artistically in the leading. Price, postpaid, in tube, 50 CENTS.

Address, W. C. FEES, Dunkirk, Indiana.

Specimens Received

H. B. Lehman favored us with a specimen in the form of a letter, the delicacy, accuracy, and grace of which is rare and still more rarely excelled. Mr. Lehman is a skillful penman— one of America’s most skilled.

Some uncommonly graceful figures and well-executed script came from J. E. Miller, St. Joseph (Mich.) Business University.

J. L. Calvert, Newark, N. J., sends a specimen of a good, legible penmanship which shows considerable skill and improvement.

J. M. Keeler, Danville, Va., sent some very creditable and well-executed shaded penmanship—something of the ordinary.

H. D. Goshert, St. Louis, Mo., favored us with a specimen of engraving script which discloses that he is quite an artist in that line.

W. T. Lindsey, Enville, Tenn., forwarded a creditable specimen by pen in writing in the form of capitals, sentences, etc.

J. E. Phummer, penman in Elliott’s Business College, sent a number of very well-executed signatures in the ornamental style. Mr. Phummer is pushing his work to the top very rapidly.

Some well written cards came from D. B. Winter, College of Des Moines, Iowa. Mr. Winter has produced his characteristic mark high, and, if we mistake not, some day few will exceed it.

Some very effective ornamental writing came from S. N. Falder, the expert penman of St. Louis, Mo.

W. X. Currier, penman in Rockford (III.) Business College, enclosed a number of very well written cards in the usual good script; a specimen of usually good business writing, Mr. Currier is a penman of much more than ordinary ability.

EDUCATION

Through popular and practical methods of instruction, we shall gain a thorough understanding of the best and most approved methods of teaching.

FOR SALE

One-half interest in a well established script college for only $10,000. About 300 students in attendance. All equipment and supplies included.

INVESTMENT

Care Penman and Artist and Business Educator.

ORNAMENTAL DESIGN

Women can learn at home, in spare time, at very small expense, to make suitable designs for embroidery, wall paper, china, glass, silver, and other textiles, book covers, manufacturing, etc. Students can while learning our course, cover, frame, and sell them, as resident art schools, is

Taught by Mail

International Correspondence Schools, Box 1874, Scranton, Pa.
To make these ornate, vertical letters successfully, use a straight holder and a fine, flexible pen such as the Zanerian Fine Writer. Let the holder point toward the elbow and keep the paper nearly parallel with the table. Employ whole-arm movement for the capitals in order to secure freedom and grace in the horizontal compound flourish. They are easy to execute if you are in the habit of using arm movement.

The small letters cannot be made in as free and off-hand manner as the capitals. They are simple and uniform in construction—too uniform for easy reading.

For variety and uniqueness these forms are as quite desirable as the old "slanters." They reveal the fact that grace and beauty are not limited to any one degree of the circle. Try your hand at them during your spare moments as did the writer. Who is the author?
Mr. E. L. Brown, the subject of this sketch, is a native of Camden, Me., and now makes his home in Maine, where the event of his birth occurred about thirty years ago; of course there was a term mixed with the incident. He early manifested an interest in good writing, and some of his first earnest efforts invested in a copy of Gaskell's Compendium, and this work, with all its faults, proved a wonderful inspiration to him. He also became a subscriber to the old Pennam's Gazette, and with the Gazette in other painting, as his teachers, he resolved to become a penman. He worked early and late and dabbled in everything, from writing to pen drawing.

When he visited his old home he often showed drawings which belonged to a boy for his friends, and while they now look crude to him, they are held as priceless gems which he cannot purchase. He entered the Rockland Commercial College in the fall of 1871, and pursued a special course in penmanship under Professor Howard, making splendid improvement in all branches of the art. The following spring he met the late A. K. Dunton, author of the Dunton system of writing, who invited him to his famous "cottage" under the hill where he showed him many fine pieces of penmanship; all branches. In fact, the house was apparently filled with specimens from all over the country, and late, of course, was a rare treat for Mr. Brown. He observed his mode of penmanship matters, and he offered to instruct him in text lettering if he might assist him at engraving diplomas, etc., and he accepted the proposition. Mr. Dunton was a master and impartial critic, and, while his criticisms at times seemed unjust, they usually proved correct. When the practice of penmanship became monotonous, the Professor would take some large object in his hand and tell Mr. Brown to watch him closely, which he did, but, presto, it was gone, and after finding in the same mysteries were all the objects in his reach smaller than a table or a chair he would feel for his pocketbook. He proposed Professor Dunton for many years engraving diplomas in Boston.

Mr. Brown has taught in the Rockland, Me., Commercial College for the past twelve years, and aside from his regular duties in the school room, he has built up a large engraving and designing business. He has made a specialty for the past few years of advertising designs for circulars and newspapers, as well as illustrations for school and college catalogs.

He is studying art continually, drawing from casts and life and he obtains much enjoyment and profit from his work in this line. He does water color painting as a pastime only, but he uses the brush to a large extent in his engraving and designing work.

The past summer was spent by Professor Howard and himself in Europe where he made a close study of art. He is a true student, believing "one is never too old to learn."

He was married about five years ago to Mattie A., daughter of Mr. and Mrs. C. H. Pendleton, of Rockland, Me.

He has found time to make several large exhibition pieces of pen art, among which might be mentioned two drawings, 22 x 28 inches in size, entitled, "Flight over the Standard," and "The Monarch of the Glen." He also has several other large pieces embracing all phases of pen art.

Mr. Brown is one of the best all-round penmen the century has produced, and we are glad to announce that his work for our readers will begin with our next number.
Lessons in Sepia Painting

Number Five

BY W. F. GILMORE, CANYON, OHIO

The autumn landscape proved to be one of our most popular drawing lessons, and is well worth your best effort. Get a good strong outline. Then with the first wash of thin tint of sepia, paint over all except the sky. Let this dry; then the corn shocks are painted a slightly darker tint and the hedge a still darker; then after this dries, the orchards or woods are painted still darker than the fence, with this same "coat" probably over the house and pine trees, but as soon as this wash is dry, we paint the house a dark coat, and then when that dries, the roof and chimney a very dark wash. The pine trees are then painted almost the purest black of the sedia. Then with strong color, using only the tip of the brush, we go over every pencil line with a strong sepia line, and give such accent touches as corn stubble, the windows, shading lines on the shocks, etc. Notice that one side of the corn shocks has a heavier line than the other and that all these lines are broken. This is not meant for a picture, but a decorative landscape, being a modification of a sketch from nature. Remember, the heavy outline of the shocks were put last, not first.

One Number Worth the Price

THE PENMAN-ARTIST AND BUSINESS EDUCATOR for November has just been received. It is certainly fine. Any business college man or commercial teacher can get more than his money's worth in instruction and inspiration out of any one number that has yet been published. Elgin, Ill. W. H. CALLOW, Elgin, III.

[Wide spacing is good to help the pupil get rid of excessive finger movement and to acquire arm movement. It is also a necessity in angular writing to enhance legibility, but these are about all it is good for. We consider it a bad rather than a necessity. As an end or product it is unbusinesslike and slow. We believe the tendency of writing for accounting and business usage is, and should be, toward rotundity rather than angularity, and toward compactness rather than wide spacing. Endnote.]

Juno 4183.

Columbus C.

Monteith――I am very interested in practical writing and wish to ask your named opinion as to the light line, wide spaced angular style something like this:

Pitchfork style of writing usually called business writing.

What is all this wide spaced angular writing for, when really the penman's business style is something like this?

Yours truly, J. M. Keeler.

Art Paragraphs.

COMPILED BY E. O. WISE, CHICAGO.

The art of a thing is, first, its aim, and next, its manner of accomplishment.

Tuckerman.

A work of art is said to be perfect in proportion as it does not remind the spectator of the process by which it was created.

Home.

It is not strength, but art, obtains the prize, and to be swift is less than to be wise.

Tis more by art, than force of innumerable strokes.

Home.

The conscious attention of thought, by speech or action, to any end, is art.

Emerson.

Drawing must be to the pupil a born faculty, the fruit of his own observation, and of his own thoughts, as well as of the training of his hand, and the dexterity and grace of his manipulation.

Drawing helps a man often to express in a few lines well put together what a whole sheet of paper in writing would not be able to represent or make intelligible. Look.

There is a sort of reading, as well as an art of thinking, and an art of writing.

Isaac Disraeli.

Artists may produce excellent designs, but they will avail little, unless the taste of the public is sufficiently cultivated to appreciate them, George C. Mason.

To teach the young student of nature to observe and execute, is an object worth much care and explanation.

MEHAN & McGAULEY. Des Moines, Iowa.
"What the Teacher of Penmanship To-day Needs"

BY L. MADARANZ

The editors of this paper are under the impression that I can give opinions—more or less valuable—as to what the teacher of penmanship to-day needs. Considering the fact that advice is seldom heeded, it follows that what I may say will do very little good. However, to stop the frequent askings for my views on the subject, I comply, with an apology for occupying valuable space, and a distinct understanding that I am "not in" for newspaper notoriety, or controversy.

This is a broad subject—for whatever are the needs of a teacher of penmanship are also the needs of teachers of all other themes. No one can do justice ever to himself as a teacher, or to his pupils, who does not bring to the work, knowledge, sincerity, enduring patience, coupled with tact, good manners, cleanliness, and health. Go as far as your knowledge extends, stop there, even if you are forced to tell your pupil, "I can carry you no farther." Be honest in your work, put forth your strongest efforts—rise to concert pitch—become en rapport. Persevere, persevere with all your will behind; if your pupil lacks understanding of one method of explanation, be expedient, try another; there are more ways than one to prove that twice two make four. Cultivate an even disposition; don't allow your temper to rise: you will find it difficult at times to do so, but take plenty of time in answering—you'll be paid for the investment. If your pupil is a confirmed candidate for a reform school, in justice to your other charges, get rid of him in short order. Absorb this: Kind, cheery, and encouraging words find in the young mind fertile soil, and soon become bulwarks unbreakable. Be clean, out of respect to yourself and your fellows; don't carry around with you any real estate except on the soles of your shoes. Cleanliness is, I consider, the first mark of a gentleman—besides, it is a strong insurance for health, the cost is water, and, soap if you can get it. The smell of a clean person is pleasing to the eye, more so to the olfactory nerves; neglect cleanliness and you'll be shunned. Unfortunately, through environment, improper living, or hereditary laws, all of us are not endowed with health—yet the science of becoming healthy is such an open book that it seems almost a crime to continue unhealthy—you, the physician. If of the right sort, can help you in the rebuilding. Teaching as a means to make money is a failure; always has been, and, possibly, always will be. Still, the consciousness of the work, when well done, is such a big reward that once undertaken, it is well nigh impossible to give it up.

This is a sermon from one whom we consider capable of saying something valuable, and if we mistake not, nothing better ever appeared upon the subject in the profession. Mr. Madarasz is not only a master penman, but a writer of superior merit. The sermon is one every penman should commit to memory and endeavor to put into practice. We congratulate ourselves and the profession in securing the paper and hereby congratulate the author upon its merits. Editors.

CARTOONS AND ILLUSTRATIONS

C. L. YOUNG, Jr. Columbus, Ohio.

AMES' NEW COMPENDIUM OF PRACTICAL ARTISTIC PENMANSHIP.

Is without doubt the most elaborate and costly book ever published on this subject. It measures 11¼ x 17¾ inches, weighs 3½ pounds, contains 20 leaves 140 pages; gold title and edges; bound substantially in cloth; and printed on extra heavy, fine paper. The price is $9.00. It contains full page plates in Script, Flourishing two thought page specimens suitable for framing worth alone $1.90. Alphabets, Headings, Designs, Resolutions, Family Record, Marriage Certificate, Diplomas, etc., etc. We have purchased the entire edition of this work and no more will be published. The edition is very limited. Order before all are gone, or before the price goes up, which it will as it becomes scarcer. Our price now is $2.50 prepaid. Address:

ZANER & BLOSER, Columbus, Ohio.
Publications Received

"English Spelling," by George D. Broomell, The Ben Franklin Company, Chicago, III., price ten cents, is a book that should be read and studied by all who are interested in correct spelling. The book is little but it contains many good, big, timely ideas and truths which we all need to know.

"S. N. Fielder's Compendium of Pen Art," by S. O., No., is a very extensively printed, produced illustrated publication, comprising business and ornamental penmanship, flourishing, engraving, drawing, etc. The author is a skilled penman and has shown considerable enterprise in publishing such an elaborate book. Price $1.00.

"Mason's Complete Course in Phonography," by J. W. Mason, No. Fourth Ave., New York City, is a 16-page, substantially bound, well printed text book upon the phonograph system of shorthand writing. Price $1.00. This original is typewriting with shorthand notes interspersed, photos-engraved, etc. Part one is devoted to lessons; part two, to business letters and advanced dictation exercises, and part three, to legal forms, etc. The book impresses us favorably.

"A Complete Compendium of Plain, Practical Penmanship" by L. W. Kelpner, Dixon, III., contains 4 slips; 9 inches of compactly and skillfully written copies in business and ornamental letters. No better, if as good, work of the kind has come to our notice. The copies are splendidly graded, accurately written with a free movement, and splendidly printed. You need to see it.

To practice this lesson take a piece of bristol board about sixteen inches wide and rule top, head and base lines for each line of script in the heading. The margin is fourteen inches wide; the largest line occupies one inch from top to base, the space for capitals and about one-half inch for the small letters. The shade over top of I and on the right of loops in h, f, and c should be made with a second stroke. The first line can be written without sketching to determine position but the next three would require a calculation of some kind if they are to take a central position. This last remark refers to original work.

Catalogs Received

"Illustrating" is the title of a very taking booklet published by the Correspondence Institute of America, Scranton, Pa.

The Ohio Valley College of Commerce, Ravenna, W. Va., is issuing a very attractive, convincing written catalog. The principal, Mr. Warren Wood, is a conscientious, wide-awake, well-qualified, courtesant gentleman whom we have known for a decade. Success to all concerned.

"Holiday Announcements," "Strictly Personal," etc., are the titles of some very attractive and "telling" circulars recently received from J. W. Warr, Moline, Ill. Warr has built up a big, prosperous business in the line of attractive, practical education literature and is doing much to elevate the standard of commercial education.

"How We Teach It," is the title of a very attractive booklet by the Elliott School of Business and Shorthand, Wheeling, W. Va., relating to Gregg Shorthand. The School is showing more than ordinary push and enterprise and has a splendid faculty.

THE NEXT TEN YEARS

The course of lessons in "Practical Writing," which you are now giving in the PEPSIAN ARTIST AND BUSINESS EDUCATOR, in my judgment, embodies the style best adapted to the needs of the business world for the next ten years.

TOM H. POUND

STATION U. CHICAGO, ILLINOIS.
President Barnhart's Address

BEFORE THE OHIO COMMERCIAL AND SPECIAL TEACHERS' ASSOCIATION AT SANDUSKY IN SEPTEMBER

This Association is to be congratulated upon the splendid showing it has made thus far and for its very bright prospects for the future. Our organization has already attracted wide attention. The Western Pennam in its last issue pronounced it one of the most important of the local organizations and expressed the hope that many teachers from the neighboring states would be present and that when they saw how their friends were enjoyed they would go home and do likewise. If there are any such here we bid them a most hearty welcome. I received a letter from the Old Bay State stating that they were writing to us. The fact that there is interest to see whether such state organizations can be successfully maintained or not. There are at present very few states having Commercial or Special Teachers' Associations. New Mexico and a great number of societies, clubs, unions, leagues, associations, organizations and federations representing almost every profession, trade, and calling, besides those in the interest of science, religion, temperance, politics, and numerous other causes. It seems, however, that teachers, who of all classes should be in the lead, are not keeping pace with some of the others. The possibilities in the direction of organization and federation has not been reached. Every state should have a Federation like ours, and these State Federations should be representatives of the National Federation. I am not sure that we have the National Federation exclusively a representative body, but think of a national meeting with representatives from forty-five state organizations besides those from the International, the National Federation, and the National Education Association. The interest in both the State and the National Federation would be increased and the influence of the National Federation would be largely extended. The enthusiasm aroused among the state organizations would certainly result not only in a larger membership in the State Federation but the national as well. The present national chairman is in sympathy with such a scheme and I would therefore recommend that we stall the ball rolling by sending delegates to the meeting at Detroit. I would suggest that we send one delegate to the Federation for each section of the Federation, which will be to represent us and to report back to us at our next meeting. It seems to me that the meeting of the state associations should be before the meetings of the National Educational Association. The time and place will be that at hand when we will quit spoiling first class mechanics, farmers, mechanics, and the like, by making them into third and fourth rate teachers, and ministers. Each one should and will, before he leaves school, discover that line of work for which he is specially fitted and the dignity of labor will be so generally recognized that no honest vocation will be considered too humble to afford the largest opportunity for an honorable and useful career. These questions are immediately before us. It is therefore desirable that we be ready to meet them, and our Associations in the future as in the past will be important factors in the proper solution of such problems.
HINTS ON ILLUSTRATIONS, ETC.

BY K. E. HUNNELL, CHICAGO

NUMBER EIGHT

Before making any design it is well to consider: "What is it for, its purpose?" Other questions which should be answered before beginning to draw a line are: "Where will the design be displayed, and how far away will the observer be while looking at it?" If the design be for stationary, let us assume it is for an envelope; its primary purpose would be to convey information to the postmaster. The postmaster while handling the mail would have it in his hands, his eye only ten or twenty inches from the envelope. Hence such a design needs not to be large nor the reading matter bold.

A sign to be displayed in a store, calculated to catch the eye of customers would have to be larger, the lettering bolder. The distance between eye and sign would be longer and consequently the angel of vision smaller. Should a certain sign be intended to be used in the open field to be read by the passengers of a swiftly moving express train, the distance between the train and the sign must indeed be large to enable the passenger to read it with ease and also to give him sufficient time to read it in. This sign must be set at a great distance from the observer; all detail should be bold and strong and striking and the conception of the whole, the design, should be very simple.

Simplicity is a great factor in good design. The line work prevalent of thought in the beholder and testifies to the want of clearness of thought in the designer. Simplicity is essential to elegance, refinement and good taste. In designing, meaningless flourishes and scrolls are apt to cheapen fancy in dress or to a bombastic speech when a courteous yes or no would be in place. Simplicity lends force and strength to a design.

One idea clearly set forth is impressive and easily remembered, a conglomeration of ideas is less impressive but easily forgotten. This is where the beginner fails (aside from crude technic). He generally tries to embody in one design many and conflicting ideas. He does not realize the necessity of unity; but, instead he feels inclined to "beautify" his work by adding an abundance of scrolls and other superficial razzle-dazzle.

The above illustration is a reduced reproduction of a display sign, a "banger." The original is ten inches high, large enough to be easily read by the good housewife making purchases in the grocery store. Do you think this sign helps to sell the goods?

ISAAC PITMAN'S SHORTHAND.
FIRST IN 1837. FOREMOST EVER SINCE.

"I have been a practitioner of the Isaac Pitman system for many years and believe it is superior to any other. Although I am personally acquainted with many fast and accurate writers among the users of the various Pitmanic systems, I regard this fact as an endorsement for the Isaac Pitman system, because "imitation is the sincerest form of flattery." I can, however, truthfully say that I am not acquainted with, nor do I know of, by reputation excepting two veteran copywriters: a single rapid and accurate writer who is not a Pitmanic follower. It does not follow of coarse that such does not exist, but I do know they are not conspicuous in this vicinity. I am a firm believer in the orthodox manner of teaching and practicing Phonography as laid down in the authorized text-book of the Isaac Pitman system, viz: The Complete Phonographic Instructor, and am decidedly of the opinion that any serious departure therefrom will only produce harmful results."—FRANK D. CURTIS, Official Stenographer, U. S. Circuit Court, New York.

SECOND EDITION IN PRESS.

PITMAN'S 20TH CENTURY DICTATION BOOK AND LEGAL FORMS.

Containing genuine letters used in American business offices, covering fifty distinct lines, Legal Forms, and a judicious selection of practice matter for general dictation. Also chapters on Spelling, Punctuation, Capitalization, and Short Practice Talks. This work, which is the most complete of its kind, is specially compiled for the teacher, the beginner, and the advanced student, and all progressive schools without reference to the system of shorthand taught. 256 pp. Price, stiff boards, 75c.; cloth, $1.00. To teachers and schools for examination, postpaid, 45c. and 58c. respectively. Specimen pages on request.

ISAAC PITMAN & SONS, Publishers, 33 UNION SQUARE, NEW YORK.

**Some Suggestions for the New Century**

For penmen, artists, teachers, students, and for all who appreciate good writing, drawing, etc., or desire to improve in these branches.

This inlaid, extra long and fancy, hand-made, rosewood holder is the latest Zanerian product—the most attractive holder ever manufactured. Present it to a good penman and he will be delighted and make happy the rest of his days. Present it to a poor penman and its alluring beauty will compel him to pick it up, practice and improve. The most indifferent pupil will delight in improving his penmanship when he has this holder. That's a suggestion for parents. Considering the time and skilled workmanship required to produce each holder it ought to be sold for $2.00, but we are offering it for the present for $1.00 postpaid. Send in box.

We also handle the Zanerian extra long, hand-made, rosewood holder, which is exactly the same in shape as the Fine Art Holder, though not so fancy, at 90 cents. To fully appreciate these holders you must have one.

**Address Zaner & Bloser, Columbus, Ohio.**
FINEST SUPPLIES FOR PENMEN AND ARTISTS

All goods go by mail postpaid except where express or freight is mentioned, in which case carriage is paid by purchaser.

Zanerian Fine Writer Pen—The best and finest fine writing pen made, whether for engrossing, card writing, and all fine script work. Gross $1.10, ¼ Gross 25c., 1 Doz.—12c.

Zanerian Ideal Pen—One of the best pens made for general penwork—business or ornamental. One of the best pens for beginners in penmanship. Gross 75c., ¼ Gross 25c., 1 Doz.—10c.

Zanerian Business Pen—A smooth, durable, common sense business pen. Ten for unmarked business writing has never been exceeded, if equaled. Gross 75c., 1 Doz.—10c.

Gillott’s Prinicipality No. 1 Pen—A fine writing pen. Gross $1.00, ¼ Gross 25c., 1 Doz.—12c.

Gillott’s No. 303 E. E. Pen—Used largely for drawing purposes. Gross $1.00, ¼ Gross 25c., 1 Doz.—12c.

Gillott’s Lithographic Pen No. 290—One of the finest pointed drawing pens made. 6 pens 25c., 12 pens 50c.—15c.

Gillott’s Crow Quill Pen No. 659—Very fine points. 6 pens 25c., 12 pens 50c.—15c.

Soennecken Lettering Pens—For making German Text, Old English, and all broad pen letters. Set of 6 No. 1, 3, 5, 6, 7 and 8 single pointed and 10, 20 and 30 double pointed—25c.

Double Holder for Soennecken Pens—Holds 2 pens at one time—10c.

Zanerian Oblique Penholder—Hand-made, rosewood, 12 inches long and most beautiful and perfect holder made. 1 holder 50c.

Excelsior Oblique Holder—The best low priced oblique holder made. Many hundreds of gross have been sold.

1 Holder—10c.

1 Dozen—50c.

¼ Gross—2.25.

1 Gross—4.25.

Straight Penholder—Cork tipped and best for business writing, flourishing, etc. 1 holder 10c.

Blank Cards—White bristol with finest surface, for fine penmanship.

100—25c.

500 by express—75c.

1000 by express—$1.40.

Black Cards—Best made for white ink.

100—25c.

500 by express—75c.

1000 by express—$1.40.

Zanerian India Ink—A fine writing ink and best for preparing script and drawings for photo-engraving. 1 Bottle—30c.

Arnold’s Japan Ink—Nearly ½ pint bottle. 1 Bottle—30c.

White Ink—Very fine. 1 Bottle—25c.

Writing Paper—Finest 12 lb. paper made. 900 sheets per ream, ruling wide and faint. 1 ream by express—$2.15.

Writing Paper—Same quality as above mentioned but 10 lb. per ream. 1 ream by express—$1.85.

Practice Paper—Best for the money to be had. 1 ream by express—$1.40.

Send stamp for samples of paper.

Envelopes—100 fine blue—24c.

1000 each kind by express—$1.50.

When you need anything in our line as for paper, we can supply anything and save you money.

Cash or any bank orders. Prices are too low to keep accounts. Remit by money order, or stamps for small amounts.

The Commercial School

That does not have a set illustrating

THE VOUCHER SYSTEM
OF BOOKKEEPING

In its course of study is behind the times, because the voucher system is more extensively used in manufacturing, transportation and industrial businesses than any other.

Teachers should investigate the MANUFACTURING SET of the BUDGET SYSTEM OF BOOKKEEPING. It is complete in itself, with its own text, blanks and stationery, and can be used without using any other part of the Budget System. The wholesale price for the set complete is 65c. Enclose 65c. in stamps and receive an outfit for examination. It can be used to follow any introductory course of study.

********

Teachers, who are looking for a banking set, should investigate

AMERICAN NATIONAL BANKING,

consisting of the reference-book, budget, blanks and stationery.

It is a revelation in practical bank bookkeeping and practice, and involves the record of many hundred business papers. It illustrates every department of modern bank work.

An enclosure of the wholesale price, $1.74, will bring a complete outfit for examination. Tenth edition just from the press.

Lessons in Practical Writing by C. P. Zaner.

Firmness

Persons who lack firmness are not as useful to society as those who possess it, either by nature or by development. Firmness is a quality that can be developed the same as any other power or faculty. Writing that lacks firmness is not as desirable as that which is stable and sure. By firmness I do not mean stiffness. I mean by firmness that kind of writing which is sure, uniform in line, and unhesitating. Arm movement makes writing firm, if the movement is well controlled. Clear thinking also means clear writing. Lines should be strong and firm, yet not stiff or heavy. A firm hand is the result of thoroughness in learning and familiarity with the subject. It is also the result of resolutely doing that which presents itself from day to day, and doing it well. It seems to me this last suggestion is enough to cause any ambitious youth to resolve to do nothing that is worth doing carelessly or poorly.

No. 36

Be sure you see clearly the shape of the letters (their proportion and construction) before attempting to make them. The H and K begin the same but end differently. The first part of each is the same and the second part begins also the same and at the same place. These are styles employed by a large majority of practical business people because they are legible, easy, and rapid. See how easily you can write and how rounding you can make the turns in the small letters. Keep your a's rounding and your e's full. Notice that the last stroke in K is a vertical compound curve, and that the H runs with vertical and horizontal curves. Joining the H and K makes a good movement exercise. See how well you can make them.

No. 37

Begin and finish the q the same as the a, being careful to make the a part well. Make the letter without raising the pen except to dot the i's. Begin the z the same as u and finish the location of the crossing of the loop. Avoid common raising the pen and keep the loops short below the line. Keep a good position, use plenty of arm movement, and large loops interfere with writing on the following line. Be careful and critical and your writing will become good. Never allow yourself to do slovenly careless work.

Swiftness and sureness are desirable.
No. 38 Begin the same as I and end it the same as small S. Think of I when you begin the letter and of S when you end it, and you will have but little difficulty in making the letter well. Curve the down stroke considerably and use an easy movement, employing little or no finger action.

Study the I closely and employ a graceful movement in its execution. Keep the line at the base small and drop below the base line with the finish and there will be but little trouble in distinguishing it from S. These letters require skillful movements to make them graceful, but in their simple form as here written, they are reasonably easy.

No. 39 The I without the lower loop is quite easy. Make it with considerable force and with little or no finger movement. Keep the loop full and short. The dotted line suggests the loop form and if you prefer it for your individual use. Study the common letters and learn to be able to write the word fullfill well and quickly, but good. You ought to be able to write it legibly twenty times in a minute. The loop below (if you make one) should be the same size as the one above.

No. 40 Use an easy, swinging, rocking movement, much the same as in S but more of it. Begin and finish the letter the same as S, and keep the crossing below. Write the word gaining without raising the pen and about twelve times in a minute. Watch spacing between words, endeavoring to keep same uniform. Gracefulness is the result of artistic impulses and skillful movements. In penmanship it makes writing a delight to behold as well as to execute. A little surplus skill is always in demand. The one who can do work better than good - better than is required, is the one who is never out of employment.

Business writing is a necessity and an accomplishment. The two in one are a bargain and can be purchased by careful practice.

No. 41 This hand is larger than is necessary for regular routine work, but it is well to be able to write it, as it is used at times in various lines of work. Then, too, it serves somewhat as a movement exercise and causes one to notice defects in form that usually go unobserved in small writing. See how accurately you can form each letter and at the same time write freely. Use enough arm movement to make your writing graceful and easy. More than that is unmanageable and unnecessary.

Writing, good writing, is like a bank account, a desirable thing to have. You can possess it.
Wide Spacing has been a bad, and is still in some places, in the penmanship world. It is a good thing in its place, but its place is not in business. As a means of breaking up finger action it is a good thing but beyond that it is not worth much as a business product. Wide spacing between letters encourages forearm movement but discourages much speed. It represents skillful rather than practical penmanship and it is indulged in by penmen rather than by unprofessional people. It is a graceful, neat, and easy mode of writing, but extravagant in space. You will do well to practice it as it encourages arm movement and uniform spacing.

Criticisms

C V. D. B.—Your work is on the improve. A little more firmness would be an improvement. Make capitals smaller.

W. H. J., Ill.—You have not practiced enough upon principles and letters. You need to study more closely and practice more thoughtfully and carefully. Study turn and angle, straight line and oval and learn to produce them first thoughtfully, then thoughtlessly. Your work lacks uniformity and firmness.

D. C. D., Boston.—Yes, you can become a good penman. You are still too heavy on the down strokes. Let up. First up stroke in m too straight.

H. W., Alton.—Do not loop your r's. Use more care in r. Close small a at top. Use more arm movement. Make e more rounding.

J. W. H., Texas.—Send more work. Do not stop the motion at the end of words with the pen on the paper. Use more arm movement and freedom.

W. H. L., West Point.—Glad you are going to improve your penmanship. Watch each letter closely as you make it and send work in regularly.

C. W. C., Eastman, Miss.—Watch turns and angles closely. Curve down stroke in o. Shorten loops. Study r closely and exercise more care in making it. Do not raise pen at the base of it—pause at the shoulder.

Seidensticker.—Your portrait of a Frenchman is good. Your penmanship is also good. You can become a penman and artist. Stick to your books for a few years yet.

E. L. G., Conn.—Your small letter exercise work is not systematic enough as a whole your efforts are in the right direction. Send on work regularly.

R. P. H., Wash.—Loops taller than necessary. Do not drop finish of t so far below the base line—it resembles y. Exercise work not systematic enough. You are doing well.

Second plate of a series of auxiliary copies by S. M. Blue. This lesson consists of words composed of letters that belong to the short letter group only. In practicing the wide spacing and to secure firm lines to the right with as little curve in them as is necessary for legibility. The next lesson will consist of short letter exercises.
The Best Style of Practical Writing and the Best Movement With Which to Produce It

By L. H. Hauflin, Concordia, Kans.

Writing

The specimen appearing herewith will illustrate what I consider the best style of penmanship for business purposes. They were made with practically a pure muscular movement. I have adopted these particular forms, for the most part, unconsciously, they seeming to fit themselves, according to some natural law, into my favor without my choice. Some of them I vary, at times, but the general style has been the same with me for a number of years. They seem as natural as my step or my voice.

A style to embody the highest qualities of a practical style must conform to the following:

Law of Simplicity

The number and kinds of strokes must be reduced to the minimum consistent with legibility and ease of execution.

It is possible to make letters too simple to be easy to execute. To illustrate: The shortest way around a square, for instance, is a line parallel with its four sides, necessitating four corners. Should I, however, be expected to pass around that square the greatest possible number of times in a given time, I would not follow the shortest course but would ignore the square corners and straight lines, and, running, would describe a circle or ellipse. Centrifugal force is very potent in rapid writing and must be taken in account in selecting a style calculated to serve the greatest use. The momentum gathered in one stroke or in any number of strokes must be utilized in the greatest possible degree in following strokes to make a style highly practical. This cannot be the case in a style composed largely of straight lines and abrupt beginnings and endings. In short, the best style of writing for business purposes, is the one in which the greatest advantage to good movement and the greatest simplicity are simultaneously secured.

Movement

I consider it an absolute necessity to master the muscular movement in order to be a good business writer, just as it is necessary to learn proper fingering in music. But after it is mastered it will and should be modified to best suit the user. It must be mastered as the foundation and to tone it off to suit individuality is a simple matter after it is thoroughly in hand.

The modification that can be made is quite limited, being simply an introduction of the finger movement or of the whole arm movement. The introduction of the finger movement always tends to decrease the slant, which is undesirable because it is difficult to maintain with the proper degree of regularity, while the whole arm movement with, perhaps, never be found necessary in business writing.

The introduction of finger movement should always be restricted to up-and-down strokes or motions and should never be allowed on progressive movements, or movements which carry the hand to the right. The finger, or fingers, which rest on the table should glide for every motion toward the right, no difference how slight, and if the fingers can give any desirable assistance on the up-and-down strokes, there seems to be no good reason for wishing to restrain them, outside of the fact that it will be found difficult to use just the same proportion of finger movement at all times, which is necessary to keep the slant uniform.

Lessons in Artistic Penmanship

Number Five

By J. E. Leamy, Troy, N. Y.

If, in your practice from these lessons, your work seems irregular, weak, nervous or still the best remedy to apply is to go back to principles and exercises. Remember that conscientious, preserving, vigorous drill is the key to success. A few feeble attempts will profit you but little. In fact, such indifferent practice is simply an aggravation, and just about enough to discourage you. Unless you are willing to work hard, long, and faithfully you need not expect to become proficient in this line. As I have said before, it takes a great amount of careful study and practice. In truth, you must grow into it. And while you are training, growing and working along these lines, it will help matters along if you will do away with habits that are liable to effect your results. A work that is worth following at all is worth following well. I refer to the smoking habit and the drinking habit. You may think that the excessive use of coffee and tea will not affect your work but it will. It is best to do away with these entirely. You will profit by it in the end and your work will speak for itself.

Now, as regards form, there is no one rule to follow, nor standard to imitate. That is, forms need not conform to some one pattern to be graceful and pretty. The main essential is that the letters, as a whole, balance well, that the ovals are full and well curved, the lines delicate, and the shades smooth and neat. For that reason it is not necessary that you imitate the copies precisely. The main point is that you make the style you prefer beautiful. This you can accomplish by employing such elements of beauty as curvature, shade, and height of stroke as are most universally admired. And if, in connection with these, you can leave the imprint of your own personality thereon, so much the better for the profession and for yourself.

One of the main faults with beginners is to hurry too much from one to another. They are too apt to go at it as they would to learn a rapid business hand. Do not go in to see how many pages you can turn out in an hour or how many caps you can make in a minute. Such practice will never result in a beautiful hand. Think between each form. Stop, collect all your energy, know just what you want and then make a trial. Take another rest before repeating your efforts and so on. This is the kind of practice that counts along these lines.
Having completed the small letters, we are once more at the capitals. But do not neglect the smaller forms. You should spend as much time on them in the future as in the past. Yes, more. Without mastering them fairly well, you cannot expect to become master of ornamental hand. They are used one hundred times where the capitals are used once.

It would be well for you to spend considerable time on line one, striving at each effort to make oval full and solid. Bring the shade low in all, and endeavor to keep each form on the correct slant. Raise the pen on the M and N, but do not place it on the shade of the first part in starting the second, but near it instead. You can use considerable hinge action to advantage in making the second part of both letters. This may necessitate a slight change in the position of your paper, but do not be afraid to do it.

The tendency will be to make the U and V too wide and the shades too long. The pen may be raised at the base, but I did not raise it in the copy, nor do I usually.

Strive in lines four and seven for uniformity in slant, spacing, and height. They are the three chief requisites of page writing. It is not necessary that you write any particular slant, but it is necessary that you keep the slant uniform. The same may be said as regards height and spacing.

The pen may be raised at the line in making the Z. Keep the small loop in the center about on the connective slant. Send on your practice.

**Criticism.**

O. H. J., New Columbia—Would rather receive the last strokes of your evening's practice than the first. It is impossible to make tops of t and d square with a single stroke. Better re-touch them. Loops below the line are good. Bunch shades on capitals a little more. Ink too thick. No time now for lessons by mail. Sorry, come again.

Curtis, W. C. Eastman, Miss.—Yes, you can become a good penman, but not by practicing on such stationery as you now use. It will pay you in the end to use better material. Capitals lack strength and force. Take your coat off. After using pen in middle of a word, be more careful how you "pick" the stroke. Write smaller and more slanting. You do well.

Baner, Marion, O.—Be proud of the fact that you are only a "farmer's lad." They are the lads who get there. Are you not using a straight holder? Procure an oblique holder, some good paper, and send me a page of the best movement exercises you can make. You have not acquired the first essential—a free movement of the arm. Do it.

J. N. W., Brockton, Mass.—Small letters are far ahead of capitals, this, however, is a good fault. Shades on caps too long right through. Keep them on same slant as small letters. No great fault in your work. Simply persevere. First oval on capital C too small for size of letter. You can get there. Send practice regularly.

A. C. U., Londonville—Pardon me for even attempting to criticize your work. It is up to the copy. What more can I say? Small z seems a little weak and lagging. Watch turns at base line in small letters. Would like your best efforts on Lesson 2.

Edward F., Jamestown, Pa.—I see no reason why you cannot learn to write elegantly, but you have not mastered the underlying principles of good penmanship—the exercises. The length of time that you have practised amounts to but little. It is "how" rather than how "long" that counts. You have not studied small letters carefully enough.

J. E., S., Md.—The most of your work is too small, indicating a rather limited action. Uniform your smalls by practicing them vigorously and persistently.

Smith, Parkersburg—Not necessary to send me your entire month's practice. Get down to business, and some evening when you feel in "trim" prepare me two or three sheets of your very best. That is what counts. Quality not quantity in this work, you know. You do very well.

Mr. G. A., Mass.—Your practice is numbered. Considering disadvantages, Ink is too thick or touch not light enough. Impossible to say which on account of softness of paper. You can make a good one if you persevere. Thanks for compliments.

E. G. F., Vt.—Yes, you do write a style large, never the less you are doing well. Be more careful about upper and lower turns in small letters. Make quite a contrast between turn and angle. First stroke in small p too straight. Keep on.

Jennie C., New York—Work appears too delicate. The tremor in loops indicates that you are using the fingers to excess, and that you haven't confidence to strike out with arm movement. Shadows are too sharp at top. You pause too long there. In fact, you stop. Keep moving.

E. J., Ohio—You are improving. You get an excellent quality of line. Endeavor to make all shades on capitals shorter and fuller. You can make your mark.
The National Federation of Commercial Teachers

Fifth Annual Meeting

The weather man was in a benevolent mood; the recent election had made everybody feel prosperous; the various Traffic Associations, struck with a temporary attack of enlargement of the heart, granted reduced rates; an artistic chef had prepared a sumptuous intellectual menu, and so it was that nearly three hundred of the foremost commercial teachers of the land set forth Wednesday, December 26th, on a pilgrimage to Detroit, Queen City of the Lakes.

Detroit is an ideal convention city. Gutchess College has a central situation, with first-class accommodations, and Mr. Gutchess is a most hospitable host, every one went away from Detroit delighted with his visit.

Federation Meetings

Although many of the teachers did not arrive until Thursday morning, about two hundred ladies and gentlemen assembled in the beautiful Turkish Room of the Hotel Cadillac, Wednesday evening, to listen to addresses of welcome from the mayor, the city superintendent of schools, and the editor of the Detroit Journal. Mr. Gutchess had promised, in Chicago, at the last previous meeting, to show the teachers "a real live mayor," if they would come to Detroit, and he kept his word.

The hearty welcome extended to commercial teachers by representatives of the city, the press, and schools, met an equally cordial and fitting response from J. A. Lyons, of the Metropolitan Business College, of Chicago; L. L. Williams, of the Rochester Business Institute, Rochester, N. Y.; and A. X. Palmer of the Cedar Rapids Business College, of Cedar Rapids, Iowa.

President W. C. Stevenson delivered his annual address, touching on the needs of the profession, the rapid development of commercial departments in our high schools and colleges, and sounding a high note for the future. His excellent address will be published in full. It should be read by every commercial teacher.

Mr. Charles M. Miller, who was to have brought a greeting from the Eastern Commercial Teachers' Association, did not reach Detroit in time for the opening session. The Eastern party made the trip in a special car and did not arrive until Thursday morning.

Thursday afternoon at three o'clock a large audience gathered in the commodious ball on the fifth floor of the Banquet Build.

ing, in which Gutchess College is located, to listen to addresses on higher commercial training.

The first address was in the form of a carefully prepared paper on "Higher Commercial Education in America," byProf. J. E. Johnson, of the University of Wisconsin. Professor Johnson's excellent paper is published in full in this number, and so we refrain from further comment, except to say that only the bards and sages of the profession, who dread the light, will fail to read with interest every word of Professor Johnson's paper.

This paper was discussed by Mr. G. W. Brown, who, in his characteristic manner, gave higher commercial training a vigorous drubbing, winding up with this strange assertion: "Higher Commercial Training leaves down genius." The ordinary convention would become a very tame affair, if it were not for the gingers put into it by the enthusiastic outbreaks of our genial brother of the many Illinois business colleges. The discussion was continued by J. E. Banks, of Philadelphia. Mr. Banks seemed to take a very gloomy view of things in general, and of the lost and undone condition of religion and the public schools in particular. Higher commercial training had few charms for him.

Robert Spencer, the beloved dean of the Old Guard, made an excellent off-hand speech, supporting the work of the University of Wisconsin. For breadth of mind and capacity of spirit, no one in business college work surpasses Mr. Spencer, and few are his peers.

D. W. Springer, of Ann Arbor, Mich., gave a brief, interesting, favorable to the work of higher commercial training.

"The Educational Message of the Century," was the subject of an address by Dr. Cheeseman A. Herrick, Director of the Philadelphia Central High School. Dr. Herrick spoke without notes, in an earnest, vigorous style, and with language so well chosen, a grasp of his subject so firm, and sincerity and lofty purpose so manifested, that the large audience applauded him generously. The champions of a narrow educational policy had roused the fighting blood of a true knight of the cause of education.

Mr. Herrick thinks that we cannot import ready-made courses from German schools, that spontaneity is the keynote of our educational needs, that our educational system must be based on a good foundation, and that, while we must know how to do, the doing is the practical test demanded by the public summing it all up. He thinks that correct education teaches men to do things, to be good citizens, to have good character, and that it is futile to dissemble these. The great mission of the schools is to produce men.

The discussion on this paper was by J. A. Hiner, of the Discerning Business College, Louisville, Ky.

Owing to the lateness of the hour, Mr. Wm. E. Doggett, of the Brooklyn Commercial High School, declined to take the part in the discussion that had been assigned to him.

Thursday evening the members of the various Associations met at 7:30 o'clock to elect officers. The Association elections passed off smoothly without contest. The names will be found in the reports of the several Associations. At 8:30 o'clock the "Executive Management," a sort of elective college, composed of the presidents, vice-presidents, secretaries, and executive committees of the various Associations—twenty-four in all—assumed to elect the officers of the Federation.

It has become almost an unwritten law that the vice-president shall be elected president for the ensuing year, but the vice-president, Mr. J. E. King, refused to accept the position on account of his health, and he suggested to some of his friends that it would be a gracious, courteous act to confer the honor upon Mr. Robert C. Spencer, the Grand Old Man of our cause. As no other name had been prominently mentioned, the large audience was surprised to hear the nomination of Mr. Spencer, followed by Mr. Charles M. Miller, of New York, who nominated Mr. George P. Lord, of Salem, Mass., a gentleman who was personally a stranger to more than three-fourths of the
members present, and who had previously attended only one meeting of the Federation. The result was the election of Mr. Lord by a majority of six. Surprise and disappointment were manifested by those who thought they saw in the election evidences of political wire-pulling and the organization of a machine to push partisan interests.

Mr. D. W. Springer was elected vice-president, a position he has long held, and his name is familiar to many in the Federation. He has been a member for many years, and his influence has been felt in many respects. His election was a popular choice, and he was warmly welcomed by the members.

Mr. J. A. Lyons was elected treasurer, and Mr. G. W. Brown continues as secretary. President Marshall, and Mr. E. H. Fitch, Chairman of the Executive Committee, were re-elected. The election of the Executive Committee was a popular one, and the members re-elected were Mr. Charles R. Weirs, Trenton, N. J., and Mr. C. G. Marshall, Cedar Rapids, Iowa.

The choice of a meeting place for the next year developed an interesting contest, invitations coming from Milwaukee, Detroit, Chicago, Indianapolis, St. Louis, and Washington. St. Louis was successful, and the next meeting will be held with Mr. E. H. Fitch, President of the Southwestern Business College.

Following the business meeting, Mr. Norman P. Heffley, of Brooklyn, delivered a very interesting and stimulating lecture on "The History of Business Education." Friday afternoon, Mr. J. A. Wiles, president of the San Francisco Business College, read a paper entitled "Impressions," in which he gave his impressions of the business and commercial education of American and European business schools. He found but few schools doing the kind of work done in our schools. Business methods abroad do not demand such specialization as in clinical training as do our business methods. Our business methods are far in advance of European methods.

There, to enter a business house, a boy needs only a good training in the common branches of business. The same results are obtained throughout the country. Some business schools were found - in fact, frequently in England, but they sustained a grammar-school course in connection with their other work, and were not giving the grade of work given in our schools. Mr. Wiles was convinced that no schools of business abroad did not consider departments of commerce in high schools or universities give so much practical training as the business schools.

Mr. Wiles' paper was discussed by Mr. W. H. Shaw, of Toronto, who has become a great favorite with the members of the Federation.

"The curriculum of the ideal Commercial School," a paper by Mr. J. O. Crissey, was an exhaustive, thoughtful presentation of a subject that is receiving a great deal of consideration at this time. A summary of this paper could not do justice to this excellent paper, and as it will doubtless be published, our readers will have an opportunity to judge of its merits at first hand.

"The influence of the recent development of business, the publication of Mr. D. W. Springer, of Ann Arbor, Mich., and Mr. Henry E. Fitch, of Rock Island, III., was brief and formal, owing to the lateness of the hour.

Mr. G. A. Sprague, President of the Sprague Correspondence School of Law, read what was said to be the best paper given before the convention. To fully appreciate it, one must have read it. The reader has to marvel at the fluent style of the eloquent speaker thrilled his auditors and revealed possibilities in the teaching of law never before dreamed of. Many persons have heretofore spoken on various phases of this subject before our conventions, but they were all as the veriest amateurs when compared with this master mind. We are glad to say that our readers will have an opportunity to read this fine address in the next number of the PENNAM ARTIST AND BUSINESS EDUCATOR.

Mr. E. W. Springer, of Milwaukee, who was to have discussed Mr. Sprague's paper, was not present, and it is apparent that no one else felt competent to do so, there was no discussion. However, a unanimous and enthusiastic vote of thanks was given to Mr. Sprague.

At this point, President Steventon read a proposed amendment to the constitution, which would permit the election of Federation officers by popular ballot, instead of by an electoral college as heretofore. The amendment was signed by a score or more of the leaders in the convention, and it was carried without a dissenting voice. Indeed the vigorous support it received was an indication that the time was ripe for such a change. The amendment was signed by a score or more of the leaders in the convention, and it was carried without a dissenting voice. Indeed the vigorous support it received was an indication that the time was ripe for such a change.

The Friday evening meeting of the Convention was held in the Hotel Olympic, and after a brief address by Mr. A. F. Fitch, President of the Southwestern Business College, the program was introduced. Mr. A. F. Fitch, President of the Southwestern Business College, introduced the program, and after a brief address by Mr. A. F. Fitch, President of the Southwestern Business College, the program was introduced.
The Old Guard

May joy be their portion!
May they live long and prosper! In the breaking light of a new century, how good it is to be among the surviving veterans of many a conflict with poverty, prejudice, and ignorance. What a sense of satisfaction must fill those, who, through the last thirty-five years, have borne aloft the unsoiled banner of a noble cause. Time has stolen from these old warriors some of their erectness, some of their vigor, some of their powers of endurance; He has playfully scattered the snows of many winters in their hair, and upon their faces he has left the evidence of his touch; but has He not compensated for it all by bringing to them ripe wisdom, magnanimity, tolerance, gentleness, fraternity, experience?

How glad were we all to see again the Grand Old Man of the profession, Robert C. Spencer. It is impossible to be in his presence for even a day without feeling a sense of growth in character and breadth of view.

E. R. Felton, is another of the fine group of men who began their good work back in the fifties. Among the Old Guard there is probably no one who surpasses Mr. Felton in felicitous address, in gracious manner, or in courtly bearing. He is a rare old gentleman, with a nature attuned to all that is most refined in life.

Then there is L. L. Williams, the incarnation of good fellowship, politeness, and alert, aggressive business spirit. As one of The Old Guard hinted, at the banquet, he has won his way from childless indigence to well-dressed wealth. No one in this veteran group is held in higher esteem than is Mr. Williams. May his tribe increase!

Baltimore might survive the loss of its bivalves, its terrapin, its canvas back ducks, but what it would do without W. H. Sadler is a conundrum. His jolly presence, his good humored stories, his comradeship have encouraged many a struggling commercial teacher, and have often been the life of gatherings of commercial teachers. His "Reminiscences," at the Detroit banquet, were enjoyed by everybody.

And who could forget J. W. Warr, with his inexhaustible fund of wit and humor: A. H. Humm, with his rare skill at the blackboard: A. D. Wilt, with a successful career extending back into times whereunto the memory of man runneth not back; T. J. Hisinger, the good-hearted champion of Spencerian penmanship; John R. Carnell, the business college man in business; Henry C. Wright who can tell of many changes in the business college life of New York and Brooklyn; W. F. Jewell, contemporary of Ira Mayhew; and O. W. Brown, whose parted whiskers and football hair may no longer deceive the very elect—for, let it be whispered, George W. Brown is one of the staunchest junior members of The Old Guard.

Let us hope that even a larger delegation of The Old Guard than the one at Detroit may meet in St. Louis next year to exchange greetings and recount experiences of the past.
Business Teachers' Association

REPORTED BY J. A. HINER, LOUISVILLE, KY.

The Business Teachers' Association was better attended than at any previous meeting, and great enthusiasm prevailed throughout the entire session.

At 9:00 o'clock on Thursday, December 29th, the reception and registration of members was held, which consumed more than the usual time on account of the large number in attendance.

The Executive Committee then read their report after which the Association listened, with much interest, to the President's address by J. C. Walker, Danville, Ill. His address was discussed by Messrs. K. C. Spencer, W. H. Whigam, U. S. Frye and others.

"The Relation of the High School Commercial Course to the Other Courses," by Henry E. Brown, Rock Island, Ill., was next heard, and was discussed by a number of members.

"The Round Table Discussion" did not receive much favor, which seemed not to be regretted by any member present.

At 1:00 P. M. "What Constitutes a Complete Business Course," by T. W. Bookmyer, Sandusky, Ohio, was read before the Association, and was discussed by J. C. Olson, Parsons, Kan. Mr. Bookmyer's paper was considered a very able production.

The next most interesting feature of the day's program was a very able paper by Miss Carrie Parsons, Kalamazoo, Mich., on "The Mission of Women in Commercial Education." This was generally discussed on account of its being a very timely topic.

T. P. Twiggis, Detroit, Mich., read the next paper, "Should Commercial Colleges Require an Entrance Examination? If so, to what Extent?" His paper was also discussed by one or two members.

Friday, December 29th, at 9:00 A. M., J. A. Hiner, Louisville, Ky., read a very practical article on "Business Correspondence," which was discussed by Messrs. Overend, Fish, Walker, Carrier and St. John.

"How I Teach Addition, Fractions, and Interest, by Blackboard Illustrations," by U. S. Frye, Chicago, Ill., next engaged the attention of the Association. Mr. Frye was cætichised quite freely, but was equal to the occasion, and showed himself master of the situation.

J. W. Ware, Moline, Ill., next interested the members present with his paper, "How can we best Stimulate the Zeal of our Students for Thorough Work?" This being one of the most interesting papers on the program, was ably discussed by Messrs. Walker, Feltamon, Frye, and others.

"The Neglected Trio: Spelling, Punctuation and Grammar," by Geo. P. Lord, Salem, Mass., was next read.

Saturday, December 30th, at 9:00 A. M., W. G. Moore, Springfield, Ill., read his paper on the "Length of Study Pursued in Business Colleges," which was discussed by Prof. Overend, of Pittsburgh, Pa., and other prominent members, whose names could not be learned at the time.

The next item on the program was "Why Teach Parliamentary Law," by D. W. Springer, Ann Arbor, Mich. Mr. Springer's paper was discussed by Messrs. Walker, Frye and King.

"How to Secure the Best Results in Arithmetic," by W. N. Ferris, Big Rapids, Mich., came next in order, and was in all probability the most entertaining and highly instructive talk given in this section. It would be useless to try to give the names of those who participated in this discussion, but it is safe to say that every member present had a question to propound to the speaker. His simplicity of manner, thorough understanding of the subject, and...
comical illustrations of some of the ridiculous methods used in public schools were thoroughly enuend, and at the end of the discussion everyone seemed to be in unison with the speaker. It was voted that his paper be published.

The next in order was "Business Practice," by G. E. King, Cedar Rapids, Ia. This paper was well received by the Association.

Prof. E. T. Overend, Pittsburg, Pa., then read his paper, "School Discipline." At 11:30 A.M. "Essentials and Teaching of Business Routine," by Chas. M. Smith, Port Deposit, Md., closed the exercises in this section.

The election of officers for the ensuing year was held and resulted in the election of J. A. Hiner, Louisville, Ky., President; R. S. Frye, Chicago, Ill., Vice-President; and W. S. Osborne, Detroit, Mich., Secretary. The President appointed as his Executive Committee for the next term: T. W. Book- 

The National Shorthand Teachers' Association.

The sessions of the Shorthand Teachers' Association began Thursday morning, December 25th, President W. L. Stack, of Springfield, Mo., in the chair. The president's address was aggressive, condemnatory of the plan of guaranteeing positions, and suggestive of reforms.

Secretary L. A. Arnold, of the West Side High School, Chicago, read a comprehensive report, carefully prepared, showing the growth of the Association during the last three years. He agreed with President Musick in offering some suggestions for improvement.

As a desire for a verbatim report of the proceedings was expressed, Mr. E. N. Miner of New York agreed to publish such report within thirty days.

Mr. A. D. Wilte, of Dayton, Ohio, read a thoughtful paper on "The Stenographer as a Factor in the Business World," quoting from Lyman J. Gage, to substantiate his assertions. This paper was discussed by Mr. H. L. Andrews, of Pittsburg.

A lively discussion followed the reading of a paper on "Methods of Classifying and Managing a Large Shorthand Department," by Mr. D. D. Mueller, Cincinnati, Ohio. Banks, of Philadelphia, Barnes of St. Louis, and Timms, of Chicago, took part in it.

"What Shall We Do With Our Dull Pupils," by Miss Frances H. North, of La Crosse, Wis., closed the morning session. In the afternoon, the session began with a discussion of Miss North's paper, by Miss Carrie Parsons, of Kalamazoo, and Mr. J. Howard Baldwin, of Detroit.

Mr. A. J. Taylor, of Indianapolis, Ind., then read an instructive paper on "Shorthand in the Public Schools," which in the discussion that followed, received the attention of Mr. Baldwin, Mr. Barnes and Mr. Banks.

One of the live questions of the day, among school principles, was next presented ably by Mr. Selby A. Moran, shorthand instructor in the Ann Arbor, (Mich.) High School. Mr. Moran, in his paper, "The Teacher's Qualifications and Responsibilities," held that teachers, like parents, are trained, and that should have thorough knowledge of the principles of the shorthand system they teach. He went into detail in discussing his subject, and was listened to with close attention.

In the evening session, the following officers were elected: President, J. Clifford Kennedy, of Des Moines, Iowa; Vice President, B. J. Griffin, Springfield, Mass.; Secretary, L. A. Arnold, Chicago, III.; and Asst. Secretary, R. A. Grant, Rockford, Ill. President Kennedy appointed the following Ex-

Friday morning, after President Musick called the meeting to order, Mrs. A. J. Barnes, of St. Louis, took charge of the proceedings.

"Typewriting from Dictation," was the subject of a very practical paper read by Mrs. A. J. Barnes, of St. Louis, took charge of the proceedings.

In a paper on "General Methods of Conducting a Typewriting Department," Miss Sarah McAllister, of Detroit, Mich., maintained that each student should begin practicing the first day in class, and should have at least two hours of subsequent daily practice until the course is finished. A general discussion followed, in which Mr. W. N. Ellis, Evansville, Ind., took part; also, Mr. J. E. Gill, Quincy, Ill., Mr. H. L. Andrews, Pittsburgh, Mr. W. D. McAllister, Lincoln, Ill., and Mr. A. C. Van Sant, Omaha, Neb.

Mr. A. C. Van Sant, then conducted a Beginner's Class in Touch Typewriting, using the touch boards presented by the teacher, maintaining that Touch Typewriting is equally well adapted to single and to double key boards. He says that his pupils can readily change from one machine to another.

Mr. F. W. Mosher, Omaha, Neb., in his paper, "Touch Typewriting—Failure vs. Success," took the position that the failures were sometimes the result of the teacher, and not to inability of pupils or deficiencies of systems.

Mr. W. O. Davis, Erie, Pa., had a paper on "The Best Method of Changing a School from Pencil Writing to Typewriting." Mr. Sigel, Springfield, Mass., said that, to succeed, a teacher must be a touch writer, and a firm believer in touch writing. An interesting discussion followed this paper, opened by Mr. Frank B. Rutherford, and concluded by Mr. Mosher, Mr. Van Sant, Mr. Himann, and others.

An exhibition of speed work in Touch Typewriting was given, but in many ways indefinite and unsatisfactory. Mrs. Barnes had a recent student present who wrote well, both blindfolded and otherwise. Mr. Van Sant had former pupils with him and they did some very creditable work. Miss Reichardt took dictation twice at the Smith Premier machine, at the rate of 88 and 90 words a minute, respectively, with but two slight errors in each instance. Miss Burvall, also at the Smith Premier machine, copied the same dictation at 90 words in a minute, respectively, making two slight errors in each instance.

Two expert writers, former students of Mr. B. J. Grifflins, were present, Miss Carrington, of Springfield, Mass., and Miss Schreiner, of Boston, but the result of their work were not made public. Mr. Grifflin during a test in which each contestant should take part at the same time, writing the same matter. Mr. Van Sant declined to have anything to do with any test, except with his own pupils and in his own way.

Mr. Charles H. McGurrrin was to have given an exhibition of his marvelous speed, but, as he writes on a machine especially adjusted for the high rate of speed he maintains, he had not come, he was unable to gratify the desire of the expectation teachers.

Friday afternoon Mr. W. W. Paterson, of Canton, Ohio, read a valuable paper on "Kind Act. He believes there was a great deal of discussion. A paper by Mr. W. L. Mason, of New York, on "The Business Training of Teachers in Connection With Shorthand and Typewriting," contained many excellent suggestions. Mr. Mason believes that there is not nearly enough attention paid to this subject, which more attention should be given, in training our students. The discussion brought W. S. Rogers, of Sandusky, Ohio; Miss N. V. A. Albert Parker, Buffalo, N. Y.; Carrie Parsons, of Kalamazoo, Mich.; P. S. F. Peters, of Kansas City, Mo.; Benj W. Peake, Pittsburgh, Miss S. F. Packard, New York, N. Y.; Jane E. Passmore, of Milwaukee, Wis.; F. Ritter, of St. Louis; Mr. W. Phillips, of Athens, Ala.; Howard F. Randall, Philadelphia, Pa.; Walter C. Ramsey, of Sandusky, Ohio; W. R. Rogers, of Sandusky, Ohio; Mrs. C. H. Root, of Birmingham, Ala.; Miss K. Reichardt, of Omaha, Neb.; Frank A. Urtmerford, of New York, N. Y.; G. A. P. Simon, of West Superior, Wis.; W. A. F. Scott, of Cleveland, Ohio; Mrs. W. C. Stephenes, of Lincoln, Neb.; Rebecca Strout, of Cleveland, Ohio; and C. T. Stith, of Chillicothe, Ohio.

Saturday morning, members gathered late, owing to the late hour at which the banquet festivities closed.

The opening paper by Mr. W. E. Van Wert, Wheeling, Va., excited a great deal of discussion.

A paper by Mr. W. L. Mason, of New York, on "The Business Training of Teachers in Connection With Shorthand and Typewriting," contained many excellent suggestions. Mr. Mason believes that there is not nearly enough attention paid to this subject, which more attention should be given, in training our students. The discussion brought W. S. Rogers, of Sandusky, Ohio; Miss N. V. A. Albert Parker, Buffalo, N. Y.; Carrie Parsons, of Kalamazoo, Mich.; P. S. F. Peters, of Kansas City, Mo.; Benj W. Peake, Pittsburgh, Miss S. F. Packard, New York, N. Y.; Jane E. Passmore, of Milwaukee, Wis.; F. Ritter, of St. Louis; Miss K. Reichardt, of Omaha, Neb.; Frank A. Urtmerford, of New York, N. Y.; G. A. P. Simon, of West Superior, Wis.; W. A. F. Scott, of Cleveland, Ohio; Mrs. W. C. Stephenes, of Lincoln, Neb.; Rebecca Strout, of Cleveland, Ohio; and C. T. Stith, of Chillicothe, Ohio.

A paper by Mr. W. L. Mason, of New York, on "The Business Training of Teachers in Connection With Shorthand and Typewriting," contained many excellent suggestions. Mr. Mason believes that there is not nearly enough attention paid to this subject, which more attention should be given, in training our students. The discussion brought W. S. Rogers, of Sandusky, Ohio; Miss N. V. A. Albert Parker, Buffalo, N. Y.; Carrie Parsons, of Kalamazoo, Mich.; P. S. F. Peters, of Kansas City, Mo.; Benj W. Peake, Pittsburgh, Miss S. F. Packard, New York, N. Y.; Jane E. Passmore, of Milwaukee, Wis.; F. Ritter, of St. Louis; Miss K. Reichardt, of Omaha, Neb.; Frank A. Urtmerford, of New York, N. Y.; G. A. P. Simon, of West Superior, Wis.; W. A. F. Scott, of Cleveland, Ohio; Mrs. W. C. Stephenes, of Lincoln, Neb.; Rebecca Strout, of Cleveland, Ohio; and C. T. Stith, of Chillicothe, Ohio.

Saturday morning, members gathered late, owing to the late hour at which the banquet festivities closed.

Saturday morning, members gathered late, owing to the late hour at which the banquet festivities closed.
Mr. Giessenman explained the method of awarding state certificates in penmanship in Iowa. Houston and Lyons also discussed the paper.

As per suggestion in Mr. Barnhart's paper, a committee was appointed by the chair to prepare a statement defining the position of the members on the subject of writing, the same to be brought to the attention of the educational public and examined through publication in penmanship and educational journals. Following is the statement as adopted:

National Penmanship Teachers' Association

DETOIT MICH., December 29, 1900.

We, the Penmanship Teachers' Association of the National Commercial Teachers' Federation in convention assembled, in order to suggest the proper solution of the Public School Writing Problem, adopt the following preamble and resolutions:

WHEREAS: No system of writing, whether vertical or slant, will in itself insure good writing whether taught by copy-book, copy-clip, tablet, blackboard or by any other method.

WHEREAS: The best results can only be secured by earnest, faithful intelligent teaching on the part of well qualified teachers.

WHEREAS: It is a well known fact that a very large per cent. of teachers have not prepared themselves to teach this important branch, simply because their Boards of Examiners have not subjected them to a rigid an examination in it as in other branches, but have simply graded them from their manuscripts and have never refused to grant certificates, however illegible the writing.

AND WHEREAS: It is a great injustice to pupils and to taxpayers to grant a certificate to any candidate who does not sufficiently understand the theory and practice of writing to direct the pupils in the development of the writing muscles of the arm, wrist and fingers, and who is not able to place on the blackboard models worthy of imitation by pupils, whose manuscripts do not indicate that the character of the teachers general work would indirectly supplement the good results secured during the regular writing period.

Resolved: That Boards of Examiners should give us rigid examinations in writing in other branches, and should call to their aid the assistance of specialists.

Resolved: That to secure a better equipment of teachers, experienced instructors of writing should be employed in every City, State and Independent Normal School, and in Institutes and Summer Schools.

Resolved: That in order to secure uniformity and enthusiasm in the graded schools, supervisors should be employed in all the cities and in townships with town and village schools.
Resolved: That educational journals should emphasize the importance of writing and give more attention to method of instruction.

Resolved: That less and larger writing be encouraged in the primary grades. The twin evils of good penmanship, excessive finger movement and gripping, are the result of requiring children to write when too young, and in the absence of a call to the pupil. Writing except under the supervision of the teacher, should be required in the first and second years, but if required, the forms should be large enough to allow the children to use the arm instead of fingers in execution. Such eminent educators as Dr. Hall of Worcester, Mass., declare that writing in the primary grades does more injury to the child and the chair than is necessary.

It is not whether children can be taught to write, or draw but whether they should be allowed, much less required, to do so. Children can write in factories but our laws wisely forbid it.

And be it further resolved: That a copy of these resolutions be submitted to the educational press for publications, and that school authorities give this matter their careful consideration.

J. F. BARNHART, W. F. GLEESON, Committee
F. F. Muskie, Jr.

"The Relation of Figures to Business Writing," by C. X. Candler, proved to be a very practical and interesting paper. Mr. Candler advocates less speed than formerly and greater care. Discussion followed by Whigham, Keefer, Lyons and Olson.

AFTERNOON

The event of the meeting was the talk by Prof. W. X. Ferris, of Big Rapids, Mich. The speaker held his audience spellbound and was listened to with much interest and enthusiasm. Like many others, Mr. Ferris has found it necessary to break away from early instruction and training. He advocated instruction to suit those who are preparing for business pursuits, for teaching, and for the trades. He recommends a large writing for young pupils, and but little of it. Like Dr. Hall, of Massachusetts, and many others, he recommends that writing be dispensed with during the first and second years in school. Mr. Ferris recommends wide spacing as a means to an end, emphasizing the straight down stroke in letters. He also advocates the placing of poor writers between good ones.

Mr. Palmer discussed the paper at length. Believed in teaching some movement to children even though they cannot apply it in daily writing. He believes in destroying a pupil's writing before beginning the construction of a new hand—believer in the "destructive method." He also advocated that only two degree-slant while nearly all favored a compromise. The tendency was toward round rather than angular writing, and the use of the "protractor." Ferris' emphasis on the "work" does not indicate that the executive committee for the coming meeting would do well to secure an expert in the "constructive method." He also advocated the use of the "E-baldwin" of Detroit. Less speed and more form-study seemed to be the sentiment of many who formerly advocated a sternest action from the beginning. No one advocated the old fifty-two degree-slant while nearly all favored a compromise. The tendency was toward round rather than angular writing, and in the direction of simplicity and ease. Ferris' emphasis on the "work" indicates that the executive committee for the coming meeting would do well to secure an expert in the "constructive method." The times demand broad, well-organized, representative men. The spirit of "give and take" in a brotherly manner was never more prevalent than in the Detroit meeting. A genuine bond of sympathy seemed to bind the band of pen-pals together as never before. No unpleasant controversies occurred, though discussion was at times lively and to the point. Let us look forward to the St. Louis gathering less than a year hence with as much pleasure as we now look back to the Detroit meeting. Pleasanter recollections of Detroit—fond anticipations for St. Louis.

Messes. J. E. Bailey, of Marion, Iowa; J. F. Wilson, of Seattle, Wash.; and others submitted work which did not comply in all of the requirements and was not therefore considered for the prizes, but some had excellent work and came within one of capturing a certificate.

HIGH SCHOOL

First prize, W. T. Shrawder, Dunkirk, N. Y.; second prize, Clara K. Eumens, Lockport, N. Y.

GRAMMAR GRADE

First prize, Harry Houston, New Haven, Conn.; second prize, F. F. Musnash, Lakewood and Rocky River, Ohio.

PRIMARY GRADE

First prize, Harry Houston, New Haven, Conn.; second prize, F. F. Musnash, Lakewood and Rocky River, Ohio.

SPECIAL CERTIFICATES FOR 7TH AND 8TH GRADES

None submitted for other grades.

First prize, St. Mary's Academy, Monroe, Mich.; second prize, W. F. Hostetter, Lapaz, Ind.

The meeting, as a whole, was a success. As compared with former meetings, it was not as large as some. The vertical question was received with more favor than ever before, while job work was not much advocated by but one school, Baldwin, Detroit. Less speed and more form-study seemed to be the sentiment of many who formerly advocated a strenuous action from the beginning. No one advocated the old fifty-two degree-slant while nearly all favored a compromise. The tendency was toward round rather than angular writing, and in the direction of simplicity and ease. Ferris' emphasis on the "work" does not indicate that the executive committee for the coming meeting would do well to secure an expert in the "constructive method." He also advocated the placing of poor writers between good ones.

Saturday Morning

President Faust being unable to be in attendance the last day, appointed Mr. Musnash President pro tempore.

The committee on awarding of certificates reported as follows:

BUSINESS COLLEGE

First Prize, E. O. Folsom, Green Bay, Wis.; second prize, A. W. Holmes, Salem, Mass.; third prize, Bert C. Campbell, Fremont, O.; F. T. Weaver, E. Liverpool, O., submitted splendid work too late for contest.

Blackboard Decoration

Mr. A. H. Himann, of Worcester, Mass., whom there is no finer, in beautiful chalk embellishments, decorated the various boards in a wonderfully artistic manner. Mr. Himann is a pupil of the famed John P. Williams, who has cultivated as no other penman his modern business letter. Mr. Himann caught much of the beauty of his master and retains it in a manner that surpasses all. May he meet with us often.

ACKNOWLEDGMENT

is hereby made to Mr. C. E. Towne, of Zanesville, O., who kindly furnished us with the above notes of the meeting.

Members in Attendance at the National Penmanship Teachers' Association

The Private Commercial School Managers' Association

REPORTED BY GEORGE F. LORD, SALEM, MASS.

The first meeting of the Private Commercial School Managers' Association was called to order at one o'clock on Thursday, December 25, by President L. L. Williams, of Rochester.

The only matter to come before this session was preliminary business connected with organization. The membership committee reported favorably upon about 55 names which were acted upon. Those who were not present when being elected, paid a dollar, and signing the constitution, became members. The others will be communicated with by the secretary.

The meetings scheduled on the regular program began at five o'clock on the afternoon of December 27th, with a very interesting ten-minute paper by O. W. Brown, of Jacksonville, Ill., entitled "How Far May the Commercial Teacher of 1870 of Study be Profitably Extended in Time and Scope?"

Discussion of this paper was opened by Mr. Robert C. Spencer, of Milwaukee. It seemed to the committee that the proper length of time for a commercial course lay somewhere between six and twelve months. Several other members of "old guard" took part in this discussion, and considerable profit was derived therefrom.

After attending to a few matters of routine business the Association went into executive session to discuss important matters, behind closed doors, until seven o'clock.

In the evening the members again assembled at eight o'clock for the purpose of electing officers. The following were chosen:

The Penman-Artist and Business Educator
In this connection, Mr. E. K. Gallager, of Hamilton, Ont., gave an interesting and helpful description of the plan which has been adopted by the schools of Canada. After a clear and concise description of this work, Mr. Gallager devoted some time to answering general questions put to him by those present. A vote of thanks was extended Mr. Gallager for his services to the Association.

Owing to the absence of Mr. T. M. Powers, of Chicago, the subject of "The Admission of Commercial School Periodicals to the Mails at Pound Rates," was taken up for discussion without his paper being read. A specialist was called upon to speak on this matter, and given authority to act for the Association. The general meeting was followed by a brief executive session, in which the name of John B. Galbraith was brought to a close, and the convention adjourned, having accomplished in its executive session work which will undoubtedly bear fruit during the coming year.

President's Address
Delivered before the Western Penman's Association at Detroit, Mich.

By Charles A. Fauust

It is with no small degree of timidity that I attempt to enlighten you in the penmanistic field, to say nothing of entertaining you, which will at least be expected. Therefore, what I shall say will be brief and to the point. I have heard that some remark may be uttered which will prove beneficial in all our future work.

My honorable colleagues, many of the brightest lights of the profession who have honored the presidency of this association in years past, have given us numerous ideas of value in their annual addresses as to how we might improve in our methods, etc., and in truth and fact much good has been made of these clear and logical thinkers. However, that there is always room for improvement admits of no argument here, and I trust that before the close of this, the fourteenth session of our association, many things of interest will be brought up, and much of value be learned, to all of which I commend an attentive ear.

Very Slow to Make Changes

Not all of us will concur in the same opinions, and it is well that this is true, and yet it is a matter of serious regret to me that upon any observation during my past experience, I have noticed that there are those who are very slow to make changes, or accept new ideas, and apply them in their every day teaching, even after having attended to the gathering of this kind and having been subjected to every kind of test by way of convincing them, even unto actual comparison of results, that their methods are wrong, and that better results could be attained by adopting the new, or in some instances, the old methods with which they were herefore unacquainted.

I first became a member of the Western Penman's Association at Davenport, Iowa, and in a brief space of time, I have been handsomely recompensed. The letters I wrote were of unmeasurable value to me, as the next week after the convention I was to make my debut as a teacher of writing in a business college. I drank freely of every member on the program, and was eager for more, and when desires of securing more light on certain subjects, and not having the nerve to put the question myself, I would pull the coat tail of the nearest member and have him propose it for me.

Individuality in Exercises

I like many others, no doubt, attempted to introduce a style of writing, all the movement drills and exercises we saw or heard discussed at the meeting. Soon we found that many of these exercises were not such as would obtain the results we were seeking. It seemed that a certain style of writing must have its individual style of exercises to accompany it. What would answer for you would not answer for me, and vice versa. Many of these writing have not analyzed this important fact. It is too often thought that the only thing necessary in movement exercises, no matter what they may be. For instance, I have seen a teacher of writing drill her pupils for thirty minutes upon the reverse oval, relaxed and extended. Horizontal strokes sweeping clear across the paper. This latter exercise, I consider the most dangerous of all which could be used, and one to be avoided at all times. After giving these exercises, the teacher gave for the page work, the word "little." If any of my hearers can see how these exercises could be considered applicable to the building up of this word, I should like to hear from them.

Form Before Speed or Movement

I know I am making a broad assertion by saying that a large percentage of teachers of penmanship are inclined and disposed to leave practical the natural relationships existing between the parts of letters used in their first lessons and exercise work. This error does not permit of laying a substantial foundation for the building up of a strong business hand. Many advocates of muscular movement from the start, may criticise me on my next issue, nevertheless, I am going to make the statement that accurate and legible writing could be taught without first considered, regardless of speed or movement. Many teachers of muscular movement writing will start a pupil, or a class, on some formative letter, of a nature of speed, the letter of the student endeavors to execute it at the rapid pace suggested, but whose muscles, while preserving the movement under pressure, are not merely accomplished in the execution of the letter at hand, to retain the form to any creditable degree, but believing that the movement instead of the form is first to be considered, he disregards the tendency to let the speed and accuracy go to the slanting and rapid movement. The aim is to have the pupil reproached with a form without motion, and the result is an invariably miserable scrap. I thoroughly believe that all strokes and drills on letters, or parts of letters should be made slowly and accurately at first. The reasoning from this is, as much as so in short-hand writing, telegraphy, or in any art wherein the hand must perform what the mind suggests. You know it is a fact, that you never found a good vertical writer who ever wrote letters fast. In reading, short-hand, a short time by practicing the drills for the latter style. The form having been fixed, the slant and rapid movement are easily acquired, with the advantage that the mental sense is controlled by the speed. The hands having been trained in the execution of accurate forms, it will naturally cling to them, as it does to the incorrect when first established. Why not apply the same principle in the same writing, as to the vertical in the initiatory
steps, if the result as has been shown, will warrant. It is certainly easier as the position of the former is not as natural as the latter.

The student who has been allowed to disregard form in his early practice, will never improve his work in the long run. In his very day business writing. While the more methodical student who has been instructed to retain the form, even at the expense of speed, will gradually increase his speed in his every day work, he will not have gained any advantage. This primary training in letter formation, by being clear and legible, instead of scrappy and uncertain.

LONG LOOPS IMPRACTICAL FOR BOOK-KEEPING

I wish also here to be permitted to say that the style of writing given the student by a majority of the instructors in our business colleges, and public schools, can be made of no practical use in up-to-date book forms. For instance, the rulings in various books will not permit of the large or extended style the student has been taught, and uses. He must immediately change his style of writing upon accepting a position which he imagines. The rulings on these books are his guide, and he must keep within the bounds and spaces outlined. In your own schools, how many of your pupils put a clear, explanatory sentence in their ledgers? They abbreviate at most beyond legibility simply because the style of writing they use will not permit of a proper explanation. I believe also that the teacher should be familiar with all kinds of books used under various conditions in business houses, and teach a style that will meet these requirements.

TAUGHT THAT WHICH COULD NOT BE USED

I am free to confess, that I, for twelve years taught a style of writing that I have recently discovered, was not one I could use in the work I have been called upon to do. I am speaking now of general work. Special work called for a style different from which I taught. The ruling argument is generally convincing. Therefore, let me say that having been familiar with various styles, and being able to successfully apply them, caused my promotion over the one who was not. In every instance, it was not only to be certain of being able to add them himself, if necessary, but that they may be perfectly intelligible to another party, for it is a fact, that a greater or less degree of care and precision must necessarily be verified by others, and, therefore, should be neatly and accurately made and placed.

PRACTICAL EXPERIENCE NECESSARY

And now, by way of a closing remark, I wish to say that in my opinion, it is a mistake, and certainly a great injustice to theA very good man of experience for outside work. Well established School in large city, steady employment. Address, with references, for position. STRAIGHT BUSINESS, Columbus, O. Care Penman-Artist and Business Educator.

Commercial Man Wanted

WANTED — An all-round commercial man of experience, who is capable of managing a Business College. Must be able to furnish good references. Good salary to the right party.

**Convention Notes**

The silk hat was much in vogue.

A youth tried to escape from the photographer, but President Stevenson captured him and brought him back.

The Eastern Commercial teachers were so "stacked" that they came in a special car, and had to be left with a special picture taken.

Look at this picture, and observe the long face with which Pearson grins. He is too young at his best. As he was "sandwiched," it was hardly complimentary to the expert about his left.

The porter on the special car was a gem. Doggett found his "galluses.in the smoking room, Gaylord's shoes were concealed under seats on opposite sides of the car, and Healey lost the P. A. J. hat. An exploring party was organized, and just as the train started the Detroit pier, the missing articles were found.

Zaner, Spencer, Felton, and Leomin, were seen to go into a Vegetarian Cafe in Detroit, but Zaner and Leomin soon emerged with out their hunting for roast beef. They declared that "roast mutton tea" was a little too thin, especially with a dessert of mush and pine-shavings.

President Stevenson was determined to run the convention on schedule time, and he "lambasted" the obtrusive recalcitrants in true pedagogical style, because they did not get around on time. Nevertless, he handled the matter well.

It was fun to see how Zaner caught old birds on the wing. Of course he had taken some of them sitting, but did not accept them as a "not-manlike" habit, for quarry wanted to look nice. But look at the sketch of Brother Bravely. Is it a counterpart of Carl Schurz, the German Reformer, Herr Most, the Anarch high priest; the late Ward McAllister, leader of New York's Four Hundred, a Socialist-member of the German Reichstag. The part in Brown's whiskers and hats strictly up-to-date, and so are his schools.

No one can come near bearing sacriligious as can J. W. Warr, without exciting
course comment. His story on the Baltimore publisher was a good one, not withstanding this objectionable feature. There was only one Warr; the others are mere mistakes.

Healey didn’t come. Healey paroled P. A. J. in 1912, and, as W. J. would not be in anything but a "stovepipe," he said in his will to his lieutenants, 'Healey’s chase is charmingly set off by the hat. If you see the white cane, but it wouldn’t do to let Max Norden have them either. He is the editor of the Photographic News in this city. He would surely use the information in his next book, as an awful tale of the deteriorating influence of photographic associations.

M. Van Antwerp stayed at home—new ar-
H. C. Biss, Editor and Business Manager

Any one who has been fortunate enough to be in contact with the Ohio Commercial and Special Teachers' Association will be held in Columbus, Ohio, March 29-30, 1901. Keep your mind on the day and it will be easier to remember that the day has gone by than to realize that the day is going by. The outcome of a successful meeting is better than ever before. Lay your plans early to be here and to bring some one along.

Look

This number of the PENMAN ARTIST AND BUSINESS EDUCATOR is largely the result of your confidence and support. What the journal shall be tomorrow, next year, the next decade, depends largely upon you. Two things—determine the success of a professional paper like ours—brains and money. The brains may be divided into two classes—moral and intellectual. The financial part consists of subscriptions and advertising. What we do for us in any other way than through the expenditure of money will be duly appreciated and reciprocated in redoubled efforts on our part to put forth the best journal possible—the best that has ever graced the world of practical education. The little you can do may seem unimportant, but to any editor or publisher these little amounts mean much. If each one who reads this editorial will be to favor us with his or her subscription we could at once better the journal. If each one were to include with said subscription a small amount that would barely enlarge our paper. We have high aims and earnest ambitions, and as soon as we can afford it, substantial improvements shall be made. Good as the PENMAN ARTIST AND BUSINESS EDUCATOR is, we want it to be better. It is not that we cannot make it much better. In the meantime we shall work to win your cooperation for the reader, after all, is the real "power behind the throne." For the support so unselfishly given our enterprise, state our sincerest thanks. We, in return, pledge our best efforts and wish you, one and all, a happy New Year and century.

A Permanent Subscription List

Many have written us during the past few months to create a permanent or professional list for those subscribers who desire to remain permanently upon our lists. This we have decided to do. By remitting $1.00 per year in advance, your name will be entered at the expiration of your subscription a bill will be sent to you, but your name will not be removed from your mailing list without your order or our further notification. In this manner you would not miss a number through neglect to renew promptly. We hope to receive your subscription at once, if you are not already a subscriber. No name will be placed on the permanent list unless we receive orders to do so. May we have your order?

A Good Time Coming

The Fifth Semi-Annual Meeting of the Ohio Commercial and Special Teachers' Association will be held in Columbus, Ohio, March 29-30, 1901. Keep your mind on the day and it will be easier to remember that the day has gone by than to realize that the day is going by. The outcome of a successful meeting is better than ever before. Lay your plans early to be here and to bring some one along.

thanked as they should be. Let no one think, however, that such letters are thrown into the electric typewriter on the other hand. They are highly appreciated, and every word carefully considered. A grateful and thankful response had we more time at our command. Such words spur us on to greater efforts in our work. Probably nothing goes further toward turning work into fun than the knowledge that every effort is fully appreciated. We thank everybody.

Catalogues and Circulards

"Salaried Positions for Learners," is the title of the last manual pamphlet issued by The International Correspondence Schools, Scranton, Pa. "Are Your Hands Tied To Unemployment?" is the suggestive and strikingly suggestive title of another booklet issued by the same enterprise.

The Federation Meeting

The meeting of commercial teachers in Detroit was the largest ever held. The attendance at each session was excellent, and we except the Fellowship Teachers' Association. Interest in the papers and discussions was sustained. Of course the last sessions on Saturday were not so full as they should have been, in justice to the speakers, but many of the teachers were a long way from home and they did not desire to remain over Sunday.

Number of Sessions

The time devoted to the work of the convention this year was rather short, being only two and one-half days. It is hard to tell how it could have been arranged in any other way, and it will be far more difficult to arrange a program sufficiently long for next year, unless those who travel a long distance are made to abandon a Christmas dinner in their own fireside.

The Next Meeting Place

St. Louis is a long way from New York and New England. Eastern teachers have been loyal to the Federation, at the sacrifice of time, money, and comfort. It is a hardship to travel even so far as Chicago, but to go to St. Louis makes it yet more difficult. In our judgment, to make it fair for all concerned, the meetings should be held in the lake cities or in the large cities just south of them. Indianapolis is an ideal city for the meeting, and we hope it may be taken there next time.

The Election

A great deal of dissatisfaction was caused by the result of the Federation election, but those who were unhanded were not in a very happy mood, and some movement in favor of a popular leader have themselves to think, if they are not pleased with the result. It would have been a good plan for each association to insist on its delegation as its choice of candidates. This would have given the rank and file a chance to express them, selves. However, the machinery of electing Federation officers is, of course, a whole operation. The new amendment to the Constitution directs that the nomination of the Federation officers shall be made from the floor by the members and that each member shall have a vote in the election. There will be more interest, more fun, and less dissatisfaction in the election next year, than in any held heretofore.

Our New President

Mr. George E. Lord, the new president of the Federation, is a type of the best men in business school work. He is the head of an excellent business school that is conducted in a clean, upright, educational manner, free from the vicious practices that characterize many so-called business schools. Mr. Lord defends the guaranteed position, the solicitor, the brazen-faced lying, and the employment of young children as teachers. His policy is broad, progressive, and effective. He is wide-awake, aggressive and strictly up-to-date in his methods. He has the esprit de corps of public schools throughout north-eastern Massachusetts; they unreservedly recommend his excellent school to their pupils. The Salem Commercial School has originated some helpful plans in teaching of practical training, and, as its principle has been ten years in the work, he has no professional experience.

The Eastern Commercial Teachers' Association is a large organization; in fact, it is not so far behind the National Federation in size. Mr. Lord has held in it, successfully, practically every office within its gift, and therefore he has had convention experience ample enough for the work he will be called upon to do this year in connection with the Federation.

Mr. Lord is a bundle of energy, a sort of human dynamo. He has the happy ability of getting things done, and he will bring about a successful convention this year, if he obtains from the presidency the cordial support that the president of the Federation ought always to receive.

A Broad View of Commercial Policy

Mr. Lord is a business school man with a partisan spirit. He believes thoroughly in the mission of the private business school, and he is not consumed with an admiration of the possibilities of commercial education in colleges and universities. While his policy may not be so liberal as Mr. Stevenson's was, it will be fair and just, and, it must be admitted, such a course will probably suit the majority of the members better than the proceedings of the last three years, during which time outside men have been more and more brought in to discuss various phases of higher commercial training.

We venture the opinion that this number has the finest illustrations ever given in connection with the report of a meeting of commercial teachers. The report of the New England Teachers' Association was kindly provided by Mr. W. O. Davis, Eric, Pa. We are indebted to President-elect George E. Lord for the report of the Private School Managers' Association meetings, and to Secretary J. A. Hiner, for the report of the Business Teachers' Association.

The paper in this number, by Prof. J. B. Johnson, and the one in our next by Dr. T. W. Bookmyer, in a measure reflect the opinion of leaders on opposite sides of a great question. Read them carefully, and broaden your understanding of what is going on in commercial education. The papers in the next number will include the best given at the convention, besides some of our regular features. We have in course of development a series of articles that will be of great interest to every commercial teacher.
Commercial Education

HENRY W. MILES.

(Continued from January.)

I will make special reference to some of the subjects that have been indicated as desirable.

THE STUDY OF ENGLISH

Let me say also that during the three years' course it should be made possible to acquire further general knowledge than is possessed at the present time, in the age of 15 or 16 years. It is not necessary for me here to point out the advantages of the study of English literature—a correct knowledge of the language stands as a first essential. The reading of it, and familiarity with its authors will but train the mind and broaden the ideas of all. The value of composition will be found in practice; in every day business life; in correspondence, and in the making of statements of fact, and in reports. In the discussion of any business subject, is it not an advantage to be able to plainly and concisely state the facts, and to write not— as a would wish to convince? How can this object be attained without tuition in composition?

THE FRENCH LANGUAGE

The French language is very necessary in a portion of this country—inevitable when travel abroad is one ambition of those who seek trade relations on the Continent of Europe, it is an essential. It is the language of diplomacy the world over, and therefore it can be said that with a knowledge of it one can travel and make oneself understood in all foreign countries. Everywhere there are those who can speak French. To speak it and to write it should be the accomplishment aimed at. English is the language while not as necessary as the French, should be pressed to the attention of all who have the time to give to its study. It is valuable to the business man who will ever engage in trade relations with Germany and Austria-Hungary.

THE HISTORY OF OUR COUNTRY

The history of the Great British Empire should be a leading subject. All our youth should have the opportunity of knowing—to appreciate—the vast domain of our beloved Country, and we will of course educate the masses to a great extent. Our people knew nothing of South Africa until called upon to respond to the defence of the Empire's honour. With the shedding of Canadian blood upon the plains and knapsacks of South Africa do we learn of the geography and history of that continent and of the almost limitless extent of Great Britain's possession in that part of the world. Should it not be differ from the course, we will have in our minds a knowledge of the extent of that Empire of which we form a part, and would not the reading and study of this subject train the mind and enlarge thought? Would it not tend to inspire ambition—to learn of the civilizing influence of the British people—the survivals for Christianity and in the noble cause of humanitarianism, as well as to an appreciation to which success has attended this unvarying purpose of our great nation? To learn of the blessings brought to the human race under this influence? The history of Europe should be an important item to the education of the great country to the south—the United States. This great nation occupies an important place among nations. It has but lately entered the wider sphere that has been so long occupied almost alone by the Motherland. In Cuba, Porto Rico, and the Philippine Islands the United States has an Empire with a capital that commands the world. It is a champion for humanity and civilization—a great nation, especially in commerce, trading with all parts of the world, a home of inventive genius, and an object less of nations, in commercial activity and progress.

OUR RELATIONS WITH THE UNITED STATES

Our trade relations with the United States are vastly important. Last year, for example, Canada purchased goods and shipped goods to the United States and Canada to the value of $1,000,000. More than one-third of the trade between the two countries is with Great Canada. The aggregate of Canada's trade is a little more than three hundred million dollars (1887), and in 1888 the trade between Canada and the United States amounted to one hundred and twenty-five million dollars. Should we not cultivate a knowledge of the history of the Republic—of the people with whom we have such a vast commerce?

JOURNALISM

Journalism should have consideration within a commercial course. Optional, perhaps; and why, may I ask, should not special advantages be accorded to those aspiring to become the educators of the masses? The press can exert a mighty influence in the progress of our country. Why should not a special effort be made and not be as a would wish to convince? How can this object be attained without tuition in composition?

BUSINESS LAW

Business law could be placed before a commercial student in a manner to be very useful throughout a business career. General lectures on the subject would be advisable, be of high value to the young man on the threshold of a business career.

PUBLIC SPEAKING

Public speaking is one of the weak points with business men generally. The brightest in college halls, the most capable as a manufacturer, as a banker, in many of the walks of business life, in fact, is often the most stupid when called upon to address a meeting. He will tell you that he is not accustomed to public speaking, that he "has nothing to say," and that "with these few remarks" he will resume his seat; or else he will try ineffectually to convey his thoughts and ideas to his audience, with but little effect, and the next day will remember, perhaps, he desired to say or should have said the day before. Training in speaking is well worth a place in a commercial course. It is the most apparent want. It would render men engaged in mercantile pursuits far more useful to the community in which they live, and as well it would multiply the effective advocates for the progress and protection of commerce.

CIVIL AND MUNICIPAL GOVERNMENT

The principles of government and the government of municipalities should be understood by the student who is engaged in commercial life. We have in this city a "Good Government Association," for instance. For some years it has sought to educate the taxpayers of this city in regard to the municipal government. The practical result is a Council honest and competent, with good purpose, and backed up by public appreciation of what is right and wrong. This is due certainly to education on the subject of municipal government. The question is only as to the extent of the teaching upon the subjects of "The Principles of Government," and "Municipal Government," that would be possible in a university commercial course.

SHORTHAND

In regard to "Shorthand." I will say that I believe it should be made a feature in a commercial course. It would be of infinite advantage to all business men. I do not mean to say that there should be competent stenographers, but, apart from the requirement of those who will actually serve in that capacity, I hold that the ability to record quickly, conversation, speech, ideas, and do likewise should be taught. The demand for stenographers is great, and the supply of those competent is indeed surprisingly limited. The reason is doubtless that sufficient attention is not given to its study. In the business office it is indeed tedious to teach a stenographer, yet that is what the present system of study at the business college offers.

COLLEGE GRADUATE UNFITTED FOR BUSINESS LIFE

I have stated that the college graduate is untrained, in a large measure, for business life. There are many exceptions to many rules, but, in a general sense, it is the ease that the following of a college course to graduation is a disadvantage to a young man who is to template commercial life. Fortunately, perhaps, all are not equal in natural ability—all have not the same ambition in life, nor the possibility within their reach of attaining a desire, and it is difficult to place before us in words what I know actually to be the fact in this connection. A college graduate under the present system of education is not practicable as an apprentice to a manufacturing business, filled into position in any business pursuit, and he certainly is not competent to manage or direct a business enterprise. I fear that the only example that I may have is a poor one, yet if it conveys the idea tavoring my contention for commercial education, it will serve a better purpose.

AN AMUSING STORY

A prominent wholesale grocer was induced to take as an apprentice a graduate of one of our universities. He was, so our acquaintance, the grandchild of prominent and wealthy people, and was quite a pretenentious young man. An apprentice in this business is an erand boy—sweeps, carries parcels, and has a variety of other calls on his time and
energy that are not included in the curriculum of study that brought him his B. A. degree. His first days of apprenticeship were devoted to looking round, getting his bearings in the great workshop. I think it was on the morning of his third day that his employer, a wealthy merchant of some sixty years of age, handed the young man a written order for four dozen brooms, telling him to hurry up, as he was completing an order of the same kind. But to do this, and get them quickly," was the command. The broom maker's place of business was some three or four hundred yards away. The young man started brightly upon his errand, and at the corner of the street realized the size of his load, he hesitated. The broom maker told him his express team would take them over to his employer in an hour or two, and he was supposed glad to have the kind of the offer. He returned to his employer, who was surprised and annoyed to observe his return empty-handed. On learning the particulars, the merchant sent him out and told the young man to follow and watch. He did not say more. On reaching the broom emporium, the employer put two dozen of the brooms—tied in one dozen packages—on each shoulder of the boy, and told him to follow and watch. His commercial education as to "brooms in a hurry" was complete when his employer said, in unloading the brooms from his shoulders: "But is day or week or year for brooms."

**A PEASANT BOY AS BUTLER**

Perhaps you have read the story of the rough peasant boy—a stable boy—who was suddenly called upon to officiate as butler for a gentleman's dinner. A number of guests were present, and the regular butler had unexpectedly absent himself. Champagne was to be one of the drinks, and the master directed the boy to get a wash-tub into the adjacent room, and partly fill it with ice. This was satisfactorily done. He was told where the wine was to be found, and, at a given signal, he was to put it on the ice. A later signal was to be given, which would indicate to him that the wine was efficiently cooled. The signals were received and acted upon, but the tub was brought into the dining room. It contained all the champagne, but, while he had put it on ice, he had considered it necessary to do away with the bottles. His education in the stable had not fitted him for the important functions of butler.

**EDUCATE FOR LIFE'S WORK**

The object should be in every direction to educate for the calling to be followed in life. The butler requires a training, but not in a stable. He puts his pupil in a universal position. He would get it in a servant's position—by watching and copying, if you like. But the merchant—the business man—should not be obliged to pass his early years in a menial position. He gives the boy his knowledge, but life is indeed too short to permit of any years of waste in time. Give our young men and women the advantage of a course of study in the college and university. It will then be possible to begin several grades higher up in the business circle. Those who will never rise in life can well fulfill the duties of earlier serving, which was the saying of the time spent in acquiring knowledge—in being educated for commerce as a profession —will serve, too, to strengthen the forces of commerce in our country.

**CANADA A GREAT COUNTRY**

We Canadians possess a great country. Great development is always proceeding, and our natural resources will in time bring Canada into rank with the great trading nations of the world. We have a history to be proud of; a record of progress of late years that evokes a natural national pride. By leaps and bounds has our Dominion come to the front—come to the attention of older countries. With a population increased small, in comparison with the area of our land, we have accomplished much. It is not alone our resources. It is not alone our government. It is not chance that has made this Dominion of Canada what it is today. The men and women of our country; the spirit, energy, and ability of Canadians, are the factors in our country's progress. The future is largely in the hands of the upholsters of our commerce, and for the strengthening of this class, I would make a plea to the universities to be benefactors of universities, for attention to the great national want that exists, and for the endowment that will be required. I have an unbounded confidence in the future of Canada, in the possibilities that lie before us, and I know of nothing that can contribute as much toward the building up of our Dominion—toward the reaching of a commercial position of importance among trading nations as the furnishing of a commercial education to our youth.

—**PROF. J. B. JOHNSON.**

**SKETCH FROM LIFE.**

**Higher Commercial Education in America**

**What Shall It be and How Shall It be Given?**

J. K. JOHNSON, DEAN OF THE COLLEGE OF ENGINEERING, UNIVERSITY OF WISCONSIN

Whatever the new century may have in store for other nations, it is evidently ushering in a new era for America. During the past century and a quarter we have passed through a sickly infancy, a turbulent childhood, a fiery and passionate youth, and have now come to maturity. We must now go forward among the nations of the earth and take upon ourselves our proper share of the world's work. And this work is such as to try men's souls, and to determine the fitness of nations to survive. A lack of progress has moved westward until West and East have come too closely in the final death struggle for self-preservation. China is now ready to follow us, and we are already down to the end of the line, and we are struggling for the India and China contending for the India and China.

**THE OCCIDENT AGAINST THE ORIENT**

The ancient orient has always despised the presumptions of the orient nations of the western world, and now she says, with the incoming century, that she will restore her former peaceful isolation. If those impudent and unjust intruders will persist in coming where they are not wanted, then she will extirpate them as much as she can.

The world's conquerors out of the west are but the more determined to obliterate this last stronghold of barbarous bigotry on the occasion of this savage war. The Christian world has been taught that "the earth is the Lord's and the fulness thereof; the world and they that dwell therein," and, as the Lord's children, we have no right to claim any portion of their rightful heritage. When this heritage has been gained, however, there is likely to be a violent quarrel over the several rights and privileges in its occupation. In the right, these world-conquerors, being involved in a life and death struggle which will try the strength of the stronger nations and which will break the strength of the weaker ones.

**THE INEVITABILITY OF PROGRESS**

In Africa, also, the attempt of a mediatorial Christian power to control the barren and landlocked land of nineteenth century progress is proving as futile as it was foolish. Progress is in the air, and as the air, it engulfs the globe. Nature does not more abhor a vacuum than she does permanence of form. What ceases to change and grow, ceases to live. Even the rocks of the eternal hills are changed to clay and are dissolved in the surrounding seas. To attempt to check the wheel of progress, therefore, is but to invite destruction. One must "accept the universe" as it is and make the best of it. And our social world is changing with such marvelous speed that it is almost bewildering to the most progressive races. It is with the greatest difficulty that these can keep the pace, while the less progressive ones are being left hopelessly behind. To realize the tremendous race we are now running, one has but to contemplate for a moment the fact, now everywhere admitted, that the scientific and material progress of the world during the present century has far surpassed that of any other period in the twenty centuries. A decade now marks greater changes than a century formerly did, and a single life of three score and ten sees a world development equal to any thousand years of the past. A little slowing up of one people, therefore, is now equivalent to losing the race.

**THE DECAY OF ENGLAND**

Viewed in this light, the present condition of England is truly alarming. Content with past achievement, and assuming that the world's markets and its debt-right of inheritance, she has fallen into a lethargic state, of which she herself is quite unconscious. The Baring failure in 1890; her rapidly growing excess of imports over exports: her measures which have been undertaken to appease her creditors; her failure to establish the masses an adequate system of primary schools and to obtain a secondary system of public education, whatever; and, worse than all, her paltry and blind self-satisfaction as one who calmly contemplates the amazing progress of Ger-
mony and America; all these are unfailling signs of decay and of a lost greatness. We will do our best to prepare for. When London ceases to be the hub and balance wheel of the commercial world, this responsibility will fall either upon Berlin or New York.

TWO YOUNG GIANTS

Germany and America are the two young giants of the new century, but we have many natural duties to perform. We are the custodians of the new national resources, in geographical position, in character of inhabitants, and in present attainment in many directions, we are far ahead of them. Never before, however, was a form of government well-fitted to following a wise and consistent foreign policy; a colonial system for us has yet to be created, if, in fact, it be possible under our constitution; and the paternal duties of protection and collection of manufacturing and commerce is constantly endangered, or at least threatened, by complete changes in the policy of the national government. As an offset to these hindrances, our system develops, to the utmost, private initiative and self-reliance on the part of all citizens, and this is the kind of power that moves the world. Too much paternal assistance, whether of parent or of state, would stifle the genius of the citizen.

In facing the new century, therefore, we see great world problems looming large before us, but we are realizing our strength as well as our duty as "one of many," and as likely some day to be leader of all. In no spirit of self-glorification, therefore, but rather as a preparation for the great part we are doomed to play in the world's business in the very near future, and to enable us to do our duty in the way to do the greatest good to the greatest number, let us examine into the educational preparatory conditions we should make for discharging these high responsibilities.

In the field of world-politics and world-business, it is but common prudence to examine the educational facilities offered by the most progressive world-power today in this direction. Although Germany has not entered upon her career as a world-power, and is the youngest of them all in her united organization, she has set herself to the solution of these problems as no people has ever done before, and her superior effort and success has already proved her superior wisdom in these matters.

CO-OPERATION AMONG GERMAN SCHOOLS

In Germany the higher scientific, technical, industrial, and commercial education go hand in hand. The greatest discoveries of her scientists are brought into service by her highly trained engineers, and the plans of these are executed by workmen who in turn have been trained in her monotechnic and trade schools, and finally the products of the factories and workshops in the corners of the world through the helpful agency of men who, in her higher colleges, have been made acquainted with the character, the resources, and the needs of the people of all lands. Never before has a nation seen so clearly, and followed so consistently, the royal road to material prosperity.

Belgium, Austria, and France have long had these high schools, and have already produced that have not had the other requisites to the making of great commercial nations.

In the two most recently established colleges of commerce in Germany, in that connection with the commercial and in Hamburg, and in those now projected for Frankfurt and other German cities, in addition to what is taught in our own "commercial colleges," there are taught by highly trained specialists a writing and speaking knowledge of at least two foreign languages—this knowledge has not already been required—elementary mathematics, including commercial arithmetic, algebra, geometry, and trigonometry; physics, and chemistry, with laboratory experiments; commercial geography of all lands, postal and telegraph regulations of the leading commercial nations; banking, exchange, coinage, and national schemes of finance; industrial history and political economy; commercial, statistical, and business laws, etc. It is true that their systems of bookkeeping and of banking are far inferior to ours, so that what is taught in our leading "commercial colleges is probably superior, so far as it goes to the grade of business education given abroad; but it must be confessed that it does not go very far towards equipping a man for engaging either in foreign commerce or manufacturing in a large way in domestic business. However, it hardly seems wise any longer to distinguish between home and foreign affairs in the commercial world. Nearly all large factories and manufacture to-day have foreign connections, and this foreign business is capable of almost indefinite expansion. In this paper therefore, I shall not distinguish between the kinds of education needed for the preparation for these two kinds of business. We now come to the primary question I am to consider:

1. What Should be the Education Today for a Business Man, to best fit him for a successful business career? If this education is intended to serve as a specific preparation for business, it thereby becomes a technical rather than a cultural education. In this case, we must consider as fundamental: The acquisition of knowledge of a subject which is subsequently to be used as a tool, or as a means to some ulterior end, implies a very different attitude towards this subject on the part of the student, and a very different kind of presentation, on the part of the teacher, from those prevailing in the class rooms of the literary or cultural colleges. To use knowledge of this kind, one must be able to both speak and write it with considerable fluency and correctness. While residence in a country where the language is spoken is not necessary, the use of any foreign language, a knowledge of which would be acquired in college which will enable one to quickly feel at home in it when he goes where it is spoken. Even the studies of history, philosophy, and science would be pursued very differently in the college of commerce and in the literary college. For this reason, it is essential at the start to regard the college of commerce as a technical rather than cultural institution.

For the commercial student, it is necessary to acquire knowledge of business languages. While it is not essential that he be conversant in any foreign language, he should be able to read a foreign language which is extensively used in the countries where commerce is transacted. In this case, English, French, Russian, and Spanish are the most important. The knowledge of a language is, however, of great importance in business, and should be acquired during the preparation for commerce.

For the preparation of a businessman, it is necessary to acquire knowledge of the laws of commerce. These laws are generally known as the laws of commerce, and are based on the principles of equity. The study of these laws is necessary for the protection of the rights of the businessman, and for the prevention of fraud and deception in commerce.

Some foreign examples:

The problem before the college of commerce in America is a new and therefore a difficult one. It would, therefore, be the part of wisdom to follow the lead of Germany in her present practice of establishing commercial universities. Some two years ago, commercial courses were established in the university of Leipsic, of equal standing with the other university courses. Last year a great commercial university was established in Hamburg, of equal rank and privilege with the other great German universities, but the course is to be confined to commerce. Now another has been projected for Fraerkfort and Magdeburg, the latter with nine full professors, besides the necessary subordinate instrumental force, and the former is to be confined to commercial education. The full professorships are to be as follows:

1. Four professors of modern languages;
2. Two professors of political economy, commercial law, and commercial geography;
3. Three professors of commercial law, including commercial exchange, international law, and commercial geography;
4. Two professors of commercial geography and history;
5. Two professors of insurance, banking, etc.;
6. Two professors of technical physics and chemistry, and descriptive natural history;
7. One professor of state and personal rights;
8. One professor of commercial relations;
9. Two professors of mathematics.

10. The course is to be two years in length.

When we remember that these students coming to these schools have completed the course either in the commercial or the scientific, or "real" schools, which would place them equal to those who have finished the sophomore year in our American colleges, we can realize the high character of the new German colleges. The students are advised to spend at least one year in business before entering, and while in the schools, visits are made to factories and mercantile houses, with the instructors. The oldest of these colleges of commerce in Europe are the one at Antwerp and at Vienna. A history of the latter and a description of its work is given in the November numbers of the Penman Artis and Business Educator.

AMERICAN CONDITIONS

In America, because of the prevalence everywhere of good, free high schools, we can obtain an abundant supply of suitably prepared young men. Our college courses also are always four years in length, so that this length of time spent, after graduating from a good high school, is regarded as no hardship. We have here the conditions for inaugurating courses of study in preparation for a business life, which are fully the equal of the best of such schools abroad. Shall we now avail ourselves of this opportunity? Several American universities have already started at this work, and are giving the courses of study to the City of New York, Pennsylvania, California, Chicago, and Wisconsin. As the writer visited many of these schools abroad in 1899, and served as chairman of the committee of the faculty of the university in Wisconsin, in preparing the course of study there, he will give the work as there outlined for the current year, as embodying its ideas of what the work of such a school should be. He will give this in the language of Dr. William A. Scott, professor of Economic History and Theory in the university, who was made director of the new school.

WISCONSIN UNIVERSITY ASK FOR BUSINESS COLLEGE DEPARTMENT

This may be prefaced, however, by saying that we require the student to take a general
course in bookkeeping and accounts at some one of the business colleges of the country, of accredited standing, either before he enters, or during one or more of his summer vacations. This work will not be given in the university. In this way we hope to establish intimate, if not organic, relations with many such schools.

FIVE LINES OF STUDY ON THE NATURE AND WORKING OF OUR INDUSTRIAL ORGANISM

"In working out its programme the faculty of the university of Wisconsin asked itself the question whether there was a young man who, in the immediate future is to carry to a successful issue the great commercial enterprises of the United States? Its answer to this question is in substance affirmative.

He should be familiar with the nature and workings of the industrial organism of which he is to be a part, and through the manipulation of which he must accomplish his ends. In order to give him this familiarity, the following five lines of study are offered:

1. Courses in commercial geography which deal with the sources and distribution of the raw materials of manufactures and commerce, the localization of the most important branches of manufacturing industry, and of the cheap routes of commerce, and the circumstances which determine, and from time to time, modify their localization.

2. Courses in transportation in which the student studies the transportation systems of the most important countries of the world, including their railroads, canals, and ocean steamer lines, the various methods of transportation of goods for transportation purposes, employed in different countries; methods of rate-making; the various systems of government ownership and control; consolidation and pooling; traffic organization; and, in particular, the characteristic features of the transportation system of the United States.

3. Courses in money and banking, which are designed to acquaint the student with the nature and functions of money and banks, the monetary systems of the great commercial nations; the laws and methods of foreign exchange, the various kinds of securities used in international and domestic commerce; stock markets; bi-metalism and monetaryism, and the history of the currency systems of the chief commercial nations.

4. A course in business organization and management, which might perhaps better be described as a course in private administration, to distinguish it from the courses in public administration, which are given in the departments of political science of our universities. This course includes a study of the various forms of business organization, such as corporations, partnerships, private business enterprises, and public administration; the organization of commerce in its various branches, including the various classes of middlemen and the markets for various sorts of products, and the methods of organization and management of typical concerns in the various lines of industry.

5. Courses in economics and economic history. It is impossible to understand existing institutions without the study of the circumstances that gave them existence, and which from time to time modify their character and forms. Hence the necessity of courses of this sort. The study of economic history familiarizes the student with the actual growth and development of industry, while the study of economics reveals to him the principles involved and the real nature of the forces with which he has to deal. In these courses emphasis is laid upon the history of commerce and upon the theories and the practices that have affected the commercial policy of nations.

The purpose of these courses is to give the prospective merchant a knowledge of the various processes through which the chief articles of commerce have to pass before they reach their finished state. This sort of knowledge is presumed to furnish in the form of courses in what it calls the materials of commerce, which courses will be carried on in connection with a commercial museum. The university plans to establish a museum about 5,000 economic plans, together with the various commodities manufactured from them, an excellent collection made by our School of Pharmacy. It expects to enlarge this collection in the immediate future, and hopes to be able soon to equip it with samples of the most important articles that enter into the commerce of the United States. In these courses in the materials of commerce will consist of a study of the history of the various commodities, from the raw material to the completed article, and will include a study of the various stages in their production, the transportation, and the prices of the goods, the costs of their manufacture, etc.

LAW COURSES

"III. A knowledge of certain branches of law is now a desideratum for the business man. Accordingly among the technical courses of the school, are included a course in the commercial law of the United States, courses in tariff legislation, laws pertaining to labor, capital, corporations, etc., and courses in the commercial law of various foreign countries with which the United States engages in commerce. All these are special courses designed to meet the needs of business men, and will not be so detailed and technical as the courses on the same subjects given in the law school for prospective lawyers.

MODERN LANGUAGES

"IV. The man who expects to represent an American business house in a foreign country should be familiar with the language in which his customers speak. In many parts of the world the business transactions are now in great disadvantage. Their agents lack a knowledge of the language, and are obliged to deal with their customers through interpreters. But the speaking of an announcement translated from English. This disadvantage has been felt to such an extent that foreign agents are employed in large numbers to transact business for American houses. At the University of Wisconsin that young men who expect to engage in the commerce of the United States in the immediate future should be equipped with at least one foreign language, and at least the reading and the acquisition of a reading, writing, and speaking knowledge of French, German or Spanish, a requirement in our School of Commerce. In addition, we offer instruction in the Chinese, the Russian, and the Spanish. We have so arranged our courses that it is possible for a student to acquire a second language if he so desires. In the instruction given in all these languages, our inspection is devoted to commercial correspondence and business and legal forms.

PHYSICS AND CHEMISTRY

"V. The sciences of Physics and Chemistry are used in industry in such a variety of forms that at least an elementary knowledge of both is essential for the good business man. Our course, therefore, includes a year of work in each one of these sciences. The course in physics is followed by a course in the generation and transmission of电, in order to make the student familiar with such a practical knowledge of the application of steam, electricity, and water-power to the conduct of business as will enable him to avoid the mistakes that arise from the nature of these processes.

The course in chemistry is necessary to the study of certain of the processes included in the manufacture of goods, and the establishment of the chemical and mechanical industries. The course in the latter subject is required for the student who expects to do business on a large scale needs to be educated in the best sense of the term, as well as equipped with the technical knowledge which the prosecution of his business requires.

We now approach the second and most difficult problem of my paper, namely:

II. How Shall Such Instruction be Given?

I have outlined above what I consider a fairly good course of study for a young man
who expects to engage in business in a large way. It goes without saying that the business in 5\r
\r
reason why they should not now establish departments of applied commercial science in colleges of commerce.

SCHOOLS OF COMMERCE IN UNIVERSITIES.

If these universities will set the pattern by establishing these higher schools of commerce as equal and co-ordinate departments. It will fix in the minds of our people for all time the significance and meaning of a "college of commerce" education, and of the degree Bachelor of Commerce, (B. C.) or better, Conferring a degree of C., S., which does not look and sound quite so antiquated. On the whole this would seem to be the best and safest method of starting the work in this country. It will at least avoid what is not so practical, or technical, at first, as it should be. The technical features of this work will be, of necessity, a matter of growth and development and will require time. Our critics must be patient with us for a few years. We have now neither books nor teachers in the field of school instruction in the ways and means of the business of commerce, but on the other hand, they must be grown; and what is great and permanent is always of slow growth.

WHAT IS IN NAME.

I think I have made it clear that this college of commerce is something quite different from the several large traveling scholarships, each of a value of $1,000,000. I did not conclude, from my study of many of these schools, that the instruction in the majority of them is of no value, or out of order, or that the courses of study were very broad or fundamental. They seemed to be engaged in teaching practical details rather than fundamental principles. However, I did not study the traveling scholarships, nor Besly in connection with the University was just instituted, and the new one at Hamburg had not yet been established. With the possible exception of a few of these schools, and one or two of the others thus far established, we can safely improve upon the colleges of commerce of Europe.

THE IDEAL AMERICAN COLLEGE OF COMMERCE.

Probably the ideal higher college of commerce in this country would be a richly endowed school, located in the business center to maintain such a school in connection with a commercial museum similar to that in Philadelphia (which, by the way, has not its equal for commercial uses in any of the great cities of the country). It would have long and wide chairs filled, however, by great masters, the faculty would have to be large, and the running expenses would be very great. The regular work, leading to graduation in a specified time, as four years, should be day school work, while a night school should be maintained for persons engaged during the day. The cost of maintaining such a school with an adequate faculty, would be at least $100,000 a year. It would be possible to maintain at the present low rates of interest, a productive endowment of at least $3,000,000, besides a permanent investment in land, buildings, museums, equipment, etc. As no provision has as yet been made for such a school, and as none of our large cities are likely to donate such large sums to this purpose, and as a union of state, municipality, and private interests, can be organized to carry on this, seems we must, for the present at least, rely upon the great universities for this new kind of technical education. And these seen now inclined to enter the field of the college of commerce, and enter the field of applied science, in their colleges of engineering, and there would seem to be no good

products he could here fortify himself against imposition by unscrupulous dealers.

WHAT THE TIMES DEMAND

But I think I have said enough to show:

1. That the times demand on the part of young American business men a higher and broader kind of education than has been obtained hitherto in this country.

2. That this kind of education should be of a high college or university grade, and that it should include certain subjects, a technical knowledge of which is essential to a successful business career, and

3. That schools for teaching these subjects can at this time be most wisely started under the auspices of our great universities.

Character Endureth Forever

December 27, 1899.

E. E. GAULDR, Beverley, Mass.

FRIEND GALDOR: The December number of the P. A. B. E. did not reach me until yesterday. It is an excellent number all through, but the thing that pleased me most was your editorial on the importance of character in our teaching. I hold that the school that fails to give its students a real idea of what character means has miserably failed to do its duty. It matters little if the student has not the knowledge or the means of obtaining, if the graduate is not in danger of moral bankruptcy, for which the teachers will one day be responsible. I feel that if you were to write by you the students get over a great deal of ground. In the first place, they have to avoid the risk of character firm and deep. Knowledge will vanish away, but character must endure forever. We need more editors like the one mentioned above, and more teachers who will realize the necessity of giving this life, and will who live and act accordingly. Give us more and still more.

Yours truly,

I. C. W. AMBROSES.

Care Penman-Artist and Business Educator.
Lessons in Vertical Writing

BY J. S. MERRILL, SUSP. PENMANSHIP AND DRAWING, INDIANA, O. I., PUBLIC SCHOOLS.

In making my bow to the readers of the PENMAN ARTIST AND BUSINESS EDUCATOR, I have no apologies to offer and no hobbies to ride, but merely to add my mite to the cause of Practical Writing as it pertains to Public School work under present conditions. In this lesson we shall find the capital and small letters and figures, such as we have used before and have found them wanting. These are given for study and as a basis for future lessons. They are not intended to be followed implicitly throughout all letter life but are to be used as a basis for an individual style.

I should not think much of a pupil who, even after receiving instruction continued to follow and practice exactly as he was taught. I should not think much of a pupil who ever does. No teacher or teacher ever does. We must adopt (adapt) writing to suit our individual tastes and the general make up of our physical differences just as much as we would solve problems, demonstrate propositions or choose a trade to our liking.

As to position, that has been illustrated so often that I need only say in this connection that I recommend the position with the paper directly in front of the body and the ruled lines parallel to the edge of the desk. Bend at the hips just enough to permit both arms to rest on the desk, holding the pen in the usual manner, letting the holder point somewhere between the elbow and shoulder. A good, free movement may thus be secured.

The person who establishes a good writing on this plan will be enabled to write reasonably well under almost any condition, and to this end we must labor, as even the poorest school room conditions are far better than the majority of the conditions under which writing must be done.

J. S. MERRILL

OUR GREATEST OFFER.

Send us only One Dollar and we will send you the following for Free.

1. A full year's subscription to the PENMAN ARTIST AND BUSINESS EDUCATOR.
3. A specimen of the Art of Writing Business Correspondence.
4. A specimen of the Art of Writing Business Checks.
5. A specimen of the Art of Writing Business Judgments.
6. A specimen of the Art of Writing Business Indorsements.
7. A specimen of the Art of Writing Business Assignments.
8. A specimen of the Art of Writing Business Agreements.
10. A specimen of the Art of Writing Business Bills.

WANTED! A first-class (male) teacher of the Dement Pitman System of Shorthand and the "Touch System" of Typewriting. Must be an enthusiastic, energetic, progressive gentleman, who can furnish A No. 1 reference. Prefer one who would eventually like to become a principal owner of one of the best equipped business colleges in the United States. This is a select institution and this opportunity is a great chance for the right party.

Address:

DEMENT PITMANIC

Care Zaner & Blasser

OHIO BUSINESS INSTITUTE, COLUMBUS, O.
To Lovers of Truly Elegant Plain, Ornamental and Artistic Penmanship

GREETING:

S. C. Malone, Author of the heading of this advertisement, as well as the Author of some of the most original and elegant engravings to be found in America, takes pleasure in announcing to the friends and patrons of Penmanship and Art, that he is about to publish for a period of ONE YEAR ONLY, each month, a Penman's Magazine to be known as

MALONE'S INTERNATIONAL MAGAZINE OF PENMANSHIP AND ART.

This Magazine will represent in Zinc-etching and Half-tone reproductions all of Mr. Malone's Masterpieces in Album and framed resolution work, which represent twenty-three years of close and most careful work, and many thousands of dollars cost of production.

The first number with its elegant title page, and a half-tone reproduction from Mr. Malone's Admiral Dewey Testimonial, which has at this time a place in the National Museum in Washington, D. C., and which cost One Thousand Dollars, will be to any subscriber to the Magazine, worth the entire year's subscription, to say nothing of the several other pages of Album Work, Alphabets, Ornament, flourishing, designing of borders, panels, Handsome initial letters, etc. There will be absolutely no space given to advertising. Each of the twenty-four pages will be devoted to the very highest class of pen and ink work with neat and appropriate letter press instructions. The subscription price of the Magazine will be $12.00 for the year, and no subscriptions will be received after March 20, 1901. The first issue is to be ready for mailing on April 20, 1901. To all who send ten dollars before Feb. 20, 1901, a receipt will be mailed in full for the twelve numbers of the magazine. Send money by P. O. Money Order or by Registered Mail.

Address all communications to

S. C. MALONE, ARTIST-PENMAN.

NO. 5 NORTH CHARLES STREET.
Baltimore, Md.
Lessons in Engrossing—by H. W. Kibbe, 181 Tremont Street, Boston, Mass.—Number Six.

This style of marking will be found useful for directing packages, engrossing lists of names and filling in diplomas when something a little stronger than script and not as expensive as German or old English text is desired. Hold the paper so that the lines are parallel with the edge of the table. Three guide lines are needed: top, head and base. Make the capitals three-eighths and the minimum letters three-sixteenths of an inch high for ordinary practice. Japan or any ink will answer while learning the forms; but for engrossing use India ink.

There has been quite some discussion why vertical writing was discarded in the New York Public Schools. The reason is not hard to find if the faults of the existing systems are closely looked into.

**Why Vertical Failed**

This paper is from one who has been in the profession for nearly two decades—from one who is amply able to speak from experience and observation—Editors.

**Publications Received**

This course seems to have the correct foundation for an extensive actual business practice. The main features are the thorough check system; the handling of all commercial papers in a real estate and insurance office, and through the entire course the subject of correspondence is introduced, so that this valuable branch receives theory and practice combined. Another thing which notice is an effort to get a "corner" on corn and wheat. The terms for a sample copy are fifty cents, with privilege to return after examination. Complimentary if adopted.

"Young's Complete Directory of Business Schools," by the School and Office Specialty Co., Massillon, Ohio, is a very valuable publication for all who desire the names and addresses of such institutions. We have found it to be very complete, and as advertised.

"Typo-Union or Practical Typewriting" by Bates Torrey, F. S. Webster & Co., 342 Congress St., Boston, Mass., is a very extensive work of 675 pages. It is profusely illustrated by diagrams and pictures, showing position, key-boards, folding, etc. A large portion of the book is printed in 1-line type, and it seems to the subject of type-writing by this new and improved method is well set forth for the learner.

Business Correspondence taught by mail. Circular free to home students who want to improve their letter writing.

J. D. Long, Boulder, Colorado.
Be it known that

Jeanette Howser

The price is very low. One hundred or more persons can be successfully shown in the group. Full size of this diploma is 18x24.

Published only by SHEPARD & CO., Columbus, O.
Lettering and Designing

Number One

BY E. L. BROWN, ROCKLAND, ME.

Commercial designing pays, and the young penman who directs some of his energies in this direction will never have cause to regret it. A designer must, of course, be able to produce a good work in order to command high prices and keep busy. In this vocation, as in all others, the room is large at the top.

We shall include in these lessons a great variety of designs for various purposes, including diploma, catalogue work, advertising matter, etc. Initials, head and foot pieces, and other embellishments will be given attention.

OUTFIT

Some coarse and fine pens, paper or cardboard with a smooth surface, and some good black ink (India ink always preferred), a drawing board and square. With the exception of the last articles, this outfit can be procured at almost any stationery store. The drawing board and square can be obtained of dealers in draughtsmen's supplies. A joiner can make these articles at small cost. They are not absolutely necessary, but they are very useful and are used by all designers.

TORCH AND WREATH

Symbol of glory and enlightenment. First draw vertical line, then place point of pencil compass on this line and draw parallel lines to govern width of wreath. Draw the torch, using the vertical line as the centre. See that the sides of the wreath are in keeping with each other. The ribbon floats gracefully downward from the knot. Study the light and shade. Suggest the same in pencil before inking. In inking use a Gillott's 170, or a similar pen.

Design number two presents a strong black and white effect. Study with care. Draw circles with compass enclosing the lettering; then roughly suggest position of lettering only, and when this is properly arranged, finish up in detail preparatory to inking. Fill in the broad surfaces with a stub pen, or a No. 2 Soennecken lettering pen. The ornate border looks easy but must be given careful study in order to make it nicely. Outline with care, then add a few shade lines and some solid black here and there to give character.

If you want to take a practical course in Business Correspondence, send for free circular describing my course.

J. D. Love, Boulder, Colorado.
Newspaper Illustrating

Portraits

BY E. A. PORTER, CHICAGO, ILL.

Pen and ink portrait drawing, from photos, is comparatively the easiest of all work done in newspaper illustrating, and, for that reason, it is a most desirable subject of study for those who wish to get results in a short time, and also for the ambitious students who find it difficult to curb their patience while traveling the rough and narrow path of creative art (original illustration). It is easy because it requires the skill of the copyist rather than the so-called talent and genius of the really great artist.

As this subject can not be covered in one short lesson a few helpful suggestions will suffice for the present.

In making the outline of the portrait, free hand work is the best for training the eye, but if found too difficult, use a pantograph, and do not touch the pen or ink until drawing is very carefully finished with pencil. Then select a good newspaper cut as near like the photo you are working on as possible and complete your picture accordingly. Give careful attention to the forced shadows under eyes, nose, lips and chin, and finish your work up strong and black.

Study good pictures, I would specially recommend Stein's work in the New York Herald. Note the lines showing texture of hair and how they differ from the lines that represent wood and cloth. This is technique and is well worth the time spent on it.

GREGG'S

SHORTHAND

Its success is unprecedented in the history of business education.

As stated in the Penman, Artist, and Business Educator for October, it is "capturing a good many of the shining shorthand lights of the profession."

With such men as G. W. Brown, Chas. M. Miller, Geo. P. Lord, W. C. Stevenson, C. M. Bartlett, L. E. Musselman, and a host of others, singing its praises, it is not necessary for us to say much.

But do not take the word of anybody—investigate for yourself. Impartial investigation always means adoption.

Modern Publications for Pennmen, Artists and Teachers

Our publications are universally recognized as the best. They are very low considering the quality and character of the work. All books are sent postpaid by mail or by express.

Portraiture—the best book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book, luxuriously printed and bound, containing hundreds of examples.

The New Zanerian Alphabets—a guide to engraving, containing a great variety of alphabets, designs, such as diplomas, resolutions, etc., with complete instruction. A substantial book bound in cloth

The Zanerian Theory of Pennmanship—a thought-provoking work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should read this booklet of 156 pages, cloth binding.

Zanerian Alphabets in Ornamental Lettering—a text written by the one who has invented the Zanerian method of learning penmanship, C. F. Zaner, in all the simplified alphabets. It is the best book for home learners.

Compendium of Simplified Vertical Pennmanship—in book form, and by far the most thorough and complete instructor in vertical writing yet published.

Manual of Simplified Script—a work containing a thorough, graded course of photo-engraved copies from the pen of that master penman and artist, C. L. Zaner, all in the simplified script. It is the best book for home learners.

Pen Studies—a portfolio of twenty-four pen drawings, consisting of objects, birds, fruit, scenery, etc. It begins at the beginning showing the pupil how to use the simplest strokes and to gradually evolve the finished design.

Zaner’s Gems of Flourishing—a book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the student how to make the simplest strokes and progresses with a great variety of designs, showing the highest degree of skill attained in the art.

Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published.

Progress—a master’s piece in flourishing. It represents an eagle, graceful and lifelike, winging himself through intricate curves and branches. It is one of the finest of this design hangs on the wall of the Zanerian Art College. It is an "animal" in the best sense of the word. It is a Spanish bird, but the American Eagle—of which it is a copy, made by C. L. Zaner, is a bird of the highest degree of skill attained in this art.

Light and Shade—a manual on drawing by Mr. Zaner. It contains 48 pages, 5 x 7 inches, of illustrations, and shows, simple, instructive text. It is just what home students need, and what all others who are not at home in drawing need to make them feel at home. Any one can learn to draw by the aid of this book. Only 25 cents, postpaid.

The illustrations are lithographed from actual pencil drawings, and are much finer than photo engravings.

Sample pages of Portraiture or Sketching from Nature mailed for 10 cents, prepaid. Address:

ZANER & BLOSER, Columbus, Ohio.
IN DIFFICULTY

The Sadler-Rowe Company

Not financial difficulty, but the difficulty of moving into another building and at the same time filling all orders on the day received, which is the standing rule. An unexpected increase in our business, far beyond our facilities to handle it, compelled us to move in the midst of the season to the

Building, No. 9 West German Street,

Consisting of four large floors and basement. The entire building will be occupied by the manufacturing and shipping departments and the offices of H. M. Rowe, Sec.-Treas. Pres. W. H. Sadler remains in the suite of offices 12 N. Charles St.

THIS IS TANGIBLE AND CONVINCING EVIDENCE OF THE POPULARITY OF THE SADLER-ROWE COMMERCIAL PUBLICATIONS.

In these days of keen competition only books of undoubted superiority in authorship, method, practicability and mechanical construction can hope to find a large sale. The history of our growth has been phenomenal in the annals of the publishing business. It has been attained solely by the favor shown our books by teachers and the educational public. That favor would never have been received if not deserved, still we are deeply grateful and appreciative.

WE EXTEND OUR BEST WISHES AND THE COMPLIMENTS OF THE SEASON TO OUR CUSTOMERS AND FRIENDS THROUGHOUT THE STATES AND CANADA.

Baltimore, MD. SADLER-ROWE CO.
Modern Publications for Penmen, Artists, and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books are sold postpaid by mail or by prepaid express.

Portraiture—The best book yet published that teaches how to make portrait Lithographs. It's a large and beautiful book, luxuriously printed and bound, containing hundreds of examples and explicit instructions.

$1.50

The New Zanerian Alphabet—A guide to engraving, containing a great variety of alphabets, diplomas, resolutions, etc., with complete instruction. A substantial book bound in cloth.

$1.50

Zanerian Theory and Practice—A thorough-going work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should read it. A book of 156 pages, cloth binding.

$1.50

Sketching from Nature—A most beautiful book that teaches how to sketch from nature. It contains a large number of examples and instructions. Get this book and go out and learn to see and sketch nature. Bound in cloth.

$1.50

Lessons in Ornamental Penmanship—A work in slip form embodying the $10 mail course formerly given gratis with some extra plates. A thorough and complete work for home learners.

$7.50

Compendium of Simplified Vertical Penmanship—In book form, and by far the most thorough and complete instructor in vertical penmanship yet published.

$5.00

Manual of Simplified Script—A work containing a thorough, graded course of penmanship, copied from the pen of that master penman and artist, C. P. Zaner, all in the simplified style. For rapid business purposes many persons believe this style of writing unequalled.

$5.00

Pen Studies—A portfolio of twenty-four pen drawings, consisting of serifs, objects, birds, fruit, scenery, etc. It begins at the beginning showing the pupil how to make the simplest strokes and to gradually evolve the finished design.

$5.00

Zaner's Genus of Flourishing—A book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the student how to make the simplest strokes and exercises and finishes with a great variety of designs showing the highest degree of skill attained in this art.

Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published.

50c

Progress—C. P. Zaner's masterpiece in flourishing. It represents an eagle, forceful and lifelike. Written himself through intricate curves and branches. It is on the finest of plate paper, 22 x 28 inches. The original of this design hangs on the wall of the Zaner Art College, and is valued at $100. 

"It's great." "It's certainly a bird." Some of the expressions have only been made on seeing it in the rough number also that it's no Spanish bird, but the American Eagle—old national bird of ours that must now be especially prized.

In tube:

$5.00

Light and Shade—A manual on drawing by Mr. Zaner. It contains 40 pages, 5 x 7 inches. Illustrations, and plain, simple, instructive text. It is just what home students need, and what all others are not at liberty of drawing need to make them feel at home. Any one can learn to draw by the aid of this book. Only 25 cents postpaid.

$5.00

The illustrations are lithographed from actual pencil drawings and are much finer than photo-engravings.

Sample pages of Portraiture or Sketching from Nature mailed for 2c stamp. Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks.

ZANER & BLOSER,
Columbus, Ohio.

The First Prayer in Congress is a 11x17 specimen of Engrossing by C. P. ZANER and represents his best Roundhand Lettering and Drawing. Independence Hall is drawn artistically in the margin. Price, postpaid, in tube.

Lessons in Practical Writing by C. P. Zaner.

Habit. Writing is habit: good, bad, or indifferent. At first it was thoughtful, voluntary, and novel. As a habit, it is thoughtless and unchangeable. Habits once formed are difficult to break. As a rule, it requires more effort and thought to break or discard a habit than to form a new one. This is due to two causes. The first is that a habit is both a brain and muscle rut. Ruts are difficult to get out of but easy to get into. The second reason why habits are more easily formed than reformed is that as a rule habits are formed during our plastic years, and the reconstruction is frequently attempted during our mature years. Now is the time that you can most advantageously learn to write well. Delay is dangerous. A little care now, a little forethought and proper practice, and a good handwriting will be your companion for life. To write well requires but little, if any, more energy than to write poorly. Indeed the best writers use less energy than the poor ones.

No. 42. Employ an easy, swinging, rolling motion to make this letter. Keep it large and full at the top. Join them into an exercise using an apparently easy though graceful motion. Write the word penmanship with equal spacing and finish the small p as carefully and freely as you begin the large one. Shift the elbow two or three times in crossing the page, usually between words. Write the sentence carefully and study it critically and thoughtfully. It delegates to oblivion the idea that writing is within the reach only of the gifted few.

No. 43. Practice the retracing exercises with freedom, care, and arm movement. Retrace the first part of R and R quickly, and finish the letters with an easy, rolling, graceful motion. Write each word in the sentence without raising the pen, and raise it but once in the word Runninghand. Keep the center loop in these capitals small and drop to or below the line with the finish of R so that it will not resemble P. Never practice with a sluggish motion or use the fingers to excess.

No. 44. These are optional capitals. Try them. If there are any you prefer to, and can make better than, the ones previously given, be free to adopt them. There is no one way for all, but there is some one way that is best for each. This takes time to discover, and no one can discover all of these things but the individual himself. A teacher can select and suggest, but the pupil must know whether the letter fits or not. Be careful to select those letters which you not only like, but can make well. Endeavor to make a set of capitals alphabetically arranged. Do not be content until you can make the entire alphabet well. Capitals need to be reduced to a certainty the same as the small letters.
The test of good writing is in actual service, not in practice. The supreme test is in page writing rather than in the practice of letters or words. The receipt herewith given is a good test of practical skill. Study the arrangement, punctuation, etc., and then proceed to write it once without stopping. Then see where the most glaring mistake is and determine what is necessary to correct it. Practice upon the defective part until you have overcome it, then write the whole receipt. Again select the most conspicuous or serious fault and correct it, and again proceed to write the entire receipt. Keep this up until the whole receipt presents an improved appearance.

Uniform size in writing indicates uniform movement and control. If your penmanship is irregular, you need to cultivate an easier mode of writing or greater control of the movements you employ. Capitals should be small and plain rather than large and scrawny. Good, plain writing is not unlike good, plain speaking, and poor penmanship is not unlike stammering or stammering speech. Do not, therefore, stammer with the pen, as it is next to stammering with the tongue—both usually the result of habit and poor teaching.

Letter Writing is the test of good penmanship. To be able to write plainly and think clearly at the same time, one needs to be schooled in skill as well as in English. While the typewriter has relieved the pen of much that became drudgery, it has not relieved it altogether, nor will it for some time to come. Good writing is as much in demand as ever, and no young person can therefore afford to start out in the world with a poor hand.

Study carefully the arrangement of the letter, the beginning, body, and ending. Learn to have order to your letters, whether it is strictly formal or not matters less than that it has order of some kind and that it is neat and free from blots. Neatness is a charm no one should fail to acquire as it makes poor penmanship look good, while the lack of it makes good penmanship look poor. Let us see who will send the best copy of the letter herewith, also the best original letter.
Hoping it will please in every particular, and that we may receive your favors in the future, we remain,

Yours truly,

[Signature]

Criticisms

D.C.D.—Your work is improving. The heaviness of the down strokes are due to the stub pen and not to pressure. Your penmanship is very practical as it now stands, but if you wish it to become more professional and accurate you will do well to adopt a pen not of the stub pattern. For purely business purposes the stub is O.K. The down strokes in your b's and f's may be more curving and the turn of the base more rounding.

Marie—Your penmanship is very good. You have more than usual talent. You can become an expert penman. Curve the down stroke in small o.

Wilson, Pa.—You write a good accountant’s hand. Spacing between a and s too wide. Loop small e. Close small o. Excuse me, I do not belong to the "Professor" class.

Van B.—Your movement is a little wild. Don’t throw final stroke of word so high—it looks scared. Make last part of m and n same height as first. Loops a trifle flat. You’re improving and writing well.

L.G.C.—You write well. Loops of Z not on base line. Your work is professional in many ways. Come again.

K. P. H.—Make o more rounding. Final turn in b too angular or broken. Loop in f too narrow. Fish-hook part of I carried too far to left. All in all you are doing splendidly.

C. V., Mich.—Keep your writing resting on the base line. Some small-letter turns are too rounding while others are too angular. Spacing between letters should be more uniform. You are doing nicely.

F. H. Y.—You do not exercise enough care in your practice. Loops below line too long and big. Your r exercise looks like p because of poor spacing. Your a's look like a’s or o’s. Exercise more control over your movement. Your a’s look like a’s. Your small a is too small. You are improving, but slowly.

Lessons in Professional Business Writing

BY H. B. LEIDEN, CLEVELAND, OHIO, WITH SPENCERIAN BUSINESS COLLEGE

In the accompanying lesson we wish to show you what is meant by wide and moderate spacing.

Judging from the many wide space business letters and lessons given in penmanship papers, I am of the opinion that many amateurs as well as some professional writers, have come to wrong conclusions, and are perhaps leading others into the same erroneous pathway. When a specimen is reproduced in the penmanship paper it is supposed to be the writer's best; if not it should be, and it is this which has led me to believe that extremely wide spacing has been adopted for practical every day work.

Wide spacing has its value and proper connection with penmanship, and all must admit that it is an excellent practice to develop the progressive or sliding motion of the hand. Owing to the fact that writing is done on a straight line to the right, it is absolutely necessary that the movement in that direction should be free. I know of no exercise which can fill the bill so completely as that of space writing, but too much spacing should not be carried into practical work. I fail to see the merit of wide spacing beyond distinctly separating the letters. I believe in spacing more than many writers do, but not to the extreme; just where the line should be drawn is a matter which good judgment must decide.

The flood of wide space copies given in the various penmanship papers during the past few years has been a means of getting many cramped writers out of the rut, and will do much good in time to come, but it should not be carried to extreme just because the movement is free.

The first copy is a specimen of writing which would not do for average every day work. The second copy is what I call moderate spacing, and is, in my judgment, about right for average work. It is most excellent practice to space considerably for fifteen or twenty minutes, and then moderate your writing to a space of about two to one, in other words, space between letters should be one-half to two of height.

By spacing it does not mean that the word should be longer; far from it, but much narrower letters and more space between, viz: 

\[
\begin{align*}
\text{minimum union} & \quad \text{minimum union} \\
\text{minimum union} & \quad \text{minimum union}
\end{align*}
\]

You will notice that as much or more
space is covered in the first line as in the second, but the latter is much more legible. Most of the best commercial schools pay considerable attention to space writing. Packard introduced it into his school a number of years ago and it is still being taught in that school with magnificent results. Professor Huntsinger, one of America's most accomplished teachers, is an ardent admirer and teacher of the same style of writing with no less flattering results, and, in fact, it is a strong point of the penmanship department of many first-class schools.

In my own experience I have helped scores of miserably cramped writers to a legible, beautiful and rapid style of writing, by giving them space exercises as well as various other movement drills.

All good teachers of writing must admit that no one can learn to write a good, substantial, practical hand without a free movement of the forearm. A good writer seldom comes from the public schools, largely because of neglect in developing a free and easy action of the forearm. The form of the letters may be acceptable, but the execution is laborious and nervous.

Sufficient movement exercises must be used in connection with regular writing lessons to insure quick and easy action of the forearm. Finger movement is by no means excluded in the execution of the best kind of writing, but used alone, develops into a slow and cramped style, of which we see enough in schools where penmanship gets no attention, or but sparingly.

The best writers in America come from Business Colleges where good penmanship is made one of the requirements of the curriculum.

Go into business houses and banks everywhere and you will find that the best writers there availed themselves one time or other, of a thorough course in business and penmanship in some good commercial college, or were inspired and taught through others.

It is not to be expected that good writing can be done standing in the ware-room, machine-shop or on a running train. There are circumstances which will unavoidably compel one to write while standing.

Clerks, bookkeepers and others who have much writing to do are not in want of a chair or sufficient desk room to do credit to their skill and business requirements. There is but one last line on the page, and I have profound sympathy for the fellow who can't contrive some means by which he can finish the bottom of the page creditably.

Much more forearm movement is used in business writing than even some teachers of penmanship know of, and one does not need half of his desk or ledger to demonstrate the fact that he learned "Muscular Movement" at some business college. Forearm movement, as applied to business writing is very short in action, seldom more than one-half inch in height forward and backward action, and is free to move right or left across the page.

Now and then we hear of a penman who, after ten or twelve years' experience in teaching writing, discovers that he has being using the wrong movement or style of writing. It may be so, but the teacher who cannot adjust his instructions day by day to meet the requirements of the profession and business world can hardly be called a reliable teacher of penmanship. The careful student or teacher makes no radical changes, but he always keeps in touch with the best methods and applies them daily.

The same movement and style of writing that made Flickinger, Patrick, the Spencers and many others stars of the profession, is just as applicable and fitting to the penmanship student today as then. Who can dare to state that the teaching of these accomplished peers of the profession were wrong? Thousands upon thousands of fine business writers have been turned out of their class rooms.

If business colleges are not supplying the right kind of writers for the business world, neither are they furnishing the right kind of bookkeepers or stenographers.

It would be mere folly to imagine the existence of such affairs, for no commercial school could live a single year under such fruitless circumstances. Business college graduates are in great demand because of their thorough qualifications in bookkeeping, penmanship, shorthand, etc., and the fact that the most energetic and prosperous business men employ them is sufficient evidence that the schools are furnishing the right kind of material.

H. B. LEHMAN.
Lessons in Artistic Penmanship

Number Six

BY J. E. LEAMY, TROY, N. Y.

At this stage of your practice close attention to detail is absolutely necessary for rapid advancement and improvement. We many times deceive ourselves by thinking that we know precisely and exactly the form of some letter; but a test at penciling that form proves that our idea was only a faint, gloomy, dreamy one. We may have had some idea as to generality but none whatsoever as to detail. We must not only know the general form of the letter, but we must know the shape of each part of the proportion of one part as compared with another, the position of each oval, etc. Now the best way to acquire this knowledge is by pencilling the letters out slowly and carefully with a medium hard pencil, placing the shades, ovals and flourishes just where you think they should be, and then by comparing your results with forms that are recognized as standard work along this line. Such work will improve your knowledge of form and reveal many wrong ideas that heretofore were unnoticed.

It is not only necessary that you get down to detail as regards form, but it is desirable at this stage of your practice that you study your execution carefully. Although we, individually, make all capitals with the same movement of the arm and bring into action the same muscles in the formation of the small letters, yet there are "side movements" that can be used to advantage in making some of the more difficult forms. These "side movements" include such work as the shifting of the paper and arm, raising the pen at certain points, etc. These little side movements differ as individuals differ, and each one of you might make a total failure in applying one with which I am successful.

Therefore, study form and execution with a critical eye. Raise the pen often in the small letters, and do not hurry across the page. Take your time between forms and strive for strength and delicacy, being careful not to sacrifice the form for the letter.

What was said in lesson five must necessarily apply on this month’s work. Keep all shades short and clean cut and make initial and final ovals full and well rounded. Watch your ink and pens. It pays to keep them in good condition.

Criticisms

Miller, St. Louis—Loops too sharp at top. Do not stop there. Keep the pen moving and think about getting back to the base line. You seem to shade the down stroke occasionally. Don’t do it. Loops below are good. Use considerable hinge action on both. Pen either worn out or too coarse.

Avery—For a business hand your writing is good save that it is a little slow, but as artistic it is not worth much. Strokes and touch too heavy and you do not raise the pen often enough. If you desire to acquire an artistic style you must study delicacy, curvature, light and shade. Try it again.

Killen, Miller’s Park—Your work is too rapid. Not thoughtful enough. Practice is such as would be required for business, not artistic writing. Put in considerable time in strengthening and slowing up your movements, and link of each stroke as you make it. This will prevent too much haste.

C. C. C.—You do not raise the pen often enough in small letters to secure accuracy. Bear in mind it is thought as well as execution. It requires close observation and pains-taking effort in every detail. The finish of the v, d, and p is not quite the care and attention. Watch them. Capitals as a whole are good. Your work right through is a trifle large but shows considerable ability.

Clinton, Ky.—Keep capitals on same slant as small letters, work on loops above the line quite good. Shunt them more by using considerable hinge action. Lines will be thinner than when you use the fingers too much. You are improving. Flourish very good.

D. W. J., Spring Garden—Strokes! I should say so. Doing splendidly. Yes, ink and paper are satisfactory now. Square top of t and d more carefully. Loops above the line are excellent. Your "hook" second part of k too high. Watch it. Quality of stroke good. Study detail carefully and watch spelling. Come again.

Divon, Albany, Ind.—Turn at base line in c too rounding. Work on capitals shows that your movement is wild and uncontrolled. Study form of each letter carefully. Shade on capital A too long and, in fact, it is too long most of your capitals. Top loop in capitals C and H too large. Loops below the line not slanting enough. Retouch shade on small t, d, and p more carefully. See no reason why you cannot succeed. Thin your ink.

C. W. C.—You should use better stationery in this work. The best of material is none too good. Work still lacks strength and sureness; you have not mastered the first essentials—principles and exercises. Find some good movement exercises and practice on them. You have created a strong, free movement of the arm. That is the only road to success in this line. Do it.

Powers—And did’st thou expect to climb the ladder of success without once stumbling on the round of discouragement? Never, never. That same discouragement reveals desire and determination. Your capitals are excellent in quality of line, light and shade and movement. Your Cs, G’s and E’s and D’s with special reference are good. Top loop in L too large and in D too small. As a whole your work is now quite professional.

LEAMY.
The next meeting of the 

E. C. C. H. 

Association will be held in the 

Bryant and Stratton Business 

College, Providence, R. I., April 5th and 6th. 

The energetic Executive Committee has 

arranged an unusually attractive program, 

which appears in another column. Every 

commercial teacher within three hundred 

miles of Providence ought to be present at 

the meeting. It is good to meet and become 

acquainted with fellow workers; it is broad- 

ening to consider the views of others who 

are attempting to solve problems similar to 

ours; it is inspiring to come into touch with 

men of such high moral force as is Mr. W. X. 

Ferris, of Big Rapids, Mich. The subject 

Mr. Ferris has chosen is one worthy of his splendid ability. 

It will be worth the cost of a trip to Provi- 

dence just to attend the banquet. Mr. L. L. 

Williams, as toast-master, with witty Mr. 

Warr, of Moline, Ill.; eloquent Mr. Ferris, of 

Big Rapids, Mich.; gracious Mr. Shaw, of 

Toronto, Canada; cordial Mr. C. C. Beale, of 

Boston, and Mr. W. S. Murray, the accom- 

plished gentleman who has charge of the 

English department at Packard's, these 

compose a staff that will make Friday 

evening, April 5th, a memorable occasion for 

all who attend the banquet. 

Our next number will be of unusual interest to every com- 

mercial teacher. The leading 

article in this department will be an illustrated description of the 

excellent School of Commerce of the 

Philadelphia Central High School. Those 

who care to know what is being done in one 

representative High School, in the teaching of commercial subjects should not fail to 

get this number. 

"Bookkeeping for Business Schools," will be discussed by W. F. Gieseman, of Des 

Moines, Iowa. He has some good ideas about registration, classification, arrange- 

ment of accounts, etc., and has kept the 

business-man, etc., apprised. 

In the next number some space will be 

devoted to the consideration of the question, "Does Higher Education Help or Hurt a Man in Business Life?" We are 
glad to say that we have obtained the views of some very eminent business men on this subject. Their opinions make inter- 
esting reading particularly for those who 

heard the discussion of Prof. J. B. Johnson's 
paper read at the Federation meeting in 

Detroit. 

Other interesting features will make the 

April number one of our best. Do not miss it. 

At the joint session of the 

American Economic and Amer- 

ican Historical Associations in 

Ann Arbor, Mich., during hol- 

iday week, three important addresses on 
"Commercial Education" were delivered. 

Two of these will appear in early numbers of this paper. The third was delivered by 

Prof. Lindley M. Keasby, of Bryn Mawr 

College. He very courteously consented to 

prepare a special article for us, for which 

we gladly yield space here. 

The Study of Economic Geography. 

Commercial education is designed to fit 

young men for a business career, but this 

is no reason why it should not be strictly 

scientific. Law schools train young men 

to be lawyers, engineering courses teach 

them how to build bridges, but, in both 
cases, the theory precedes the practice. So 

it should be with commercial education. 

Economics: a Basic Science. 

What then, is the basic science of business? Obviously econ- 

omics. The practical courses now given in our commercial schools are all very well in their way, but 

to be of real benefit to those who wish to be prepared for 

the fundamental course in economic theory. 

Before passing over to the details of busi- 

ness procedure, the student should first be made familiar with the laws of demand 

and supply, competition, monopoly, etc., as worked out 

by economists. Economics should, in short, be set first in the list of scientific studies 

required in the curriculum of commercial education. 

Descriptive Study Needed. 

Between the science of econ- 

omics and the practical courses in 

accounting, banking, book- 

keeping, and the like, there 

should also be inserted a series of descrip- 

tive studies included under the general 

title of economic geography. By this I 

mean a descriptive study of the natural 

resources of the earth and their historical 

application, through the processes of pro- 

duction, distribution, and exchange to the 

satisfaction of human wants. Other scien- 

ces are supplemented by descriptions of 

this sort. Astronomy, for example, is suc- 

ceeded by mathematical geography, which deals with the earth as a whole, exhibits its 

nature, and determines its relation to other 

members of the solar system. Geology is 

followed by physical geography, which de- 

scribes the superficial properties of the 

earth, its rigid lithosphere, its mobile hydros- 

phere, and itscircumambient atmosphere. 

Biology is likewise supplemented by bio- 

geography, which recognizes a vital purpose 

in nature and regards the world as adapted 

to the support of life. But the science of 
economics, which deals with the production, 

consumption, and distribution of wealth, is, strange to say, followed by no such de- 

scription. 

For the sake of this descriptive study, students are obliged to pass directly from abstract 
or conceptual economic theory to the consid- 

eration of concrete cases of business practice, and on this account often find it im- 

possible to fit the theory to the facts or the facts to the theory. 

The remedy lies in an historical considera- 
tion of economic evolution. The earth should be regarded from the economic point of view, that is, as subjected to the production of wealth, the extension of commerce and colonization, or in a word, to the develop- 

ment of humanity. An historical account should then be given of the uses men have made of these natural resources in elabor- 

ating the structure of civilization. Econo- 

mics as the antecedent science would pre- 

sent the principle of human development and solvency as a guide to such a descriptive 

study. Mathematical, physical, and geo- 

graphy would supply the necessary en- 

vironmental data, and history would furnish the facts of economic evolution. So there you have a course in economic geography which would set 

before the student a consistent account of 

growth of material civilization. 

Enlarging the Student's Horizon. 

When this is done, students in commerce will be able to grasp the meaning of modern business enterprises and understand the relation of present economic activities with past his- 

tory. It is all important that young men preparing to take 

an active part in business life should realize that they are entering upon an enterprise 

which is as old as mankind, and that they 

will hold their share to the work of their predecessors in building up the structure of civilization. They 

should, of course, be technically trained for 

the task of practical courses of instruction 

but besides this they should also under- 

stand the principle of material development and appreciate the magnitude and excel- 

lence of the efforts already exerted by man 

in making the earth a fit abode for human- 

ity. Otherwise their horizon will be con- 

tracted and they will regard the business 

world from too narrow a point of view. 

Cogs or Wheels? 

Owing to specialty and modern division of labor, workers are too apt to consider themselves mere cogs in the great money-making ma- 

This tends to make them sordid and selfish. Instead, they are taught to look upon business life as the elaboration of an historical development making for the useless decorative; they will enter the lists with more enthusiasm and under- 

standing, and labor with their fellows for the extension of civilization. 

It is for these reasons, then, scientific and pedagogical, that I should set economic geography first in the list of required sciences, and insert economic geography as the funda- 

mental descriptive study in the curriculum of commercial education. 

Bryn Mawr, Pa., Jan. 1, 1901.
The Commercial School
Its Relation to the Public School and Schools of Higher Education

T. W. BOOKMYER, SANDUSKY BUSINESS COLLEGE, SANDUSKY, OHIO.

[Farad paper before the Federation, at Detroit, December 29, 1900.]

FELLOWS MEMBERS AND FRIENDS: In presenting this subject for your consideration I have but two regrets to offer. The first is, that the class of commercial men to whom we address a portion of this paper are not in attendance at this meeting; or, for that matter at any other meeting designed for the advancement of the cause of commercial education. The other regret is, that, in addition to their not being here, there is no likelihood of their ever knowing what is done or said here in this convention. It will likely never come to the attention of those who sit so much in need of regeneration, unless our publishers of the official organs of the various departments head them on their subscription list. If by chance there be any here whose policy it is, they will help him to defend his position in the discussion of this paper.

COMMERCIALISM, KEYNOTES OF THE AGE

The time for discussing the relations of the private commercial school to other institutions of learning is most opportune, made so by the advance and the trend of thought during the past century.

We are living in a distinctively commercial age. Commercialism dominates, to a great extent, our schools, the church, society, and the state. Whether this influence is always for the advantage of the cause of education and as factors in molding public thought, we owe it as a duty to the profession, and the phase of education for which we stand, to discuss most thoroughly the relation of that cause to the present departure from other existing forms, and the tendency resulting therefrom. If the trend is in the direction of a more earnest recognition of the work now being done at our various institutions from the different points of view, it is clearly the right. It is clearly the right for the public schools, and the public, to hold up and commend the work that is being done by the schools and colleges in this branch of education.

COMMERCIAL EDUCATION OUTFITIN PLACE IN THE PUBLIC SCHOOLS

I hold not because of any personal interest, that commercial education should not be made a public charge, nor provided at the public expense. I hold not that it is not possible to arrive at a conclusion that can be arrived at, after careful thought. The line must be drawn somewhere, and its true location is between the general and the technical. This is made a subject of charge, and you consistently stop? There are dozens of other subjects that become more general and are of more frequent occurrence in the life of mankind than is commercial education. As well, or better, include dentistry in the public school course, as more of us are doomed sooner or later to an affliction of the toothache or to spend a goodly portion of our lives in the prevention of the teeth, and the advancement of a career. The very nature of the work precludes its being made a part of the high school course with any degree of success. It is a subject that must be pushed to a co-ordinate position. I hold not that this is consistent with good work. Interest is lost in delays and the best results are only obtained by continuity of thought. To sandwich it in with the regular high school subjects would be to break up the continuity of thought by associating it with subjects absolutely foreign to it, both in pursuit and application. Many of our high schools of the country have attempted to do this, but have failed to number a large number of them, and it has not yet passed the experimental stage in any of them.

CLOSER RELATIONS BETWEEN PRIVATE AND PUBLIC SCHOOLS

Whatever may be the future of this subject, I plead for a closer relation between the commercial and the public school, for the present. In the past there have been a few, indeed, that you could recognize nothing in common. Each in its own peculiar way has acted upon lines absolutely independent of the other, yet both tending to the same end, to betoken the term of its clientele. Yet this is not to be wondered at when we take into consideration the fact that but a few years ago our colleges of higher education and public high schools were as widely separated. There was little sympathy and less in common between them. Each was jealous of the other, and in the performance of their work, and the spirit of the ages, in the investigation of this problem, this changed so that today we find them working in almost perfect accord. The result of this mutual understanding has added to the dignity and sphere of usefulness of the public school, while the commercial school is developing new and stronger courses with a larger attendance, while the colleges are having an attendance that is phenomenal. Never in the history of the world have there been so many colleges and universities, and today, with the prospects of the future far out-numbering the present. To such an extent has this ambition in the young grown, that it is becoming a question of pretense, general discussion as to whether there is no danger of over-educating. We need have little fear on this score so long as our colleges are true to their trust, and keep continuous their work for the benefit of the community, and education, and ever recognize that the best part of man is his soul-power.

COMMERCIAL TRAINING IN COLLEGES AND UNIVERSITIES

I believe that you will agree with me when I say that the major part of the commercial teaching will be left to other schools than the public schools, and let us go farther, than the public schools, and learn if possible the facilities offered by our schools of higher education for providing this commercial training. Is there anything that would warrant the sober belief for a minute that their organization is such as to provide the instruction? The prospects here are more discouraging, if possible, than in the public schools. The plan of their organization is not practical, either in its entirety or in a fragment, absolutely, of original and practical thought, mechanical in everything. Hundreds of young people annually leave our colleges, whose portion would be crumpled, in their public schools, and introduced into practical thought. Many of our colleges of higher education make an effort to provide for the demands of commercial education by taking on a more practical basis, and giving it just about as much attention as such an attachment generally receives.

PRACTICAL COMMERCIAL EDUCATION WILL BE GIVEN IN BUSINESS SCHOOLS

I am convinced that commercial education, at least that part of it necessary to meet the demands of the business world, will be left to private commercial schools to give. I am convinced that the business school has a mission as high and as holy as any educational institution has ever been charged with. That this sacred trust may be discharged in the fulness of all its obligations, the business schools ask and must have the good will and co-operation of both the public schools and schools of higher education. In the past there has been little cooperation and a very indifferent results. Just why this cooperation has in many instances been withheld, and a discriminating policy pursued, will be a part of this paper.

WHY CO-OOperation HAS BEEN WITHHElD

The first was a most natural one, and no blame can be attached to either system. It was simply a precautionary measure, adopted until the merits of the system could
proved. The commercial school was the last in the field, hence it was necessary that it prove itself worthy a place in the educational ranks before even partial recognition be extended to it. It is unnecessary for me to take any special pains to state how noble has the dignity of commercial education been sustained by the well-organized commercial schools of the country. You all know the high place of honor to which it has been raised, both in business, and the tendency on the part of the educational world to give it encouragement.

CRITICISM

I would that I could complete this paper with no severe criticisms and with nothing but the highest commendations of the efforts that are being put forth by the representatives of commercial education, but there comes creeping over me a sense of shame for some of the things that are done under the guise of business education, by unprincipled characters whose only stock in trade is their faculty for successful deceit. This is in reality, in the greater part, for the educational world's withholding from our work co-operation and sympathy. The particular source from which encouragement should come, is thus made to pour forth denunciations. No system of education can withstand a determined policy against the commercial school, thus bringing odium upon the cause, from which the good schools suffer more or less, for the misdeeds of a few. The fault is not all on the commercial school, as many of the public schools feel that the commercial school has entered a field sacred only to them, and look upon the new comer as an intruder. There is no valid reason for such conclusions, nor is there any necessity that a commercial school, organized and conducted on proper lines, should interfere with the work of the public school in the least. Perfect accord should exist between the two systems of schools; nor will we expect success, where one or the other unfortunately falls into the hands of charlatans or fanatical enthusiasts. I regret exceedingly the lack of sympathy on the part of the educational officers in the matter of organizing and conducting schools.

Were I to start up a corner grocery or even to open a bar, a state officer would soon be upon the ground to test my weights and measures. But I can go our highways without let or hindrance, I am at liberty to open any kind of school, dish out to the gullible public what I please, and in such quantities as I please, so long as I label it "Education, opporunity abused."

While the intentions of the States were noble, with the view of advancing the cause of education, the opportunity has been taken advantage of, and no greater confidence games have been perpetrated upon a trusting public than by those self-styled professors of this or of that, who make a life work of the craft of commercial education, without let or hindrance, I am at liberty to open any kind of school, dish out to the gullible public what I please, and in such quantities as I please, so long as I label it "Education, opportunity abused.

While the intentions of the States were noble, with the view of advancing the cause of education, the opportunity has been taken advantage of, and no greater confidence games have been perpetrated upon a trusting public than by those self-styled professors of this or of that, who make a life work of the craft of commercial education, without let or hindrance, I am at liberty to open any kind of school, dish out to the gullible public what I please, and in such quantities as I please, so long as I label it "Education, opportunity abused."

UNWORTHY METHODS OF SOLVING STUDENTS

A third cause for this wide breach between the commercial schools and the public schools is the matter of soliciting patronage. This is a sore point, and I regret to say is not limited to the unprincipled only. Many of our schools of character and good repute have their paid solicitors throughout the land seeking whom they may devour. I am firmly convinced that it is an unwise and shortsighted policy on the part of a commercial school to employ solicitors. You lower the dignity of your own school and injure the cause in general. A pupil who can be obtained only through solicitors is resorted to by lightening rod agents is not a desirable pupil, and is one who will add nothing to your reputation, though he may replenish the pocket book. Right here is just the trouble, the conscience and the pocket book of too many of our school proprietors are too closely associated.

I never knew a professional solicitor, on commission or on salary, that could be trusted in the field of commercial education honestly, or in a manner that you would justify. Sooner or later he will place the proprietor of the school in an embarrassing position.

It is unprofessional, undignified, and should be beneath the dignity of educational institutions to have in their employ paid solicitors. The enrollment of the school may be increased but its reputation, its dignity, — never.

JUSTIFIABLE SOLICITING

No objection whatever can be offered to calls made by the proprietors or some member of the faculty, upon those who make inquiry in reference to the school or who are interested or should be interested in commerce. I lay before you this proposition, and I believe that the most of you will agree with me in saying that there are but two classes of students that should be solicited for enrollment in the commercial school; viz., those who have graduated from the high school, and those who have left the public school before the completion of the course. To solicit others is to do a rank injustice, not only to the pupils who have been trained and disciplined, but to the pupil as well. No blame can be attached to the public school teachers and officers for putting forth every effort to protect the interests of their schools against the selfish greed of professional solicitors and proprietors. I believe, however, that there would be a material less of this annoyance, did the commercial school receive at the proper time, the recognition to which it is entitled.

Every high school principal is ambitious to have as many of his good men as possible go into higher education, hence he urges the claim and advantages of a college course, in preference to any other consideration, frequently discouraging all thoughts of a commercial education. A comment upon his position might be gathering upon every graduate, a college course, regardless of natural bent and capacity.

Commercial life offers by far the greater opportunities for success, so far at least, as worldly possessions are concerned, and the few college bred men represented among successful business men, bespeak more eloquently than the necessity of a college training as a preparation.

MEETING POINT FOR COMMERCIAL AND PUBLIC SCHOOLS

The close of the high school course should be the common meeting point for the commercial and public school. The closest relation should exist at this point. It is a time when the most can be done for our pupils, and when we can work up to this point, in no other than the educational path would be strengthened by the application of the practical. Their minds hunger and thirst for knowledge of the business world. At no other time in their life are they better prepared for such instruction, and at no other time would it profit them so much. I know of no course that is better suited for developing the reasoning powers, for inculcating high moral and intellectual and training them in up-to-date commercial course.

College students with a commercial course, as preparatory, will outstrip their less fortunate class-mates. This is not a theory, but a fact demonstrated frequently in my own observations. Even if the graduates of the high schools fail to enter college or drop out before completing the course, they have the assurance that the year they spend in a commercial course will not be without the necessary preparation for a successful life's work. The success of one life should be sufficient cause for putting aside all differences that have existed, and induce a closer study of each class of schools and establish a relation that will not only be mutually beneficial to the two systems of schools, but equally so to the pupils thereof.

UNWORTHY ADVERTISING

A further cause for commercial schools being ignored by the public schools and schools of higher education, is the bombastic and misleading advertisements and literature frequently put into circulation. Much of this literature is nothing short of an open confession of charlatanism, and proclaims upon its face in almost every line that the author of the literature and proprietor of the school is lacking in his knowledge of the first principles of education. Claims without foundation, unreasonable and ridiculous statements, and absurdities are made. Moderate statements, statements within the bounds of reason and common sense will secure the confidence of our public school friends, and an enrollment that will be a credit to the institution we represent.

In conclusion, let me plead for a better understanding of work of each system of education, and a higher respect for the work of each, in order that a greater respect
may be had for that phase of education for which we stand. By thoroughly understanding the fields of our own labors and respectfully recognizing the fields of others, we shall secure the cooperation of the public school and other schools of higher education, and thus raise the dignity of our own schools, and in this way rid out the unsanitary schools that have done so much harm to the cause of commercial education. By so doing, we shall raise the standard of our schools, the standard of commercial education will be raised, and last, but not least, we shall be instrumental in leading many a young man and young woman in the direction of the arts of life. This done, we shall have the satisfaction of knowing that our journey through life will be free from self-reproaches and regrets, and we shall have the assurance of good deeds and lady well done.

The Place of Commercial Law in a Business Education

READ AT THE FEDERATION MEETING BY W. C. SPAEGLE, PRESIDENT OF THE SPRAGUE CORRESPONDENCE SCHOOL OF LAW OF DETROIT.

Every specialist is prone to estimate inordinately the importance of his own department of work; and, if every specialist were given to this habit, there would be found some difficulty in getting the pupil to his grave in time for the Resurrection.

Every teacher worthy the name is something of an enthusiast, and so is unable with an unbiassed judgment of the importance of his own work. The specialist is not to blame for his seemingly selfish attitude. He alone appreciates the importance of his work, because he alone knows enough about it to adequately estimate its value. The real trouble lies in the fact that life is too short; there isn't time enough; there is too much to learn; too much to know; too much to do. Our boasted systems of education undergarments, when the results are viewed alongside the vast fields of knowledge and attainment through which the student is never led. Longfellow touches the keynote when he says, 'Art long and good time is fleeting.'

THE SPECIALIST IS AN ENTHUSIAST

I honor the enthusiast in any field of effort, whether in the world, with the impetuosity of a zealot, toward the goal of perfect knowledge of one thing, and I sorrow for him when I see him branded as a crank or fool, scoffed at by his fellows, and crowded out of obscurity by the hosts of superficial men who have been satisfied to only taste here and there, like the gaudy butterfly. How the true student longs to learn even the whole length that he has gone, and preserve for him these deep, rich treasures that lie below the surface! But the exigencies of time and circumstance, the demand for quick and easy knowledge, the heartless competitions of business, the keen jumper for money, spins around him the myriad wheels of life, and he is swept forward by the current, ever forcing him to the outmost horizon.

No honest teacher can be satisfied with himself or his work till he has taught all that he knows. If he stops short of this, he must feel that he has withheld from something that does not belong to him from those to whom he has been commissioned to deliver it. That teacher is a thief, who, with the opportunity of giving of his own fullness, deliberately withholds part. No teacher who does not realize that his mission is to give and not to withhold from others. The teacher is a trustee, answerable for the uses he makes of the trust estate, no part of which belongs to him alone. There is no honest, conscientious teacher who does not seek to improve his pupils with a feeling of distress, arising from the fact that out of the deep wells of his own knowledge he is permitted to give no more than a cupful.

To make this somewhat lengthy introduction to the real subject, for these thoughts press for utterance; and no true teacher who has been limited to the bare pittance of an hour or two a week on what he estimates to be the subject in the curriculum of a business college, will fail to echo my sentiments.

COMMERCIAL LAW AS THE SUBSTRUCTURE OF BUSINESS

The place of Commercial Law in a business education! At the beginning, in the noble/Hu, one of the noblest parts of the business system is the fiber of it; entwined and interwoven with its every thread. Why? Because everything done in business life produces or springs from legal relations. Every business act has its legal side. Generally speaking, every letter written in the counting-house looks forward to, becomes a part of, or relates back to, a contract. Every scratch of the bookkeeper's pen records not a mere interchange of money or contract subject, but also a step in a contract. Nay, nearly every act of social and political life is based upon law or presupposes it. To prepare for business life means the study of that which gives validity and force to these transactions is like studying botany and leaving out of account, in the growth and development of plant life, the sun in the heavens. Law is the vitalizing power in business, or, to change the figure, it is the substructure on which business is built, and without which it cannot stand for a day.

THE INDIFFERENCE OF BUSINESS SCHOOLS

I plead, first, for a recognized and honored place for Commercial Law in our business colleges, and second, with the methods of teaching this subject, practiced in the business colleges of the country, the amount of time and importance attached to it in these institutions, but I think it is not for me to speak of the subject. It is not often looked upon as a sort of necessary evil? Is it not the feeling generally extant among the pupils that it is a sort of superfluity, and that it is too much taken from so-called practical subjects? Is not this feeling in the pupil encouraged by the manner of its treatment by the school authorities? Do we exercise the same degree of care in procuring capable teachers of bookkeeping, stenography, etc.? Do we often employ some of the teachers of law who teaches not from a love of it, nor special fitness, but for the mere earning of a livelihood? Are not the considerations in the employment of such a teacher much more his own earnings, as estimated by the amount he is willing to accept for his services? And are not our boys and girls bright enough to estimate the teacher and his subject, as we estimate him and it? Or, do we lecture the lecture to the students of some fairly good teacher in other branches, who wants to earn an extra dollar or two, and can teach a subject about which he knows nothing, and perhaps regard, with the aid of the text-book? If so, every boy in the room knows that the teacher doesn't know the law, and, in the very worst of things, he must lack the spirit of the true teacher, the enthusiasm, the holy zeal, that must inspire him who is to inspire a class.

NOT THE LAW BUT THE TEACHER IS DRY

We say that the Law is a dry subject, that boys and girls becomes restless under it, and that it is impossible to hold them and interest them along this line. Any dryer than bookkeeping? Any dryer than mental arithmetic? Any dryer than stenography? And, for the reason that it is dry, will you squeeze out what little moisture there is in it before giving it to your pupils, by impressing them with your own lack of appreciation of it and your own indifference as to who teaches it or how it is taught? I am here to say that the dryly taught, may be made as fascinating to a class of average boys and girls as a story from the Arabian Nights. The trouble is not with the subject. Give it to one who knows and loves the Law, who knows and loves the subject, and the boys and girls, who looks upon his work as a mission, and I will trust the class. My old teacher of that dryest of college subjects, Mental Philosophy, E. Benjamin Andrews, once President of Brown University and later superintendent of the schools of Chicago, often stood before his class teaching abstract truths, with the tears rolling down his cheeks, and the class holding his breath with awe and delight as the magnificent revelations poured from seemingly dry and empty vessels.

LOVE OF LAW IS CONTAGIOUS

May I be pardoned for saying that I will under no circumstances, teach a boy or a girl in any commercial school in the country—it matters not how rough and untutored they may be—and will make them fall in love with the Law at first sight? I have endeavored on many occasions in branches of the Law, before classes of two hundred miscellaneous, fun-loving boys and girls, and have held them profoundly silent for a full hour. Time and again I have chocked with emotion myself at the utterance of great legal truths, and by my own manifest earnestness brought an unwilling class captive to my subject.

I do not wish to speak to myself any special words of praise as a teacher. I only wish to impress upon you what I so thoroughly feel—that Commercial Law deserves to be taught by one who loves it and who feels that his mission is to make others to see it as he sees it himself.

TEACHING IS A MISSION

I was impressed with the remark of an old business educator, who has been at the work for over a third of a century, made to me. The remark was made in a strict joke that he made to me home late one evening. I said: "I presume you will have a vacation during the Christmas holidays?" "No," he said, "we shall have nothing for Christmas, after a short holiday, we go to work the day after." I said, "You must feel, after all these years, that your work is drudgery—night and day, day in and day out." The response came quickly and earnestly: "No, not drudgery; it is a mission."
When your teachers of Commercial Law are upheld and inspired by this kind of feeling, you will have Commercial Law taught as it should be, the best legal teacher of your schools, and respected by the pupils.

GET GOOD TEACHERS

The Law is a jealous mistress; she will not yield up her charms indifferently to one and all. Honor it then, I say, by giving it a co-ordinate position with other subjects. Young men may be led by having the very best—best lawyer?—no, the very best teacher of law you can find in your city. He is to be had. Experiment until you get him, just as you would experiment in matters of bookkeeping. You will not keep an incompetent, an unpopular, an indifferent teacher of bookkeeping. Why should you proceed otherwise in the matter of Law? I know of no man better in the making of a lawyer than he is a good teacher of Law. The poorest lawyer I ever sat under in a law school was one of the greatest lawyers of his time: namely, ex-Governor J. W. Stevenson, of Kentucky. He was the best teacher of Law that I ever sat under was one of the poorest practitioners before the bar of a great city. Try to get a man who knows the Law, loves the Law, appreciates young people, and possesses the proper spirit, and in your students that sort of teacher, and you will win your students, the subject a popular one. Your school, from a financial point of view, and your pupils, from an educational point of view, will prosper.

I go to the extent of saying that Commercial Law is one subject in the business college that should be taught to every individual pupil in it, whether he be under instruction alone, bookkeeping alone, or what not.

THE PROGRAM OF AN IDEAL SCHOOL

Let me tell you what I would do if I were the proprietor of a business college. Of course, as I do not conduct a business college, I can plan an ideal one, and run it very satisfactorily.

First off is the opening bell in the morning, in my ideal school, every student in the institution will occupy a seat in the general assembly room, and every teacher will occupy a place on the platform. Your commercial instructor in Commercial Law will stand before the whole school, and, as earnestly and impressively as he is able, will teach his subject, instilling the desire in the minds of the boys and girls who are to become men and women, in their legal rights and duties—the obligations of man to man, citizen to citizen, citizen to country, country to citizen. He will impress every student in the school with the idea that under all their business education, as underneath all their business life, there must rest a respect—namely, a reverence—for the Law. I would by this means imbue those with a love for the Law, for it is impossible, in the short course of the business college, to teach thoroughly the many and varied branches of Commercial Law; but it is possible to give every pupil a little of the Law, and, as the Law is that, to instill in him a general idea of great legal principles, which, as he grows older, he may apply to the varied conditions with which he meets.

Promptly at 3:30 the school will dissolve itself into its varied departments. The hum of recitations, the click of the typewriter, the movement of classes will go on through a hurried day, and the boys and girls will be learning the mechanics—the machinery of business; but never through it all will the result of that morning half hour be lost. The words of that half hour may have passed away, and even the most earnest of your teachers may have fallen into a mental lethargy, but in the business characters of your students, you will see a growth—something more substantial than the mere ability to figure, to write a legible hand, or to construct a readable letter.

WHAT IS A BUSINESS EDUCATION?

Do we realize that we are making business men? What is a business education, anyway? Is it teaching boys only to cipher, to buy and sell, the use of agent, the making of returns, the use of set figures, the placing of goods, the making of figures, to strike balances, to make signs for words? No! Thrice no! A business school should make business men, with as much accent on "get" and a business. How much grander the conception of a business education, could we send out our graduates not only skilled in figures and signs and short cuts, but endowed with a clear sense of business morality, business duties and obligations, and a full conception of their rights and responsibilities as men and citizens.

SHAPE OFF THE BARNACLES

I beg of you to go back to your schools and get rid of the barnacle or "mooseback" in Commercial Law there a tire-some bore for your boys, and tempted you to throw the whole subject out of the window; and try and try again till you have found the man who can get up with you the opportunity and the duty of the hour. If I can prevail upon one of you to do this, I shall have accomplished something for the boys and the girls, who, for so brief an hour in their lives, are being taught to be the business men and women of the new century. I will be doing something, too, for you, for you can thus make a reputation for your school in your community, and a place for it in the hearts of its pupils, that will count in financial as well as other returns in future years.

I am one who believes that the teaching of Commercial Law, like the elementary way at least, is in the common schools; but I insist that, of all places in the world where it ought to be taught, and taught aright, the commercial college is the cheapest. I insist that the act required to handle properly the instruments which he knows the legal qualities of the instrument No man is fitted to make a bank deposit till he knows the legal effect of his act. No man is a capable bookkeeper until he knows something more than the mere science of accounts, knows something of the legal significance of the figures and words which he has been taught to put down in the books.

More than ninety per cent of business men fail at least once during a lifetime. Why? Often, indeed, from inability to do the things you teach so well in your schools, and more often from a false conception of the duties of a business man. A man may write ever so fair a hand, be ever so accurate in figures, be able to write shorthand, and transcribe his notes with absolute perfection, and understand the meaning of the brokerage or banking business, he be able to keep a beautiful set of books, never miss striking a true balance, and yet be a business failure. Is it not to express the hope that the business college of the future will rise to a higher conception of what constitutes a business education?

METHODS OF TEACHING

My subject does not require that I consider the best method of teaching law in commercial schools, nor the relative value of the various helps provided. I am glad that it does not put this burden upon me, and that the teacher, while the time is allowed, can give him no suggestions as to how he shall fill his time. My method, if I had fifteen minutes or a half hour a day, would be totally unlike what it would be if I had the same instructor who had an opportunity to be to the text-book himself, the text-book would still be desirable, although not so necessary, if I were given a half hour a day. I would favor the use, in my classes, of the text-book, and particularly so if I could have but an hour a week; for, with such limited time at my disposal, I must cover a large field, and there are few students who are able to carry away much from a lecture into which a great deal is crowded, unless they are assisted by notes furnished them in the shape of syllabi.

But this subject of ways and means is too large a one for me to enter upon, although I have ideas along this line, and which I must confess, I have not myself put into practice, largely because of the limitations of which I complain.

TEXT BOOKS

As to text-books perhaps I had better keep quiet. Until a very recent time, there has been absolutely no commercial law text-book of any worth to be found in the schools. With one or two exceptions, there are no books adequate to the purpose now in the field. The fact is, brethren, men who teach this subject and who have read books and books about books, are unable to furnish the needs of boys and girls in commercial colleges. Generally speaking, books on this subject have been made to sell. Authors have not got down to business earnestly and completely but have written books that has seemed to me to come the nearest to the requirements; but as I have not yet received a retainer for the advertisement of it, I cannot consider it a good book. However, it is a good book but that it can be improved, and I am not certain but that I shall have to write a book myself.

A MOVING COMPARISON

But I must not detain you longer. I know of no one who has studied in any detail the subject of business education. I know the awful pressure of the times; I realize that many of you good men burn with aspirations that you cannot realize even hope to realize under present conditions, and that you are impressed day after day with the inadequate opportunity that you have for properly educating the boys and girls. They come before you in an endless stream. They are under you, but a brief glance at the duties of a teacher often blurs the words "business education." You feel sometimes as you sit in your office that you are scarcely the superintendent of a college, but rather the superintendent of a great office, with its hurrying thongs, some rushing breaths to take a train, hardly stopping to buy a ticket: others restlessly scuttling the clock for the slow moments to that an hour and a half, and then, quietly dozing, till you fairly push him out and aboard the train. I know that you feel as I do, that the tendency to hurried education is ruinous: that all this is not education, in the highest and best sense. Would that this federation of the best men in the profession could take some action that would put a stop to the degenerating tendency of the times and sweep away the
The Best Business Writing for the Present Decade

Had I the prophecic genius of the editors of the PENMAN-ARTIST AND BUSINESS EDUCATOR, who nearly a decade since invented the "simplified writing," I might foresee what would be the most desirable script for the next ten years.

Since no indiction of mankind is perfect, all systems of writing contain defects,—the merit of the simplified is that it embraces fewer than the others—but I am not without confidence that a better scheme than any extant may be produced. From the lengthy term of well tried and satisfactory service it has given me, and from the fact nothing of greater merit has been offered in lieu, I feel justified in continuing its admiring and faithful patron.

The alphabet here given, barring imperfect execution, conveys an idea of its simple, easy forms. Modifications to suit the individual taste or requirement are permissible, retaining in main that short well-rounded character of all letters, that is its distinguishing feature. For general writing, capitals, and small letters with upper extensions are sufficiently long when made half the ordinary—three-eights inch space. Taller than this, only makes them apt to tangle with the line above. Many now recognize the value of shortening letters, but some still think, like David Hare's turkey apprentice at Christmas dinner, "Little too much is jest right," and shoot the extremities dangerously near the upper line.

In taping the letter V. I wish to state I believe them a decided advantage rather than an impediment to the speed of any but the reckless scribbler. The untainted writer takes up his pen frequently in places that are of no advantage. It is no uncommon thing to see the pen lifted at top of a, g and a in such words as "again." Surely that is a loss of time, not to mention the ragged appearance caused by the assured gaps at such places. In the abbreviated loops, we teach the pupil to keep the pen on the paper at those places where nothing is gained by removing it, and to raise it where it may be done to advantage. Lifting the pen at the bottom of the letter, e, for instance, to the next letter, and there is a relief in the momentary cessation of grind that is soon perceptible.

Each year finds us approaching nearer the type-forms, and in this connection it is not amiss to notice Q and Z. The former obviates a confusion with Z which has never been very serious. In Z a very sensible innovation has been made, for we have here a quick, easy, and unmistakable form in exchange for an ungraceful one, which required a whirr of motion so difficult that a good letter was a rare creation of a pupil.

The capitals are of little consequence as compared with the small letters. The frequent use of the latter contrasted with the making of the former, leads to the belief that many teachers make a serious mistake in devoting so great a part of the practice period to the capitals. It was suggested not long since that script caps be abrogated and that the ordinary small letters with a line over be bestowed their place. While such a stroke may not be practicable, yet none will deny the boon it would be to the teacher and pupil of business writing.

I believe the future has in store some radical changes in penmanship, and that, if this decade does not see it, the next one surely will, wherein some system of shorthand will be taught in schools, doing away with much of the use of the writing of today.

K.G. LAIRD.

"quick and the dead" method of graduating from a business college.

Whence shall arise the prophet, or the prophet, that shall lead this great body of business educators out of the maelstrom of ruinous competition and unseemly cutting of fees and curriculums, and on to the firm rock of thorough business university training?

INPLANT APPRECIATION OF HUMAN RIGHTS AND OBLIGATIONS.

But whether you keep the boys a week, a month, or a year, I beg of you to give them, as a part of your course, as thorough a training as your abilities and your circumstances will permit, in the basic principles of business which are found imbedded in the Law. Don't be satisfied with giving mere manual dexterity or mechanical expertness, Implant in the minds of the boys and girls as they go out into business life, a broader and holier appreciation of human rights and obligations. In this way you will do a service for the boys and the girls — the business men and women of the future — your country, that will entitle you to heaven as well as earthly rewards. The Twentieth Century business university will do this, and you, representing the forces that are stepping across the line of the Century, will make for or against its speedy doing it.

Perhaps now I should close with the words I used in opening: Every specialist is prone to estimate inordinately his own department of work: and, if every specialist was given his way, the undertaker would find some difficulty in getting the pupil to the graveyard in time for the Resurrection. I thank you for the honor you have conferred upon me in giving me a place on your program, and express the hope that your meeting may result in good to you individually, and to the noble cause of business education generally throughout our land.

NEW YORK, January 29, 1901.

MESSRS. ZANER & BLOSER.

PENMAN-ARTIST AND BUSINESS EDUCATOR.

GENTLEMEN: We have read your very interesting report of the Federation of Commercial Teachers contained in the February number of the PENMAN-ARTIST AND BUSINESS EDUCATOR, and shall be glad if you will send us two additional copies of this issue. It was the intention of the writer to be present at this convention, but unfortunately he was serving on Jury duty during the month of December, and the consequent accumulation of business made it impossible for him to attend. Better luck next time! We are with best wishes.

ISAAC PITMAN & SONS,
C. A. Pitman.
Rip Van Winklesism

Penmanship teachers in association at Detroit resolve that examining boards should make penmanship mandatory: that normal schools and institutes should employ experts to teach penmanship, and (c) that the educational press should advocate penmanship. We all need the Writing for the sake of writing. The numerous different styles of penmanship taught are useful pur-

pose if they teach us that any writing which is simple and legible and easy, is good enough for practical purposes, and so free us from the busines and parade of the professional penmanship as

We now and then correspondents ask for information concerning the movement of bricklaying, bicycling, gymnastics, etc., upon learning to write. We now desire to say that it depends largely upon the individual and the excess or the extent to which these things are practiced. Ordinary work is the best kind of exercise, but too much work is as injurious as too little. Then there is the old adage which says that you can do but one thing at a time to do it well. The question resolves itself into whether you wish to be expert in penmanship or in other things. If the former, then it is well to sub-

ordinate everything to penmanship, and then you can go on doing your daily work and learn to write a good hand in the evenings, but you cannot become a master.

Muscular Movement

An enthusiastic advocate of muscular movement postscripts his communication to us thus: "Muscular movement adva-
ced by an ex-student, Mr. T. E. O'Leary, Professor Palmer, Professor Jim Corbett, Professor B. Fitzsimmons, and myself."

Please excuse us. We do not know whether brother Palmer can stand up against these heavy weights; but for us we acknowledge our inability to do so. Therefore surrender the title to them. [EDITORS]
Gentlemen:

Your seasons of premium offers received and noted. Your favors to me in the past have been very much appreciated, and that you can never be sufficiently thanked.

The PENMAN ARTIST AND BUSINESS EDUCATION has been a source of real joy; and when interest lagged, I had to do something to keep it going. It had to do with the art, until I wanted to keep it up for the sake of the commercial service. We have to work for our living, and the hirsute appendages are changing with the season. In each one of them, I want the joy that comes with the subject you have so beautifully written about.

Miss Ellie Potter and E. F. Quintal, two of G. W. Brown's accomplished forces of teachers, have decided to take the tide of business in their stride, and to let their feet go down the path of success. They have taught the Penman Art and Business Education at the West Bay Business College, Green Bay, Wis.

The J. W. Stetson University of De Land, Fla., has placed commercial work on even footing with subjects of general intellectual culture, by allowing book-keeping and shorthand to be one of the electives in their general courses. W. W. Fra is to be congratulated that he convinced the people that he was a teacher who was worth teaching. That commercial banks have an educational, as well as a utilitarian value.  

The catalogue of the Kock Island (Ill.) High School presents a strong four years' plan for the business student. This includes the use of the English language, and the study of English, and English, and English. The catalogue of the Evanston (Ind.) High School should have the four years' work of the four years' plan. This plan is so well defined, just as worthy as the Classical or Scientific courses.

A catalogue of the Manual Training High School of Kansas City, Mo., comes to our desk this week. It is the work of F. B. S. Peters, who has charge of shorthand and book-keeping. These courses are very attractive in appearance, but it appears that the commercial work is merely a cover to the various technical instruction given.

Mr. W. M. Ellis, principal of the Commercial Department of the Evanston (Ind.) High School, has three assistant teachers, not to mention the impressive instructor, H. Peirce, special instructor in penmanship. Evanston has a three-year Commercial Course, but the work is so distributed that, in our judgment, it is impossible to fit the average graduate to compete successfully with the graduates of the penmanship schools. For instance, penmanship is always the first thing to learn, with shorthand and typewriting being allowed the second. In this school, presumably 90 per cent. of its students major in commercial pursuits, and as such, the interruptions incident to the approach of commencement, etc. Give us four years wonder in the high school, two years of book-keeping and office work, two years of book-keeping, and three years of shorthand worked into it. Let pupils go out not only with a good general foundation but also with an adequate special training that will make the majority of them possible breadwinners at once.

An excellent full-length picture of our friend, Mr. W. H. Shaw, adorns the front page of the handsome new 100th Prospectus of the Central Business College of Toronto.

Mr. Shaw's School, like its proprietor, is honest and thorough, an inspiration and a symbol of success to the bright young student who fills the needs of our times, and the forests and fields with unsung gladness of prosperity and little jewels of fortune.

Miss E. S. Herrick, of Indiana, has charge of the penmanship department of Groversville, N. Y., Business School. She writes a splendid artistic hand and reports a good attendance.

John R. Gregg, of Chicago, Ill., has published a full-length catalogue of the Western Business College of Wheeling, W. Va. Success to the new enterprise.

Burt German, principal Ohio Business University, Fremont, Ohio, reports a daily enrollment of 150. A good showing for a new school.

B. R. Baker, of Bedford, Ind., is now teaching at the New York High School. Private Commercial College of Cleveland.

"The Brazil (Ind.) Times" speaks flatteringly of the work and worth of the Brazil Business University, Munson Bros., proprietors.

The Jackson, Mich., Business University is now incorporated, and is in a prosperous condition.

A. S. Weaver, principal of the San Francisco Business College, is a prosperous school. From the character of the catalogue, the Evening School "circumstances recently received favor from the business community." This institution is unusually well patronized. We often wonder in the Big news school two years of book-keeping, and three years of shorthand worked into it. Let pupils go out not only with a good general foundation but also with an adequate special training that will make the majority of them possible breadwinners at once.

Miss Alice Cary Coster, of Nebraska, is in Washington, D. C., working for Uncle Sam at a good salary. Miss C. is a fine penman.

Mr. Caldwell is a hustler as well as a true gentleman.

Mr. H. W. Woodland, of Canada, student of 80 of the Zoanarian, is now in charge of the development of the Press, Post, of this city.

There is now before the House Committee on Printing a resolution to print extra copies of the monographs on our coal trade, iron trade, and the steel trade. The Commercial China in 1899, etc., that have been in the possession of the Bureau of Statistics of the Treasury Department. This resolution has passed the 5th of the House Committee. Teachers who appreciate the work of the monographs should write to the Hon. Joel P. Kellogg, Chairman House Committee on Printing, U. S. House of Rep., Washington, D. C., expressing their view of the value of these publications.
How to Raise the Standard of Writing Throughout the Country

PAPER READ BEFORE THE NATIONAL PENMANSHIP TEACHERS' ASSOCIATION AT DETROIT, MICH. DEC. 900

There has perhaps, never been a time when the condition of many schools was so good an opportunity to suggest to the Educational Public the time remedy for poor writing as the present. Had the National Penmanship Teachers' Association to issue a statement to the school authorities of the country, it would not need to make such effort to have the teaching of writing more consideration than any such action would have received at any time in recent years.

On most points we agree, but there are certain points that are as paramount upon some teachers, while others regard them as only secondary matters. Some of these I shall consider in the following:

A few years ago the cause of good writing was not a matter of much attention, and writing was truly a neglected art. Then came the flood tide of vertical writing which swept over the entire country.

WESTWARD, NO.

There were many who thought that the flood tide would resemble the old woman with the broom, to sweep back the tide with the muscular movements of a strong woman, proved of no avail, for the wave which started in Europe and crossed the Atlantic to our Eastern coast came on and reached the plains of Canada, the Hudson Rivers, the Cedar Rapids, and then rushed on to the Golden Gate, and finally followed the flag to the Philippine Islands.

GENERAL AWAKENING

The noise and uproar created by this inundation, caused a general awakening among those who wrapped about in their robes of conservatism, prejudice, and bigotry, were attacked by our narrow conceptions of self-conceit and self-satisfaction, as well as among those who, reared in garbs of progress, were shaken by the alarms of discontent, and were unexpectedly wakened for the dawning of a new day.

WRITING BETTER THAN EVER

The result of all this has been most satisfactory to the great body of educators throughout the country. They have found that after all, the country has never been so much a good long time ago, as at the present time. The introduction of vertical has indeed proved a more popular one, and it may be the final outcome of the battle. Great as it has been the improvement, however, the highest degree of attainment has not yet been reached, owing to causes which I shall consider later.

NOAH'S ARK

Notwithstanding the present improved conditions, there is a little band of Scribes and Pharisees who refuse to be either converted, reconciled, or comforted. They have assembled in a lofty buurt house called the Text-book Library, which is serving as a sort of Noah's Ark on Mount Ararat or the vertical island. The modern Noah has been constantly sending out doves to see if the flood has abated, but they have returned with encouraging news; since, that the tide at Somerville, Mass., had not abated the second time, that at New York there was a perceptible increase, and that of the other sea. The modern Noah, being younger and less patient than the ancient Noah, immediately issued from the cellar to the summit of the vertical island, and with the text-book in his hand, he compelled the men who had been left behind at Mount Ararat to go down and possess the land. It turned out that these stallions were dry, and that the flood had stopped temporarily at a point called intermediar, or high shant, and that it is very likely to rise again.

A FALSE ALARM

The movement at New York is said to have been caused by an artificial breeze raised by the Book Trust by means of a large bellows called the Daily Press. Others claim that it was due to a gigantic political cresspool located near Tammany Hall; but however this may be, the latest reports and statements indicate that the tide at New York met a stronger current from the texts, called the State Board of Superintendents, which endorsed the vertical by an overwhelming majority.

MISLEADING STATEMENTS

Then again the flood has recently been declared universal in several whole states, which would indicate that the tide is still on the rise, according to false and misleading statements to the contrary, are constantly being circulated by those who are trying to

as well recognize this fact first as last and act accordingly.

AS OLD AS STORY ITSELF

The abolition of copy-books has been advocated for years. Some, by the persistence of the author, have raised a fighting movement, but their despair on each and every occasion, in seasons and out of season, have almost outlived the hopes of the advocates of the new and the old, and teachers will be compelled to teach in a creditable manner. This *needs operandi* is not a new idea, it is as old as story itself.

RATS

It is the policy once adopted by the immortal farmer who burned his barn to get rid of the rats. Twice the rats have been in the barn, but while he was building a shed to take the place of the barn, he had a rat escape from the cellar, in the cellar, and in the garret. When the second rat settled itself in the barn, it was discovered that the rat was not the same rat. It had been changed into a chicken by a wizard. But the result was the same. The rat, or chicken, was destroyed, and in the meantime the farmer was supreme.

TEACHERS AND BOOKS

No, the barnburner policy will not do, for it will not follow that a teacher will be better off deprived of a book. The arguments used against copy-books are also used against text-books on arithmetic and book-keeping, by many very with whom the Public school teachers who teach without books. The advantage that is gained from the use of books in teaching these subjects is no greater than those seen in the case of copy-books. The teacher who is no more than the book is secure in no better practical results in book-keeping, arithmetic, grammar, reading, and writing, than is secured in writing by the teacher who confines herself entirely to the copy-book. Text-books are not to blame for failure; the fault must be a teacher behind the book.

No single superintendent, to the knowledge of the recent agitation, blamed copy-books with the large and procuring classes, if good results in writing. So it is safe to conclude that they are also here to stay, and our plan must meet this condition.

SPECIAL TEACHERS NECESSARY

Employ special teachers in a splendid suggestion, provided it is not conditioned upon the abundance of veredit writing, as the copy-book. It is rather unfortunate that many superintendents and teachers, instead of converted to the idea that with copy-books no special teachers are necessary, and teachers who advocate the abolition of copy-books have done their share in the matter. The advocates of the text-book have reached this doctrine have become mark." typists, and the new type of teachers who succeed them is already succeeded by the copy-book. The book companies have also been active and lowering the standard in doctrine, where their interests have been antagonized.

MUSCULAR, A FAD

Muscular movement has had its time. No less an authority than Mr. G. W. Brown, general of writing, said that vertical writing caused protest against the negative of a thing.

THEY WIGGLE JUST THE SAME

Rapid muscular movement from the start is beautiful in theory, but it becomes rather muddy when we try to determine just where
to start, and to locate ourselves after things begin to stir. We all believe in muscular
movement, more or less, or perhaps more properly, making the combined move-
ment, for it amounts to the same thing in the end. If good practical results are
secured. An effort has been made to judge the only difference between the two is, the
combined movement toward the pupil. The pupils," you wiggle your fingers," and
they wiggle their fingers to the Sinum-pug teachers say, "Don't wiggle your fingers," and
the pupils wiggle then.

QUALIFIED TEACHERS GET RESULTS
Poor writing is not due to lack of oppor-
tunities to teach handwriting. All copy-books
provide ample exercises with instructions, and
recommended plenty of practice paper to
be used at the beginning of every lesson.

Teaching children to write when too
young and at an age when requiring too
much small writing in the primary grades and
the use of improper tools, have, of course,
had their evil influence, but aside from
these, there is due to poor teaching and to
to the neglect and to any other causes. A
qualified teacher can get good average re-
sults with any system, vertical or slant,
copy-books or no copy-books.

EVOLUTION, NOT REVOLUTION
Our plan must be the first in the sense that,
recognize conditions as they are. We must
find where we are at and start there. The
plan must be evolutionary and not revolu-
tionary. The plan must, of necessity, somewhat resemble that of a certain Vir-
ginius county, which resolved as follows:

1. That we build a new courthouse.
2. The new courthouse must be built with
the materials from the old one.
3. We must continue to occupy the old
courthouse until the new one is completed.

Now as impracticable as this plan seems in
the case of the courthouse, it almost
exactly describes the conditions which con-
front us.

The skilled educational builder can, how-
ever, without completely tearing down and
digging up the foundations, remodel and
improve the old until it meets all the
requirements of the modern edifice, while
those who would revolutionize, often exhaus-
t their resources on the broad foun-
dations, and the superstructure is not even
gotten, much less completed.

EXAMINERS AT FAULT
The whole question of raising the stand-
ard of writing is a question of better quali-
fied teachers. This is a matter which will
necessarily have to begin with the Boards of
Examiners and school authorities. Re-
quire teachers to pass rigid examinations and
they will prepare themselves. This will
create a demand for instructors in
institutes and summer schools. Normal
classes in writing will increase in size, and
schools without instructors will be forced to
engage them to meet the demand. There
will then come a call for specialists teachers
and supervisors, and supervision in all the
cities and in townships with town and vil-
lage schools, would be a possibility.

FACE ABOUT
Now, if you say this cannot be accom-
plished, I would ask how much you hope to
accomplish by writing vertical writing and

CONCORD, N. H. January 9th, 1901.
FRIENDS ZANER & BLAESER:

I am pleased with your announcement
that Mr. Cameron will conduct a course in or-
manetical writing through the columns of the
PENMAN-ARTIST AND BUSINESS EDU-
CATOR. He is certainly one of the finest all
round penmen of the country. His work in
the line of accurate script has wonderfully
improved of late, and I am sure that
some very accurate and original work from him in this
course.

I also want to express to you my apprecia-
tion of the work that the veteran Kibbe is
giving us through your paper. His engross-
ing script is exceeding graceful and artistic
as well as accurate.

Yours truly,

FRED S. HEATH.

Lessons in Vertical Writing—No. Two

BY J. S. MERRILL, Supt., PENMANSHIP AND DRAWING, URBANA (OHIO) PUBLIC SCHOOLS

My experience leads me to believe that three-fourths of the good faults in writing are contracted in the first two grades of school work and are reinforced by conditions in the upper grades which we must face, while they are conditions for which we, as teachers, are not wholly responsible, and yet are such as are calculated to counteract much of our efforts. In order to overcome these difficulties and start the pupils on the right road, we lay a great deal of stress on the study of form, position, penholding, etc., firmly believing that with increased familiarity will come increased facility until the limit of the child's ability to write well shall have been reached.

This limit varies just as much in different pupils as the rate of speed does in the different classes of horses.

A great deal is said about speed for business purposes as though we expected all our pupils to follow mercantile pursuits, when in reality only a small per cent. of them do so. My purpose is to make the foundation secure and then let those, who from choice or necessity follow a business, build upon that foundation by pursuing an advanced course as he would do in any other line.

For the purpose of study and comparison we have arranged the letters into groups.

Illegible writing is mostly due to insufficient curvature of the up strokes. No danger of getting too much curvature or too great a size in the primary grades as an increase in speed will decrease both, while a superabundance of speed will carry them to the other extreme and destroy legibility.

In the accompanying plate samples of lessons are given for each of the first eight grades of school.
Lessons in Engraver's Script

Number Nine

BY CHARLTON V. HOWE, 357 VINCENNES AVE.—STATION M., CHICAGO, ILL.

Instructions for Practice

Make introductory stroke to first shade of the H in the following lines; and, after giving it grace, give it grace: it should commence near the lower right corner of the capital letter H and upward, and take three spaces above base line; the first shaded stroke is one-half space in height; the connecting stroke between first and second shaded strokes should be compounded and retraced for a distance of half space with the second shade which commences two spaces and a half above base line and terminates half space above base line. The second shade is finished with a dot same as T, F, t, etc. The curve between the dot and shaded stroke should be round and full. Connecting stroke of loop and third shaded stroke should commence two-thirds of space above base line and to the right of the dot; cross second shaded stroke about a space and a half above base line, continuing stroke without lifting the pen to preserve a smooth line forming the loop and third shaded stroke; the third shaded stroke commences two spaces and a half above base line and tapers off at base line same as small l; the first, second and third shaded strokes should be of the same thickness and slant. Finish loop with delicate shade at top same as L, C and G. Avoid making loop too wide or too narrow and don’t leave too much space between second and third shaded strokes; the distance between these shaded strokes is less than the third and fourth; therefore, a capital H must be the same as the standard H except the oval is added, which is about the same proportion as the introductory oval in the K. Connecting stroke between second and third shaded strokes is the same as the standard K, a fifth; it should commence about a fifth of a space below base line and should be delicately shaded after the letter is finished.

The first part of the modified K is exactly the same as the regular K, the second part of the modified K is the same as the first part of the modified H, the third shaded stroke is the same as in the standard K except it is one shaded stroke placed to the right of the dot and shaded stroke is added to it; this stroke is usually shaded after the letter is completed and not shaded too heavy. The first part of the standard V is the same as the first part of the standard H, except instead of being finished with a dot it tapers off into a hair line as it nears the base line; the pen should be lifted when this stroke is completed, connect terminating stroke with hair line stroke of second shade at base line. Slightly compound this stroke and bend with dot. The space between second shade and hair line at the top is a space and a half. Avoid making second shade too long and with too much curve, so that when the hair line stroke is connected at the bottom the letter will not look blunt. The first part of the modified V is the same as the first part of the modified H, except the dot is omitted. The terminating stroke is finished with a grace and curve shaded same as the modified K.

The first part of the modified W is exactly same as first part of standard V; the connecting hair line stroke between second and third shades is compounded same as terminating stroke of the V; lift pen at the end of this stroke, connect with third shaded stroke which is exactly same as the second shaded stroke; the terminating hair line stroke is the same as the standard H.

Mr. George H. Woodworth, of Trumbull's Academy, a former student of mine, has written the following two exercises in beautiful script and is entitled to the two dollars offered, J. D. Valentine, Jr., of Tompkins, New York, has written the following two exercises in beautiful script and is entitled to the two dollars offered.

A suggestion to those who did not commence with the first lessons. Rule lines eight and an inch apart, or less, with a lead pencil and also another line, 1/8 of an inch below each side. This will enable you to locate oval spaces and small letters, an advantage with much greater accuracy.

Criticisms

E. J. La R. Your work shows that you need much careful study and practice before your script improves. You are taught to deviate a great deal of your time to other subjects. I think you could use it to a good advantage for headings, which would add greatly to the appearance of your book. The main subject is that you are lack of uniformity in shading, spacing, lack of proportion and form. I would suggest you use a headline for small letters. Thank you for your very kind words.

OUR GREATEST OFFER.

SEND US ONLY ONE DOLLAR and we will send you the PENMAN AND BUSINESS ARTIST'S Course in New Improved Automatic Shading Pen, 50 and $2.50 for a year's subscription to Tram Course for small businesses, $10,000 for a year's subscription to the Engraver's Script Master and Method, and $4 for a year's subscription to the Penman and Business Artist, all for $1.00. If you order one, you will get the other three free. If you order two, you will get the other four free. If you order three, you will get the other five free.

Lessons in Sepia Shading—Number Six—by W. F. Gilmore, Canton, Ohio

The sepia sketch of the white mill landscape will prove our most difficult lesson, for in it you must combine the directions given in lessons four and five. It was first drawn from nature and shaded with a pencil just as we wanted it to be when finished. A thin tint of sepia, the tint of the distant hill at the left, was washed quickly over the entire drawing except the front of the mill, the flowers, and the sky, where the paper was left untouched. But through this tint the lines and pencil shading could still be seen. The next coat was washed on the farther trees or woods and on the buildings. Then the shading of the trees, such as the clumps on the left of the mill race and the willows in the meadow on the right, was blended just as we did with the quinces in a previous lesson: look up this lesson. The light streaks in the water were simply left untouched after the first coat.

The fence was painted on after the hillside had been shaded. In the meadow foreground the black lines of the ditch were painted last, since they seemed darkest; likewise the distant fence and tree trunks. Probably the darkest parts in the picture, such as the under side of the tree trunks, and the race, were done by painting over the fourth or fifth coat. While one part of this painting was drying, we can be painting on some other. Be careful about using only the tip of brush; keep enough of any one tint on the brush that you will not wear it out by pressing it down till the handle strikes the paper. Of course, the sketch from nature must first be good in the pencil shading before a good wash drawing can be made. Afterwards the skilled artist will only need a light outline in pencil.

Shorthand Association
Gregg Teachers Organized at Detroit

One of the concluding events of the National Commercial Teachers' Convention was the formation of the "Gregg Shorthand Association of America" with forty charter members. It is intended to include all teachers of this system in Canada and the United States. The following officers were elected at the Hotel Cadillac: President, Charles M. Miller, New York; vice president, W. W. Patterson, Canton, O.; secretary, W. E. Van Wett, Wheeling, W. Va.; treasurer, Thomas P. Scully, Boston. An executive committee of three will be appointed. A convention will be held next summer in Chicago.

J. D. Fair.
Et tu Tsetse!

To me it is a very sad spectacle indeed to see those who have been foremost in any good cause for a number of years suddenly lose the courage to sign their names to their contributions.

I have been much impressed by the great similarity in the aim of the leading articles which have appeared during the past few years in opposition to copy-books and to vertical writing. A skeleton outline of these papers would appear about as follows:

1. A Great Failure in Public Schools.
2. Example—Some large city with unfavorable conditions.
3. Cause.
4. Alleged.
5. Copy-books or 2 Vertical Writing.
   Note: Depends on which horn is being taught.
6. Real: "Main root of evil."
7. No supervision.
8. Teachers not qualified.
10. A Great Success in Business Colleges.

The article by "Tsetse" in the last number of the PENMAN-ARTIST AND BUSINESS EDUCATOR polemicizes against the use of this spiral plan.

I have been told that the vertical in use in New York was not the true vertical founded on the circle but on the oval the same as in slant. Had vertical writing in New York been taught by qualified teachers under the direction of a competent supervisor, no doubt it would not have been discarded and alas! Tsetse would not have had a test for his paper! Verily, it is ill wind that blows nobody good.

Fraternally,

J. F. BARNHART.

Faust is the Mark Twain of the Twentieth Century

I was rather startled when I read that portion of Charley Faust's address delivered before the Pennman's Convention at Detroit, Christmas week, wherein he stated that he had been teaching for many years a style of writing that was thoroughly impractical. Is it possible he made that confession seriously? If so, where does brother Palmer and his system come in? If I remember rightly, Faust is one of the esteemed "Western Pennman's" pet pupils, and I can recall some strong words of commendation bestowed by friend Palmer regarding the work accomplished in the school room by "the Auto-Man." Was Palmer joking? Did his pipe, filled with choice Cavendish, go out? Or did some cruel Chicago thug (Peerless or Crusade) hit Faust in a vulnerable spot and wake him? Twelve years is a long time to labor in pennmanship peacefulness, especially, when three wide-awake pennman's papers make monthly harangues.

I know Faust by his pictures, his unexcelled automatic pen work, and his advertisements of the "Myograph," and judging by the picture and Myograph, I arrive at the conclusion that Faust is the twentieth century Mark Twain of the pennman's profession.

LAMSON & CARPENTER,
521 So. For. Sav.
CLEVELAND, 0.
Lessons in Engrossing—by H. W. Ribbe, 181 Tremont Street, Boston, Mass.—Number Seven.

This letter is similar to lesson six but requires more time to execute as more attention must be given to squaring up the ends of strokes which should be as straight as possible without retouching. It is useful for cheap diploma work, marking packages and show cards. Hold the paper so that lines run parallel with the edge of the table and be sure to put on even pressure on each nib of the pen. Study forms until you do not need to look at copy. This is the rule for studying any style of lettering, if it is to be of any practical value.

Esterbrook's Steel Pens

The most popular in use

E. E. Bald, Washington, D. C., greets us with a variety of card designs comprising drawing, lettering, ornamental combinations, copperplate script, etc., which disclose ability.

Obituary

We are pained to learn that on February 4, Eugene, seven months old son of Mr. and Mrs. W. F. Gilmore, Canton, O., passed the harder line of death. He paid early the debt we are still owing. Our condolence to the sorrowing parents.

We Do Not Believe

In guaranteeing things but we are not afraid to guarantee satisfaction on one dozen cards for only 22 cents.

Lettering and Designing. No. Two

BY E. L. BROWN, ROCKLAND, ME.

A decorative heading for programmes. A good design must be appropriate as well as artistic, and it will be well for the beginner to bear this fact in mind. The mask, torches, etc., suggest drama, making this heading at once appropriate for a theatre programme.

The original of this heading was made ten inches long and two inches wide. Lay off a space not smaller than the above, then proceed to sketch the face, torches, etc. The face must be midway between the two ends. Pencil out all the respective parts with care before adding any ink. See that the lettering balances properly, as well as the reverse drawing of torch and palm branch. Shade the face with a Gillott's No. 170 pen and use a coarser pen on the rest of the design. A broad pen should be used for making all large solid black surfaces.

"Linear Perspective," adapted for colleges, schools and teachers and for self-instruction, including examples in parallel, angular and oblique perspective, by Edward T. Cooper, Architect, Civil Engineer and Instructor in Drawing, Lampson & Carpenter, publishers, Cleveland, Ohio, is the most practical and comprehensive publication of the kind that has come under our notice. It presents the subject in a new, interesting and novel yet technical and practical manner, a thing few others or none others have been able to do. This has been accomplished in part by the use of photographs reproduced by the half-tone and zinc-etching processes of engraving. The plates and pages are unusual in size (about 15 x 20 inches), while the binding, paper, etc., is very substantial and appropriate. To any one who desires to learn the foundation of correct drawing, this work is well-nigh invaluable. We recommend it most heartily.

"Pitman's Twentieth Century Business Dictation Book," a manual of dictation for the use of schools, teachers, students, etc., by Isaac Pitman & Sons, 31 Union Square, N. Y., is a very complete work—a sort of encyclopedia of letter writing. It is one of the best books of the kind (if not the best) upon the market.

**VISITING CARDS NEATLY EXECUTED.**

15 Cents a dozen, seven dozen, $1.00. Good work, no humbug. Address Geo. J. Jensen, Port Clinton, O.

**BE A WRITER.**

Hundreds of writers are earning money with their pens. They not only get up the work, but self and care make it so. Editors, bookkeepers, teachers and students have plenty of leisure time, increase your income by writing stories and articles. We will aid you. Send stamp at once for our Prospectus containing helpful suggestions to young writers and valuable information concerning story writing.

1232 Curtis Avenue, CLEVELAND, OHIO.
There is a greater demand today than there has ever been before for persons who are thoroughly qualified to teach writing, drawing, and the commercial branches. The public schools of our country need a large number of special teachers of writing and drawing. These positions can be had by the competent.

Commercial schools need more teachers of penmanship and of the commercial branches than ever before, because they have more pupils.

Then in the lines of illustrating, engraving, designing, etc., there is much more work to be done at good prices than ever before.

Why not consider the matter of taking a three, six, nine or twelve months' course in the Zanerian Art College to prepare yourself in one or more of the lines of work mentioned?

Regarding the practical value of such a course, many hundreds of former pupils are ready to testify.

The Zanerian Art College is very liberally patronized, and is one of the most successful institutions in the country in securing profitable positions for its pupils.

Rates of tuition are no higher than they have always been. Good board and room can be had at a very reasonable figure.

Large, finely illustrated catalogue of the school, worth one dollar, free to interested persons.

Read below what one of the foremost illustrators, designers and artists in America says of the Zanerian.

---

Chicago, Ill., January 2nd, 1891.

I can truthfully say that the four months I passed as a student in the Zanerian Art College were spent very profitably to myself. The knowledge and skill I gained there enabled me to get a foothold in the Commercial Art line. I am proud to number the proprietors, Messrs. Zaner & Blower, among my best friends.

Go to the Zanerian! Yours truly,

R. E. HUMMEL
Designer and Illustrator, 149 Race St., Cincinnati.

ISAAC PITMAN'S SHORTHAND.
FIRST IN 1837. FOREMOST EVER SINCE.
"I have been a practitioner of the Isaac Pitman system for many years and believe it is superior
to any other. Although I am personally acquainted with many fast and accurate writers among
the users of the various Pitmanic systems, I regard this fact as an endorsement for the Isaac Pitman
system, because 'imitation is the sincerest form of flattery.' I can, however, truthfully say that I
am not acquainted with, nor do I know of by reputation (excepting two veteran Gurney writers)
a single rapid and accurate writer who is not a Pitmanic follower. It does not follow of course that
such men do not exist, but I do know they are not conspicuous in this vicinity. I am a firm believer in
the orthodox manner of teaching and practicing Phonography as laid down in the authorized text-
book of the Isaac Pitman system, viz: "The Complete Phonographic Instructor," and am decidedly of
the opinion that any serious defects therein will produce harmful results."—Frank D. Cress, Official
Stenographer, U. S. Circuit Court, New York.

Pitman's 20th Century Dictation Book and Legal Forms.
Containing "growing" letters used in American business offices, covering fifty distinct lines, Legal
Forms, and a judicious selection of practice matter for general dictation. Also chapters on Spelling,
Punctuation, Capitalization, and Short Practical Talks. This work, which is the most complete of its
kind for the teacher, the beginner, and the advanced student and all progress-
sive schools without reference to the system of shorthand taught. 240 pp. Price, stiff boards, 75c; cloth, $1.00.
To teachers and schools for examination, postpaid, 45c. and 80c respectively. Specimen
paper furnished.
Twenty-four page catalogue of over 100 works in Isaac Pitman shorthand, and copy of "Pit-
man's Shorthand Weekly," free.

Latest Success.

It is the policy of this company never to publish a work on any subject that has not been found superior after a most thorough test. We have therefore delayed the publishing of a “touch typewriting” until we discovered what we wanted, which we found in

Banks’ “Easy Method” of

Touch Typewriting  

BY  

BENJ. STANLEY BANKS, 

The first revised edition has just been received from the press; it consists of 50 exercises bound in book form with Manilla covers or printed on cardboard.

A most valuable appliance to assist in the proper manipulation of the keys is BANKS’ BASIC TOUCH GUIDES, which are attached to the space bar of the typewriter. These guides are used by allowing the thumbs to rest in them, thereby giving the operator a fixed base from which to operate and maintaining the hands in a fixed relative position.

SAMPLE PAGES of the exercises will be sent to any teacher or school officer upon receipt of request.

WHOLESALE PRICES.

The 50 exercises bound in book form, Manilla cover, per copy . 40c.
The 50 exercises printed on cardboard, per set . . . . $1.00
Banks’ Basic Touch Guides per pair . . . . . . 50c.

Sample copies of either of the above will be sent prepaid upon receipt of the wholesale price, to teachers or school officers.

ISAAC PITMAN'S SHORTHAND.

FIRST IN 1837. FOREMOST EVER SINCE.

ADOPTED BY THE HIGH SCHOOLS OF NEW YORK.

"I have received the "Instructor," etc., and have spent every leisure moment reading the printed matter and examining the text. It is the first time I have ever examined your system, and I am glad to say that I am more than pleased with it. I have been examining several other systems and they are all crude in comparison with the Isaac Pitman. I think you are doing humanity a kind act when you furnish them with a copy of Which System of Shorthand Should We Learn."—Henry B. Rogers, Principal Rockhampton, (Fla.) Business College.

SECOND EDITION IN PRESS.

Pitman's 20th Century Dietction Book and Legal Forms.

Containing genuine letters used in American business offices, covering fifty distinct lines, Legal Forms, and a judicious selection of practice matter for general dictation. Also chapters on Spelling, Punctuation, Capitalization, and Short Practical Talks. This work, which is the most complete of its kind, is specially compiled for the teacher, the beginner, and the advanced student, and all progressive schools without reference to the system of shorthand taught. 480 pp. Price, stiff boards, 75c.; cloth, $1.50. To teachers and schools for examination, postpaid, 5c. and 10c. respectively. Specify pages on request. Write for "Which System," illustrated with shorthand cuts. Free.

Twenty-four page catalogue of over 156 works in Isaac Pitman shorthand, and copy of "Pitman's Shorthand Weekly," free.

Publishers of Isaac Pitman's Complete Phonographic Instructor, $1.40.
Lessons in Practical Writing by C. P. Zaner.

Number Eight.

A good hand is a profit as well as a pleasure. A.
Better your penmanship by proper practice. B.
Command you may and your hand will obey. C.
Do your very, very best and do it every time. D.
Employ mind as well as muscle in learning. E.
Finish each word as carefully as you begin it.
Good penmanship is the product of right practice.

How well as well as how much is the modern need.
Improvement is a process of growth, therefore slow. I.
Joining words is good movement practice. Join.
Know wherein your writing is poorest—then improve.
Learn to see details, then you will succeed. Learn.
Momentum is the foundation of easy execution. M.

Neatness is a charm you will do well to acquire.
One thing at a time is the secret of success. One. O.

Penmanship may be useful as well as beautiful.
Quickness is a modern need—a paying quality. Q.
Round writing is easy to read and easy to write.
Simplicity in all things is best, in writing as well.
True merit reveals itself in work; in good work.
Use a free and easy movement in your writing.

Vanity and presumption ruin thousands. V. V.
Write well, spell well, compose well, think well. W.
X is the twenty-fourth letter in the alphabet. X.
Young man, young woman, learn to write well.
Zealously pursue the study and practice of writing."
Knowledge and Skill are necessary for success in practical penmanship, as well as in all things else. Knowledge to dictate, skill to obey. Know something and do something is the demand of the times. Writing is a vehicle of carrying your knowledge to market. The vehicle, (writing,) without something to put into it (knowledge,) is of little or no account. Knowledge, without a means of conveying it to others, is like unto a candle under a bushel—of little value or satisfaction. Skill comes by careful doing and right practice. Knowledge comes by desire and effort. Skill is well-directed thought—thought transformed into habit. A good handwriting is therefore nothing more nor less than thought reduced to material form—thought reduced to action. Good writing is the result of good thinking, along the line of writing, at least.

The Combinations or signatures presented herewith demand a free, sure movement. One that is not spasmodic or fitful on the one hand, nor sluggish or awkward on the other. See how gracefully you can execute them. Be sure you know the style of joining before placing the pen on the paper, and then be careful as to the spacing between the letters. There is need of little or no finger action in such work. The nearer you come to pure arm action the better, for capitals in particular. Let the elbow serve as the chief center of motion and control.

Criticism J. A. J.—Loops below the line such as t are too sharp. Watch details. Small i is too small. Your work is quite good from a business standpoint.

D. C. D. Yes, your work is better. Loops taller than necessary. Last part of r too nearly vertical. Curve down stroke in b and l slightly. Avoid angle at top of loops by using less finger action and by not passing there.

J. G. W.—Form, arrangement, construction, punctuation, etc., are good. Pens and ink good. Paper rather cheap. Second part of p too sharp. Watch spacing between letters. Keep it uniform.

K. R. H. You have filled your pages very neatly and systematically—two commendable things. You seem to lack freedom in your movements, however, and we would therefore advise the practice of plenty of free arm exercises. Many of your forms are very good.

C. V. B. Give more attention to turns and angles, uniformity, etc. Your movements seem free enough, but they must be controlled still better. You can become a very fine penman. Less attention to movement drills, and more attention to securing control is our advice to you.

P. F.—Your movements are improving. Your writing is very legible and seems easily and freely executed. Practice wide spacing for a time, watching carefully your turns and angles. This encourages strength and force, two things your writing lacks to some extent.
Progressiveville, O, 5-14, 1901.

Mr. William J. Simpson,
Millcreek, Ill.

Dear Sir,

Your favor of the ninth inst. is received, in which you ask what, in my opinion, a modern young man most needs, and in answer I would say he needs a good character as a foundation. Without this, skill and knowledge are of but little value or lasting comfort. He next needs a good common English education, comprising at least a thorough High School course. After these as a foundation, he needs a special education in whatever line or direction he intends to earn a livelihood. If he intends to engage in business pursuits, he needs a thorough Commercial course. If he intends to farm, he needs an Agricultural course. A good handwriting, coupled with good spelling, concise English, and accurate, ready mathematics, is a very profitable acquisition. A good High School course implies this, and ought to insure it, but as yet it is the exception rather than the rule.

To these things a young man needs to add industry, willingness, tact, and ambition. Without these he is apt to lack patience and balance—two forces needed to achieve and merit enduring success. It seems needless to add that proper food, plenty of sleep, and healthful exercise are normal requirements. Intoxicating liquors and tobacco in all forms should be avoided.

Sincerely yours,

Thos. H. Common.

**The Letter**

herewith is not studied penmanship, but off-hand and thoughtless in execution. The thought was expended in the composition. The same was not first thought-out and then copied, but created, composed, and executed simultaneously. And that, it seems to me, is the true test of the practicability of any hand. Not how your penmanship looks while you are thinking about it, but how does it look when you are executing it and thinking of other things at the same time? Thoughtful practice leads to thoughtless excellence, if the practice is of the right sort. Think of your work while forming new habits, but acquire the ability to do good work with little direct thought. No writing, to my mind, is actual business writing if it be not done in an automatic or unconscious manner. The world demands legible, rapid, habitual (automatic) writers. Are you capable of supplying the demand?
SUPPLEMENTARY COPIES BY J. M. BLUE, WITH ZANERIAN.

BY E. P. KUHL, STUDENT OF SANDUSKY, O., BUSINESS COLLEGE AND THE ZANERIAN.

BY L. W. CURTIS, STUDENT IN IOWA BUSINESS COLLEGE, DES MOINES IOWA.
The Best Style of Penmanship for the Beginning of the Twentieth Century

BY J. I. MILLER, SEATTLE, WASHINGTON

Your request for alphabets, such as the business world will demand during the first decade of the twentieth century, is not an easy one with which to comply, because the ways of the world are growing so rapidly that the needs of today will not be sufficient to meet the demands a few years hence.

We are living in a fast age, and no branch of education has undergone more radical changes within the past decade than that of business writing. The business world demands today, writing more legible, more rapid, freer from superfluities, and more of it, than ever before. Rapid business writing has an intrinsic value which nothing else does or ever will take the place of.

The copies herewith were written rapidly, with the forearm muscular movement, with a straight holder, and medium pen. They are not ideal—when the writer has attained his ideals he hopes to lay down his burdens and take up the crown—but are practical forms, simple in construction, and are certainly legible. The two essentials above all others are speed, and legibility, and whatever, in penmanship, is a hindrance to either, should be discarded.

The simplified forms of script writing, such as are advocated by the editors of the PENMAN-ARTIST AND BUSINESS EDUCATOR, while intensely legible and beautiful in their simplicity, are not the forms most easily and rapidly constructed, it seems to me.

The absence of all unnecessary strokes in these abbreviated forms, requires that the pen come to a dead stop before it is lifted from the paper, and this is an obstruction in the path of rapidity.

It is hoped that no one will infer from what is here stated that I am opposed to the Zanerian simplified style of writing. On the contrary, no one is more ardent in his praise or admiration of it than I, and it to those who advocate and use it, it can be more rapidly written than any other, it is certainly the style to adopt.

There is no one style of writing, form of letters, degree of slant, or method of execution, that is best suited to all requirements in writing, as in everything else, there ought to be—there must be, in spite of us—individuality.

To the great majority of those who do a great deal of writing, we believe the forearm muscular movement is the movement, and yet there are many conditions under which this movement can not be used.

As regards slant, this is a question of no great importance. To say that every one should write with a certain degree of slant, is to crush individuality, and this is despotism—as some one has truly said.

In conclusion, we must divorce ourselves from the old orthodox creeds of the past namely, beauty, grace and accuracy, and supplant instead, ease of execution, speed and utility.

Brother Stevenson Speaks

PORT DEPOSIT, MD., Feb. 3, 1901.
ZANER & BLOSER, Columbus, O.
MY DEAR FRIENDS:

"Put my name on your permanent list, sending bill whenever you want the cash." I trust that my quoting from your courteous circular will not displease you.

The PENMAN-ARTIST AND BUSINESS EDUCATOR is, a credit to our cause, to its editors and to the profession of teaching, in general. We can afford to support a dozen such papers.

It is a source of considerable wonder to me that the PENMAN-ARTIST AND BUSINESS EDUCATOR can advocate finger movement, two-measurement letters, vertical writing, and hold men like Satam and then give lessons that are up to date and as radical teachers of forearm movement, standard positions and forms, as the irresistible Palmer in his most insane intervals.

Thanking you for your splendid report of the Federation, and especially for the life like picture of your handsome Mr. Omega, (the end of the alphabet) and the Alpha of artists and parted whisker malsols, I beg to remain, Yours at a natural slant,

W. C. STEVENSON.

[Thanks, brother, for compliments, support and criticism. Replying to your criticism we take pleasure in saying that we are not advocates of finger movement but of truth. If we were finger movement advocates, as you state, we could not be advocates of any other movement. Instead of such being the case, we are advocates of a number of movements, and not of but one. But by being advocates of truth we mean that if we use the fingers, even a little, we acknowledge it. The fact is, we use less finger movement than many who advocate simon pure muscular. We do not even try to saddle the little we do use onto Satan, but acknowledge it like men. We are for uprightness and simplicity as suggested, but neither narrowly nor selfishly so. Thanks, brother, for opportunity to define our position.—EDITORS.]

Best of its Kind

PRATT, GA., Jan. 3d, 1901.
The PENMAN-ARTIST AND BUSINESS EDUCATOR is certainly the best paper of its kind published.

Fraternally,
J. C. BLAXTON.

BY L. E. STACY, KINGSTON, N. Y.
A contracted Horizon

"Higher education levels down geniuses. If this is not so, why haven't the colleges and universities, in the last two hundred years, caught a genius? I want those who oppose me to explain Washington, Franklin, Hamilton, Lincoln, Rockefeller, and a dozen others." There is so much plausibility in the foregoing statement, made at the Detroit meeting of the Federation that we give it some consideration this month. It would be a grave misfortune if the present tendency among business school proprietors to disparage the work of higher institutions of learning should become intensified through the haste-acceptance of a dogmatic assertion like that quoted above. Such a belief can be the result of nothing less than a pitiable narrow outlook on life and exceptional ignorance of history.

The college men of Daniel Webster's day, or even of the Transition period of Charles Sumner's schooling, would hardly recognize the Harvard of 1875 or 1878, so great have been the changes in the direction of training for business affairs. The giants of success among the older class of present day business men got their start when colleges were narrow and unrelated to practical life; when the field of competition was not filled with sternness, well-trained opponents; when native sagacity and physical vigor were needed, more than intellectual skill in applying the laws and forces of Nature and the principles of economic science. The successful man of the future will be a college man, today almost as many men enter our colleges, technical schools, and institutions of higher learning, intending to prepare for a business life, as enter to train for a professional vocation. It is no longer necessary to study a dead language in order to obtain a Harvard or Yale diploma.

Some Highly Educated Girard, Peter Cooper, George Man Peabody, Abraham Lincoln, Commodore Vanderbilt, Jay Gould, William Cullen Bryant, John G. Whittier, C.P. Huntington, Leland Stanford, Henry Villard, P. D. Armour, Geo. M. Pullman, A. J. Drexel, Senator Fair, and scores of other eminent but uneducated men, so also are Andrew Carnegie, Mark Twain, H. H. Kohlsaat, Kussel Sage, Mark Hanna, President McKinley, J. P. Morgan, J. A. Garfield, Alexander Kevell, Clark Spack-}

el, Clem Stadthinker, Senator William A. Clark, of Montana, Lyman J. Gage, and many others that might be named.

By "highly educated," we mean their powers have been developed, so that they have been used to great advantage, if not to the best purpose. Education, in the true sense, is that which calls out and strengthens one's powers, and gives him facility in using them. The college is by no means the only medium of such training, but it provides such preparation in the best and most economical manner; besides, it is more likely to develop a man symmetrically than is the sternness school of experience. The famous men here mentioned, succeeded, not because they lacked a college training, but in spite of their lack of it.

Probably every one of these What Chey Chinos! Higher Education They reached their goal by the long route rather than by the short one, for the same reason that, previous to the middle American railway, Liverpool sailed around the Cape of Good Hope instead of across the Isthmus of Suez—they couldn't do anything else. When the time came to show their interest in the business school field, they did it most effectively—by sending their children to such schools, and by giving largely of their money to support such institutions.

Mr. Rockefeller has given more than $200,000,000 to Chicago University, besides large gifts to other schools. Leland Stanford, Jr., University is the grandest monument ever erected in memory of a departed child. Its endowment has a face value of $80,000,000 and a cash value of $45,000,000. These gifts of the unscrupled Senator Stanford and his wife make this institution the most richly endowed of all privately endowed schools in the country. Vanderbilt received $5,000,000 from the grandchild of D. P. D. Armour, founder of Vanderbilt University, Nashville, Tenn.; C. P. Huntington gave $50,000 to Hampton Institute, and, at his death, left $50,000 to Tuskegee Normal and Industrial Institution. P. D. Armour, founder in Chicago, Armour Institute of Technology, at a cost of $2,500,000; Charles T. Yerkes gave the Yerkes Astronomical Observatory at Chicago University, a gift that cost the street railway magnate $2,000,000. Girard College, Philadelphia, is known everywhere among well informed persons; Cooper Union has been a continual reminder to New York people of Peter Cooper's interest in affairs educational. E. I. du Pont de Nemours founded and endowed the University of Delaware, at a cost of $1,000,000; Sen. Hiram Belknap, of Ohio, gave $30,000 to the University of Cincinnati; the makers of Alpine Cider, at a cost of $100,000, gave the University of Nebraska.

If a man has made a fortune in the commission business, it is well to give some of his money to a college for the benefit of those who are trained in his business. At any rate, there is no need to disparage the institutions of higher learning, or to compare them with the schools of our day; the latter, like the former, have given us men who have made great contributions to the arts of life, a larger number and of a higher order. The college is by no means the only medium of such training, but it provides such preparation in the best and most economical manner; besides, it is more likely to develop a man symmetrically than is the sternness school of experience. The famous men here mentioned, succeeded, not because they lacked a college education, but in spite of their lack of it.

Comparisons and Contrasts

Greely had not a college training, but Charles A. Dana did have it, and, financially, at least, he was the most successful; Edison, without schooling, is a Wizard, but are Nicola Tesla and Sig- nor Marconi less remarkable because they had the benefit of excellent schools?

Washington was a great statesman, but was not Gladstone also?

Rockefeller is a splendid organizer and a successful financier, but what of J. P. Morgan?

Bryant and Whitaker delight us with their melody; are Longfellow and Holmes less musical?

J. J. Hill has been a very successful railway promoter, but have his achievements dimmed the lustre of Senator Depew's great work?

Jackson was a dashingly general and a hard-headed man of no mean ability; what of Lee?

Lincoln was beloved; was Garfield despised? Nobody seemed ashamed of the Count of Monte-Carlo, but he welcomed gladly the presence and assistance of the great Professor Drummond.

It is true that Washington was not a college trained man, but Jefferson, the Adamses, Madison, and Jackson, were college graduates. Jackson, Van Buren, and Taylor had only limited school training, but Harrison, Tyler, Polk, Fillmore, Pierce, and Buchanan were college graduates. Up to 1900, from millions trained only in the common schools and academies of our country, but four men were chosen president. The other eleven were chosen from a few thousand college graduates. Which class, as a class, has the better prospects for political preferment?

Did a university training dull the edge of the incisive Voltaire? Did it obscure the splendid paragraphs of cloudless memory of Macaulay? Did it detract from the achievements of Max Muller, the greatest philologist the world has ever known?

What was the trusted legal adviser of the Paris Peace Commission? Prof. John B. Moore, of Columbia University, New York.

Who was called before the Trust Conference to give what was considered to be the best obtainable expert advice as to methods
of regulating these great combinations? Prof. J. W. Jenks, of Cornell University.

A few Genii Captured

Education, has traced statistics back to twenty-five years, and he has also contributed to the population, three times as many as men are graduated from colleges today as graduated in 1862, and now, of all men who reach the age of twenty-one, only one in ninety-two is a college graduate. Until recently nearly all of these went into the professions, so that, until within ten years, it has been comparatively a rare thing to find a college man attempting to succeed in commercial pursuits. The splendid success achieved by those who have done so is incontrovertible evidence of the value of college training.

Even the same men who have gone on to have a great business that was founded and developed by some man who didn't have a college education," exclaimed a gentleman at the Detroit meeting, when a notice was read that the college graduates were rare. The statement is incorrect, but even if it were true it would not detract from the value of the college training, for it requires quite as much ability nowadays to administer and increase a fortune as it did formerly to found one.

While the gentleman was speaking, the Detroit papers were praising Mr. Charles L. Brush, a young brother, who, at the age of twenty-four, founded an iron mining company, and was later elected president of the American National Bank. The gentleman is now director of some of the largest iron mining companies, and treasurer of two other industrial companies.

In 1893, Mr. A. B. Xewell, a Yale graduate, twenty-four years old, was appointed superintendent of the Lake Shore and Michigan Southern Railway, having been but four years out of college. He holds his job.

A few years ago, John N. Vanderbilt, another young college man, read a paper before a convention of engineers, and evoked warm praise. A locomotive constructed under his supervision and with his assistance, has just been put to work on the New York Central Railway.

But the man who has been chosen as the highest authority on problems of municipal ownership is Prof. Edward W. Benns, recently of Chicago University. Who is admitted to have written the most lucid, trenchant, and constructive articles on institutions of this country? The Honorable Jas. Bryce, M. P., graduate of Glasgow University.

Who was the greatest master of our mother tongue? John Ruskin, O.xford graduate.

Whose bacteriological researches took from hydrophobia and diphtheria their horrible majesty in the kingdom of death? Louis Pasteur, a French university graduate.

Whose, among the great names in Germany, during the last half-century, will be accounted greatest? Bismarck's, graduate of the same German university that afterward trained the splendid powers of J. Pierpoint Morgan.

Who is the mightiest personal factor in the affairs of South Africa today? Cecil Rhodes, Oxf ord graduate.

Who are the great leaders in England today? Salisbury, Chamberlain, Rosebery, Roberts, college or university graduates, all of them. Have the colleges and universities never caught the geographic index?

There is, however, another side to this question. Dr. W. T. Harris, our Commissioner of Education, has traced statistics back to twenty-five years ago, and he has also contributed to the population, three times as many as men are graduated from colleges today as graduated in 1862, and now, of all men who reach the age of twenty-one, only one in ninety-two is a college graduate. Until recently nearly all of these went into the professions, so that, until within ten years, it has been comparatively a rare thing to find a college man attempting to succeed in commercial pursuits. The splendid success achieved by those who have done so is incontrovertible evidence of the value of college training.

Every name you have mentioned represents a man who took charge of a great business that was founded and developed by some man who didn't have a college education," exclaimed a gentleman at the Detroit meeting, when a notice was read that the college graduates were rare. The statement is incorrect, but even if it were true it would not detract from the value of the college training, for it requires quite as much ability nowadays to administer and increase a fortune as it did formerly to found one.
Commercial Geography in Europe

LOUIS C. HURT, PROFESSOR OF ENGLISH
AT THE COMMERCIAL ACADEMY
OF VIENNA.

Commercial Geography holds an important place among the subjects taught in Commercial Schools on the continent of Europe; and Dr. Edmund J. James, head of the Department of University Extension, in Chicago University, who was sent to Europe by the “American Bankers’ Association” in the year 1892, for the purpose of studying the organization and methods of teaching in Commercial Schools on this continent, stated in his report how particularly he was struck by the importance of this subject, and the admirable way in which it was taught. It endeavors to give the student an idea of the different States of the earth in their geographical, ethnographical, and geological circumstances and treats of the productions, exports, and imports of each country. Former pupils of German Commercial Schools are to be found all over the world, as the writer of this article is able to testify from personal experience, and the knowledge that they have acquired at school cannot fail to be of service to them. But some acquaintance with foreign countries must nowadays, when means of communication are so easy, be indispensable to every man of business, whether he stays at home or goes abroad, and to none more so than Americans, who seem likely to acquire from year to year a more important position in the commerce of the globe.

W. N. FERRIS, PRESIDENT OF FERRIS INSTITUT","BEG KAPIDS, MICH.

Our public schools provide for eight years of work in arithmetic. It is generally admitted that the results are very unsatisfactory. On completing this course the majority of students are slow, inaccurate and impractical. The public school course in arithmetic should be reformed. Children should not be required to take up four years of work in arithmetic before entering upon the fourth year of school work. Prior to this time, (1) the majority of children are not ready for it; (2) they have no use for it; (3) they are arithmetically injured by it. These are legacies of prevision which should challenge the careful consideration of every teacher of this subject.

THE MATTER

The subject matter of arithmetic has received very little attention. In the aggregate, there have been very few attempts made to present the children with solid reference to giving them something to do. The selecting of subject matter with reference to securing rapidity, skill, and power has been unconsciously ignored. The teacher who wishes to secure satisfactory results in arithmetic must give the subject matter his undivided attention. The arithmetic exercise, ordinarily used to dissipate mental energy, confuse the child, and unfit him for ever mastering the subject. In selecting matter, the enumerative plan should be observed; in other words, the work done the first week is the same as that done the second week. To illustrate, “1 + 3 + 1 + 2 = ?” is not one problem, but three problems, the final result of which is not to be remembered, because it cannot be turned to service in solving any other problem. If the child is ever to become a ready reckoner he must learn sometime and somewhere that 4 + 3 7, and that this, when once learned, he must always know instantly without calculation. In a word, the “what” in relation to each number must be little and fundamental. On the basis of what has already been said the successful teacher will, in teaching, “reduce his problems to their simplest form” select those in common use and require children to give results “at sight.” He will very rarely ask his class to reduce “squares” to their simplest form, because this problem is unknown to the simple work. The process will be worse than useless. While solving such a problem the children can, under the direction of the teacher, solve fifteen practical problems, and thereby gain in accuracy and skill. This paper does not advocate the use of less subject matter, but on the contrary, advocates the use of more subject matter, but of a kind that can be handled with ease. He believes that the mind is in touch with actual life relations. Pure arithmetic involves but few principles. These principles are simple. Their application to business involves by far the larger number of actual difficulties. The teacher cannot put too much stress upon the “what” in arithmetic. When teachers recognize this important fact, they will discover that the entire subject of practical arithmetic can be mastered by children, beginning the third year of school, in three years. The time, ordinarily required by the handwork in the other five years, can be profitably devoted to elementary science, literature and handcraft.

THE METHOD

It is now my purpose to discuss method in securing the best results. The teacher will find that the boy or girl who begins arithmetic in the fourth grade has already acquired, in the plural way, a working knowledge of the science of the relation of quantities as expressed in number. If by chance the children in this grade have not in their life relations acquired this art, he finds them in the hands of the best teachers. The child and the man always use when not parasitized by the use of a book. What is this method? The answer is simple. The teacher moves the hand of the child from the day to day, LINING TO APEX, FILLING ONE AT A TIME, raising the book. The relations of these commodities in trade are expressed in number. It is not always easy to bring flour, meat, sugar, eggs, etc., into the school room. It is easy to employ blocks and cut paste-board in such forms as admit of easy measurement. These objects are to be put out of sight just as soon as their use stands in the way of quick and accurate mental operations.

MENTAL ARITHMETIC

In the fourth grade the teacher should be provided with as many mental arithmetics as he has pupils. I commend to you Kirk & Sabin’s Course in Oral Arithmetic, two books, covering six years of work, the same to be mastered by ordinary pupils in two years. The books are not to be put into the hands of the children for study. The revival of interest in mental arithmetic is to be of little value to pupils if the current method is to be pursued. Bear in mind that the oral work is much easier for the child, and select from the book the matter that is adapted to each particular class. He is to use the book and not let the book use him. The class having been called, the teacher revives from the books a form or two for the pupil of the result. If the answer is correct, he does not waste time in requiring the pupil to repeat the problem, and then under the guise of so-called analysis, require the pupil to use the book himself. If he gives the correct answer, he has understood the problem and he has performed the mental work. What more does the teacher want? By pursuing this method, the teacher can make such rapidity, neatness, rapidity, correctly read and write, and skill and accuracy. “Oral analysis” is to be used solely for illustrative purposes, to aid some pupil who does not see the arithmetic. By this method forty or fifty problems will be solved by the children in minutes as against eight or ten by the “therefore, henceforth, and forever” method. Some teacher asks, “Why not put the pupils to the hands of the children and assign regular lessons?” Because he will fail utterly in securing “fine art” results. I assume that the “fine art” is an artist, that he recognizes the value of the pupil’s work and that he will understand the mental operations of his pupils. If he gives the children the books, he tramples upon his own work as an artist. They are the

(Continued on Page 217.)
The Department of Commerce of the Central High School of Philadelphia

HENRY W. PATTEN

In his report on the public schools of Philadelphia, in 1892-3, Superintendent Edward Brooks first made mention of a Commercial High School for boys. His suggestions and discussions of this subject were continued each year, until in his report of 1896, he recommended that a Commercial High School be established. The Board of Education acted upon this recommendation, and a committee was appointed to report on the subject. Definite action was taken May 24, 1898, when the Board recommended that such a school be established. The course of instruction was adopted in June, and Dr. Cheesman A. Herrick was chosen Director of the Department. Dr. Herrick is a graduate of the Wharton School of the University of Pennsylvania, and a teacher of experience and marked ability, whose career has been most fruitful of good results. He recognizes the value of the school to the community and is enthusiastic for its success.

THE OPENING

The new Department opened with an enrollment of 175 pupils, thus confirming the views of those who felt that it was needed and indeed demanded in this city. It is now in its third year, having been very successful, both as regards attendance and results accomplished.

LABORATORY METHODS

Scientific studies treating of the forces of nature, with a view to their applications in the Mechanic Arts and Industries, have been deemed very essential. Extensive and well equipped laboratories have been provided, where, in addition to Physics and Chemistry, the Raw Materials of Commerce in the Animal, Vegetable and Mineral products are analyzed and studied. Excellent opportunities are offered for visiting the different and varied industrial processes to be found in operation in Philadelphia, and thus admirably to supplement the regular school work. Visits have already been made: for example, to the Atlantic Refining Company, the Penncord Iron Works, The Baldwin Locomotive Works, and Cramp's Ship Yard, etc.

MUSEUMS

The Philadelphia Commercial Museum is available for observation work, where the products of the entire world may be studied, as is also the Pennsylvania Museum and the School of Industrial Art. A Museum is being collected for the Department, which, when completed, will contain specimens of raw materials and the manufactured products from these, from all over the world. The advantages of such a collection for the purposes of study cannot be over-estimated. Commercial Geography becomes at once a fascinating study, when this varied display is placed before the pupil and he is required to tell, not only in what country or countries the materials or goods are to be obtained, but also what means of transportation are to be employed, and through what ports the goods must pass before entering the United States.

LANGUAGES AND ACCOUNTING

The Commercial value of the modern languages has been taken into account and German is required in the second, third and fourth years, and Spanish or French in the third and fourth years. The Department of Accounts and Business Practice affords instruction in penmanship, book-keeping, business forms and commercial law. Stenography and typewriting are taught during the second and third years.

THE COURSE OF STUDY

The following is the course of study adopted by the Board of Education:

FIRST YEAR

Composition writing, with a study of Classical Literature in translation, and of American Literature, three hours each week.

Elements of Latin and Easy Readings.

Algebra, five hours.
The Penman-Artist and Business Educator

Greek and Roman History and European History to 500 A.D., three hours.

Raw Materials of Commerce, (Animal, Vegetable and Mineral Products,) four hours

Composition, (Lectures and Quizzes,) two hours.

Business Forms, with Penmanship Practice, two hours.

SECOND YEAR

History of English Literature, with Composition Writing, three hours.

German Grammar, Reading and Conversation, five hours.

Advanced Commercial Arithmetic, including Mensuration and the Metric System, two hours.

The elements of Geometry and Trigonometry, three hours.

LITERARY AND DR. MERRICK'S MEDITATION ROOM.

English and Modern European History, two hours.

Commercial Geography, Book-Keeping, three hours.

Stenography and Type-Writing four hours.

THIRD YEAR

Readings from English Literature with Essay Writing, and Elucution, three hours.

German Reading, Composition and Conversation, three hours.

Spanish or French (Election,) four hours.

American History, two hours.

Physics and Chemistry, four hours.

Political Economy, two hours.

Mechanical Drawing, two hours.

Observation, and Reports on Office Practice, Business Methods, etc., three hours.

Stenography and Type-Writing, four hours.

FOURTH YEAR

Readings from English Literature and Thesis Writing, three hours.

German—Advanced Reading, Conversation and Correspondence, three hours.

Spanish or French (continued,) three hours.

Modern Industrial and Commercial History of the United States and England, three hours.

Industrial Chemistry, two hours.

Transportation, Banking and Finance, four hours.

Statistics (in connection with Thesis Writing,) one hour.

Study of Government (chiefly cities,) three hours.

Ethics of Business and Commercial Law, two hours.

HOW THE COURSE WAS DEVELOPED

The work of preparing the course of study was interesting.

Suggestions were requested from a large number of business men, and when these had been co-ordinated, the provisional course that was made was submitted, along with a typical course prepared by Professor James of the University of Chicago, for further comment and criticism.

SUGGESTIONS was received from men representing wide ranges of interests, and when the final reports were received, the provisional course was revised and adopted by the Board. But this course was not accepted as final. The President of the Board has requested in his annual reports that those interested, communicate further suggestions.

At the end of a year the Director of the Department recommended a revision of the course, considerably modifying the original plan of studies. A further report urging additional slight changes will likely be made some time in the present year.

CO-OPERATION OF EMINENT BUSINESS MEN

In this connection it is interesting to note the cordial support which the project has received from the business men since its inception. Mr. Samuel B. Huey, President of the Board of Education, and a very successful corporation lawyer, Mr. Theodore C. Search, one of the foremost business men of this city, Dr. Wm. P. Wilson, Director of the Commercial Museum, and many others, have given most efficient aid to the project from the beginning.

THE OBJECT TO BE ATTAINED

The aim of the School of Commerce, as conceived in the Philadelphia experiment, is to prepare young men to participate in every phase of business activity. Its promoters believe that the successful business man of the future must be broad in his conceptions, and must have a knowledge of the various industries and processes of manufacture and of the operations of trade, not only for this country but for others.

The business man must be familiar with the trade conditions and needs of other nations as well as his own, and such familiarity this school aims to furnish. Schools of commerce are today found in Germany, wherein her young men are trained to carry her products to foreign markets, and during the last few years Germany has secured an entrance into the markets of every country, and already rivals England, which so long has pre-empted the trade of the nations. Dr. Brooks says, in his report for 1898-9, "America is rich in her manufactures."

INDIVIDUAL DESKS IN LABORATORY—ANIMAL AND MINERAL PRODUCTS.

LABORATORY FOR VEGETABLE PRODUCTS—DEMONSTRATION TABLES AND CASE.

STENOGRAPHY AND TYPEWRITING ROOM.
Through her skilled laborers and superior mechanics, she is the peer, if not the superior, of any nation of the globe. What she needs now is trained young men to carry her products to foreign countries. If there were a hundred such young men in this city today, bright and properly qualified, they could line up in the front ranks andenerative em-
ployment as representatives of American goods and American firms in the markets of Mexico and South America. We need, moreover, a trained class of men to act as consuls and representatives, men who are familiar with the trade conditions and needs, to look after and protect American interests in foreign markets. Indeed, there is no class of schools in our city, which promises a larger field of usefulness and a richer reward to its pupils, than the Commercial High School. It is interesting to note that it has already so impressed itself on the educational world, that in December last, Cornell University invited Dr. Herrick to de-
liver, at Ithaca, a course of lectures on the functions and possibilities of schools of com-
merce in this country.

Professor Feibleman of this monograph on commercial education, says: "I believe the time has arrived when the American Commercial School should cease to be purely a clerk factory and educational repair shop, and should assume the duties and position of a real business training school. In order to do this, it must raise its standards, broaden and deepen its course of study and lengthen its time requirement. This stand-
ard of secondary commercial training has been more nearly approximated in Phila-
delphia, at the Commercial High School, than in any other American city."

Judging from the results so far obtained, it is considered that the four years course as herein outlined, will so far meet the existing requirements, as that the gradu-
ates of this Department will in the future be recognized among the successful repre-
sentatives of business activity in this country.

FERRIS ON ARITHMETIC.

Continued from Page 214.

learners, he is the master, the director, the train-
er. In many schools where the chil-
dren have the books, problems and answer-
s are committed to memory in order to avoid receiving a deris, and the results are demoral-
ing. Such is the state of the arithmetic in this school. "In a few weeks more" the pupil will be placed in the hands of the pupils during the recitation. The teacher should designate problem by number, pause a few seconds and then call upon a pupil for the correct answer. If the pupil has been taught the kinds of the problem, the teacher should bear in mind that he is teaching mental arithmetic. By pursuing this plan, an immense amount of first-class training is gained in a very short time. The oral course, as outlined by Kirk & Sabin, is comprehensive, covering all the practical applications of arithmetic. By pursuing this method the pure oral course can be completed, provides it is begun in the fourth grade, in two years. If, for any reason, some of the children are withdrawn from school while pursuing this course, there can be no harm in adopting the be-

The foregoining is fundamental. Further illustrations are unnecessary. The value of modern arithmetical language and forms in practical problems, has been greatly exaggerated. A large number of the so-called cases of modern text-books are utterly foreign to business, and are unworthy of even a charitable consideration. As already stated, arithmetic is the science which solves the relation of quantities as expressed in numbers. These relations involve simple reasoning. The pupil who has mastered addition, subtrac-
tion, multiplication and division in relation to integers and fractions, has no use whatever for the terms, — rate, percentage, base, and interest as taught in the methods employed by most teachers. By employing the current method, pupils rightly imagine that they are meeting new obstacles daily, whereas, when he begins the specific applications of percentage, he is only master of the arithmetical feature. The new element in percentage is the application of arithmetic to business. The large part of the pupil’s work in this stage of learning business usages. Not infrequently, the teacher has had little experience in business. He is over-burdened with work, and feels that he is forced to employ rules and the limitations contained in the school arithmetics.

No man or woman can teach practical arithmetic without first acquiring a knowl-
dge of business. In "profit and loss" the child must be trained to appreciate "cost price;" in commission, to appreciate "work done, or service rendered," in order to guard against the fool notion that there are two classes of merchants. He must understand, "bank discount" to appreciate the fact that he must always have in mind "the value of bankable paper at maturity;" in "stocks and bonds" to appreciate the importance of seconding mind.

In business college work, the training does not differ from right training in our public schools except that the entire arith-
metic course must be completed in from three to six months. The "oral course" is the preliminary "oral course." Use Kirk & Sabin's first book for four, or possibly five weeks. Again I say, pupils enjoy doing what they can do readily and quickly. Then use the second book. The time allowed for it should be six weeks. The method is the precisely the same as already outlined. Then use acquired arithmetic power in having pupils master so-called arithmetical applications, but it must never forget the importance of accur-
acy. No credit should ever be given in "business arithmetic" for quick method of solution when linked with an inaccurate result.

Daily drills in rapid addition, sub-
traction, multiplication and division are indispensible. More than 50% of all ap-
plied arithmetic involves these fundamental processes.

In conclusion, more and better arithmetic can be taught in three years, in the public schools and business colleges, by the plan I have outlined, than is now taught in eight years. In the first-class business college, pupils of sixteen and twenty years of age, whether previously trained or not, can be taught practical arithmetic in six months. At the beginning of the 20th century let us cease to waste time teaching arithmetic. Let arithmetic teachers keep pace with the demands of life; let them use the time saved by employing sensible methods to awaken human souls to an ap-
preciation of the world's best literature; to an appreciation of the arts and humanities; to an appreciation of the laws and humanities of nature; to an appreciation of the meaning and mission of human life.

Some Good Words from S. McVeigh.

Enclosed find check for three subscrip-
tions for the PENMAN-ARTIST and BUSI-
NESS EDUCATION. I find that your journal has inspired me in my work, and I can no longer afford to be without it. The new department, I must say, is a real delight to me, and you are fortunate in securing Mr. Chadwick to preside at its head.

M. McVEIGH.

Oct. 1, 1902.
Our Vertical application. cents cation. before others class expression. which we have never refined manuscripts simply because they did not state our views.

As Publishers, we endeavor to do that which will command the widest and best attention and patronage. In order to secure subscriptions, we do not give that which people are willing to pay for. To secure advertisements of the right sort, we must circulate among people who have money and intelligence.

As readers, you have a right to expect to hear from others, and to be heard when you have anything to say. As subscribers, you pay for our services and opinions, pertaining to penmanship, art, and to practical education, and not our beliefs and prejudices concerning religion and politics.

Our Creed. We believe in simpler script characters because they mean more legibility and speed, and better writing at the hands of all. We further believe that there is more slant, no one movement, one style that is best for all, but that there is for each, and that the best teacher is the one who endeavors to help rather than suppress individuality. We are opposed to big bone-idea and little n methods.

An intellectual, commercial educator wrote us as follows: "There is a liberty and fairness in your publication which first attracts my attention and which just suits my way of thinking. It is a difficult thing to be both liberal and enthusiastic, and yet you possess both to a high degree." I pon this platform we solicit our patronage and dedicate our enquiries.

ZANER & BLOSER, Publishers.

Vertical Questions Answered

"In view of the fact that the vertical slant of penmanship is being demanded, I take this opportunity of asking your opinion regarding same.

1. Do you think it easier to learn than the slant hand?

2. According to the best authority, can it be written as rapidly as the slant?

3. Would you adopt it into the schools exclusively, or would you prefer slant?

Any information you may give regarding the standing of vertical, as compared with the slant, will be gladly received.

The above are typical of many similar questions asked us frequently and we here have it to ask: Is vertical writing to be worthy to those whom they may concern.

1. Vertical is more easily acquired than the usual slant hand because it is less complex.

2. Vertical can be written as rapidly as the slant hand—faster by some. That is, it depends more upon the likes and dislikes, prejudices, temperament, etc., of the individual than upon the merits of any particular degree between 90 and 15.

3. We would adopt vertical in the primary grades and let the experimenting ends there more, if made intelligently and fairly, determine the standard to be adopted for the upper grades. Wisdom, patience, skill, time, experience are necessary to solve the slant problem. In the primary grades one slant may be the standard for children and another for adults.

Editors.

The Few and the Many

The few of the Spencerians and their worthy followers try to teach people to write better than plainly to write prettily. We once thought all could learn to write beautifully if they would but earnestly try. Today, however, we see differently. Experiments have demonstrated that all can learn to write plainly, the few beautifully. The world needs legible penmanship on the part of every citizen and beautiful penmanship on the part of every specialist. Ornamental penmanship will live long after business penmanship has become the product of shorthand, typewriter and phonograph. The few can profitably learn to write beautifully while all can profitably learn to write plainly. The lessons of the past have taught that the many cannot become expert, but that the few can. All, therefore, need to learn to write legibly and fairly rapidly, while the few who have the genius of tool and talent need to become expert.

Banks

"Is it true that banks do not accept vertical writing and if so, why?" We guess they do when it comes in on checks or deposits with such names as Edson or Eaton attached. Some bankers doubtless refuse Boston Pen Art Company, made rigid an examination in writing as in other branches. This raises the very important question, What and how much should a candidate for a certificate know in order to teach up to date writing? To get the conscious or unconscious opinion of the Writing Masters and Educators concerning the matter, the PENMAN-ARTIST AND BUSINESS EDUCATOR has decided to publish a symposium. As an examiner, what ten questions would you ask in order to determine the applicant's qualifications to teach writing?

Madarasz

You have doubtless noticed the advertisement of Mr. L. Madarasz concerning his proposed summer class in penmanship. We consider him one of our teachers— one who is familiar with many widely differing methods, and many penmen. Mr. Madarasz is therefore qualified as are but few others to instruct in his specialty— penmanship.

We wish to call the attention of our readers to the advertisements in other columns of The Penman and Business Educator. We have every reason for believing that they are perfectly reliable and that they aim to satisfy all customers.
Mr. J. F. Caskey, recently of Marion, O., is now one of the teachers in the Elliot School of Business and shorthand, Wheeling, W. Va.

Mr. F. T. Weaver, E. Liverpool, Ohio, in a letter using the insignia for stenographer and supplies, states that he "opened the year with seven times as many students as last year," and though his school is only a single fellow—reason he came from a fine family.

Mr. R. G. Lath, the hustling, intelligent, skillful, all-round commercial teacher and penman, in the Boys School, Bluffton, Ind., has become one of the leading commercial studies in the city, and has elected to the position in the Boys' High School, Manhattan Borough. Success, brother.

Mr. W. L. Tipton, recently of Detroit, Mich., is now a teacher in the commercial department of the high school, Tyrone, Pa.

K. A. McDevitt, recently with the Massachusetts Mutual Life Insurance Company, is now with the Chas. Business College, Ypsilanti, Mich., teaching simplified penmanship.

Edward A. Bowes, of Lynn, Mass., is now principal of the shorthand department of the Winsted (Conn.) Business College.

Prof. A. J. Zaner, of the Penman-Artist, is now a hustling, progressive, congenial fellow.

Mr. M. A. Albin, penman in the Topeka (Kans.) Business College, reports a splendid school of penmanship, spelling, English history, and one class in composition rhetoric.

Mr. W. A. Pierson is now connected with King's Mountain Military Academy, Yorkville, S. C.; writes, "I have an excellent penman, and feel that a small institution in every respect." The PENMAN-ARTIST wishes Mr. Pierson the very best wishes for his new field of work.

Mr. R. E. Moore, formerly of Pine Bluff, Ark., is now supervisor of writing and drawing in the public schools of Montgomery, Ala. The PENMAN-ARTIST wishes Mr. Moore much success in his new field of work, and he writes the simplified style exceedingly well.

W. P. Wright of Wheeling, Pa., Business College, has united his forces with F. M. Allen of Wilkes Barre, Pa., Business College, and they will conduct both institutions under one management.

Mr. Wright, however, will remain at Hazelton as resident principal of the school there, and Mr. Allen will occupy a similar position in the school at Wilkes Barre. This will give both gentlemen a wider field for their energies, and we wish the combination no bounded success.

Mr. P. W. Fredrickson, president of the Mensfield, Ohio, Business College, reports a splendid attendance of students, and all is well.

Mr. R. H. Wright, who has been pursuing a course of instruction in the Zanerian Art College, was recently called away from his work to take charge of a class for commercial pupils in the Peabody High School, Peabody, Mass.

"The American Economist," of February 22, commented at length of the proceedings at the annual banquet of the American Protective Order of Odd Fellows at the Waldorf, Astoria, February 16. The excellent account, which was given so promptly to the press, is an extra fine work by our friend E. M. Barber, of The Appraiser's Office, New York.

F. F. Price, principal of the commercial department, Bay City, Mich., reports an attendance of 225 pupils, and is strictly up-to-date in consequence thereof.

Mr. C. W. Ransom, for four years principal of the Boys' High School, Winkleville, N. Y., and well known throughout the country as a principal in every respect. For many years Mr. Ransom has had years of experience in teaching penmanship by mail, and we feel sure that those desiring instruction will do well to correspond with him. See his advertisement in this issue.

We acknowledge the receipt of "The Art of the Pen." We are delighted to have in the hands of our friend, W. J. Kinsey, of whose successful work the essay by him is taken.

The excellent article on School and Business Arithmetic, published in a recent number of this paper, is by a penman who has published in pamphlet form by the author, Dr. Edward W. Day. The PENMAN-ARTIST has been sent a copy, with the compliments of Dr. Stitt.

W. K. Hayward is teaching in the Philadelphia Business University.

Warren M. Van Name, a graduate of Columbia University, recently accepted a position as professor of English in New York Commercial High School. He was formerly at Blairston Prepstrean Academy.

The Brooklyn Commercial High School has enrolled a larger class than ever before in its history. It has an excellent faculty, and the PENMAN-ARTIST wishes the students to do well in their studies. The Penman-Artist desires the school to be successful.

The veteran, L. M. Lannan, is announcing, in an attractive manner, a summer school for penmanship teachers. It is a rare privilege to sit under such instruction.

OBITUARY

J. B. LUCKEY

Prof. J. B. Luckey is dead. This news will be read with sorrow by the penmen of all over the land, he having a national reputation as a penman.

Professor Luckey was connected with the Bryant & Stratton Business College at Los Angeles, Cal.

The cause of his death was pneumonia, which occurred February 10, 1901, after a short illness of nine days.

Professor Luckey was a man of much ability and was truly a penman. During the fifteen years in which he was connected with the above mentioned institution, he never failed to display anger or impatience with a pupil.

J. N. MEHAN

Just as our February issue was about to be closed for passage of our journal we learned of the death of the veteran commercial educator, J. N. Mehau, of the Commercial College, Des Moines, Iowa.

Mr. Mehau was very successful in commercial educators generally, as he was well known and highly respected by nearly all such persons in his line of work.

It was known that his health was somewhat broken, but when we heard that he had again taken up his duties as publisher and school proprietor, it was thought that he would be able to continue.

We extend our sincere sympathy to his family.

CATALOGUES AND CIRCULARS

W. A. Thompson, Pontiac, Mich., is putting out a very fetching poster-circular for his Home Study course in sign-show card lettering. Mr. Thompson is doing conscientious, up-to-date work, and is deserving of the extensive patronage he is receiving.

"Success" is the title of a unique and high-grade business handbook issued by the Spencerian Commercial School, Cleveland, O. The pamphlet containing the same is a rich, brilliant red and was effectively addressed with white ink by that skillful penman, Mr. H. H. Lehman. The entire portable address of James A. Garfield delivered before the students of the Spencerian Business College, Washington, D. C., is presented, together with portraits of successful penmen and effective pupils of the school.

"A Catalogue of Publications of the University of Chicago Press," gives one an idea of the type of the institution by giving a list of the books, tracts, publications, etc., issued by and in association with the University.

"The Searchlight," is the title of a very vigorous circular published by the Marietta Ohio Commercial College, Benn J. Fergus, manager.

We acknowledge the receipt of some neat and attractive advertising matter from the Western Penman, Wis., Business College, Mr. W. Blankenship, a former pupil of the Zanerian Art College, is principal of this institution. F. H. Prexton, Business Educator wishes Mr. Blankenship much success in the conduct of this school. Messrs. Brown and Way, of Milwaukee, Wis., are the proprietors of the institution.

KUTLAND, VT., January 31, 1901.

ZANERI & SONS, GENTLEMEN: The convention number is issued for all interested in the commercially and artistically; it is an inspiration. Judging from the rapid progress made by the paper, you not only believe in evolution, but in an evolution so rapid that it is practically revolution. Sincerely yours,

E. D. SNOW.

"Art Penmanship," by C. C. Cann, published by the Western Penman Publishing Company, Cedar Rapids, la., is a 5-page booklet containing information on business and ornamental penmanship, flourishes, lettering, and pen drawing. The author has given to the public his highest skill and conceptions and no one interested in these studies needs a copy. Given as a premium with the Western Penman one year at our dollar.
The following plan is simple and sufficient for keeping accounts with pupils attending a private school where the time and particularly the expiration of term is varied. Its advantages will be apparent to those interested.

An Enrollment Book made large enough to contain one year's business and stamped with its year date, and the certificates and stubs numbered consecutively. This book should be so made that when the certificates are detached, it can be trimmed and preserved as a complete reference book for future use. The stub space should be large, and arranged to contain all data taken when enrolling the student, his ledger account, expiration of term, extension, re-enrollment, date of graduation, home address, business after leaving, changes in position, etc., All reference to and from this book to be made by use of certificate number, plus the year date.

The Roll-call Register should have names entered in consecutive order from the Certificate Book, and should be large enough to hold one year's record without rewriting names.

A check mark or E should be placed opposite each name in advance, at the date of expiration, or for the time for which each student entered. When a pupil's attendance is marked up to his E, he should be sent to the office immediately, and a new agreement made for a definite period, and marked in both books as before. Time lost may be extended in the same manner.

If the roll is called in other departments at the same time (the first thing for each half day's session), prepared sheets should be used, copied from, weekly, and preserved.

An Index Book of names should be kept for all time to come with nothing but names (alphabet order, vowel index), certificate, number and year. When a student enters for a second year, his new enrollment number and year should be placed above the former.

A Columnar Journal should be so kept that tuition belonging to different departments may be posted separately by footings. The pupil's name appearing as explanation of entry, but no account required other than the original stub of Enrollment Book.

Bills Receivable should have columns, if much business is done by note, and the notes placed in a receptacle in order of due dates.

Unpaid bills or balances, should not be entered through the Journal, but should be made out in bill form at once, indexed with enrollment number and filed in alphabetical order in a bill holder. The amounts on these bills need not be posted until paid. Bills with specific date should have same marked in Roll Call Register, and reported as for Expirations, otherwise the bills should be looked over monthly and duplicates made for presentation. No bill should be removed from the until paid, and posted to stub of Enrollment Book, and journalized.

The Evil of Today

That children are bringing to learn to write at the age of six years and under, and to perform writing daily and almost hourly in the school room, is a wrong which we need to do all in our power to abandon. The reasons are many and obvious. The child is too young to learn the art aright. Being too young, it acquires habits which are detrimental alike to the child's health and to the child's penmanship. The child does not need writing at that age, but it does need knowledge of stones and stars, of ants and ages, of clouds and crows, of moun- tain and valley, of dew and duty, of right and wrong, of which can be acquired more quickly and completely by other means than writing. The prime evils of gripping, excessive finger action, and poor position are the fruits of attempting to learn to write at an age never dreamed of by mature. Let us give the children a rest, and the art of writing a much needed vacation, in the kindergarten and primary grade.

Orders a Dozen Copies

February issue of the PENMAN-ARTIST AND BUSINESS EDUCATOR unquesionably is in the front rank both in quantity and quality. I sincerely hope that you may meet the reward your efficient writing for these

Please send me with bill, one dozen copies of Convention number and oblige.

C. A. FAIR, St. Chicago, III.

Lessons in Artistic Penmanship

Number Seven

BY J. E. LEARNEY, TROY, N. Y.

How well do I call to mind the amount of pleasure and interest engendered by the first set of ornamental capitals that ever fell into my hands. If the forms here- with were to awaken as much enthusiasm and desire on the part of those following these lessons, as many ones have in me in the past, I believe I would envy your delight. Poor as they are, they are the product of much hard work and study. Yet I consider the moments spent in the acquire- ment of them among the happiest of my past life. True it is, there is more satisfaction in possession than in pursuit, yet when the former is born the latter is buried. Therefore enjoy the pleasures of your present labors and then the satisfaction that comes only by possession.

CONCEPTION, CONFIDENCE AND PRACTICE

I have heard it said that to be able to make a good set of capitals one must make half a dozen sets daily. That is, no doubt, a good way, but there are better ways. However, the first requisite is a knowledge of form. The second is that the most important essential, is skill, which comes only by honest effort repeated over and over again. Another very necessary essential is confidence, which is born of skill and experience. Not necessarily that kind of confidence that causes the head to enlarge, but rather that which is the result of honest service and efforts.

Practice on each capital until you can make it well any time of day without pre- liminary work, and you will be able to make a set of capitals with but little addi- tional practice. But as long as you are not reasonably sure of the result before the pen strikes the paper you need not expect to have much success in getting out sets of capitals. In other words, as long as you make as many poor letters as good ones don't waste time on the alphabet. Spend it on individual letters.

GENERAL APPEARANCE

After all, the appearance of the alphabet is not dependent so much upon the form of each letter as upon the relationship as
The Penman-Artist and Business Educator

Capitals

 críticams

Hill, Keene, N. H. Would advise you to follow some good course in business writing until you become master of a fairly good hand. You are endeavoring to execute forms that are beyond your present skill. Shading is too long on all capitals. Spend considerable time on some good movement exercises and it will benefit you. Paper is poor and ink too thin.

Chaffin, Eastman, Miss. Work still lacks strength right through. Too weak and sprawling. Do you work at all on movement exercises? You need it. Keep your arm free from tight clothing and endeavor to put some force into your capitals. Small letters require a great amount of careful study. Watch slant. You can procure good paper from the editors of this paper.

Edward F. James, St. Louis, Pa. Your C's are as good as the other letters. Your forms reveal an uncertain action. Occasionally you strike a good form but more frequently a bad one. Study form closely and practice the elements and principles carefully. Review lessons one and two carefully, and you will then see the necessity of reviewing all. Do not infer from this that your writing is poor—it is good.

Smith, Parkersburg. Raise your pen oftener in words. It should be raised, on an average, in making about every second or third letter. Loops are too narrow. Do not pause at top of bottom of j.

G. A. B. Mass. Capitals are not strong enough. You seem to use too much finger action or too slow an arm action. All in all, your writing is good, very good, considering the fact that you are not following it professionally.

davis, Lincoln, Neb. Your work is too large right through, and pen too coarse or touch too heavy. See "Edward F."

Hoffman, Toledo. Yes, there is money in the work to which you refer, but you should raise your standard a trifle higher. Lower part of T too long and shade on E, too high. As a whole, your work is now quite attractive. Some of your forms lack strength, which reveals a rather uncertain action. Alphabet good. Come again.

Ullman, London, O. Your habit of "retouching" shades on all capitals is a poor one. Do away with it. Shade on A too long. Uniform initial and final ovals. Final oval of Z too large. You do very well.

D. W. Jones, Spring Garden. You say you go too fast for accuracy. Then why not slow down? Capitals are "coming up." Move more carefully on small letters and pick the pen often. Lower turn in T, too sharp.

Z. Manchester, N. H. Your work is "climbing." Exercise more care on small letters. Get loops above the line fuller and strive for more strength right through. Initial oval of L too small.

Hamilton, Ky. I see no reason why you cannot acquire an ornamental hand. You will have to study form closely. Procure better paper and "sail in:"

J. C. C., Md. Some (yes, many) of your capitals are too wide for their height. Many of your shades are too high especially in the capital-stem. Work on plain-standard forms will do more towards straightening up your capitals than any one thing. You can become one of our finest penmen.

J. K. S., Md. Capitals are good but uncertain. You get an excellent quality of line. Shades a trifle light. Lower loops in J, Y and Z too large.

whole. All shades should be uniform in weight and the forms about equally distant. Keep all ovals well rounded and about horizontal.

Shading

The shades are most difficult because they require that elastic action which alone at times determines the work of the professional from that of the amateur. In fact, it is this elastic action that determines the quality of the shade. The pen must not only move in the direction of the stroke, but the hand must move up and down to produce the shade. The pen points must not only spread but the weight must be relaxed in time to allow the pen to move smoothly around the turns. If your shades are long and slim it reveals the fact that this up and down action is not quick enough for the other action.

But in spite of all that I have said this time to discourage you in your efforts, do your best to outdo the copy. I candidly admit that I belong to the jealous class, yet I will promise not to feel that way if you succeed.

I am glad to see the rapid strides that many of you are making in this work. This alone is a source of encouragement and satisfaction. I hope you will all continue to improve in the future as you have in the past, and I feel sure that one and all will succeed if you but persevere.
Verticalism

There still appears to be a difference of opinion among the distinguished men of the penmanship profession as to the practical value of vertical writing; yet it might be fairly said that most penmen have gone back to the slant, which clearly shows that the slant is the better style for the masses.

Conceding all this, however, the truth remains that the promoters of the vertical system have not labored entirely in vain during their apparently successful period of a few years, but have, in upholding it, given birth to that medium slant which promises to be the business writing of the future. The favorable record already made by the verticalites has been due to the splendid work of a comparatively few men, the result of whose labors redounded to the credit of the whole profession. Have they not by their untiring efforts aided the development of the most practical style in existence? Yes, and despite the admitted superiority of the slant system and the attempts of its advocates to crush the vertical, some of them still cling to it.

That the verticalites have aided in raising the standard of business writing, there is no doubt, when the results accomplished by them are compared with previous work.

The course of its development, however, has not been in a straight line of progression. Like all evolutionary processes, it has had its periods of retardation and acceleration.

Now that the country has been vastly benefited by the efforts of the vertical advocates, not by the utility and practicability of the style, but by the out-growth of their attempts to make it a universal system, is it not time to follow the out-growth, the product of their work, the star of the future, instead of clinging to the old-fogyisms which, if it is admitted, were more of a failure than a success in the recent past.

Teaching the vertical for the sake of writing vertical is supposed to have resulted in failure as evidenced by the recent moves of the public schools, but it is by no means certain that even those schools were not benefited by it.

However zealously and industriously may seem the promoters of the vertical forms of writing, the awakened ingenuity of the majority of them in seeking a way to escape from its claws, step over to the medium slant which, it is admitted, is far more business like and practical than the vertical.

The verticalites, then, have had their day. Their high attainments and selfless devotion to the profession affords high inspiration to every seeker of the chirographic art, and the public recognition of them has stimulated scholarly ambition among a wide circle of earnest students.

L. M. REASON,
Com'1 Dept. D. M. I., Danville, Va.

Appreciative

Enclosed find remittance for THE PENMAN-ARTIST AND BUSINESS EDUCATOR for one year.
You are publishing a paper of great value. That article by Madaras is worth all the paper will cost me in years. Lehman is giving some fine lessons. In short, it is the paper for me.
May you have all the success you deserve. I cannot think of greater prosperity.
Buckley, Ill.
Yours very truly.
E. A. CAST.

In Advance

Enclosed find $1.00 for renewal to PENMAN-ARTIST AND BUSINESS EDUCATOR. Your journal is now up-to-date in every respect, and in my opinion is in advance of anything else of the kind.
KAY DECKER,

BY E. L. BROWN, ROCKLAND, ME.
Commercial teachers who intend to visit the Pan-American Exposition at Buffalo will be pleased to learn that they can secure rooms from Mrs. A. H. Stephenson, wife of the well-known teacher in the Bryant & Stratton College of that city. Her house has fifteen rooms, so that she can accommodate quite a number. Her address is 40 Sanborn Ave., Kenmore, N. Y. Kenmore is a convenient suburb.

LAMSON & CARPENTER,

521 Soc. for Sav. CLEVELAND, O.

The Best Business Writing for the Present Decade

The accompanying letters and figures show the style of writing taught in the Commercial Department of St. Johnsbury Academy. We make no claims for its beauty or form, or for perfect accuracy in the shape of the letters. These forms are used because past experience has shown that they meet the demands made upon them in the hurry and rush of the business world. They may be formed with great rapidity and yet retain their legibility. Students acquire these forms with comparative ease, and forming the habit of keeping the loops short and the capitals small, soon are able to put up a neat looking page.

The movement used is the forearm, or muscular movement as it is often called, but with a difference in the application of it to capitals and to small letters. In teaching capitals and movement exercises connected therewith, we ask pupils to slide the third and fourth fingers on the paper, just as in the pen slides, but in teaching small letters we try to retain exactly the same action of arm and shoulder muscles, but ask the pupil to now allow the third and fourth fingers to act as a second rest. Thus on a letter like small s the third and fourth fingers form a second rest upon which the hand rests and rolls in a manner similar to the arm rolling on the muscles of the forearm. This gives a second center of control much nearer the letter than the forearm center. Thus by using this second rest less time and skill is required for obtaining an easy, well controlled movement in writing than is needed when only the forearm rest is used.

On other letters the third and fourth fingers slide on up strokes and rest on down strokes. The use of this double rest is a great advantage to pupils when writing in office books, as their ability to control and regulate the movement is greatly increased thereby. In ordinary writing, the faster a pupil writes, the less of the double rest is used, owing to the ease retained to keep the movement under control, while when accuracy of form is especially desired, a greater use is made of this rest.

The use of this double rest in no sense implies that there is a moving of the thumb in the formation of the small letters, for that is just as unnecessary as it would be in the formation of capitals. It might be said that in one sense there is some "finger" movement, for the third and fourth fingers slide or rest as the case may be, but on the other hand it may also be said that this is a forearm motion, for that is the source of the compelling power, the two fingers serving simply as a controller of the motion already produced.

A. H. BARBOUR.

St. Johnsbury, Vt.

CONGRATULATIONS FROM MR. ROSEBERG

I congratulate you on the well rounded and valuable paper you are giving us. It is wonderfully neat and attractive in appearance and contains much valuable and interesting matter. You are to be congratulated upon having associated with you Mr. E. E. GILLOTT whose editorial page is wonderfully interesting and timely. The article by Mr. Barber is an excellent one and should be read by all pro- seo and aspiring teachers.

W. G. ROSEBERG,

I DON'T KNOW IT ALL

So one does—but what I know you'll get the benefit of if you come to New York this coming July and work under me. Those who have been under my instruction in writing are unanimous in saying I know more about writing than any one else. This particular "more" may be the means of making you a successful teacher. It has made others so, and if you know an opportunity you'll enclose a stamp for full particulars.

Come quick. Dozen cards or set Caps, 10c. Satisfaction guaranteed. E. W. Anderson, Penman, Summerville, Tenn.

SHORTHAND by Mail—Book and Lessons. Not free but inexpensive. Newest and best plan—easy to learn, easy to read. Write to J. A. Mcallen, Knoxville, Tenn.

JOIN US!

A grand opportunity to secure a business education at home. C. W. RANSOM, the famous penman, and W. S. DRYDEN, the celebrated shorthand instructor, will conduct a COMMERCIAL and SHORTHAND MAIL COURSE, beginning April 30, 1901.

In order to introduce our work to the readers of the Penman-Artist and Business Educator, we make the following offer, good for thirty days: A trial lesson in shorthand, one set of Business Capitals, and one set of Ornate Capitals, all for 10c. If you wish a specimen of writing unsurpassed by any penman, write for full particulars. Address RANSOM & DRYDEN, Central College, KANSAS CITY, MO.

The Albert Teacher's Agency

C. J. ALBERT, MANAGER.
FINE ARTS BUILDING, CHICAGO

A REAL HELP FOR TEACHERS AND OFFICIALS.

It is our constant aim to be. We have increased in usefulness during the 19 years of successful existence. If you are seeking a Teacher or a Position, NOW is the time to communicate with us. Manual and blank for a stamp. Commercial Teachers a specialty.

CENTRAL TEACHERS' BUREAU, Edw. C. Dixon, 1420 Chestnut Street, PHILADELPHIA, PA.

VISITING CARDS NEATLY EXECUTED.

15 Cents a dozen, seven dozen $1.00. Good Work—no humbug. Address names 5 cents a dozen extra. Two cent stamp for samples. L. E. SCHMITT, 249 S. BROADWAY, BALTIMORE, MD.

YOU WANT MORE THAN YOUR MONEY'S WORTH and HERE'S WHERE YOU GET IT.

Work First-class, Prices Most Reasonable

PORTRAITS 80c. PORTRAITS

For the next thirty days I will make a $2.50 pen and ink portrait for 80c. In placing this ridiculously low price on my work I am not trying to make money but to acquaint you with the superiority of my portraits. Photos returned.

Estimates and Sketches Furnished When Desired.

J. Henderson

215 West 57th Street, NEW YORK.

BE A WRITER

Earn Money at home by writing stories and articles. We review, edit and criticize manuscripts. We know what editors want. Write this paper, and we will send you FREE our Prospectus containing helpful suggestions to young writers and valuable information concerning story writing.

WRITERS' AID ASSOCIATION, 155 Hassan Street, New York.
Mr. G. S. Henderson, the talented young artist who made the cover design for this issue of our journal, and also the design for our February number, spent his boyhood days quite uneventfully, as such days are spent by most boys, going to school, playing ball, "scraping," going fishing, swimming, etc.

In 1866 he graduated from the Portland, Oregon, High School. He then took up shorthand and secured a position as stenographer. He soon gave up this work, however, to engage as a penman with the Holmes Business College, of Portland. Before accepting this position, however, he had never thought of developing his talent for handling the pen, but as the need of a penman was urgent, he set to work with a strong determination to master his specialty. From a series of lessons ran in the Penman's Art Journal by Mr. L. M. Thornburgh, he practiced and drew inspiration. He later received much encouragement from Mr. Thornburgh, for which he has ever since been grateful. Not content with the mastery of penmanship alone, about the middle of 1868 he began to give his attention to designing, engraving, etc. He soon found that he had much talent in this line of work and at once began to save up money to attend school. In October, 1867, he entered the Art Students' League of New York, and started at the bottom of the line. It usually takes the average student about two years to complete the work in antique and modern engraving and lithography, but by hard work Mr. Henderson secured admission to two life classes in just six weeks' time. His funds became exhausted in 1868, but he returned to Portland and again took up writing in Holmes College. He also fitted up a studio on the top floor of the college building, advertising his works. He gave private lessons, did designing, made color sketches for lithography, wrote cards, engraved resolutions, etc. From these various sources he acquired enough money to warrant his returning to New York and the League.

A few weeks ago Mr. Henderson was greatly encouraged by finding that his work in nude stood third. Thirty-five drawings were entered in this contest, some having been made by persons who have spent five or six years in school.

Surely Mr. Henderson has exceptional ability, and it is hard to predict what the future holds in store for him.

Prosperity on the Pacific Coast

SAN FRANCISCO, CALIF., Feb. 1, 1901.

Enclosed find herewith P. O. order for one dollar, which please credit to our account, and charge against our one year's subscription to THE PENMAN-ARTIST AND BUSINESS EDUCATOR. It is a welcome offer at our desk. It is a breezy voice from the other side of the continent.

We closed a most prosperous year and the first month of the new year and century sets a very satisfactory pace. Our business for January is the best for years and January is always the best of the year out here. With best wishes, we are,

Very respectfully yours,

HEALD'S BUSINESS-COLLEGE

MEHAN & McCauley, Des Moines, Iowa.
Value of Good Penmanship

"No person but one who cannot write a legible hand is at all excusable for sending to another handwriting that is difficult to read. Whenever such writing is sent by man or woman who is able to do better, the sending of it is in the nature of an affront to the recipient, except in the instance where the scrawl is caused by lack of time. It is, first of all, an intimation that the writer has no consideration for either the loss of time to which he puts the receiver of the scrawling and scrambling letter, or to his or her discomfort. It is a general intimation that this writing, shabby as it is, 'is good enough for you.' In the next place the sending of such a letter puts difficulty in the way of the writer's own purpose, whatever it may be. If the letter goes to a busy person, almost continuously occupied with urgent affairs, it is almost certain to encounter delay. It is at once laid aside to wait a more convenient opportunity for plodding through its hard hieroglyphs, or it is put away in a pigeonhole or a drawer for the leisure hour that may be a week or month in coming. Once off the track, such a letter is not only delayed, but the object of the writer may be totally defeated. The purpose of a letter, or of any written communication, is to convey information to make something known or to explain something to the recipient of the written paper, and therefore the writer should endeavor to write in a way that will plainly effectuate that purpose, and especially not in a way that may hinder or possibly defeat it. When you next sit down to write, remember this."

—Philadelphia Ledger.

This is a good likeness of the genial, skillful, veteran penman, Mr. A. H. Hinman. Worcester, Mass. Mr. H. has been in professional harness almost a third of a century and has seen many fine penmen. He was a pupil of the world-famed Jos. D. Williams, the flourisher. The blackboard designs herewith disclose that he is without a peer in this line. But fine as he is, he says his master teacher was still finer. Mr. Hinman is a genuine artist in ornate penmanship. He is not only an artist on the blackboard, but he is one also on paper. Few have done more to stimulate enthusiasm on the part of individuals, and professionally, than has he. And he is still quite as much interested as ever, none are younger in spirit than he. We are much pleased to be able to present his work herewith.

Mr. F. W. Frederick, proprietor Mansfield O. Business College, recently sent students' specimens which indicate that he is teaching practical business penmanship.

B. B. Baker, principal and part owner of the Boston Private Commercial College, Cleveland, O., recently favored us with specimens of students' writing which disclosed excellent instruction. Miss Delta for excellence received first prize.

Miss Lizzie Hardee favors us with specimens of writing and drawing which display art ability.

A packet of unpicked specimens of students' writing came from D. A. Casev, of the Woonsocket, R. I., Business University, The work is fair.

J. D. Valentine, Bellefonte, Pa., recently favored us with some of the best text lettering and round hand received at this office. Mr. C. is bound to be one of the very finest.

E. A. Mason, Burnt Corn, Ala., favored us with cards which show that he is getting on to the swing incident to flourished penmanship.

---

Welcome to our School.
Ho for Columbus!

CINCINNATI, O., February 28, 1891.

DEAR FRIENDS: A great treat is in store for the special teachers of the Ohio schools who should attend the next Convention of the Ohio Commercial and Special Teachers’ Association. It will be held at Columbus on March 29 and 30. The Executive Committee has received assurances from a number of interested men who will bring together teachers throughout the state that they will place the world’s best Exhibition. The scheme is destined to yield an unusual interest, and promises to bring about a new era in the Exhibition of work. Can we hope to have your assistance in making this exhibit a success? No, we could not: you can do others in your profession.

On Friday afternoon, March 29, we will visit the state institutions in a body. The Associations in high favor with the Almighty, and who have never visited them. Misses. Zaner & Blesser will be pleased to have you visit their institution and see their display of Pen Art. This in itself should be of great interest to any Public School Trade of Penmanship. It is all expected that this meeting will be held by the Association in this state.

220 P. M. Address of Welcome, Mr. J. Y. Russell, Sec’y, Commercial and Special Teachers’ Association. In the third fare providing we have present on that occasion.” The opportunity will be taken to inform the Executive Committee at once if you intend to make a report on the subject. Our meeting is to be made for the members of the Association to be held on the 30th, one of the guests of the Institute, fee of charge, Friday, April 1, Mr. Zaner Art College.”

Chairman Executive Committee.

Revised and Complete Program of the Ohio Commercial and Special Teachers’ Association

Friday, March 29

7:30 P. M. Welcome, Mr. J. Y. Russell, Sec’y, Commercial and Special Teachers’ Association. In the third fare providing we have present on that occasion.”

2:30 P. M. How to Teach Bookkeeping. L. R. Hudson, Commercial Department of Commercial Business College, Columbus, Ohio. Discussion led by J. P. Krider, Sec’y, Actual Business College Co., Canton, Ohio.

3:00 P. M. High School Work for Typographers and Tyewriter Operators. F. W. Ferguson, President of the Business College, Springfield, Ohio. Discussion general.

5:00 P. M. Social Notice: Through the courtesy of Mr. J. Y. Russell, arrangements have been made for the members of the Association to be held on the 30th, one of the guests of the Institute, fee of charge, Friday, April 1, Mr. Zaner Art College.”

Chairman Executive Committee.

Ho for Providence!

April Meeting of the E. C. T. A.

The April meeting of the Eastern Commercial Teachers’ Association promises to be the best-attended and most enthusiastic meeting ever held in any part of the country. The schools are large and numerous, and the interest of the teachers from the Commercial Departments of public schools will be in force, and doubtless the interaction will lead toward the organization of a High School Commercial Teachers Association. The meeting will be held on the 30th, and will certainly exceed any previous handsomely held by the Eastern Commercial Teachers’ Association.

Let us members attend; let them bring with them the enthusiasm of the public school teachers be in attendance, and with the influence of such papers as our own, we will really, the Association, we bespeak the grandest meeting and the most important of the history of the Association. In the interest of the education of the young, and in the interest of the teachers, it is the responsibility of our Association to attend and not be benefited beyond the convention.”

Fraternally yours,

J. Y. ROUSE,
President.

GREGG'S SHORTHAND

Its success is unprecedented in the history of business education. As stated in the Pencman-Artist and Business Educator for October, it is "capturing a good many of the shining shorthand lights of the profession."

With such men as G. W. Brown, Char. N. Miller, Geo. P. Lord, W. C. Stevenson, C. N. Bartlett, D. L. Nusselman, and a host of others, singing its praises, it is not necessary for us to say much. But do not take the word of anybody—investigate for yourself. Impartial investigation always means adoption.

MEDIALL WRITING BOOKS

FOR INTRODUCTION, 60 CENTS PER DOZEN.

IN THE MEDIALL WRITING SYSTEM THE SLANT IS SUFFICIENT FOR ATTAINING THE HIGHEST SPEED, WHILE IT DOES NOT DEPART FROM THE VERTICAL TO SUCH AN EXTENT AS TO INTERFERE WITH LEGIBILITY.

The Medial writing books have been prepared after the most careful study to meet the objections against the leading systems and the vertical. The authors of the system have had practical experience that enables them to write a practical system. The chief features of the series are summarized as follows:
1. A style of writing as plain and legible as any vertical, simple in form and capable of rapid execution
2. The slant is sufficient to make it possible to write with the greatest speed
3. Two copies on each page throughout the first six books of the series, giving great variety in practice and keeping the copy always near the pupil's eye
4. The slant of the copy so divided that those on the upper half of the page consist of important and interesting facts, while the middle copies are made up of problems which afford perhaps the most valuable means for moral training in the schools.
5. Figures and abbreviations are fully treated
6. An arrangement of the copies by which in the earlier books, capital letters are given in order of similarity of formation, and in the later books in alphabetical order
7. Book 1 has a unique arrangement for correlating with nature study and home geography.

Books 7 and 8 are occupied mainly with social and business forms.

G. S. HENDERSON.
215 W. 57th Street, - - NEW YORK.

A Unique Catalogue for 1902
Will probably find your business college competitors sleeping and enable you to outdistance them in securing a large attendance. An attractive cover, some decorative headings a few tall pieces, and a correct grouping of the photographs will only require an expenditure of $25 or $25 and will be the means of bringing you many times that amount. Now, if you agree to the above, it remains for you to make a wise choice of an artist and I request that you correspond with me, allowing me to furnish estimates and sketches before you place your order.

Cash must accompany all orders. Prices are too low to keep accounts. Remit by money order, or stamps for small amounts.

Address, ZANOE & BLOCKS, Columbus, O.
Lettering and Designing - No. 3 - by E. L. Brown, Rockland, Me.

The original of the accompanying drawing was made 12 x 12 inches, the circle coming midway between the two ends. First study the effect of the design as a whole, then give the component parts careful attention. Note the character of the fruit and vegetables, which must conform to Nature's ideas, and at the same time give a good decorative effect. Pencil out the details very carefully. The opposite sides of the circle need not be drawn in reverse, but the two ends must properly balance. Suggest the light and shade of the fruit and leaves, as well as the darker portions of the background. In adding the ink, notice the lines in the treatment of light and shade. Work carefully, as every line means something in the way of effect. Use a coarse pen with some flexibility. In the place of the books, etc., a marine view, landscape, or a picture of your best girl can be used with equally as good effect. In fact, the foot piece can be made appropriate for scores of purposes by changing the drawing in the circle.

ABCDEFGIJKLMNOPQRSTUVWXYZ
abcdefghijklmnopqrstuvwxyz Thomas Sexton

Lessons in Engrossing - Number Eight - by H. W. Kibbe, 181 Tremont Street, Boston, Mass.

To practice on this style of lettering, rule spaces one-half inch wide and allow a little more than one-fourth of an inch for the small letters. Use a Soennecken broad pen, number two, and hold the paper in the best position for making the principal downward strokes vertical. Where two strokes are joined, one being made in one direction and the other in another, a combination which occurs in every letter, decide by experiment which one to make first in order to best secure form and position. Use a common pen for finishing. Call it broad pen text.

FREE Two Beautiful Pictures. FREE

OUR OFFER - To introduce our beautiful Black and White Engravings, Reproductions of some of the Most Noted Paintings in the world, we will, on receipt of $1.00, send post-paid, any two of our large pictures, size 16 x 20 inches, and a year's subscription to the Penman-Artist and Business Educator.

W. M. O. PRATT, Manager

The Best Penholder.
Send us only 25 cents (silver or nickel) in writing and we will send you the best penholder in the world for fine penmanship. (See Explanatory Leaflet, sent gratis). It is designed by a teacher and made at a price to give teachers, and others, the best penholder to be had for $1.00. Sold by mail, $1.00.

Compendium of Simplified Vertical Penmanship—A book form and for the most thorough and complete instructor in vertical writing yet published.

Manual of Simplified Script—A work containing a thorough, graded course for the penmanship of the most advanced student. The work is divided into two parts, the first containing a thorough treatment of the alphabet, and the second part containing a complete set of practice exercises in the use of the pen.

Pen Studies—A portfolio of twenty-four pen drawings, consisting of scrolls, objects, birds, fruit, etc. Each illustration is attached to a page of text, and is accompanied by explanatory notes. The work is divided into two parts, the first containing a thorough treatment of the alphabet, and the second part containing a complete set of practice exercises in the use of the pen.

Zaner's Gems of Flourishing—A book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the student how to make the simplest strokes and exercises with a high degree of skill yet attained in this art. Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published.

Progress—C. P. Zaner's masterpiece in flourishing. It represents an eagle, forceful and lifelike, winging itself through intrepide curves and branches. It is bound in the finest plate paper, 22x28 inches. The original of this design hangs on the wall of the Zaner Art College, and is valued at $100. It's great, it certainly is a bird, that's some of the expressions many have drawn by the aid of this book. Only 25 cents postpaid.
The illustrations are lithographed from actual pencil drawings and are much finer than photo-engravings.

Sample pages of Portraiture or Sketching from Nature mailed for 2c stamp. Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks. Address: ZANER & BLOSER, Columbus, Ohio.
Abbreviations  For the above signs and abbreviations use a movement much the same as in figures and minimum letters. The little finger need not slip but should serve as the center of control. Let the hand roll, work, and act upon it, much as the arm does upon the elbow rest in large letters. The flourish over the a may be made with the finger slipping. Study the forms closely and be careful.

**How to Practice** After writing a line or a sentence, look it over and see which word is most poorly written. Study it to find wherein it is poor. Then write the word over and over carefully until you can say that it is equal to the best that you have written any other word. Then write the entire sentence over again, and again select your poorest work. Practice upon it until it is among the best and then try the entire sentence again. In this manner you can soon weed out poor letters, irregular spacing, etc., and by so doing improve your penmanship more than you suppose.

The plate preceding this illustrates how I improved the sentence by writing thoughtfully the poor words but a few times. The spacing in the word "perfect" was irregular. The k in the word "makes" in the second sentence was too wide - practice overcame it. Eternal vigilance is the price of excellence in penmanship.

---

P.D. Howard Co., Dayton.

---

**The World's Writing** is now largely done in books. Typewriting has monopolized the bulk of the correspondence. More writing is done than ever before but it is principally along the line of accounting. To be of the greatest value in this direction, writing should be small, compact, and intensely plain. To be all of these, yet easy and rapid, the letters need to be simple in construction and rounding. Neatness, unmistakableness, and sureness are the essentials of this class of penmanship. Tall loops, complex capitals, rat-tail endings are all out of place here. Facts need to be recorded and condensed in the plainest and smallest form possible consistent with speed and ease.

---

**C. O. D. Account.**

---

**Figures** are used more and more in accounting, and letters less and less. The need to be able to make figures doubly quick and plain is therefore, greater than ever before. To meet this demand, one needs to omit unnecessary strokes and to shorten the long ones. Plainness and speed are the two chief essentials. Study the figures given herewith and then see how well and how readily you can make them. Learn to make figures in columns and to space them equally.

% 30 days. 2% in 10 days.
System and Order are keys to good penmanship. As a rule, the one who is orderly and systematic is not a scribbler. One of the first requisites of good writing is systematic writing. As an aid to good writing, use closely ruled paper and stick to the line. Learn to keep within prescribed spaces. The boxes in the old copy-books served their purpose in discouraging scrabbling and recklessness. With our modern need of speed we must be doubly careful of more scribbling will be the result. Stick to plainness, to neatness, and to system.

Criticisms

- D. C. D. - Your down strokes look unnecessarily straight, and, consequently, stiff and formal in movement, particularly in loops. Last down stroke in t rather short. You are improving.

- A. C. L. - Small s needs attention - curve the down stroke more. Small a looks too much like o - last down stroke should come to the base line on the main slant. See “How to Practice” in this lesson as concerns spacing.

- N. S. - Movement a trifle spasmodic in capitals. Small letters are excellent. Simplify some of your capitals.

- E. E. L. - Shoulder of t too pointed. Second part of n too sharp. Oval part of d too narrow. Last part of W too sharp. Small s looks too much like t - curve down stroke more. You write a strong hand - a good feature indeed.

- P. A. M. - You write a good hand. Some letters were written a trifle slowly. Curve up stroke in C and E more. Don’t pause at top of loops - thereby avoid the angle where there should be a turn.

- C. W. A. - You are doing well. Strive for a still greater degree of accuracy without modifying the speed. You have covered too much work in too little time. Work on one thing longer before taking up something else. You can become an expert. Work you enclosed may have been done with either whole-arm or forearm movement.

- K. F. H. - Fine practice - good, clean, free, practical writing. Make loops more rounding at top - don’t check motion there. Slant B a trifle more. - Some turns. Watch spacing between letters in words - some are too close, others too far apart.

- F. H. Y. - Watch last part of m, n, u, etc. Little finger should slip toward the right in making up strokes. It need not slip much up and down. You do not watch details of form closely enough. Exercise more care but write freely. You make third part of m to sharp and narrow. Study spacing and proportion. You have made a good deal of improvement. Watch the little things closely.

SUPPLEMENTARY COPIES BY S. M. BLUE. BROKEN ROW, NEB.

Fred J. Hillman, Springfield, Mass., favored us with a photo of resolutions which disclose considerable skill.

J. M. Keasler, Parkville, Va., recently favored us with some unusually neat and freely written cards in the copper plate hand. They are what we call success - a style worth having because it is fine art in character and money earning.

L. M. Henry, Shenandoah, Ia., sent us a very attractive Easter design in colors.

A letter from A. H. Ross, Mabny, X. Y., clearly demonstrates that he writes a hand that but few can excel.

C. J. Schwoke, Cleveland, Ohio, swings a pen with unusual force and grace.

C. N. Waltz, Fairview, W. Va., writes a very creditable professional hand.

S. L. Overton, Ahskie, X. C., sends work after practicing from our Compendium, which shows good movement and that he is moving in the right direction.

C. R. Tate, Birmingham, Ala., submits some cards and other specimens which indicate the artistic temperament and touch as well as excellent training.

William Rhoads, 25 Pearl St., Reading Pa., recently sent us some ornamented cards disclosing skill and taste.

J. L. Hayward, Southampton, Mass., although not now following penmanship professionally, but is conducting a commercial college instead, still shows a thoroughly professional quill as evidenced by specimens of ornamental and round penmanship before us.

T. Courtney, Providence, R. I., has favored us with photos of two resolutions executed in a creditable manner with pen and brush. Mr. T. is an all round penman and artist of more than usual ability.

A. B. Hansford, Science Hill, Ky., favored us with a wash drawing of a water-melting diryux of the genuine Southern type. It is quite realistic and well executed. Mr. H. has considerable talent and skill in art lines.

E. L. Glick, Concord, X. H., swings one of the most graceful pens in the profession. Mr. G. is a hustler, and were he to make a specialty of penmanship, no one could surpass him.

A package of mastery written cards came from H. O. Keesling, penman in the Indianapolis, Ind., Business University. Mr. Keesling certainly has much ability in this line of work.

We have received from J. A. Elston, Canton, Mo., some very well written cards, business capitals, rapid business writing, etc. Mr. Elston is now in the insurance business, and he has doubt finds rapid business writing a very valuable accomplishment. He recently sent his subscription to the PENMAN-ARTIST AXD BUSINESS EDUCATOR, and adds that “It is the best paper of the kind published.”

Mr. S. C. Bedinger, penman in the Northwestern Business College, Spokane, Washington, sent some dashy ornamental signatures that possess a good deal of merit. Mr. Bedinger gains the pen with unusual force and is certainly on the right road to become one of the masters in this work. He is a permanent subscriber to the PENMAN-ARTIST AXD BUSINESS EDUCATOR.

Mr. J. E. Thornton, of Carrollton, Ga., submits some dashy ornamental writing which shows considerable ability for handling the pen. Mr. T. could become one of the very finest penmen in the country by proper study and practice.

A letter in a very clever ornamental style came from F. E. McKinley, of the Athens, Texas Business College. The work is free, easy looking, and shows that he has considerable ability for handling the pen.

A lot of cards written in a very good ornamental hand have been received from W. A. Bode, Pittsburgh, Pa. Mr. Bode is making a specialty of this work.
Lessons in Artistic Penmanship

Number Eight

BY J. E. LEAMY, TROY, N. Y.

Here are a few simple combinations. This seems to be one of the aspirations of every young penman, to be able to join capitals and lowercase unison, to one who has made a special study of penmanship there is truly something charming in a page of combinations from a master hand. In it you see nerve and muscular energy, as well as beautifully curved lines and striking contrasts in light and shade.

BEAUTY IN CURVED LINES

One of the main essentials in learning this class of work is to recognize the beauty there is in curved lines. For there is beauty in mere lines, especially in these lines which by their delicacy, strength, smoothness and curve reveal a great amount of careful training. The curves must not only be full and strong, but they must also be arranged harmoniously. They should not crowd each other, neither should they appear distant or disinterested. Instead, all lines must appear to be a part of the whole and without which others would be incomplete. But, with all of this the combination would hardly be pleasing without a few shaded strokes to contrast the light lines. In fact, shades are the real life of combinations. They give tone, snap and vitality to the work. Endeavor to keep them about the same size.

GENERALITY

To secure these several results you should first see that your capitals are spaced well, about equally distant one from the other. You should then see that the joins do not detract seriously from any of the forms. In a word, join the capitals so that the combination will be pleasing as a whole, rather than unbalanced and out of line. Seek the simplest manner possible for producing the desired effect rather than the most complex and intricate way.

PROFESSIONAL WRITING FOR PROFESSIONAL PURPOSES

I would say to the young people who have been practicing from these lessons that there is a time to use this display style and a time not to do so. It is out of place in business just as business writing is out of place in a set of resolutions. It has no place in social correspondence because it is too difficult in execution for clearness of thought expression; it takes too much time for its own execution. But it is in place in professional work or whenever display is allowable and desirable. To execute beautiful work it takes a great amount of delicate skill, plus a good deal of confidence. These are the product of toil and training. Therefore, if you are unable to do as well as you wish, it may be you have not labored long and faithfully enough.

This style is always in demand, therefore persevere. It will teach you to be neat, pains-taking, critical and accurate. It will teach you to be observant, not only an admirer of the beauty in others' work, but also in your own. In a word, it will teach you to recognize that God given law, that the hand is ever under the direction of the will.

CONCLUSION

This concludes my efforts to arouse in you a desire to do better along these lines. If you have profited by them as I have, your efforts have not been poorly spent. We begin to die about as soon as we cease to learn, and for that reason I always try to learn as much as my pupils. I sincerely hope that you will all do me before long. A continuation of your good work in the future, reinforced by your ambitions and desires, cannot do otherwise than carry you to the front.

Good-bye.

J. E. LEAMY.

CRITICISMS

J. A. Lincoln, Neb.—Initial oval in A. N. F. I, etc. too large. F's too long and shade too high. Small letters too large also. Touch still too heavy. Better procure some ruled paper. Doing very well.

A. J. K. of Dakota—I am quite positive you are on the right track. Continue your good efforts and success is certain. Consisting the length of time you have worked you write exceptionally well. Keep on.

One of the finest trial-balances we have ever seen was done by H. A. Mason, a student of the Bliss Business College of this city.

F. E. Warner, Buzcom, O., submitted specimens of students which show more than average improvement. Teacher and pupils are to be congratulated.

Mr. J. E. Pinnover, Burlington, Iowa, recently sent us some specimens of students' work of an unusually practical nature, demonstrating that he is a very successful teacher. The best specimen in the entire lot was by Lena Nickler, though there were many nearly as good.

Miss Dorothy C. Godfrey, Supervisor of Writing in the public schools of Monroe, Mich., sent specimens from the grammar grades, which, for uniform accuracy of form we have never seen excelled, it equaled. All of the work is vertical almost to a degree, demonstrating that pupils can be taught to new closer to ninety degrees than to any other. The oval exercises were unusually skillful. We think it would be better to infuse into the writing more freedom and arm movement.

25 Cents Each for Copies of the Penman-Artist and Business Educator

A gentleman who is enthusiastic friend and supporter of the PENMAN-ARTIST AND BUSINESS EDUCATOR wishes to announce that he will give twenty-five cents each for a copy of the October and November numbers of 1900. Persons who have these numbers and wish to dispose of them at this price will please mail them to our office, and oblige.
business schools received attention. The most important and emphatic note of a professional character in the address was the vigorous exhortation to teach pupils to think.

President Shoemaker was followed by Dr. W. H. P. Faunce, President of Brown University, who spoke on "The Evolution of the Businessman." President Faunce, though recently a New York clergyman, is so shrewd a man of business that within his first year as President of the University he secured an endowment of $200,000 for Brown University, of which J. D. Rockefeller gave $250,000.

Dr. Faunce said that all schools are parts of one school; that their great purpose was expressed in Genesis, in the words, "Let us make man." In the work of education, isolation is death; division, is defeat. If the commercial teacher thinks he can neglect the work of the university, with its high ideals, he errs; and if the university man thinks he can ignore the practical work of the commercial teacher, he is wrong.

We are all partners in one great enterprise. Among the ancient, labor and trade and all things incident thereto, were regarded as beneath the dignity of educated men. The educated gentleman could merely speculate upon philosophic propositions, even in England until very recent times tradesmen were regarded as out of caste with those who were in social favor. But she is waking up to her danger; she sees Germany and the United States grasping her great foreign trade; business men are coming to the front in everything; business methods dominate in politics; business men today, not orators, carry out the work of legislation.

One of the finest examples of this is Tammany Hall. Despicable in its influence, but admirable in its methods. Business methods prevail largely in education today. Dr. Faunce hopes, however, that the high ideals of life to be met in university work may not be displaced. In churches, too, business methods are applied. The minister who today has charge of a large church, must be an able administrator. Fifty years ago young people were taught by the apprentice system; that system has largely disappeared; modern schools must do its work. The schools can give students the mastery of the essential tools of commercial life. If students can be taught to use well the English language, their teacher will confer upon them an invaluable power. He regards the ability to use our mother tongue well as one of the fundamental requisites for success. Commercial schools should teach also the mastery of some processes of modern enterprises. The place of self-made men is narrowing every day, and ten years hence there will be no room for them. We should teach alertness in seeing

The Eastern Commercial Teachers' Association

Amid gloomy weather a large crowd of commercial teachers gathered in the audito

Friday Morning

President's Address

After giving very generous credit to the various committees for the work they had done, he spoke with approval of the change from semiannual to annual meetings. He believes that new developments do not occur frequently enough to justify semiannual meetings, and that the expense and inconvenience are not so likely to diminish attendance when meetings are held annually.

The growing cordiality of the relationship between public and private commercial school work, Track Type writing, the development of English Department's business schools, and the recent financial success of
opportunities; we should wake up our young people; they have every day fifty opportunities for one that they see. The last and greatest essential to be taught young men is the ability to organize, to use the labor of others, to set in motion thousands of other hands and minds. The great organizer is a man of leisure. Andrew Carnegie in his busiest days never worked more than four or five hours a day, but those hours were tense with concentrated application. The power to organize is a power that may be devoted to base uses or to noble purposes. Character must be trained.

In closing, President Faunce paid a graceful compliment to President Shoeemaker for the high note he struck in exhorting commercial teachers to teach their pupils to think.

"The Handwriting on the Wall" was the subject of a scathing denunciation of vertical writing. From the text "New, New, Tekel, Upharsin," the speaker took the word Tekel (Thou art weighed in the balances and found wanting.) and Daniel himself could not have delivered from it a more excoriating disquisition, although he would probably not have been so lengthy.

Mr. Huntsinger had prepared a fifty-page type-written manuscript, embodying the condensed results of an almost incredible expense of labor, time, and money. He spent more than $100 in money and wrote to probably 1,000 persons during his investigations. This list included 50 Connecticut school teachers and 40 American publishing houses. Among the many assertions made against vertical writing, were the following:

It had its origin in China. It died about two hundred years ago, but was exhumed by Germany about twelve years ago. Vertical penmanship would do credit to the hand of a pirate. It is valueless in the office. It develops unnatural position and movement. It is "smil penmanship." It is wholly inflexible and lacks inspiration. It is cruelly wasteful of time and energy. Being based on a circle instead of an ellipse, it occupies more space than sloping writing. Merchants can not, do not, and will not rule and bind new books to accommodate the large, awkward characters of vertical writing.

Vertical writing is the "wild oats" of penmanship. Dollars and cents were back of its introduction into the public schools. With the publishers it was not an educational problem, but a question of business, and more monetary gain. Vertical writing is supported and taught, as a rule, by poor teachers of writing. When it was introduced, unusual attention was given to it, far more than sloping writing had received before. It is plain, so it print. Any writing, drawn as slowly and receiving as much attention as vertical writing receives, would also be plain. 52 slant, to which but few persons adhere absolutely in their teaching, has been called "iron-clad slant," how about vertical? Advanced pupils in schools drop the vertical as soon as possible because it is slow. Its use can be compelled in public schools, but not in business offices. Not even school teachers, who happen to be business men, will hire the pupils upon whom their official action has fastened this wretched habit.

The publishers of vertical systems do not use it on their account books, and not even the professionals who prepare the copies sign their name in a vertical hand, but draw out the characters and have a rubber stamp or penmanship." The publishers, of the fifteen publishers of vertical systems use it at all in his business office. Copious extracts from head bookkeepers in these offices proved this conclusively.

Mr. Huntsinger knows of no person of any great skill who is a vertical writer. He has heard of no business school that teaches it.

The Canadian who started the epidemic in this country was not a decent penman himself, and could not even prepare his own copies. Bankers, insurance men, merchants, etc., condemn it; children of a reasonable age in school write away from it, and we ought to cry out against the wrong perpetrated on innocent children, many of whom will be unable to obtain positions in offices, unless they learn all over again.

Of the 150 publishing houses to which Mr. Huntsinger wrote less than one per cent, allowed any vertical writing on their account books, and the voluminous quotations from many of them showed that they were emphatically opposed to it. We submit herewith some of the quotations:

"Everybody writes sloping except one girl, and it would be much more convenient if she, too, would use the same style."

"We do not employ vertical in any manner, shape, or form."

"We should never permit any vertical writing on our books."

"All the clerks in the counting room write the slant hand." (A firm that is pushing vertical writing for all they are worth.)

"Only one person in our office uses the vertical hand."

"We use the sloping style in all our work in our offices in Boston, New York, and Chicago. There are between 50 and 60 clerks in our office, but not a vertical writer."

"It is very rarely that we have a communication in vertical hand writing." (Boston house having extensive correspondence in French, Italian, and Spanish.)

"We never permit any vertical writing in our office."

These quotations might be continued indefinitely, but they would merely repeat in substance what has been given. Mr. Huntsinger, at great expense and personal sacrifice, has performed a real service to the cause of good writing, and we imagine that thousands of teachers will join with Palmer, Peirce and Parsons in thanking him. Write him a letter and tell him your experiences.

It was too late to listen to the address scheduled to be delivered by Mr. CHAS. M. MILLER, of New York; the session adjourned at 12:10.
Friday Afternoon

BUSINESS SECTION

The afternoon session began at two o'clock with President Shoemaker in the chair in the Business Section.

Mr. Geo. F. Lord's paper on "Is Professional Canvassing in keeping with the dignity of a First-class Commercial School?" set forth his well-known views on the subject with accustomed vigor and incisiveness. He said that there are two classes of solicitors, those whose interest ends with the enrollment of the student, and those whose interests are affected by the quality of students obtained; that is, manager, principal, and teachers. Unless more than dignity suffers from personal solicitation, soliciting will go on. However, it would not do to say that there should never be any personal soliciting. A school manager, to succeed, must have a thorough school organization, educated teachers, and intimate knowledge of the conditions surrounding him. In New England, where people are accustomed to pay for a good education, it is regarded as a sign of inferiority to canvass from house to house for students. canvassing must have the same effect on the better class in any community. Of course, if this better class is not sufficiently numerous to sustain a school, it may be advisable, where public-school methods are loose and the educational standard not very high, to use personal solicitation to avoid cessation of business. But, in his community, Mr. Lord finds that without personal canvassing he can conduct his school on a higher plan, with better tuition rates, a higher grade of pupils, a better class of positions, greater success for his graduates, and a more remunerative business for himself.

Advertising in the newspapers, writing personal letters, sending circulars, personal interviews between prospective pupils and the manager of the teachers in soliciting, but, in New England, more profitable, because more dignified and worthy than personal, house-to-house canvassing. When soliciting becomes fixed as a custom, it is hard to discontinue it. One important school manager declares that, if he should quit it for six months, he should be compelled to close his doors for lack of business. Under such conditions the school is forced into an unnatural attitude. It is made to appear under obligations to the student. He expects to receive, not to grant, favors. To secure proper results in the school room, it is indispensable that students feel that the tuition money is but a part of the compensation for the service received, that it does not discharge the debt of gratitude the student owes to the school. A manager should say nothing about competitors in talking to prospective students. Solicitation by the principal discards him for disciplinary power in the school room and proper independence in the office. For the sake of stability but few changes should be made in the faculty. Teachers should not canvass during vacations. They need rest for vigorous work during the new term. In most instances it certainly lowers, not only the dignity, but also, in time, the bank account of a school, to permit personal canvassing.

Mr. J. W. Warr, Moline, Ill., then took the floor. His address on "Business Education as a Factor in the Prosperity of the People," was well received. The teachers showed their appreciation of the fraternal interest that brought a man twelve hundred miles to speak to them. Mr. Warr said: "It is certain that the man who has succeeded, according to the world's interpretation of success, had to study and apply correct principles of business, whether in a school of theory or in the school of experience. Every man, to make himself of highest use, must place the products of his brain on the market. As a professional man, he buys books and the services of others for the necessary training of his mind, and he is endeavoring, after his investment has been made and his intellectual stock in trade laid in, to sell the services of his mind in the best market. Life is thus one vast commercial enterprise. In the olden time no great mental training was required to produce tailor's shops, but it demands financial giants now to manage the Standard Oil Company. no special intellect, no equipment was needed to hammer out plows on the anvil of a country blacksmith shop, but splendid intellectual resources and administrative capacity to manage a modern plow factory. A good appetite and strong muscles were formerly the principle requisites for successful farming; it is not these qualities that today make millions on the homestead farms of the great Northwest. Farmers cannot succeed today without knowing and applying to their affairs the correct principles of business. Even the universities, that sometimes sneer at business education, could not exist, were it not for the endowments obtained from successful business men.

Mr. Warr is a valuable defender of the use of the word "college" as applied to schools teaching the commercial branches. He referred to Lyman J. Gage as the product of Kohl C. Spencer's teaching, and said: "For a religion that is exemplified by correct living and just relations to one's fellow men, I place more reliance upon the teachings of a well-conducted business training school.
than upon any regular school of theology. If every person should put to himself or herself, at the close of each day, the question, "What have I received from the world to-day, and what have I given in exchange for it?" and should then refuse to allow conscience to be satisfied if the debits and credits were not equal, the world would be immeasurably improved."

He believes that business schools have exercised a profound influence on office methods, improving, systematizing, and economizing in time and effort. The name "clerk factory," as sometimes applied to business schools, is to Mr. Warr, no more than to the late Mr. Packard, a term of reproach. "A good clerk will become a good manager." "Business education is too strongly entrenched in the good opinion and confidence of the masses to be endangered by the contemptuous grant of the educational fossil, or the bigoted criticism of the ignoramus who knows everything except his own idiocy." Mr. Warr's paper was not discussed.

Mr. George A. Littlefield, formerly principal of the Rhode Island State Normal School, but now a practicing lawyer of Providence, delivered an address on the subject, "Commercial Law," which proved to be one of the strongest papers that has been given at the convention at any time. At its close, Mr. Littlefield received rounds of applause for the noble sentiments that he uttered concerning the study of law and its influence upon the character of the young men and women who are now attending school. He said that Commercial Law is a broad term, and always broadening; that the word "business" is badly overworked at present. If Commercial Law is as broad as the term "business," it is certainly very broad. Incidentally, Mr. Littlefield paid the Bryant & Stratton school, under the direction of Mr. Stowell, a glowing compliment. He said that he had recently examined a set of examination papers from this school, that were equal in many respects to those of a regular law school.

Mr. Littlefield condemned some of our textbooks as being too complicated in their treatment of the subject for the time at our disposal. He would not expect schools to attempt to make "every man his own lawyer." He believes that an elementary course in law is invaluable to young people from fifteen to twenty years of age. The great principles of law are simple and few; the great task that engages the attention of lawyers is the application of those principles. Mr. Littlefield likes to think of the law as an immense and beautiful growth. At this point the speaker introduced some points in the study of law that he would have the pupils consider. The first was the subject of contracts. He would teach this subject so thoroughly to the students that they would grasp all the primary principles concerning it. In the application of law, he would be satisfied to raise a doubt in a business man's mind concerning the law. This would cause him to look the matter up; people who make mistakes are those who think they know, when really they do not know. If a man can be induced to look the matter up, he is likely to free himself from error.

Mr. Littlefield proceeded to give an illustration of the various stages of contracts; such as who may make contracts, what people must do to enter into them, and things that will vitiate a contract after it has been made. He gave illustrations of partnerships, and of the different modes of operation of corporations as being a fourth person in a corporation composed, say, of three.

Mr. Littlefield closed his address with a magnificent peroration, in which he placed the study of law in a higher position. He eulogized the men who had interpreted the Constitution, the highest law of the land, and paid a glowing tribute to those who had laid the foundations of law in this country. They had built better than they knew, and the buildings those foundations do large and so deep that all of the ever-changing circumstances that come up may be adapted to these deathless principles.

At four o'clock, Mr. W. N. Ferris, of Big Kanals, Mich., delivered by far the most stirring address of the entire meeting, on the subject, "The Moral Side of Business Training." This address was a fitting climax to an afternoon of unusual profit to teachers. Mr. Ferris will long be remembered by those who heard his noble words, and we venture the opinion that scores of teachers will have carried to thousands of young people a more helpful influence, inspired by loftier motives than ever before. After all squabbles about subjects and methods are over and done, the great fact must come before us that character building is the ultimate, the most exalted, the eternal result of teaching. All of the rest is but temporal and fleeting, merely a means to an end. Mr. Ferris' splendid paper is published in full on another page.

The New State Capitol at Providence.

Friday Afternoon

SHORTHAND SECTION

The Shorthand Section met Friday afternoon at two o'clock. The first paper, "The Shorthand Curriculum; What Studies Should It Embrace?" was read by Mr. T. C. Strickland, of East Greenwich, R. I. It was one of the most practical papers read during the convention.
Mr. Strickland had written to twenty-five experienced stenographers and twenty-five business men in all lines, covering the field from Boston to New York. He found the consensus of opinion to be that the first study should be by the teacher in estimating the aptitude of the pupil for office work, that only 50% of intelligence in the ordinary subjects taught in high school be required as a condition of entrance for a shorthand course, general intelligence being a fundamental requirement. The English branches are, I believe, absolutely essential to the equipment of a first-class stenographer.

Another thinks that "The foundation of a successful and satisfactory amanuensis is a good English education." Another writes, "The cities are over crowded with stenographers who are only half educated, and the result is that they can never command the salary a stenographer should receive. One says, "This city is filled with schools that make the study of shorthand, typewriting, spelling, and correspondence a complete shorthand course. The result is shown by the large number of ungrammatical letters received in business. The first is usually from small lumber dealers, builders, supply men, etc., and very few from architects' offices. This goes to prove that the better educated stenographers fill the higher positions, and those who have studied simply shorthand and typewriting fill the poorer places, and usually get no farther."

Among the foundation studies recommended by these practical men were penmanship, arithmetic, geography, history, grammar, and rhetoric. The greatest emphasis was put on the study of grammar. One metropolitan stenographer says: "The men in this office deal directly with wealthy and well educated people, and a poorly worded and badly punctuated letter might cost the firm a good sized contract. Mr. — wants his letters to leave the office in first-class shape, and he knows such a letter when he sees it, though strange to say, he does not dictate his letters correctly half the time. It is my duty to make them grammatical. If I hadn't studied grammar before I took up shorthand, how long would I hold my position?"

The fifty writers were unanimous in saying that the ordinary standards of spelling and punctuation are much too low. Teach pupils to comprehend, if possible, the matter dictated. Let them become so familiar with outline construction that they make outlines automatically, leaving the mind free to follow the thought of the speaker. The questions of shorthand systems was not raised, and speed was specifically mentioned by but one. Neatness and accuracy were the fundamental requirements.

"Teach pupils to leave their business knowledge in the business office," said one writer, certainly a significant hint. Nothing was said about duplicating processes, card systems, or even the copying press. The demand was for well-trained thinkers, for heads as well as hands.

Discussion of Mr. Strickland's paper was opened by W. D. Fulton, of Auburn, N. Y. He emphasized the importance of making men and women and developing thinking human beings; also the importance of a general training to precede the shorthand course. He recommended the study of rhetoric as well as grammar, and a special study of words. He emphasized the quality of loyalty to an employer's business interests. He thought this could be taught by the teacher assuming himself to be the employer and the student the employee.

Mr. Thorp advocated the use of the typewriter in the public school as an aid in teaching spelling. Mr. Smith, of Port Deposit, Md., said that business men insist that stenographers have a knowledge of unphonography. He said that business men are anxious inquiring how to obtain work from stenographers who are always looking for three things: Twelve o'clock A. M., five o'clock P. M., and pay day.

Charles T. Platt and Charles M. Miller favor the use of desks in the study of shorthand but think that pupils ought to be able to write without them.

The discussion of Mr. Strickland's paper was followed by a paper on "The Value of Taking Dictation Directly upon the Typewriter." This paper, by Miss Stella Smith, of the Eagan School of Business, Hoboken, N. J., was substituted for a paper that should have been read by Mr. William Billings of Passaic, N. J. Mr. Billings was absent.

Miss Smith advocated the giving of dictation directly on the typewriter to teach a pupil to have confidence enough to take dictation thus in an office in cases of emergency. She thought correct spelling under such circumstances would become an unconscious act, and to that extent a liberation from drudgery.
Miss Smith's excellent paper was followed by an exhibition of Touch Typewriting by a class of six students of the Bryant & Stratton Business College. Their teacher, Mr. Kenyon, dictated to them, requesting that no one touch them, because it was not a time exhibit. He said that about thirty minutes a day is devoted to writing directly from dictation. The exhibition consisted of three tests: Direct dictation, copying from printed matter, and transcribing shorthand notes. One correct copy was produced. The young ladies did well under the trying conditions of a public exhibition, and the large audience appreciated their efforts highly.

At 3:30 P.M. the shorthand section adjourned to meet with the business section to listen to an address by Mr. W. N. Ferris, on "The Moral Side of Business Training."

**Reception and Banquet**

At six o'clock P.M. the parlor of "The Elise," a spacious, elegant entertainment hall, were filled with a happy company of teachers. From an alcove overlooking the beautiful dining room, the American Band sent forth strains of inspiring music. At seven o'clock President and Mrs. Shoemaker led the way to the banquet tables. One hundred and fifty-three persons were present, the largest number that ever met in a commercial teachers' banquet. After two hours of gastronomic exercise, the intellectual activity began. Mr. L. L. Williams, with the easy grace that characterizes all of his efforts, performed perfectly the delicate duties of a toastmaster. Mr. C. C. Beale, of Boston, responded to the toast, "Round Pegs in Square Holes." He did not attempt to be humorous but his sensible, high-minded remarks were received with manifest approval. Mr. Geo. S. Murray, of New York, reached the city just in time for the banquet, expressed some very suggestive ideas about ordinariness on the topic, "The Cart Before the Horse." Mr. Murray is a splendid young man, who has a very promising prospect in professional life. Mr. W. H. Shaw, of Toronto, who should have spoken next, was not present, owing to an unexpected business incident which made it impossible for him to leave Toronto in time for the banquet. Mr. T. B. Stockwell, member of the Rhode Island State Board of Education spoke next, and he was followed by Mr. G. H. Aymar, of Boston, who told some humorous stories and performed an entertaining pantomime act.

Everybody enjoyed Mr. Aymar, Mr. J. W. Barr, of Mobile, Ala., spoke on "The show correct total cost of Merchandise, and his serenette, the question: Why does a hen lay an egg? Mr. Barr's inimitable wit and sound sense added scores to his already long list of admirers."

At one o'clock the assemblage broke up, bound in their praise of the care and success with which everything had been arranged. The credit for this most successful banquet belongs to Mr. W. H. Scott, and Mr. A. S. Hubbard, of the Bryant & Stratton Business College, of Providence. In cooperation with Mr. T. B. Stockwell, they attended to the planning and to the details. No small part of the enjoyment of the occasion was due to the fact that the Association had the use of an entire building especially adapted to meet every requirement of such an event. This was made possible through the generosity of Mr. Stockwell, who personally bore the large expensive required.

**Saturday Forenoon**

**BUSINESS SECTION**

The plan of the Executive Committee to have practical discussions covering the principal subjects of the Business Department, brought out a good attendance Saturday morning. Mr. Jas. Rea read a brief paper on "The Merchandise Account." He said: "That to debit Merchandise with every thing, including goods returned, would not be a correct method. Credit the account with everything, including goods returned, would show what it has produced. Many accountants keep two accounts for Merchandise, a Purchases account debited with invoices of goods as they come in, and with such other items affecting the cost as freight, marine insurance, duties, warehouse charges, etc., and credited with goods returned, discounts, and other deductions. The balance thus showing the actual net cost. The Sales account is conducted on the same principle. In this way the general result of the gross gain is not altered, the volume of business and the exact per cent of profit on sales may be ascertained. These two accounts should be closed into a general Merchandise account, which is never debited. The net amount is entered, is closed as usual. Some accountants keep a Returns Goods journal, and deduct the total allowances shown by it, from the sales recorded in the Sales journal, before any posting is done, posting only the net Sales. Purchases are similarly recorded.

The other accountants follow a method which is designed to show at any time the actual stock on hand at cost prices. When sales are made, two sets of prices are extended, one representing the cost, and the other the selling price of the merchandise sold. Before the ledger is closed, the total of the cost column of the sales is carried to the debit side of Sales account, and also to the credit side of Purchase account. The Sales account, having been debited with the cost of the goods sold, and credited with the sales proceeds, will exhibit a balance representing gross profit. The Purchase account, having been debited with the cost of the merchandise purchased, and credited with the sales proceeds, will exhibit a balance representing the cost of the merchandise on hand, that is, the inventory. With fixed selling prices and discounts, a correct inventory may be obtained in this way, but with fluctuating prices and changeable discounts, it is with miscellaneous merchandise almost impossible to get correct results.

"The Voucher System," was the subject of a short, practical paper by Mr. F. J. Hillman, of Springfield, Mass. He said: "When we speak of 'The Voucher System,' we mean a system which provides a record of accounts payable, arranged with a sufficient number of columns for the distribution of purchases, to their proper accounts, and some form of voucher to accompany the payment which, when signed, shall not only be an acknowledgement of payment, but shall specify the particular purpose for which the money was paid, bear the C. K. of the purchasing agent, and be arranged numerically for ready reference. In the case of large concerns, it should bear the C. K. of the bookkeeper that the extensions are correct, also those of the auditor and either the secretary or president. According to this system, the Voucher Record is the only book that is used other than those ordinarily used. The system is intended to do away with the necessity of keeping accounts with creditors. It brings all of the outside liabilities, except bonds and mortgages, under one head.
We have several divisions of The Voucher System, brought about chiefly by the difference in the Vouchers. Prominent among these is the one that gives the total amount of invoices attached. Those who use this system save labor, but compensate for it in postage and storage.

Another Voucher used by the majority of our railroad companies is combined with a check in one document. To my mind this style has many advantages. When the voucher is returned, we have in one document a record of goods purchased, the distribution, the time of purchase, the time of payment, and a receipt.

There is another system in which a remittance statement takes the place of the voucher, and the distribution is made in a Cash Journal. The remittance statement is copied and no voucher returned except the endorsed check.

The Voucher system facilitates the auditing of accounts, reduces to a minimum the opportunities for errors, is the best safeguard against dishonesty yet discovered, and is sufficiently flexible to admit of use in almost any line of business. It is said that it consumes more time than other systems, but I am sure that its advantages outweigh any considerations of additional expense or labor. It has already been adopted by the United States Government, by nearly or quite all railroad and express corporations, and by thousands of private companies.

This paper was discussed by A. W. Holmes, of Salem, Mass., and by Mr. H. M. Rowe, of Baltimore. This completed the program under the general head, "Bookkeeping." Under the title, "Arithmetic," two excellent papers were read, accompanied by blackboard demonstrations. Mr. E. C. A. Becker, of Worcester, Mass., read the first paper, on "Equation of Accounts." Before preparing his paper, he had visited many large business houses to learn their methods of equating accounts. He found no uniformity, and but little of such equating as the school books give. A firm, by "Equation of Accounts," meant adding in interest on overdue amounts. True equation is used comparatively little. Mr. Becker, in a careful and detailed manner, explained and demonstrated the "product method," which he prefers.

The second paper was on, "Interest." It was prepared by Mr. H. H. Cole, of Fitchburg, Mass. Mr. Cole does not believe in spectacles, methods, and he dislikes the phrase, "Lightning Calculator." He wants his pupils to reason, and to learn to use one method thoroughly. Having explained how to multiply and divide by ten and its multiples, he explains what is meant by six per cent. per annum. He then prepares the following equations.

\[
\begin{align*}
\text{If} & \quad \text{Mr. Holmes earns } \text{6c in } 300 \text{ days} \\
\text{then} & \quad \text{he earns } \text{1c in } 100 \text{ days} \\
\text{7c} & \quad \text{is earned in } 350 \text{ days} \\
\text{This demonstrates the reason for pointing off two places in the principal to get the interest at six percent, for sixty days. He then prepares the following diagram to show how long it takes any sum at six percent, to double itself, to earn ten percent, one percent, or one-tenth of one percent.} \\
\end{align*}
\]

Mr. Cole would have each student construct a diagram, and practice on the best way of dividing up the days into convenient divisions of say, 500, or 600, or 40 days, when the rate is six percent. He does not believe in long, hard tests, for a good teacher knows what his pupils can do, without using them. He grades problems so that each one in the class may be kept busy. He believes in the use of one method only, because he believes that a student should learn one thing so thoroughly that it becomes automatic. He thinks that there is another sense in which we need to teach interest and we shall all agree with him.

Following the papers on, "Arithmetic," were two talks on, "Pencillmanship." The first was given by Mr. E. L. Glick, on "Letters," and the second by Mr. T. Courtney, on "Figures." He is skillful, practical, and speaks with ease. Mr. Courtney analyzed the figures, giving his method of teaching them. He uses cross-rulled paper to assist in obtaining accuracy and small forms.

Papers that were to have been read by Mr. J. P. Byrne and H. G. Healey were put over until afternoon.

**THE SHORTHAND SECTION**

"The Phonograph for Dictation Work" by Mr. B. J. Green, of Springfield, Mass., was the opening exercise. Mr. Griffin said that it is irksome to dictate over and over again the same material, no matter how valuable it may be, and we sometimes use material not the best, for the sake of a change. The phonograph never becomes tired, doesn't vary in speed, isn't detracted by visitors. After dictating into the phonograph at the desired speed, the class can be called, the current turned on, and the teacher may give his attention to the pupils' writing. Easy words may be arranged into sentences early in the course, and the phonograph may dictate these over and over again until the pupil has learned to write them at the desired rate.

Mr. Griffin doesn't think it well to use the phonograph for new matter. It is possible that it may be used in dictating to pupils at the typewriters, but here the tubes and not the horn must be used. Some pupils object to the use of tubes because others have used them. Extra ear pieces might be used to overcome this difficulty. The phonograph requires great care, both in making records and during operation, while it is so delicate that it is easily injured. Its use is still experimental.
Mr. Griffin was followed by Mr. A. S. Heaney, of the Rhode Island Commercial School. Mr. Heaney made a very practical address, characteristic of the man and his methods. He holds that in a business training-school, in view of the material we get, and the time [as it were], English teaching must be the work of a carpenter, not of an architect. Attention to apparently trivial things is indispensable.

Dictionary work and grammar work are necessary. The more advanced work, this sphere of the architect, lies in rhetoric, for which we do not have time.

Mr. W. J. Kinsley, of New York City, left his work as a hand writing expert, on the Rice murder case, and went to Providence to tell teachers "What an Anamnesis Should be Able to Do Upon Entering an Office." His paper consisted largely of Shakespearean quotations and Hibernian Classics, interspersed with a graphic account of his trials and tribulations with the would-be typewriter girl who thought that "Woosocket" was "Wouldn't Socket!" that "criticism" was the classical way of putting "criticism," and that "anonymously agreed" was sufficiently accurate for "unanimously agreed." Our good-hearted friend simply couldn't put up with inability to write a note, to use the postal scales, to attach enclosures to letters mentioning them, to write the form of salutation that was dictated, to paste newspaper clippings in a scrapbook, to address individuals in a corporation without troubling the corporation officials to read the letters, etc. Mr. Kinsley thinks that an anamnesis should know the rudiments of English grammar; spelling, including proper names; punctuation and capitalization; letter writing; at least rudimentary geography; mechanism of the machine sufficiently not to injure it; how to file letters and use the pinemograph; how to write a fair business hand; how to use the typewriter, any system—at fifty words a minute; how to write on the typewriter, same one machine—at ten words a minute; how to exercise tact and common sense. The ready wit, the frank and kindly manner, of that genial man have won him a host of friends, who always enjoy the privilege of hearing him speak.

"Should Bookkeeping be an Elective Study in the Shorthand Course?" was the subject of a vigorous, terse address by Mr. Chas. M. Miller, of New York. He held that it ought not to be taken while students are taking shorthand. A vote showed that the teachers present believed that it ought to be taken, but a large minority believed it ought not to be taken before shorthand study is begun.

Mr. Frank A. Tibbetts, of Hope High School, Providence, prepared a brief, pointed paper on "Touch Typewriting," and Mr. Thos. P. Scully, of Boston, read it. He said, in part: Begin with the Touch method at once. Do not allow your pupils to see the characters on the machine. I merely tell each pupil that the longer finger of the left hand is over the letter "P," and the little finger of the right hand is over the letter "P;" that he is to use the first finger of each hand upon the two inside keys, and not to move his hand from this position. The exercises do the rest. It is not necessary to have the keys of a piano lettered.

Why those of the typewriter? I use blank cushion covers on all keys and find that they are far more satisfactory than anything else. Copy holders of some kind should be used. The lifting of the carriage should not be allowed. The pupil should learn that lifting the carriage loses time and therefore reduces his market value. Erasers should not be allowed in the typewriter room. Exercising for practice should be so arranged as to take one row of keys for each lesson. The work of transcribing shorthand notes should begin just as soon as the pupil has a good knowledge of the key-board. Insist on correctness, but say nothing about speed. Correct all exercises and letters, and have them rewritten until they are perfectly written. Pupils should be taught to read through transcripts; correct, if necessary; rewrite, and hand them to the dictator in perfect form. Never tell a pupil how to spell a word, or the meaning of a word, but make him consult his dictionary. Discussions on each of these papers were lively and practical.

Saturday Afternoon

BUSINESS SECTION

A 1:30 o'clock the afternoon session was called to order and Mr. C. S. Clark, of Rochester, N.Y., read the most practical paper, from the business manager's point of view, that was presented at the convention. The subject was "The Card System and its Uses." We shall publish it in full in our June number.

J. P. Byrne, of the Brooklyn Commercial High School, read a very suggestive and thorough paper on the subject, "The Business School Library and General Reading."

He said that breadth of culture and wide discrimination come of varied intelligence, and varied intelligence does not lie between the covers of one formal textbook. In both public and private secondary schools, the business library has become more and more the center of mental life. The business world is demanding more general intelligence, and is willing to pay for it. A library for a business school should be able to meet the demands of general subjects, and provide books on money, banking, insurance, transportation, corporations, business law, etc.; publications on manufactory, agriculture, mining, etc.; geographical, statistical, government publications treating of commerce; some books on general English literature, and current publications of both a general and a trade character. The library makes possible a wider preparation for school work; it is often the key to an otherwise dull intellect; it presents a field for cultivating the general mental growth of pupils who are but a short time with us. Much broader views may be obtained when special or even general subjects are followed up by library work in special books or in the current literature of the subject in hand. Banking, Transporta-

tion, every vocational text and trade have their special journals, and general current literature abounds with material having a commercial significance. Mr. Byrne referred to the use of these advantages, of his pupils. Librarians will accept suggestions as to books that ought to be purchased for the library, and they will gladly do supplementary reading along the special line of their work.

The commercial teacher should cooperate with the city librarian. It will be to the utmost advantage of his pupils, librarians will accept suggestions as to books that ought to be purchased for the library, and they will gladly do supplementary reading along the special line of their work.
"There seems to be a spirit of unrest in our profession, a feeling of dissatisfaction with our results. This feeling is accompanied by a sense of our duty as developers of character, and the teacher who is successful in teaching more depends on his understanding of the nature of the student than upon his knowledge of the subject. The formation of character is of greater worth than the accumulation of knowledge. Without character there is a power for evil which will surely bring ruin. Human nature and temperament are like the constant in mathematics, the keynote in a tune, the clue to the making of maps through every thought and act and habit. Consciously or unconsciously, skillfully, or unskillfully, every day, every hour, and every minute we are influencing the character of the students under our control. For our own content we are instrumental in affecting their destiny. The High School teacher fits his pupils for college, the college professor prepares them for special schools, but the commercial teacher is caught when they leave him their school days are over. In trying to do the work of this high station, it should be remembered that an indirect suggestion is better than direct, that word, act, habit, story, may impress upon an observant student a truth or moral, when he would not heed it if told in words. The teacher should seek to embody in himself those characteristics which he considers necessary to the make-up of a man. "Whatever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report, if there be any virtue, and if there be any praise, think on these things. For this work, no general or special direction can be laid down, as each teacher must be a law unto himself and his pupils in these matters.

"Our goal is success, success means character; success means happiness; success means the best use of our talents; success means the realization of the capacity, of leisure for labor, of dissipation for discipline, of sham for sincerity; of pleasure for purpose. We must not shirk our duty, nor suppose that some one before us has done it all. The future will show that the seed or water the tender plant, which may already have taken root. We are changing the course, not of a great river, but of a little brook. We should first teach our own pupils, and when one is good enough for himself, he is generally master of any situation. He is able to curb his passions, to make the best of the worst, and to find in every incident a new spring in the bud on which he climbs from darkness into light and from defeat unto victory. Teach your pupil to be true to himself, true to his ideals, true to his principles, true to his convictions, true to his purpose. Teach him to respect his own ideas, and to have confidence in his own worth and ability. Teach him not to stifle an inward aspiration, if it can be followed to perfection; that work is a natural law; that everything works from the holy angels singing "Ho- samna in the Highest," down to the animal life that play in a drop of water; that out of work come life and strength and growth, and even genius and virtue. Teach him not to live for himself alone; that to be helpful, warm-hearted, kind, courteous, cheerful, will insure him not only success but happiness."

After the reading of Mr. Healey's paper the members prepared to meet with the shorthand teachers in joint business session.

THE SHORTHAND SECTION

The Shorthand Section met rather late, with Mr. Byron Horton in the chair. Mr. C. C. Dexter, of Lynn, Mass., who was to have read a paper, was absent, as was also Mr. Frank Kuthford, of New York, who pre- tended to read. Mr. Kuthford's paper was read by Mr. Holmes, of the Kenmont Typewriter Company.

Anferlott made to commit this Section to an "official organ," but the teachers very sensibly disapproved the suggestion at 5:38 o'clock, the Section adjourned to meet in joint session with the Business Section, for the transaction of business.

BUSINESS MEETING

Nearly half of the teachers had left the city when the business meeting was called to order by President Shoemaker. The time of holding the business meeting should be changed so that all members could take part in it.

The several reports were very satisfactory. The treasurer shows a substantial balance, thanks to the energy of the treasurer, Mr. B. D. Fulton, who is a very literal human dynamo of activity. The membership is now about 20, the Membership Committee having recommended 65 new names, which were voted unanimously.

President Shoemaker asked for the pleasure of the members as to methods of nominating and electing officers. It was voted not to nominate by committee, as heretofore, an eminently satisfactory change. Mr. C. C. Beale nominated Mr. Horace G. Healey; Mr. J. R. Byrom nominated Mr. E. E. Gaylord; Mr. E. M. Holdsinger nominated Mr. T. B. Stowell. The last nomination created a favorable applause, and Mr. Stowell would have been elected unanimously if Mr. Stowell — the nominations having been closed — had not declined election. Mr. Stowell's royal hospitality has endeared him to a host of new friends, and it was a matter of general regret that they could not be permitted to indicate in this way their high regard for him. There being but two nominees left, and they life-long friends, under the circumstances, had been quietly working for each other. The situation was an embarrassing one until Mr. Healey, with unexampled generosity arose and withdrew his name, in favor of his old friend, Mr. Gaylord. Mr. Gaylord was then elected unanimously, after a complimentary vote to Mr. Healey. Miss Cora Burbank, of Boston, Mr. F. B. Moore, of Trenton, and Mr. W. B. Sherman, of Providence, were elected Vice Presidents. The former efficient Secretary, Mr. A. S. Heeley, was re-elected, as was also the former Treasurer, Mr. M. D. Forsey.

Invitations for the next meeting were received from the Packard Commercial School, New York, and from Temple College, Philadelphia. Mr. E. H. Hull, the superintendent in the Department of Temple College, presented such an array of incentives to go to Philadelphia that that city was chosen almost unanimously.

The Providence meeting was a record-breaker in every way, and it will require energetic, faithful effort to make future meetings equal it. Although we believe that the ultimate magnitude and importance of our business is a matter beyond our control, and that the size of the present enrollment.

The Moral Side of Business Training

W. N. Ferris, Big Rapids, Mich.

(Read before the E. C. T. A., Providence, R. I.)

The subject, "The Moral Side of Business Training," is impelling in every respect, as it has more than one side. This is an unfortunate implication. For hundreds of years, perhaps thousands of years, the unity of life has been ignored. Hence, it has been impossible to explain the difference between the business man and the man from the life that deals with the getting of bread and butter, clothing and shelter. Even at the beginning of the twentieth century, we hear men and women remark that "Mr. James Smith has gone skidding.

This idea has been emphasized by the churches. Services are held once or twice a week. These services are supposed to deal exclusively with religious matters. In the house the same notion prevails. So long as an attempt is made to divorce man's religious life from his essential life, religion will retain some of the characteristics of this condition, and produce little fruitage. Every normal man is religious, that is to say the kingdom of heaven is within him. To objectify this kingdom, is to recognize the brotherhood of man and the fatherhood of God.

MORALS GROW OUT OF SOCIAL RELATIONS

The so-called teaching of morals in the schools, churches, homes, society, and in the state, emphasizes the notion that man has a moral life apart from his essential every day life. As a consequence, abstract moral precepts are taught, exercises are set apart for the purpose of inculcating morals. No doubt, a little something is accomplished by this method. The method, however, is not sound pedagogically nor is it any longer worthy of any special consideration. The same criticism holds true with reference to the moral side of business training. It is not the purpose of this paper to show how moral training can be engraved upon business training. Morals grow out of social relations. Whenever two or more human beings attempt to live a related life, morals are involved. Robinson Crusoe found it difficult to live either a moral or an immoral life. For his purposes, the commandments had very little significance, because they were given, not to an isolated man, but to a social man, a man living with other men. Robinson Crusoe resumed his social life when he found his man, Friday, and, at the same time, most of the ten commandments came into immediate force.
THE MORTAL ELEMENT IS INSEPERABLE FROM A BUSINESS LIFE

I shall occasionally use the term "moral side of business training," because the term occurs in the subject assigned me. I shall always mean by it, the moral element in a business training.

The object of business training is to prepare men and women for a business life, and a business life cannot be pursued on the Robinson Crusoe plan. It involves the life and welfare of men working together. It is not, therefore, left to a business college to decide whether the moral element shall or shall not enter into business training. This element is inseparable from a business life. Every course of business training involves the training of men and women organized into a social unit called the school. This social unit is either moral or immoral, some of the teachers of business colleges are probably for the remainder of this life is immoral. Just a word about unneutral acts. Whether a student goes down the right side or to the left, there is neither moral nor immoral, provided that he has not violated no or social regulation. His conduct is unneutral. Whether he employs vertical or slant writing, whether he paints his name with a pen, whether he parts his hair in the middle or on the side, are acts that can be classed as moral or immoral. They are moral acts. It is my purpose to examine as best I can, the moral factor in this course of business training.

Business training with an immoral side, or immoral factor, is self destructive. A course of business training with a moral side, or with a moral factor, is self-preserving, self perpetuating.

BUSINESS USAGES INVOLVE QUESTIONS OF RIGHT AND WRONG

It should be remembered that the business college had its origin in the demands of the business world. The business world asked for helpers who could make arithmetical computations with accuracy and dispatch, who could make a history of business with accuracy, and in such a way as to secure economy in interpreting said history. The business world is beginning to demand something more of the business college graduate. It is asking that the business college graduate be able to pass from the making of mere records to the transacting of business. In other words, it is asking that the graduate become a business man.

In order to pass from pure arithmetic, he does not encounter the element of morality. The fundamental processes of addition, subtraction, multiplication and division do not involve social relations. Unless he is obtained as a whole to the moral factor in applied arithmetic. In applied arithmetic, he is obliged to become familiar with business usages. These business usages involve questions of right and wrong. To what extent these usages can be profitably discussed in class work, it is not for me to say at this time. The wise teacher will, however, call attention to the moral factor. He will urge the student to study and realize every business usage. Profit and loss, commissmion, trade discount, insurance, taxes, duties and customs, stocks, interest, bank discount and partnership are phases of applied arithmetic not involved in business conjunction. For example, it would be difficult to teach successfully the subject of stocks and bonds without touching upon what is termed watering of stock and stock gambling. While the teacher may avoid doctrinizing on this subject he cannot avoid some of the ethical considerations involved in the conduct of a stock speculator. He will call his attention to the fact that in a human world the acquisition of wealth ought to have some quantitative relation to service rendered. The acquisition of wealth ought not to depend upon the influence of mercenary motives.

DEBIT AND CREDIT INVOLVE EXACT EQUITY

In teaching the different applications of bookkeeping, questions of credit and debit must arise. The bearing of the teacher can be made to permeate the life of the student. If, in the teaching of bookkeeping, the instructor takes special pains to commend illustration of a moral character, and cunning, he will utterly fail in awakening moral responsibility. Theoretically, the principles of debit and credit involve exact equity. The element of loss and gain will present itself daily. If the transact clearly illustrate the laws of compensation, only wholesome results will follow. Not a few commercial teachers are saturated with the spirit of modern commercialization, and modern commercialism is only a name for a form of slavery that is more destructive to the individual than ever was the slavery endured by the American negro. Every teacher of bookkeeping has come in to enable attorneys to take advantage of the masses. If every student could be made to appreciate the attitude of Abraham Lincoln toward the functions of law, the business college graduate would be inspired to use every effort in his power to promote commercial justice.

A NEW AGE COMING

If the business educator is fortunate enough to have the subject of Economics in his commercial course, he will have occasion to deal with those relations that are fundamental in business, the formation of national morality. John Ruskin and Edward Carpenter of England, George Herron and his followers in America have done much to give the world a revolutionary form of ecumenism. Women are taught to deny their fellowwomen free access to the world's natural resources there can be little progress in national morals. Just at present, the evolution of economics indicates clearly that there is a new age in which men shall not be owned, an age in which men shall be free, an age in which men shall realize the joy that comes from having off the products of their own labor. At present the larger part of the world's products is appropriated under the sanction of the laws favoring individualism. I am aware that this view is considered in many parts of the United States, to be rank heresy.

A BUSINESS LETTER IS AN INDEX OF CHARACTER

In Business Correspondence, the thorough going business educator has an excellent opportunity for teaching ethics. The spontaneous expression of a business man's thought in a letter is not infrequently the moral index to the writer's character. The business man who always conveys in his written communication the spirit of brotherhood, consecrates, in no small way, business life. As a rule, the exacting, dominating and tyrannical business man always reveals himself in his correspondence. As yet, there is no a text in Business Correspondence that fully and freely brings out the ethical side of Business Correspondence. Every week there are letters sent out by our great business houses that express magnanimity, kindness, and a human feeling. The teacher who believes in the moral side of business training should exercise the utmost care in selecting model letters. As yet, literature does not recognize the contributions of the business world to literature. I believe that the business moral enthusiast will yet be found who will triumphantly gather together the best forms, and the best expressions that have been sent forth by the business world. When the business college young men and young women of this country are saturated with these models they will find in their business communications with their own kind, and with those among whom they will stand as good, I am the last man to suggest moralizing in connection with this work. The deserving student will never fail to recognize the beauty of justice, and the transcendent loveliness of practical kindness.

The moral element involved in teaching rapid calculations, penmanship and spelling is of minor importance. The other features of a business education are of so much greater importance that I make special comment upon these.

MORNING EXERCISES

The moral side of business training can be emphasized in no more efficient and successful way by having what, for want of a
Report of Ohio Commercial and Special Teachers’ Association

held at Columbus, March 29, and 30

REPORTED BY J. D. FAIR

From the four quarters of Ohio came the Knights of the Pen and Pencil, together with those expert in accounts. According to the mandates of our superiors, we did hasten to that grand city, Columbus, the commercial metropolis of the state. The subject which we addressed was the necessity for a well-trained teacher, particularly in the higher grades of the public schools. Miss Lena Dickson, of Elyria, was one of the subjects discussed.

The meeting was held Wednesday afternoon and evening, in the Ohio State Normal School, and was attended by a large number of teachers. The meeting was opened by President J. F. Barnhart, after which Mrs. W. J. Bassell, Secretary of the State Board of Trade, delivered an address which was received with great applause. She spoke on the subject of "Art in Education," and the importance of bringing art into the schools.

The meeting adjourned to a smaller room, where a discussion was held on the topic of "Art in Education." The discussion was open to all members of the association, and a large number of teachers attended. The meeting adjourned at 10:00 o'clock in the evening.

SATURDAY, MARCH 30, 1901

Xine A. M. Meeting called to order and members registered as given below:

First on the program was Miss Lucia May Wiant. She spoke on "Art in Education," and the importance of bringing art into the schools.

The meeting adjourned to a smaller room, where a discussion was held on the topic of "Art in Education." The discussion was open to all members of the association, and a large number of teachers attended. The meeting adjourned at 10:00 o'clock in the evening.

L. L. HUDSON, Delaware, O.
"How I Teach Bookkeeping"
Columbus schools, who gave a practical illustration by using a class of bright little boys and girls from a Primary grade, conducted by their graceful teacher, Miss Jeannette Hall. This was certainly a fine illustration, showing how, by a little care, children can be trained to obey commands in real teaching. It does a regiment of soldiers obey the commands of their Colonel. Following this came a class of A Grammar students, conducted by Miss Ella C. Burkline, illustrating how to cultivate grace and beauty in writing. This proved to be one of the most enjoyable features of the entire meeting.

L. L. Hudson read his paper on "How I Teach Bookkeeping." He teaches Theory and Practical bookkeeping. He is also a strong advocate of Special Rule Books, as a labor saver to teacher, student and bookkeeper.

Discussion by J. J. Krider, who is a strong believer in practical business from the start, vice of modern students, as the average student we receive has absolutely no knowledge of the subject of accounts, and very little other knowledge of use to a practical business man.

A better article on "Higher Education for Stenographers and Typewriter Operators" was never delivered, than that by F. W. Williss. He said that short courses led to producing $100 among steno- grammers. Low prices indicate cheap teachers, and cheap teachers lead to more $100 stenographers. Raise the prices of tuition, lengthen the course and produce $100 to $200 stenographers. "Shorthand, when properly learned, will prove to be not only a most agreeable and remunerative profession, but in many cases a stepping stone to something much better, and as a means of mental training is without a rival." James A. Garfield.

The report of the nominating committee composed of C. F. Zane, J. J. Krider, and D. D. Mueller was adopted, and the following officers for the ensuing year were elected: President, A. D. Willitt, Dayton, Ohio; Vice President, E. A. Hall, Youngstown, Ohio; Secretary, Miss Lenna Dickson, Elyria, Ohio; Treasurer, J. S. Merrill, Urbana, Ohio. The Executive Committee: Jerome B. Howard, Cincinnati; F. F. Musrrush, Cleveland; T. W. Bookmyer, Sandusky; Delegates to the Federation at St. Louis, Federation Delegates, M. H. Davis, Toledo, Short-hand Section, D. D. Mueller, Cincinnati; Business Section, H. C. Rowland, Columbus; Penmanship Section, C. E. Towne, Zanesville.

The following resolutions were adopted:

- In behalf of the Ohio Commercial and Special Teachers' Association, be it resolved, that we express our appreciation of the hearty reception to the city of Columbus, tendered us through Mr. J. Y. Bassell, of the City Board of Trade. And also to the special teachers of said city for their kind treatment, especially for the delightful surprise provided for us by Mr. C. A. Bliss, of the Bliss Business College, Following so appropriately our "heart to heart" talks.
- We also heartily appreciate the fine exhibits furnished by Miss Fraser, of Columbus, and Mrs. Downen, of Mansfield, and of writing by Mr. Barnhart, of Akron, and Mr. Nocen, of Columbus. It is to be hoped that at our next meeting there will be a large number of exhibits, even though they may be small, as we believe the exhibits to be a very helpful feature of the work.

Signed: BENJ. FERGUSON, F. W. WILLISS, MISS DICKINSON, Committee.

The meeting was adjourned to meet next Spring at the home of our new President, A. D. Willitt, Dayton, Ohio.

C. L. TOWNE
Zanesville, Ohio,
Delegate to the Penmanship Association at St. Louis, Mo.

Mrs. JENNIE C. DOWNEN
Mansfield, O., Secretary.
Penmanship Philosophy

Speed in writing is a good thing, but to shoot speed, speed, speed, and nothing but speed, at the neglect of numerous other essentials, is not productive of the best results. The same is true also of movement, form, etc. The best teacher of penmanship recognizes all of the essentials and does not unduly emphasize one at the expense of the others.

The professional penman has frequent use for the whole arm movement, notwithstanding the claims of the one idea, one movement for all work enthusiast. If you intend to become a real penman, don't let the prejudices of another prevent you from learning all you can in all the ways you can.

While there has been in existence for a good many years such a thing as simplified or abbreviated penmanship, it has not been of a practical kind, and the senior editor of the PENMAN-ARTIST AND BUSINESS EDUCATOR has therefore been the first to originate, to prepare for them, as far as he knows, the other, tangible, and sensible style of simplified writing.

The nonsense of using fine pointed pens for business purposes is daily becoming more apparent. Pupils should be taught to use such pens as they can use when they enter the business world.

He who labels his specimens "Written with pure muscular movement," when combined movement was used, shows more zeal for movement than regard for truth.

There are still a few persons who insist in calling combined movement finger movement. This is either dense ignorance or an attempt at rank deception.

Suppose that 30 were to become the standard of writing in the future, who should be given credit for the same, the verticalists or the five degreeists? Since seventy is midway between fifty and ninety, would the honors be about equal?

Will those who so strenuously insisted that it was wrong to require a pupil who had acquired a slant hand to change to the vertical now claim that it is equally wrong to require those who have acquired a vertical hand to change to the slant? It is a poor rule that won't work both ways.

Because you can write one style best and another no excuse that we fostle those styles upon the public as standards. A standard is broader than an individual—fits everybody in general and nobody in particular. It is far from particularity and yet common in character. No one can appropriate it, yet everybody can adapt it to his individual service.

If finger movement is worthless, paralyzing, slow, cramped and illegible, how is it that Shakespeare and Milton, Dickens and Thackeray, Ruskin and Hugo, and nearly all the other great writers used it? Rather strange, isn't it, that the other up their sleeves! Strange, too, that such immortal documents as the Declaration of Independence and Emancipation Proclamation, which were written by the much maligned, despised, and miserable finger movement!

Pure finger movement is certainly not desirable for practical writing. How about pure arm movement? Are they not both extremes? The one belongs to the hand, the other to the shoulders. The two combined comprise a golden mean. Is not that the thing desired?

One slant, one movement, one idea for all in penmanship, is about as sensible as one tone in speaking, one step in walking, one thought in thinking for all.

Mr. Madaras

Informs us that the desires of profiting by his summer school should correspond with him at once as his advertisement will not appear again. Now is the accepted time.

Printers' Ink

"Printers' Ink," the well known journal for advertisers, published at No. 18 Spruce St., New York, has much space in its issue of April 6th to business college advertising. Mr. G. S. Walworth, of the Walworth Institute of New York City, and Mr. Norman P. Heffley, of the Heffley School, Brooklyn, are the authors of the article, and it is interesting to see how they advertise their schools. Both institutions being very successful, the methods employed by their promoters can be profitably studied by others. Considerable other interesting and valuable information regarding school advertising appears in this same number. In fact, it may be appropriately called a special business college number. The publishers of "Printers' Ink" are said to have been extensively used in business colleges as a textbook on advertising. It certainly is a very bright and interesting "Little Schoolmaster" in this subject.

Let the Good Work Go On

Mr. W. H. Carrier, the accomplished teacher and all round good fellow, of the Mechanicsville, Pa., Commercial College, went in a club to the PENMAN-ARTIST AND BUSINESS EDUCATOR, and with it the following letter: "I have been vigorously preaching the gospel of Good Penmanship of late. Below you will find a page of nine column of advertisements and a post office order to admit them to full membership, and it is safe to say that there are more on the "anxious seat."

The Last of the Greatest Book on Penmanship

We have on hand a few of the remaining copies of the "New Spencerian Compendium of Penmanship," by far the greatest work on professional penmanship of modern times. The size is 12 x 12, inches, one inch in thickness, and sumptuously bound in cloth and leather with large gilt stamping. This covers the various styles of writing, lettering, flourishing, and pen drawing, and contains the richest gems in these lines that have probably ever been given to the world. It costs a fortune to produce it and no more will be published. The few copies that are left can be had only of us, as we have secured the last of the entire edition. This work has ever been the companion and inspiration of such masters as Mada- ras, and is a complete school of penmanship.

Now is your chance to secure one before it is too late. They are worth $25.00 each, but you can secure one now for much less than it is worth. For price, address, Zener & Grosen, Columbus, O.
Angular Precise Penmanship:

Appreciation and Shekels from a Veteran

MESSRS. ZANER & BLOSER,
Columbus, O.

GENTLEMEN: For several months past I have been the recipient of an ideal chiropractic publication known as the PENMAN AND ARTIST for short. I am well pleased with it, and I have seen copies enough to justify me in saying that it is first class in every feature. Your treatment of the whole subject is broad and courteous. It appears to me to be thoroughly solid, having length, breadth and thickness, and withal about square.

Keep right on in the same direction! Now this is good advice, isn't it? But how are you to keep on without the shekels? It seems high time my dollar should clink in your till. I have thought so for some time, but you know how it is yourself when one has too many irons in the fire. Commence me back where I belong by good rights.

Very sincerely yours,

H. W. SHAYLOK

12 Pine St., Portland, Me.
Indefiniteness in Teaching Commercial Geography

W. J. AMOS, PHILADELPHIA, PA.

If there is any one word that characterizes a large part of the instruction in Commercial Geography, I believe that word is "belief." "But believe" was used all along. The subject was to be given no exposition, no class, no detailed instruction, no practice, no regular subject matter. It was a problem which was to be treated, and the teacher was to give "but believe" work on it.

As the courses of study are planned in the majority of the commercial schools, both public and private, the time for Commercial Geography is fearfully curtailed. The best public school commercial classes in this country only allows for three periods per week, covering a total period of two and a quarter hours. This means but eighty-one hours per year, and in this particular class the subject must be completed in one year.

Now, it must be obvious to any person at all familiar with the essentials of Commercial Geography, that scarcely the preliminaries of the subject can be touched in this time, without mention technical details.

The other day I visited another prominent public school and had the pleasure of hearing a talk by the worthy principal of the commercial department on "Cotton Seed." It was wonderfully entertaining. The pupils gave the closest attention, took no notes, merely listened. At the close of the period, the principal asked, "will you give me a talk on "Silk" next time." No home work assigned, no clippings called for, no discussion. Before the class was dismissed, I was asked to say something concerning "Cotton Seed." I composed a fable in the front seat to tell me the leading product of the cotton seed. He promptly replied, "Cod liver oil." Another said, "Butter." Another said something about "Axle grease." No one said a word about the cotton plant. I then opened a young lady to name a state producing cotton. "Kansas" was the reply. I asked for the leading American cotton market. Chicago was given the preference. I was also surprised to find that Manila was our leading foreign market, while Hoboken was the leading cotton manufacturing city in the United States.

Now, my friends, there is a pedagogical screw loose in that school. One year to complete Commercial Geography. Precious periods absorbed in lecturing impressions such as I have mentioned. Is it any wonder that our people sometimes find fault with million dollar institutions and ten-cent instruction?

How to Do It

It does seem that the teacher in that school would have been doing more definite and perhaps more valuable work had he given those pupils plenty of home work, which, when discussed in the class, would have brought out the fact that cotton is raised for fibre and seed; that it is the leading product of this country; that Great Britain is our leading foreign market; that we are responsible for the fact that New England is the leading cotton manufacturing section of our country; that this industry is gradually moving southward, then, when this field had been covered, he could have discussed the seed and other products.

Understanding, I am finding no fault with details in Commercial Geography. They should be taught—if you have the time. If you do not, let us teach a few, definite, needful facts. Stir your class by getting them into action. Let them do things. Don't swamp them intellectually with your pedagogical "mushiness."

The Moral Side of Business Training.

Continued from Page 248.

better term, I call morning exercises. For a quarter of a century, I have used thirty minutes every morning of every school day in which to awaken and stimulate the heart side of human nature. A large number of young men and young women enter the modern business college hypnotized by the "get there" spirit. Nearly all of them are hero worshipers, worshipers of the almighty dollar hero. They feel that there is a sound number of men who have come through the world. This spirit of ownership not only relates to material wealth, but even has a distinct reference to the ownership of man. Even at the beginning of the twentieth century, the dominating idea in the marriage relation continues to be ownership, and such ownership is always at variance with freedom. The morning exercises should not be enough for preaching sermons nor for the purpose of telling men and women that they are on the road to hell. I do not recommend reading in these exercises the biography of millionaires or such books as "Mathews," "Getting on in the World," Marden's "Pushing to the Front," or Conwell's "Acres of Diamonds," I prefer Drummond's "The Greatest Thing in the World," "The Investment of Influence," by F. H. Kellogg; "The Town of Wild Olive," Bishop Spalding's little books, "Education and the Higher Life," "Opportunity and Other Essays," "Means and Ends of Education," "Thoughts and Theories of Life and Education," and "Things of the Mind," David Starr Jordan's "Care and Culture of Men," some of the very best selections from the "Saturday Evening Post," now and then an article from the "Outlook," or from some of the great magazines will awaken latent emotions, will awaken a love for the best books, will give men and women a broader vision of life and enable them to get out into the world as builders rather than destroyers. A novel like "Eben Holden," will do more to sweeten and ennoble the life of business.
students than will stereotyped scripture readings and prayers. Men and women need to be awakened morally and spiritually in order that they may do their work intelligently. The half hour that is properly used in the morning is never thrown away. In these morning exercises men and women will get new views of life. They will get a new vision of the world. They will get a clearer vision as to the value of time; a clearer vision as to their mission in this world. The morning exercises should be a permanent feature of every school in the world, from the kindergarten to the university. No school that attempts to educate the whole man can afford to dispense with this feature. It is the one way of all ways for arousing moral and intellectual hunger. When men and women are morally and intellectually hungry, they will find the necessary food. When this hunger has been aroused the larger part of the teacher’s work is already done and will done.

THE SCHOOL MUST BE A BROTHERHOOD

The essential feature of the moral side of business education constitutes the last section of this paper. The school by whatever name it is called is a social organism, a social unity. The director of this school organism makes the whole. In all his relations to his pupils is morally invigorating, both teacher and pupils must grow in the direction of a high and beautiful manhood. The propietor or director is a group of workers, who, if they are in day-to-day dealings with his pupils cannot hope to build strong men and strong women. The school must be a brotherhood in which the pupils are the members of the brotherhood, in which the teacher is the brother by the pupils, a school in which students make their own laws, and enforce their own laws with the cooperation of the teacher. If in this social unity students drive shotguns, attempt to get ahead of one another through the influence of wrong incentives, for example, through prizes, then we have a right to expect that the school is engaged in furnishing new recruits to the army that is already attempting to conquer the world through ownership. The teacher who believes in beautiful schoolrooms, who believes in the most comfortable and attractive seating, in the best food, the best instruction possible, who believes in music, who believes in amusements, who believes in teaching in the golden rule is really the leader in giving significance to the moral side of business training.

PICTURES OF REAL ART

The day has gone by when the pictures upon the walls of the business college consist of flourishing eagles, horses, lions and dragons. The business college no longer makes an apology for its existence. It is, at this day, relatively an integral part of the great system of popular and universal education. The business college is no longer doing fragmentary work. The business college of today is engaged in practical business work. For example, the auditor, Yale and Columbia Universities, the building of men. On the walls of the rooms of the thoroughly equipped business college hang pictures of real art. There the Angelus, The Sower, The Breaking of Home Ties, A Madonna, here a portrait of Washington, Lincoln, Grant, Longfellow, Whitier, Bryant, Lowell, Holmes, Harriet Beecher Stowe, Fenimore Cooper, in the corner room, pictures of mountain and lake, forest and plain. These decorations contribute to the joy of work. Young people carry away from the beautiful business college rooms memory pictures that some day they will document, in their own stores and in their own homes.

Among the books, those already mentioned together with the complete works of Cooper, Irving, Hawthorne, Emerson, Longfellow, Whittier, Lowell, Holmes, Bryant, Brougham, Sedgwick, Lowell, Donald G. Mitchell, Mark Twain, Josh Billings, Artemus Ward, Prescott, Bancroft, Parkman, Motley, Schiller, Scott, Dickens, Thackeray, George Eliot, Thos. Kingsley, George McDougall. It is possible complete sets of American Stateman Series, English Men of Letters, American Reformers Series, Great Commanders Series, Famous Women Series, Beacon Biographies, and as many more great books as the proprietor can afford. This reading room should be open seven days and seven evenings in the week. Students should be permitted to borrow the books provided they read them in the reading rooms during their leisure hours on Saturday or Sunday. The masterful teacher should give suggestions relative to the right use of books. This feature of any school nourishes and inspires the soul.

THE LECTURE PLATFORM

The business college has another mighty agent at its command. This agent is the lecture platform. Bring to your school the great men and the great women of the land. Your students, then, are friends of yours and friends of the world. The one hour in the presence of a world builder will frequently reveal the existence of a student genius. It is your magnificent privilege to thus crown all of his work in the business world, to invigorate and inspire men and women who are hungering and thirsting after the power to do something, and be something.

COURTESY BELONGS TO A BEAUTIFUL HUMANITY

The business educator must not assume that student relations are incidental and of little value. Courtesy is one of the flowers that grow from the ashes of industry. The gentleman is next to the highest product of a Christian civilization. When the student becomes a gentleman there is little danger of his ever becoming a demagogue or a tyrant. This rules out the business education of the commercial world. The gentlemanizes the moral side of a business education will seek to bring his students together as often as circumstances will permit for social intercourse. Furthermore, he will in the morning exercises give specific instruction relative to social usages. Through these usages men and women work together, live together and get a glimpse of the meaning of the brotherhood or man. I said that the gentleman is next to the highest product of a Christian civilization. The highest product is man. In a school where there are factions, cliques, superiors and inferiors, where there are brilliant students and dull students, there can be no hope to maintain law and order.

LADIES AND MORALITY GO TOGETHER

The moral side of business training is the essential side, not the incidental side. If the student in acquiring a business education is not kept in balance, if he does not grow in the beauty of the life, if he is a better that a mill stone was hanged about his neck. Men and women do not derive the best things of life from the use of a multiplication table nor from the use of debit and credit, nor from the business peculilities. Their chief joy or their deepest sorrow comes from the healthy manifestations of their emotional nature. In the new democracy, the schoolroom is the nearest approach to the democracy. Men and women are to manifest all their powers through their daily work. If this lesson is learned in the schoolroom and men and women will grow into the world possessing the gift of the greatest leaders.

The lowest ideal that dominates society today teaches men to hate his daily routine. This is the lowest form of indolence that I can manage to describe. The majority of men and women do not understand the work of man and lives to work of some kind. If man is to grow morally and religiously at all, he must, therefore, grow morally and religiously while doing his daily work. If he does grow morally and religiously, then he may do his daily work and do it well. This is not only the man’s work, but the woman’s work. If the moral side of education not as a side feature, but as a vitalizing feature, as an inspiring feature, as a creating feature in all of our educational work. Thus may the flag of Americanism never lower on the sand, but on a rock.

Accurate, Systematic Penmanship

The Centhe of a Series of 24 Script Alphabets Illustrating as Many Practical, Unique, Ornaments, Fashions, Characteristic Hands

[SEE FOLLOWING PAGE.]

These forms are not only suited to careful, slightly ornamental writing and for rapid, clean, engaging, but also serve as a foundation for ornamental or professional writing. Indeed, this is no doubt its most serviceable function. It is a most excellent hand to cultivate as it systematizes and results in the order the more frisky, flourished-styled.

Use a fine, flexible pen and an oblique holder that is properly adjusted. In the small letters, the little finger should slip gently under the middle of the back of the pen and also the first and second fingers may act to advantage in such letters as, A, a, t, i, but the main motion should come from the arm, it should seemly center and originate at the elbow. No finger action other is used in the capitals except in such places as the second part of W, second and first part of A, W, and V. In the making the second parts of these letters it is well to keep the thumb high well to the right, then the fingers need be used but little.
Accurate Systematic Penmanship.

Accuracy, system, plainness, uniformity, grace, beauty, skill, strength, and ideality.

Vertical or Slant

Read Before the Ohio Commercial and Special Teachers' Association at Columbus, O., March 30, 1901

By L. P. W. Stieth

These associations of congenial spirits and kindred workers are the golden links which bind many souls in an unbroken chain, and the chords touched in our hearts will vibrate for an age. I sincerely hope that our desires may be attained in harmony, and may lines of duty and mutual benefit keep us within a circle of eternal love, friendship, and fidelity toward each other, and devotion to our noble calling.

VERTICAL OR SLANT?

"Vertical or Slant" is the subject of this paper. I now declare for approximate rightness for one-stroke in every ten, and the other nine to be parts of a circle. The public took me with its strong arms and master grip, and raised me gradually from an inclining system of writing composed of long, slightly curved, and straight lines, executed by sliding movement of the pen at slopes of fifty-two to thirty degrees slant, and acute angles, to a perpendicular position, and circular system of penmanship.

About ten years ago I began a thorough investigation of "Vertical Writing," proceeding at first to change the position of my paper and straighten up my dear old Spencerian penmanship. This I practiced faithfully, using finger, muscular, and combined movements, but with little success. The next step I took was along the line advocated by Mr. John Jackson and other foreign authors whose stiff Roman print letters are labeled and positively ugly in construction. Said authors and their systems are not good examples and convincing teachers, and too many American and Canadian authors and teachers are making fatal mistakes by continuing to imitate such slow finger movement, and marking letter systems. I soon discovered that my work was not satisfactory from any standpoint. Therefore I was not satisfied with the different systems of vertical writing published in this and foreign countries. Believing it important to the cause of education that the principles of this Art and Science be settled on such basis of artistic beauty and practical utility as shall lead all teachers to uniformity in their instruction.

BASED ON THE CIRCLE

I love the beautiful in nature and art, and could forget the exquisite beauty in the art of writing, the unlimited opportunity to choose from an infinite variety of ever-changing forms and shadings of vesture of the "Spencerian Queen," and practice too irresistibly fascinating for an old teacher, practitioner and admirer of that system. But the system I have formulated does not contain all of the artistic lines twisting hither and thither like tropical vines. The system of writing that I call your attention to is named "Cyclography," meaning circle writing. I am the author and publisher of this system. The copyright was assigned by the Librarian of Congress to me as the "author, proprietor and designer of an improved system of vertical penmanship, developed from a straight line and circle principle." Based on a circle, thereby the most satisfactory degree of rapidity, legibility, simplicity and beauty is obtained. The position while writing may be a healthful and natural one, with paper in most convenient radius of sight and direction for a free rolling motion, produced by a combined action of the pronator, supinator, extensor, biceps, triceps and deltoid muscles and humerus, radius and ulna bones. Nine strokes of the pen-put of every ten are parts of a circle, and the tenth stroke is a straight line which may be made from one to fifteen degrees leftward from a vertical line by all persons not having a convenient arm rest--such as store, railway, express, mail, bill, check and many other clerks, time keepers, reporters, inspectors, collectors, conductors, delivery men and others required to hold a book in their left hand while writing with the right hand. This straight line may lean from one to fifteen degrees rightward from a vertical line and thus harmonize all advocates of intermedial slant writing to an approximate concept and practical application of improved upright penmanship. The ideal "Cyclography" is written in the following manner:--Front position--nearly erect, bending slightly forward from the hips, chest free from the desk, paper to right of center of body, turned slightly to the left and nearly in line with the arm from elbow forward. Move the paper or board forward as the head forward on the page. Train your hand for correct penholding by grasping a hollow rubber ball of proper size, affording comfortable feeling in the hollow of the right hand. Fasten the penholder to said rubber ball by a tight loop, and loop each finger to the ball that does not assume the correct curvature. Adjust the penholder between the thumb, first and second fingers, about one inch from the point of the pen, the holder pointing along the arm toward the elbow. Another hoop fastened to the holder and encircling the first finger between first and second joints will prevent and break the probable faults of gripping the pen and cramping the fingers. Get the Cyclographic motion and write with the rolling motion, but do not generate more rotary movement than you can control. I have faith in the movement adopted in this style of writing, because the laws that govern the innumerable worlds in their cyclic or circular travels through the realms of space, teach us that rotary movement is nature's plan. I have not time at my disposal now to discuss the most useful movement that man and God demonstrates everywhere, day and night. I recommend that rolling movement be used in the formation of circular letters. Proceed to practice on circle and straight line principles, and at no stage of the work is the process necessarily violent. By using the rotary motion necessary for easy and accurate printed writing, we do not disturb our slant writing or the lateral sliding movement practiced by all successful slope writers. Circular writing is altogether different from slant writing in execution. No danger of mixing the mental conception and physical constructions of Cyclography and Semi-Angular Slant Penmanship.

CROSS SECTION RULING

I commend the use of cross-section rulings by all persons learning to draw the circular letters either on paper or black board. The writing surface divided into squares enables the student to draw straight lines, describe correct arcs of a circle of any radius geometrically exact, which is impos

Writing

It is not my intention in this article to discuss the merits or demerits of vertical writing, but will simply say that if I had my choice of teaching vertical or extreme slant, I think I should select the vertical. I mean to be broad in my views, and I have no patience with anyone who cannot see any good in the vertical, or in the slant, as the case may be.

The vertical possesses advantages and disadvantages: the same can be said of the slant. In the past year I taught both the vertical and the medium slant in the Public Schools, and I have come to the conclusion that vertical is better for little folks, and the medium slant for older pupils. So if I were allowed to select a style or styles of writing for Public Schools, I should start all pupils with copy-books with vertical copies, medium size, with broad turns, and keep them on that style up to and including the fourth year, and at the beginning of the fifth I would give them copy-books containing medium slant copies, and besides a few good movement exercises, and by changing the position of the paper and using a free movement it would be but a short time until the greater part of the students would be writing an easy, free style just a little forward of the vertical.

Perhaps it would be well at this point for me to give my reasons for changing from vertical to slant. Slant can be written more freely than vertical, because the motions in vertical are mainly up and down, instead of to the right, as in slant, and anyone who has practiced writing realizes that one's ability to write freely depends upon his ability to move the pen to the right and to give the hand or fingers to drag heavily on the desk or paper. I imagine I hear someone say that vertical is much more legible than slant, to which I will agree, provided, however, that the turns are broad, and it is executed slowly and carefully; but if slant style is written slowly, and turns are broad, the slant will be as easily read as the up-right, and it will be prettier and more graceful, on account of smooth lines which the vertical does not possess.

At the beginning of the sixth year, I should do away with copy-books, and give movement exercises, and follow up with word and sentence writing. If the above plan was carried out by a careful writing teacher, with the cooperation of the regular teachers, high school students need not be turned out ashamed of their writing.

P. W. Frederick.
Mansfield, Ohio, March 13, 1911.

The Sadler-Rowe Co.

The growth and progress of the Sadler-Rowe Co., Baltimore, Md., is truly remarkable. As commercial text book publishers they have accomplished more in a decade than is usually accomplished in a life time.

The latest book this house has brought out is Bank's "Easy Method" of Touch Typewriting, a most thorough and exhaustive work by Ben. S. Banks, of Banks' Business College, Philadelphia, Pa.

Our readers have probably noticed in the announcement of our April number, that they have recently added a complete department for the manufacture of blank books and stationery. While this was a very expensive addition to their business, it will enable all customers to secure just what they want in this line, however different it may be from regular stock goods. All of their books are of the very highest order, and their methods of pushing the sale of the same and meeting competition, are dignified and straightforward.

No one is doing more to promote the welfare of young men than they, and none is doing more than they to lift commercial education out of the mire of superficiality and quackery. Merit and push win. That is the secret of their success.
Outline of the Ohio Commercial College Board of Examiners Association.

Prepared and Presented at the Ohio Commercial and Special Teachers' Association, by A. D. Wilt, Dayton, Ohio.

This Board will consist of the Local Examiners appointed by the Local Boards of Trade and the Local Commercial Bureaus, with a committee of not less than five prominent business men. On convening at their first meeting, they will elect a President, a Vice-President, and Secretary by ballot; and a majority of the members of the Association shall be required to elect. These officers to be elected for a term of one year or until their successors shall have been regularly elected. They shall assemble not less than once a year at a place agreed upon by a majority of the whole body.

The Secretary shall also be the Examiner in Chief, to whom the Principals of the several colleges of the Principals Association shall transmit their lists of questions for examination. It shall be the duty of this Examiner in Chief, to select from the lists furnished him in this way ten questions on each topic, and to have them printed and entered on examination blanks, in a permanent record. He shall transmit to the Local Examiners in each city, all on the same day, these selected lists. After the local examinations have been held, the Local Examiners will transmit to him the result of the examinations, giving names, residence, age and grade of each candidate examined. To such candidates who shall have passed this examination, the Examiner in Chief shall send through the Local Examiners a diploma of the Association, signed by the President and Secretary of the Examining body, the local examiner, and the Principal of the local school.

The records of the Examiner in Chief shall be accessible only to the members of the Principals Association, and of the Examiners Association, and all information concerning the examinations shall be held from any but the members of the two Associations. The expenses of the Board of the General Association of Examiners, including printing, postage, salary, and other expenses from time to time paid out of the general fund of the Examiners Association, which shall be derived wholly from the Principals Association; and all payments on account of said expenses shall be made by order of the President of the Principals Association on the Examiner in Chief. The amount of salaries and other expenses shall be such as may be mutually agreed upon between Principals and Examiners.

Applications for membership may be addressed to the Secretary at any time, and on the first day of each month all such applications made the previous month shall be submitted to each of the members then belonging, of whom two-thirds must vote favorably to insure the candidates admission.

III. Officers

Officers of the Association shall consist of the President, Vice-President, and Secretary who also acts as Treasurer, and an Executive Committee of three; one shall be elected to serve one year; one two years; and one three years. Successors after the first election shall be elected for a term of three years, one retiring each year.

IV. Duties of Officers

The duties of the President, Vice-President, and Secretary Treasurer shall be as are assigned or proxy sent to the Secretary, and all amendments proposed shall be made known to members either in writing or personally, not less than two weeks before the meeting which will take action on it.

[There was no action taken and therefore nothing done concerning the above, but we give it for what it is worth.—Editors.]

Good Art in Illustration

What it is, How to Recognize, Enjoy, and Appreciate It

Antonio Fabres, the creator of this drawing, seems to take us away from the conventional and lead us into new pastures of beauty. Beauty? did some servant of line say? Yes, that is just what we said, and we said what we meant. The lines herein displayed have been servants of the artist's will. He has used them to express his thought, not their beauty. They are made to serve as the agents of expression, of sunshine and shadow, of manhood and toil. They do not exist for themselves, but for others. They are beautiful in the service they give, not in themselves. But the picture is beautiful for the sunshine that it reflects. How can you look at it without involuntarily squinting the eyes the same as when the sunshine of heaven shines in them. The artist's soul saw the sunshine and caught it for future generations to enjoy. But we think the picture beautiful because it depicts sturdy manhood and hardy toil. What better service could lines perform, or human heart feel, mind perceive, and hand execute? We think it is beautiful because it is a communication of a human soul to humanity. If it teaches nothing else, it teaches the dignity of labor. It dignifies toil by associating it with sunshine.

To appreciate this kind of art or to see it in the light of reality, squint at it or study it from a distance of five feet. Then the sunshine and the shadows become more intelligible.

VISITORS To the Pan-American Exposition at Buffalo will find first-class rooms in a private family, one mile north of grounds—a pleasant walk. Cars and bus direct to main entrance. This style of lettering will be found useful where compactness is required. The copy was executed with a number two broad point, the size we recommend for the student's practice. Very little work is required to finish this style with the common pen, and we use it for certain purposes where nothing more than rapid, legible lettering is desired without any finishing touches other than the broad pen strokes.

Lessons in Engraver's Script

Number Nine

BY CHARLES V. HOWE, 357 VINCENNES AVE.—STATION M., CHICAGO, ILL.

Instructions for Practice

The first stroke of the N is made straight and is curved only after it reaches one space above base line; it is finished with a dot. Do not make the first stroke with too much slant which makes the letter too wide. The shaded stroke should commence with a hair line and end with a hair line, the shaded stroke being compound more than the second shaded stroke of the T; lift pen at the termination of shaded stroke and connect the terminating stroke at base line. The terminating stroke is finished with the dot in the standard T and W. The introductory and terminating strokes of the standard N should be parallel. The N can be modified by finishing with an oval at the bottom and the curved stroke at the top, same as modified H and W. The introductory stroke of the N is made as the N in every respect, join introductory stroke at top and gradually increase pressure on pen until nearly to base line, then relax pressure to taper it off like the small l; the connecting hair line is made the same as the introductory stroke, and the second shaded stroke is exactly same as the first; the terminating stroke is same as connect with the standard stroke, and shaded strokes should follow the introductory and connecting hair lines very closely, especially for a space and a half from the top, care being taken not to leave too much space between the hair lines and shaded strokes. The hair lines should be of the same slant and parallel to each other. The standard N is a space in width at the top. The first shaded stroke and connecting line (at base line) should be round and not too pointed. The modified N can be made with the first shade compounded very slightly, and the rest of the letter same as the standard N.

The introductory stroke of the standard A is made same as the introductory stroke of the N, except it has much greater slant. The shaded stroke commences with a hair line and gradually becomes broader until the base line is reached, where it is the broadest. The shaded stroke should be slightly compound to give it proper slant. The loop or oval of the A is made last. It should connect with the shaded stroke at base line and form a perfect oval, crossing the shaded stroke one-fifth of a space above the base line. The shade is added after loop is finished and care should be taken not to shade too heavy, the standard form, except it is finished with a shaded oval instead of the dot.

Criticalisms

J. R. X—Capital letters should be three spaces in height. Shaded strokes are too heavy in proportion to height. Capitals H, I, and U should rest on base line. Small loop of A should be made a space and a third above base line. Connecting strokes between small letters should be more round. By carefully filling up small letters at top and bottom and going over strokes that are too thin, will greatly add to the appearance of your work. Ruled pencil lines should be very light so they will erase easily.

C. F. G.—Introductory hair line stroke of H should be made with more curve; finishing dot of second shaded stroke is too heavy and not rounded enough; space between second and third shaded strokes is too narrow, make it wider; the small loop of capital K should not touch the second shaded stroke. H is too narrow. Your small letters are better than your capitals, which is a very good fault. See suggestions at the end of "Instructions for Practice." In March number regarding ruled lines, and apply same to your practice work. Let me hear from you again.

J. M. D. —I would suggest that you review the criticisms which I gave you in the March number regarding ink and pens. Pay more attention to confining your strokes within base lines and guide lines. Shading is too heavy in proportion to height of letters. Study form more closely and use good black ink.

LAMSON & CARPENTER, 521 S. 4th for Sav. CLEVELAND, O.
A Compromise Slant

CINCINNATI, O., March 21, 1901.

MESSRS. ZANER & BLOSER,
Columbus, O.

GENTLEMEN: In response to your favor of recent date will say that after a discussion of the subject of writing in our schools a resolution was adopted, practically unanimous, recommending to the Board of Education of Cincinnati, a change to a natural slant. I opened the discussion, with about a forty-five minutes talk, and then a large number of principals spoke on the subject, after which I introduced the resolution, which passed with but two dissenting votes.

We have had very good results with Barnes' Vertical, but I have felt that we could get more freedom, and still retain legibility, by using a slant, which is more natural, and is a 32 degree, and yet not force pupils to strive to make down lines vertical.

The man who has never had charge of the writing in a large system of public schools, has no conception of the difficulties to be overcome.

Yours very respectfully,

A. H. STEADMAN.

[The above speaks for itself. It clearly illustrates that 32 degrees is a thing of the past, and now vertical is also, as concerns Cincinnati. The honors are about even between the advocates of the old and the vertical. What next?] Editors.

Penmanship Renaissance

Baltimore, Md., March 16, 1901.

MESSRS. ZANER & BLOSER, Columbus, O.

GENTLEMEN: Enclosed is ten cents for a March number. It certainly sets a high-water mark for distinguished contributors—Zaner, Spencer, Lehman, Madaras, Howe, Kibbe, etc. If this continues and Madaras' summer school is a go, there will be another Renaissance in penmanship, as in the time of F. K. Spencer or Gaskell residually.

Speaking of your efforts in behalf of his plan, I am very much pleased and grateful for the information you have supplied me. I have taught for twelve years and had recently for business, was long legs, extended perpendicularly and horizontally, and writing that was not yet second to none in teaching that kind of writing. I am at present getting results second to none in teaching that kind of writing. It seems to be the natural way.

 Yours very respectfully,

A. H. STEADMAN.

[Thanks for compliments. Regarding the origin of the water lily poetry, we cannot say who the author was. — Editors.]

FELLOWSHIPS

A most useful 40 page book 6 x 11 inches securely bound in cloth, consisting of Business Writing, Ornamental Writing, Engraver's Script-Flourishing, Embossing, Resolution designing, etc., for 50c, reduced from $1.00. I have had a few left of this first edition, and they may go below cost. Order at once.

Address, S. N. FALDER,
309 N. BROADWAY, ST. LOUIS, MO.

IF—IF— You intend coming to my lectures and lessons on "HOW TO TEACH PRACTICAL WRITING" and "HOW TO BECOME AN EXPERT WRITER", you should let me hear from you now, the quicker the better. It will be personal instruction, the best in my power, strong, forceful, valuable, successful—and whatever you get from me will be just so much clear gain to your present ability as a teacher of writing. I can't teach the ones who know it all—no one else can—I am not a magician. My way of teaching writing is backed by an experience of 25 years practice and observation. I know I can show you your faults and make you a self-critic, the rest comes easy. Better write today for fuller particulars, enclosing stamp.

Resolutions

E. L. BROWN

LETTERING AND DESIGNING—NUMBER FOUR—BY E. L. BROWN, ROCKFORD, ILL.

The style and character of pen work changes as the years go by, and the work of the modern pen artist is quite different and of greater variety than that produced by the ink slinger from twenty-five to thirty years ago, when the ability to dash off a wild-eyed bird or a ferocious looking lion was considered by some the extreme height of a penman's skill. Yet, however, flourishing has lost some of its charm and usefulness, and when considered in this way, no one has time and money to waste on any accomplishment lacking in bread winning features. And after all what decoration can be added to German Text and old English lettering with such rapid and pleasing results? We believe this one use makes it a very useful accomplishment for the engrosser. Its study also cultivates a taste for grace and harmony. Flourishing may be carefully drawn out in pencil and inked over, but when produced in this manner it always lacks the naturalness and hand work stands in comparison with the Isaac and work more "snap," sharper and clearer cut lines, but it can be executed in one-tenth of the time necessary for the drawn out process.

INSTRUCTIONS—Make compound curves with pencil compass about one inch apart for height of letters, then add two more lines between these to regulate depth of the shoulders of the letters. Now, pencil out the word "Resolutions"—observing uniform spacing, width of strokes, etc., and see that the center is uniform to the curve. Proceed about the same with the word "Engrossed," then add the flourishing which should be executed with a bold off-hand motion. See that your ink flows freely, otherwise it will be impossible to do good work. Study direction, shading, and arrangement of each stroke, and avoid adding short broken lines which only tend to weaken the general effect. Stump the letters in with a No. 1. Soennecken lettering pen, then rule up the edges, and add other finishing touches with a common pen. Avoid slope in the letters.

GILLOTT'S PENS,

THE MOST PERFECT OF PENS,

HAVE GAINED THE

GRAND PRIZE,

PARIS EXPOSITION, 1900.

This is the highest price ever awarded to pens.

ISAAC PITMAN'S SHORTHAND.

FIRST IN 1837. FOREMOST EVER SINCE.

"I have received the 'Instructor,' etc., and have spent every leisure moment reading the printed matter and examining the text. It is the first time I have ever examined your system, and I am glad to say that I am much more pleased with it. I have been examining several other systems and they all afloat; but I feel sure that Pitman is a better. I am proud of doing humanity a kind act when you furnish them with a copy of 'Which System of Shorthand Shall We Learn.' It should be in the hands of every one who contemplates the study of shorthand. I wish I had seen a copy twelve years ago. I think the Isaac Pitman Shorthand is 'Father of them all,' and I consider your advertising matter and claims are the most honorable I have yet seen."—H. H. Spence, Principal, New Westminster, B.C.

Adapted by the Leading Business Schools. TWENTIETH CENTURY DICTATION BOOK AND LEGAL FORMS. 3d edition, In ordinary type. Liberal discount to teachers and schools. Specimen pages free. "Which System?" Twenty page catalogue of over 150 works in Isaac Pitman Shorthand, and copy of "Pitman's Shorthand Weekly," free.

ISAAC PITMAN & SONS, Publishers, 33 UNION SQUARE, NEW YORK.
Qualify
PENMANSHIP AND DRAWING

There is a greater demand today than has ever been before for persons who are thoroughly qualified to teach writing, drawing, and the commercial branches.

The public schools of our country need a large number of special teachers of writing and drawing. These positions can be had by the competent.

Commercial schools need more teachers of penmanship and of the commercial branches than ever before, because they have more pupils.

Then in the lines of illustrating, engraving, designing, etc., there is much more work to be done at good prices than ever before.

Why not consider the matter of taking a three, six, nine or twelve months’ course in the Zanerian Art College to prepare yourself in one or more of the lines of work mentioned?

Regarding the practical value of such a course, many hundreds of former pupils are ready to testify.

The Zanerian Art College is very liberally patronized, and is one of the most successful institutions in the country in securing profitable positions for its pupils.

Rates of tuition are no higher than they have always been. Good board and room can be had at a very reasonable figure.

Large, finely illustrated catalogue of the school, worth one dollar, free to interested persons.

Read below an unsolicited testimonial from an appreciative student:

Birmingham, Ala., Feb. 23, 1894.

In another month I expect to send you something in payment for your services in helping me secure this position.

And do not forget that I intend to enter the Zanerian again as soon as circumstances will permit. To the instruction received there I owe all my success.

Yours very truly,

With Birmingham Business College.

C. R. TATE.

ADDRESS:
Zanerian Art College,
COLUMBUS, OHIO.

The Benn Pitman System of Phonography

Is the only system of shorthand which has stood the test of forty-five years of hard wear in the hands of writers of all grades—from the business clerk to the reporter of the National Congress; and it is the only one called by the United States Bureau of Education

The American System of Shorthand.

WHAT THE LATE OFFICIAL REPORTER OF THE UNITED STATES SENATE SAID:

My own view is in favor of Isaac Pitman’s system as it was published about 1850. Of course, his books of that date are now out of print, and the nearest approach thereto now attainable is Benn Pitman’s Manual. If I were starting to learn now, I should get Benn Pitman’s Manual and other books, and follow them.—Dennis F. Murphy, Late Official Reporter, U. S. Senate.

[At a later date Mr. Murphy wrote: “I make no objection to the publication of my old letter, as though not written for publication, it merely expressed sentiments as well known to those who have consulted me on the subject—sentiments formed after observation and examination, and which I have since seen no reason to change.”]

Principals of shorthand schools, business colleges, academies, and private teachers of shorthand are invited to correspond with us. Full information will be cheerfully furnished.

We take especial pains in assisting principals to engage competent teachers of phonography.

THE PHONOGRAPHIC INSTITUTE COMPANY.

BENN PITMAN, President.
JEROME R. HOWARD, Manager.

CINCINNATI, O., U. S. A.
Modern Publications for Penmen, Artists and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books are sent postpaid by mail or by prepaid express.

Portraiture—The best book yet published that teaches the penman how to draw things as fine as pencil, crayon, brush, etc. It is a large and beautiful book, luxuriously printed and bound, containing hundreds of illustrations and explicit instruction $1.50

The New Zanerian Alphabets—A guide to engraving, containing a great variety of illustrations, designs, etc., with complete instructions. A substantial book bound in cloth $1.50

Zanerian Theory of Penmanship—A thought-provoking work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should read it. A book of 176 pages, cloth binding $1.00

Drawing from Nature—A most beautiful book that teaches the pupil how to sketch from nature. Contains a large number of examples with fascinating text and instruction. Get this book and go out and learn to see and sketch nature. Bound in cloth $1.00

Lessons in Ornamental Penmanship—A work in slip form embodying the $10 mail course formerly given by us, with some extra plates. A thorough and complete course for home learners 75c.

Compendium of Simplified Vertical Penmanship—In book form, and by far the most thorough and complete work on vertical writing ever published

Manual of Simplified Script—A work containing thorough, practical, beautifully lithographed copies of the penmanship of master penman and artist, C. F. Zaner, all in the simplified style. For rapid business purposes many persons believe this style of writing unequalled 50c.

Pen Studies—A portfolio of twenty-four pen drawings, consisting of scrolls, objects, birds, fruit, scenery, etc. It begins at the beginning of the pupil's work and shows the simplest strokes and to gradually evolve the finest. The prices

Zaner's Gems of Flourishing—A book devoted exclusively to the fascinating art of flour-ishing. It is written for beginners, showing the student how to make the simplest stroke to the most elaborate. Cash should be sent with order. It contains a great variety of designs, showing the highest grades of skill and attainments in this art. Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published

Progress C. F. Zaner's masterpiece in flourishing. It represents an eagle, forceful and lifelike, winging himself through intricate curves and branches. It is on the finest of plate paper, 22 x 28 inches. The original of this design hangs on the wall of the Zanerian Art College, and is valued at $100. "It's great!" "It's a masterpiece!" Some of the expressions have made on seeing it. Let the reader remember also that it's no Spanish bird, but the American Eagle, that old national bird of ours that must now be protected. 50c.

Light and Shade—A manual on drawing by Mr. Zaner. It contains 48 pages, 5 x 7 inches, of illuminations, and plain, simple, instructive text. It is just what home students need. All books on drawing and painting should have in home in drawing need to make them feel at home. Any one can learn to draw by the aid of this book. A natural genius will profit by it. The illustrations are lithographed from actual pencil drawings and are much finer than those of the engraving. Sample pages of Penmanship or Sketching from Nature mailed for 2 cents, subjects describing any company all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks.

ILLUSTRATING—A book on Penmanship, $1.50

VOL. V NO. 35 JUNE 1901

PRICES 10¢ A COPY
In the Medial Writing System the slant is sufficient for attaining the highest speed, while it does not depart from the vertical to such an extent as to interfere with legibility.

The Medial Writing Books have been prepared after the most careful study to meet the objections against the leading systems already on the market, namely, the old slant and the vertical. The authors of the system have had a long and successful experience that enables them to present features of the utmost practical value. Features of the series are:

- A style of writing as plain and legible as any vertical, simple in form and capable of rapid execution.
- An arrangement of the copies by which in the earlier books, capital letters are given in order of similarity of formation, and in the later books, in alphabetical order.
- Correlation with other studies. Book 1 has a unique arrangement for correlating with nature study and home geography. Books 7 and 8 are occupied mainly with social and business forms.
- Superior mechanical execution. The paper has been selected on the advice of the leading oculists and hygienists of the country, as the best in quality, finish and color for writing-book use.

Announcements for the Coming Year

You probably know what The Penman-Artist and Business Educator has been in the past, and what it is to-day. Then you will have an idea what it will be the coming year when we say it will be better as well as bigger, more varied in illustration and text, and more intensely practical.

**The Department of Business Education**

Speaks for itself in each issue. Arrangements are being made with the leading educators and teachers to contribute into the growing and practical papers the coming year. This department gives something more than papers read before our associations. It has a policy—the betterment of business education.

We know that all will be pleased to learn that Mr. Gaylord will remain at the head of this department, which, according to many capable judges, contains the most able and helpful literature ever contributed to the cause of business education. Surely no business educator can afford to miss a single number of The Penman-Artist and Business Educator.

**The Department of Penmanship**

Will contain nearly double the amount of high grade, practical writing from the world's most skilful penmen and teachers that we are prepared this year. Our aim is, not the biggest, but the best. Beginning with our next number, two of the most skilful penmen in the world will each begin a series of lessons in business writing. These lessons will run throughout the year. Never before in the history of penmanship journalism have two such masters given lessons in the same journal at the same time. And you can have the benefit of their skill and professional experience for the price of but one subscription. These persons are none other than Mr. E. C. Mills, Rochester, N. Y., and Mr. H. B. Leitman, Cleveland, O. Don't be afraid to show your appreciation of such unusual merit and enterprise by chalking us freely and often.

But we have others who are to appear, also, whose work will not suffer by comparison with these masters. Messrs. A. K. Burnett, of Ashland, Ill., and H. O. Keesling, of Trenton, N. J., are each preparing a series of lessons in practical writing. You will doubtless be surprised with their skill. Mr. S. M. Blue, who has been surprising his friends, will continue to do so right along. Mr. Zaner intends to present what he believes to be the best style of writing thus far evolved. At the present time when people are growing between vertical and slant, these lessons will be as helpful as they aim to be opportune.

**The Department of Ornamental Penmanship**

Starts off with the work from the brain and hand of that skilled artist, Mr. L. C. Caman. Mr. Blue is now preparing a series of lessons which are to follow, the text of which will be entirely different than the others. Mr. Zaner will contribute some of his best now and then, and Mr. C. V. Howe will continue the most remarkable series of lessons in Roundhand or Engraver's Script ever given in a penman's paper of modern times at least.

**The Department of Art**

Will be better than ever. Miss Lenna Dickinson, Supervising Artist, Drawing, in our present issue, will edit a page each issue. Messrs. E. L. Brown, of Rockland, Me., and H. W. Kilibe, of Boston, will continue their unique and practical work, while Mr. G. S. Henderson, of New York, and others will favor us with portraits, designs, etc., etc. Mr. E. E. Evans, of Streator, II., is beginning a series of lessons in practical automatic pen work which will doubtless be worth a great deal to many. The articles on “What is Fine Art” will continue indefinitely. The inimitable Dennis of Brooklyn, is planning special work for our readers—don't miss it. Mr. N. B. Moore, of Morgan, Ky., the immaculate flourisher will favor us with his skill.

**Our Unique Color, Title-Pages**

will continue to elevate the standard of excellence in color harmony, design, etc. They cost a great deal more than most people suppose, but they appeal to the heart as well as to the intellect, and are not only to lessen your pure-acre by the extent of a dollar a year.

**The Literary, News, Etc., Features of the Penman-Artist and Business Educator**

will continue to be first-class; terse, timely, and fresh. Conventions will be given the space they merit.

**To the Student**

The Penman-Artist and Business Educator will be helpful and inspiring, presenting complete courses in the various lines of writing, lettering, and pen art. It will give the best obtainable, not necessarily the most of a cheap sort. Nothing, in our opinion, is too good for the student.

**To the Teacher**

It will be a source of interest and inspiration, giving the news of the profession, the latest and best thought of the ablest business educators, and the most progressive ideas on methods, etc.

**To the Proprietor**

The paper will prove a source of profit and interest in the way of information concerning teachers, schools, advertisers, publications, conventions, etc.

**How to the Point**

Can you afford to miss it? Does it deserve your support? If you consider it a credit to the cause it represents, a benefit to you, a source of inspiration, let us have your support today.

**Clubs**

If you are in a position to secure subscriptions, whether many or few, write us for our very liberal terms. Write at once.

ZANER & BLOSER, Publishers, Columbus, Ohio.
The Prizes

Those desiring to compete for the prizes offered last year for the most improvement from practicing from these lessons, either as individuals or as a school, will please forward the final specimens not later than June 15th. The prizes will then be awarded and the announcement made in our September number. Who wins?

Poorness, slipshodness, slovenliness and shiftlessness in other things are generally recognized as inexusable; why not so in writing? No American citizen has a moral right to write illegibly. A legible handwriting is within the capacity of all who are neither lazy nor indifferent.

The Marking Hand

To be able to letter plainly and rapidly is an accomplishment no one need despise. It alone is sometimes the means of one person being promoted over another. To do the work successfully, hold the paper parallel with the desk and let the pen holder point toward the elbow, the hand resting upon the side. Use a flexible pen and at first a deliberate movement. The fingers may do most of the work or the arm, whichever you prefer. Aim at uniform slant, uniform width of stroke, and uniform spacing.

The Old, Ever-New, Valuable, Available Alphabet.

abcdefghijklmnopqrstuvwxyzABCDEFGHIJKLMNOPQRSTUVWXYZ

The Business Forms herewith presented were lettered and written in a business like manner. First plan them by ruling the paper carefully, then letter them and then do the writing. Some employers demand that at least one of their employees be able to do such work as there is more or less lettering, planning, ruling, etc., to be done in nearly all offices and lines of work. Prepare for almost anything that may present itself by doing this work plainly and neatly. Now don't say you can't. You can if you but earnestly and patiently try. Do not think it possible to design, letter, and write a note in a minute, or in five minutes. That would be unreasonable. First learn to do it well, then, if necessary, learn to do it expeditiously.

Orangeville, Pa., Sept. 9, 1900.

Criticisms
W. H. L.—You are improving. Some of your practice is excellent. Under favorable conditions you could become a fine penman. Down stroke in small s is too straight. The twitching of which you speak is not serious—it may be due to too much rapid writing, or to coffee or tobacco.

J. A. J.—Your work is improving nicely. Lower loops a trifle angular at bottom. Your ornamental is good. Try to make it more accurate. Don't hurry.

D. C. D.—Do not join S to following letter as it looks like L. Your small r fluctuates in form—try to establish some one way of making it. Angles at tops of loops show that the motion is not free enough at that point. Your work is getting easy and uniform.

C. V. D. R.—The small i is usually too narrow. Loops generally not full and graceful enough. Watch spacing between words. Your review practice is O.K.

SUPPLEMENTARY EXERCISES BY S. M. BLUE, BROKEN BOW, NEB.
Good business writing should be easily and freely executed and easily read. This hand is not hard to write and is nearly as plain as print.

Hoping that each pupil will give it a fair trial, I am,

Yours truly,

C. D. Jackson.

Mr. C. S. Jackson, whose portrait and penmanship are presented herewith, is a young man of more than ordinary ability. He has a good foundation educationally, and as to skill, that is equalled only by his modesty. He has taken instruction and taught in the Jamestown, N. Y., Business College, and is now employed in the Zanerian. Mr. Jackson is now nearing the front in skillful, graceful, beautiful penmanship, and more will be known of him later.

Gents at the Why and How of Writing

Inclosed find $1.00 for which please renew my subscription to the PENMAN-ARTIST AND BUSINESS EDUCATOR. I could not afford to miss a single number of your excellent journal. It gets at the why and how of writing in such a manner as to cause one to think and desire to act at the same time.

O. E. Hovis,

Warren, O.
It is our duty, in order to be truly successful as penmen and teachers of the art, to be "up-to-date," and accordingly we must observe, inquire, study and experiment, and after years of varied experience, and careful study, inquiry and observation I believe the accompanying alphabets and figures will not fall far short of meeting the demands of the present decade.

The pen is crowded into use where the typewriter cannot be used, and we have not always a large table with plenty of elbow room, but generally a standing desk, and frequently simply a tab held in the hand or placed on a box or anything accessible. Simplicity of form is therefore of first importance. Leave off all superfluous strokes, and we have a style of writing easily read and as easily written. Certainly, what is lost in beauty is more than gained in legibility. We are preparing most of our students for business, and especially bookkeeping, where the greater part of the writing is on books, and I find that the simpler the forms the more legible the writing and the neater their work.

I believe in—and in this respect, at least, I practice as I preach—the combined movement, and I give such movement exercises as lead to the letters I wish to present in each lesson, paying especial attention to form, from the very first, and keeping them at form, paying little attention to speed until they can make all letters reasonably well with the forearm rest or with only the hand rest. I also believe in drilling a good deal on wide spacing to cultivate a free sliding motion of the hand. Then more attention is given to speed. Form, however, is never neglected. By resting the hand only, more finger action is required.

In our school position and movement are not lost sight of the instant the student gets through his daily class drills—of all the teachers in our commercial department are required to be good business writers, and the student is constantly criticized and "every stroke must represent his very best efforts." As an incentive we require the student to pass a certain grade in penmanship before he is admitted into the Office Practice Department, and if that grade is not attained by the time he is ready for this department he is kept on penmanship alone until the required grade is reached. I have been able to find nothing to date, that, in my judgment, is better adapted to the varied uses to which penmanship is called at the present time than the plain, simple forms herewith presented.

J. C. Renager

BY J. C. RENAGER, QUINCY, ILL.

BY MISS MARY CHAMPION, DES MOINES, IA., STUDENT OF THE C. C. C. C.

Sample of Design

FORT WAYNE, Ind.
April 28, 1901.

Mr. C. P. Zander,
Columbus, Ohio.

Dear Sir: Please find enclosed samples of my hand-engraved cards for which I would like to ask if they are all right to work on or not. There have been a great many people in and about Fort Wayne who have advised me to. Please let me know what you think about it.

Yours Truly,

Albert W. Spalding
70 Rivermet Avenue.

[For downright daintiness and artistic elegance, this strikes us as being in the top notch.—Editors.]
Columbus, Ohio, 9-5-95.

E.E. Summer.
Mannington, Wis.

Dear Sir,

I have taken pleasure in handing you this as a specimen of my ornamental penmanship. If it will please you, and that I may hear from you again, I am,

Yours truly,

Mr. Stue.

Specimen of my plain business penmanship, as I use and teach it.

J.E. Caskey
Ornamental Penmanship — By C. C. Canan — Article No. 1

Having just read in a recent periodical that "the less you say, the more the people will remember," I have been led to cut out much that was written for six sketches on the subject of ornamental penmanship, and now it appears that I can truthfully call the sketches "Short Sixes." It is hoped that they may at least be of interest to those who are already interested in penmanship.

Instructions for a course of lessons in ornamental penmanship are not to be written alike and it is my opinion that they do not use the same movements. Instruction for all will not always apply in individual cases, and especially is this true in regard to ornamental writing. Instead of much instruction in these lessons that might, after all, only confuse the student, criticisms will be given and also a few inside facts regarding the history and practice of art penmanship in this country.

Much credit for originating forms and popularizing shaded writing is given to "Father Spencer," who, in the early '50s, sent forth from the little log school house in Ashtabula County, Ohio, many young men who advocated the cause of good writing. The life and works of Platt R. Spencer are worthy the careful study of every penman. He is thought of by many writers as having lived the ideal life of true greatness. The following tribute is by James A. Garfield: "His mind was too large, his sympathy too quick and active to be limited to any one pursuit. To the thousands of young men and women who enjoyed the benefit of his brilliant instruction, to the still larger circle of his friends and acquaintances, and to all who love a gifted, noble and true-hearted man, the memory of his life will remain a perpetual benediction."

The New "Spencerian Compendium," published in 1859 by Tyson, Blakeman, Taylor & Company, with plates engraved by A. McLees, is the first great work of art penmanship of which I have any knowledge, and it is today a book of reference and delight to hundreds of penmen throughout the United States. Other publications along these lines have appeared from time to time but the accurate forms and delicate engraving of the "Spencerian Compendium" have never been excelled.

Brief Instructions for this Month's Copies

For the copies given herewith use a free movement. Sit facing the table with both arms resting thereon. Bend forward from the hips so that you can get close to the work and yet sit in a healthful position. Use good materials. The Zanerian Fine Writer or Gillion's Principality No. 1 are the only pens that give satisfactory results in this work. A good quality of white paper and ink that will flow freely and give a clear line should be used. An oblique penholder is indispensable for good work.

Do not let the wrist drag on paper, but the third and fourth fingers and the muscle of the forearm should rest on the paper or desk. Use six or eight sheets of paper at a time, as this gives the proper surface to write upon. Let the muscle of the forearm rest in one place on the desk, the wrist going in and out the sleeve as the movement is applied. Change the position of the arm after making words and exercises, if necessary. The movement should not be very slow nor very fast. One should write rapidly enough for firmness and slowly enough to avoid recklessness. A good shaded part of letter is seldom, if ever, made with a hesitating movement. Slow movement will not give a dashy appearance to the letter. Do not use finger movement in making the copies given in this lesson. Study to know the parts of a letter as a watch-maker knows the parts of a watch; be able to place the parts of a letter together in their proper proportion.

Specimens for criticisms should be sent to C. C. Canan, 30th N. 16th St., Philadelphia.

Write on but one side of the paper and arrange your work neatly. Stamps for return postage should be enclosed.
Mr. A. Albin, Penman in the Topeka, Kans., Business college recently submitted specimens showing improvement in writing; Pearl Stone made most improvement and James Carrol made second-best improvement. Those making nearly as much improvement were Nettie Stevens, F. D. Wilson, Leah Kay, Kenneth Anderson, D. R. Banta, W. E. Whittman, and T. S. Skeen, nearly all made marked, some unusual, improvement. Mr. Albin is a success as a teacher. He gets results.

H. English, Mt. Carmel, Pa., sent us specimens of one of his student's writing which show splendid ability. The pupil's name is Miss Laura E. Palmer.

Chas. R. Owen, penman in Dranghon's Practical Business College, Little Rock, Ark., sent specimens from students who had received but one month's instruction. The work is excellent considering the length of time given to it. Mr. Owen is in favor of simpler penmanship.

Mr. Jno. Martinon, of San Francisco, recently favored us with a specimen of penmanship from Master P. Escalon, of Santa Ana, Republic of El Salvador, and nephew of Mr. E. Nejia, San Francisco, Calif., Consul General in the United States for the Republic of El Salvador. Master Escalon is but fifteen years of age yet he writes a remarkable hand. It is wonderfully dainty yet bold—a good imitation of the style in vogue during the days of Gaskell and Spencer.
Prudent teachers are already planning for their summer vacation. There is no calling in which an annual period of rest is more imperatively demanded than in teaching, and the commercial teacher is one of the hardest worked members of the profession. The working hours in the average commercial school are longer than in other schools, and generally the mental strain endured is more intense. Eastern teachers are favored more than their Western brethren, in that most Eastern commercial schools have a summer vacation corresponding in length to the vacation allowed by the public schools, and, furthermore, the vacation habit has, in the East, become so fixed that even the servile girls must have their two weeks at the sea shore or among the mountains. Our Western brethren do not so regularly grant themselves a leave of absence, and their work necessarily lacks some of the enthusiasm and tonic properties that an annual change of scene and occupation may bring to it. However, the commercial teacher's vacation habit is not deserving of the highest praise, if he make of it merely an opportunity to "load." He should be able to obtain information having to do with his work. We know of commercial teachers who not only do not make a special effort to utilize the advantages presented by special trips, but who do not even become acquainted with the business enterprises in their own communities. It is hard to see how a teacher can make Commercial Geography other than a dry subject if he knows nothing at first hand about the commercial life and problems that are going on all about him. It would be a revelation to some of the commercial teachers to go into sugar refineries if they could get away from oldries, silver, copper, and iron smelters, rolling mills, cotton, woolen, silk, shoe, and rubber factories, and to arrange visits for their pupils to such places.

The Pan-American Exposition this year offers pleasure and instruction combined in a most delightful way, and commercial teachers should spend some time there, either just before or just after a trip to Detroit.

President Wm. E. Doggett, of the N. E. R. H. Business Educators' Section of the National Educational Association, is putting forth some well-directed and energetic efforts to prepare one of the most practical programs ever presented before that organization. This is a meeting that should enjoy the support and attendance of commercial teachers in the public schools particularly, inasmuch as it is now offered chiefly by public school teachers, is closely affiliated with the larger body, made up almost wholly of public school and college teachers, and is not supported by private commercial school teachers as are the Federation and the E.C.T.A. The proprietors of commercial schools and teachers in these schools, were responsible for the formation of the Federation and the E.C.T.A., and the problems of organization, management, and instruction in the two classes of commercial schools—public and private—are subject to conditions so materially different that a gathering of the two classes of teachers could not be expected to listen with equal interest to discussions of such topics as "School Advertising" and "Differentiation between College and Commercial English in the High School." It is therefore not natural and right that the interests of private schools should be made prominent in the meetings of the Eastern Association and in those of the Federation. The E.C.T.A. is the place for the High School commercial teacher to discuss his special problems, at least until there shall have been organized a High School section of the Federation.

***

At the Detroit meeting of the High School Federation a number of High School commercial teachers met and appointed a committee consisting of the writer; Mr. K. B. Seymour, Springfield, III.; Mr. K. A. Grant, Rockford, Ill., and Mr. P. B. S. Peters, Kansas City, Mo. The business of this committee is to confer with commercial teachers in the public schools to gather general information about the work being accomplished, and to stimulate attendance at the St. Louis meeting next spring when an effort will be made to organize a High School section. In furtherance of this plan it is desired that all commercial teachers in High Schools send to one of the members of this committee the names and addresses of those who are interested in this work. The names and addresses of those who are interested in this work.

***

Books for Commercial Teachers issued by the State Department at Washington, and others are obtaining the equally valuable Monthly Summary of Commerce and Finance sent out by the Treasury Department, Bureau of Statistics; but many teachers do not know that, at slight cost, excellent government maps may be obtained, and that the Agricultural Department sends out reports and special monographs of great value to every live teacher. Write to Superintendent of Documents, Union Building, Washington, D. C., and ask him to put your name on his list to receive announcements of government publications.

Current literature is full of material for entering commercial teachers. The Review of Reviews is always good, and, among the very best are The Saturday Evening Post and The World's Work. The May number of the latter is a perfect mine of information for those who are interested in the business side of life.

The newer books have also much that is splendid. We have seen a study book recently that is more to be commended than "South America," by Frank G. Carpenter, the famous traveller and newspaper correspondent. Many of us have read with delight Mr. Carpenter's sympathetic letters in the metropolitan press, while he was making this "5000 mile journey in quest of information," but it remained to peruse the collected manuscript, with its fine illustrations, in order to realize the service that Mr. Carpenter has performed.

His descriptions of the cacao orchards of Ecuador; the rubber forests, the Peruvian bark, and the marvelous silver and gold mines of Bolivia; the nitrate fields of Chile; the sheep farms and wheat fields of Argentina; the coffee plantations, diamond mines, gold fields, and rubber camps of Brazil; and many pages of other information so varied, valuable, and fascinating that one cannot quit it before he has finished it, any more than he could quit one of Cooper's Indian tales before completing it. We have it in our own library, our school library, and the public library. It is published by the Saukfield Publishing Company, Akron, Ohio. We hope that Mr. Carpenter, who has recently been writing from China, will publish as interesting and helpful a book about Asia when he returns.

***

With this number we close the first year's work of the Business Educator. We promised a great deal, more than could be put into the limited space at our disposal in twelve numbers. Therefore some of the good things are still to come. We have regretted that Mr. W. J. Amos was unable to continue his plan of a monthly review of articles in current literature touching on Commercial Geography, but we shall be able to resume this work in September, with a plan that promises to be exceedingly serviceable. We are better prepared than before to present articles on Methods of Teaching. Some of the foremost commercial teachers of the country are at this time preparing articles of this character. Our friends, the business college managers, have meant to exchange views during the year, through our columns,
Business Arithmetic

BY WALLACE B. WHIGAM, CHICAGO, I.1.

A noted writer has said: "A man should know first, where he is; second, where he is going; and third, how to get there."

In the province of mathematical equations there are a number of principles dominating; having two quantities, to find the relation one sustains to the other; and having the relation of two numbers and one of them, to find the other.

While the caption of this article is Business Arithmetic, I shall divert from the subject enough to preface this article by an introduction that may be termed the "Theory and Practice of Business Arithmetic." In conducting a recitation it is needless to say that the teacher should have a thorough and comprehensive knowledge of the subject at hand; that the method of instruction should be based largely on relationship; proceeding from the known to the unknown, I shall take as a text in this article that "The basis of any lesson is the student's related knowledge of the subject at hand."

Scientific Questioning

When a new principle is being introduced to a student, the questioning is doubtless three-fold: First, questioning the rule; the instructor to determine the actual condition of the student; as it were, he conducts a reconnaissance in order thoroughly to inform himself of the conditions. The second type of questioning should be largely for the purpose of determining the student's wants, stimulating and directing the student to awaken new ideas and develop new capacities for satisfying new desires and the full enjoyment of the student's powers. The third set of questions is of a review nature, and may be termed "Test questions" reviewing the work covered by the second set. It is a recapitulation of the work. It shows the student whether the student has done himself, and indirectly it tests the teacher's work.

Numerical Relations Admit But Two Changes

Arithmetic, in its relation to numbers, admits of but two possible changes. Irregular increase (or, addition simplified—multiplication); regular increase by addition, or, addition simplified—multiplication; regular decrease by subtraction, or, subtraction simplified—division. It, therefore, logically follows that the departments of arithmetic or subjects thereof are closely related. A proper relation of number to number, value to value, etc., is not properly appreciated by the average student, or the ridiculous results which are frequently obtained would not be found.

While not attempting to maintain that the fact of relationship is not recognized by the average teacher, it is asserted that this fact is frequently not fully and properly explained.

Students Lack Sense of Proportion

Students do not have fully or clearly in mind an image of the quantities dealt with; a square foot and a linear foot are misapplied because they are words, words, words. Quantities are not before the mind of the student and he Sauces confused over the words. A noted psychologist has said that he believes that if twentieths of the time spent in mathematics were spent seeing to it that he formed proper images and a stock of instruction would be incalculably facilitated. Wherever possible the student should be called upon to picture out the conditions of the problem; to see at the sight; not to think or reason; he should be able to do this even if he cannot solve the problem. Much reading can and should be taught in arithmetic. Endeavor to form the habit of "sizing up" the problem and then answer it in a general way, it fits the conditions, and is not ridiculous. Impractical and unnatural conditions in problems should not be given place in arithmetic. They serve to take the twenty-five years away from realities, and tend to form the habit of thinking that problems are all on paper. Students should be encouraged to make problems to be solved, and they should be criticized as to their practical fitness, the condition of the problem conditions. In what life the student will meet is not five-nineteenth of four and three-seventeenths of six but a set of varying conditions, which will require a great deal of what he is doing or wishes to do, and he should be trained to act thoughtfully and not mechanically to be caught with a question such as, if a two-seated rig cost 50, what will a one-seated rig cost?

We teach that if one pint of molasses cost twelve cents, a gallon will cost ninety-six cents, but most of the time the student will get it for ninety cents, etc.

I do not attempt to instruct mathematical work; the text book; I know that we need that enough, but to show that in life we do not use this, and that we must learn the varying conditions accordingly.

This is but a hint to other articles that are to follow in succeeding numbers, Mr. Whigam is one of the most practical teachers in the profession. (EDITOR.)

The Card System and Its Uses

(Read by Charles S. Clark, Rochester, N. Y., Before the E. C. T. A. at Providence, April 8, 1901.)

Every business man is interested in the card index because it signifies economy in time, and accuracy in system. Every progressive business educator is interested in increasing his knowledge of its principles is an essential part of a modern business education.

It would be unkind in me to presume to tell the Eastern Commercial Teachers' Association how the card index is; this would be a disparagement of the intelligence of those present. I shall therefore make an effort to tell how such a system may be used. In doing so I shall speak from experience.

The card system may be used any place where a book can be used; it is cheaper than a book and better than a book, cheaper because it saves time in referring to memoranda—better because it perpetuates itself, admits of any kind of change in classifications, lends itself readily to an alphabetical classification under as many subdivisions as may be necessary. It absorbs new material and admits of the elimination of dead matter, thus adapting itself to any business, whether that business be increasing or diminishing in volume. Books are bound—the card system is boundless.

It is elastic.

Take an ordinary alphabetical or vowel index, and write two thousand names into it: if your business expands until you need four thousand names you will find your original book inadequate. Soon your records will be clogged with a lot of material that has outlived its usefulness. You will be obliged to re-write all your data into another index. If you use a card system you can remove the names that have become useless through age and substitute the new ones. It will not require the scratch of a pen to make the change and all the original information, and data will follow the card into its new classifications.

Suppose you start an index in which you think you will use five thousand names at the maximum and make your classifications accordingly. Suppose the business increases rapidly and requires twenty-five thousand names; with this card system this would be no inconvenience at all. For five thousand names you would need five hundred guide cards to put an average of ten record cards behind each guide. When the business expands so that you have in ten thousand names, you can put a larger sub-division of the alphabet and still have only ten names between each sub-division. To handle the business with books would require re-writing the names and you would never have them in such position that they would be easy of reference.

The card system is elastic. If you have five thousand names in a book and you wish to reach them quickly with circular matter, only one or two persons can work at addressing the envelopes and recording the data. If they are in a card system you can put twenty-five persons to work and accomplish the task as quickly as the exigencies of the case demand.

Card System in the School Business

"I have used a card system in the school business to stimulate an attendance. Of
course, Commercial School notes are not sensed by the matter of enrolling pupils. Very few of them care about reaching out to induce an attendance. They have more pupils than they can accommodate, and they are too modest to advertise. Those who are willing to come are welcome; those who are unwilling to attend, however, will find a good system a most valuable aid.

Probably the best method is to make a separate card for each name that you send circulars to. Make a record of the addresses marked x and send all of the names that you can procure the same and something about the scholarship and probable aspirations of the prospective pupil. Make a record of the names marked x that you write to the class. These cards give you an advantage in indicating this classification by the color of the cards. I am now fully convinced that this is neither necessary nor expedient.

**WORKING UP A NIGHT CLASS**

With your lists arranged in this manner, if you wish to work up a night class, you can address special advertising to clerks, overtime clerks, and others employed over thirty persons who have indicated an interest in your school. If you permit your faculty to canvass, you can arrange the city in streets. I would advocate a temporary plan of canvassing. This enables you to accommodate twice as much as otherwise would be possible. He should be instructed to note on the cards anything that you would be expected to remember in a subsequent meeting with the prospective pupil. For instance,—the course in which that person is interested; the progress he has made in his work in the public schools; what session he would probably wish to attend. With the proper card it is an easy matter when the prospective becomes a pupil to reverse the card and make a record of his efforts while in school. When he returns the card you can arrange a card in his home in inducing him to attend; of his progress in school; of the date of his graduation and such other information as all schools should keep accurately, but many of them fail to keep at all.

**SUPERIORITY OVER BOOK SYSTEM**

I am using a card system in a mail order business which receives from one to three thousand new names daily. I employ a great number of people in office work. When I assumed its management it was encumbered with a book system; forty girls were making a futile attempt to do the work now done by twenty-three under the card system. We found it impossible to work

ame our names to more than two propositions—could not get girls enough around the books to do the work. Under the card system, with an increase of business of more than fifty per cent., twenty-three girls do perfectly, promptly, and accurately, and that in all with books. Under the card system the names are followed to five distinct propositions, and through an intricate correspondence in which what has gone before determines what shall follow. A complete record of the correspondence and business transactions of each correspondent is shown on the cards. Our active files contain more than thirty thousand pieces of mail matter are addressed from them every week. The cards that cease to be active are transferred and our files thus perpetuate themselves and contain only the matter in active use.

It is a mechanical memory

No other system equals the card system for listing names or detached memoranda of pupil, pupil, pupil. The pupil pupil, pupil pupil, pupil is the infallible memory; it is a classified memory, a systematic memory; it enables those seeking business to tickle the vanity of the possible customer by a remembrance of details that knows nothing. It is a memory that those we meet not forget us, and we are all willing to believe that it is our personality rather than the perfection of some system that causes them to bear us in mind.

To remember a prospective pupil, his visit or this correspondence is a source of gratification to him that you cannot well appreciate. It begins the acquisition of an important personal confidence, is, after all, the foundation of a teacher's success. Less conspicuous ability, coupled with a personality that inspires confidence will succeed in any walk of life. A card is a record and a talent where the element of confidence is lacking. The use to which a card system may be put may not be told in a brief thirty minutes. It is as broad as business itself, and as far as business in its own recommendation.

**THE SAVING GRACE OF COMMON SENSE**

My experience with commercial school graduates in actual business convinces me of the practical nature, the practical nature, the practical nature, the practical nature, and not enough business of a practical nature. I do not wish to go on record as asserting that they know too much about bookkeeping, though I was prepared to argue that some of them know too much about bookkeeping of the kind that they know about. The average graduate would be better prepared for business if he had had his fingers ends, and knew less about the reason why a trial balance that does not balance should balance, but wouldn't. It is easy to over-educate him along theoretical lines, though not necessarily along the practical lines. A little of the saving grace of common sense would benefit him wonderfully. We employed a bookkeeper who did not know enough to write consecutive numbers six times a week. He made a mistake in numbering our courses, to correct which we cost us the writing of one thousand letters and a loss of at least $500.00. Probably no one will present even thought, it necessary to try to teach a pupil aspiring to a business education how to write consecutive numbers. This young lady numbered up to 51,100; then she took on 52,000 and followed that trial until the end of it on a variety, with an appetite that knew no satisfaction, she looked on 53,000. By this hop, skip and jump method of numbering she confused matters in one day so that it took a month to rectify the error. She lost her position. This may not be pertinent to a discussion of the card system, but it moves near the real question why some business men sometimes object to commercial school graduates that it is worthy of mention. The fault in this case was not with the school—it lay entirely with the person; it was a question of common sense, or a conspicuous lack of it.

**A PRACTICAL SCHOOLROOM SUBJECT**

Every school should teach its pupils something about a card system, for every office man can use one to advantage, and thousands of them do. Teach them that the alphabet may have more than twenty-five subdivisions, and that the divide division of division than the consonants and vowels; show them that indexing has been reduced to a science, like life insurance. Teach them to make memoranda of what they are doing, and that there is no way to stop employees' forgetting things that I was forced to resort to giving all instructions in the form of written bulletins. If I desire to tell the clerk in the next room the time, the day, and the week and the month, I dictate it; there is no appeal from a written bulletin; it bears but one interpretation and it is an insurance policy against misunderstanding.

If the clerk is to make himself a habit and ask himself to do a certain thing I have written down and file it on his desk until the work has been accomplished. You can confer no greater benefit upon your graduate than the fitting of him with that habit. The human memory is uncertain, and human interest often lags when it should be most alert. The only memory that I am willing to rely upon is that which has been written down and with the aid of a system enables you to classify such a memory. It is a monitor that you cannot escape. I have seen it fail but once. I had one man whose memory was so poor that he forgot his number and for twenty years after that he had forgotten it. I gave him a single drawer with a guide card for each day of the month and had him write on thirty-one different cards, one for each day of the month, the things that he was likely to forget, I told him to file a card under each date and examine that file the first thing each morning. He soon forgot the calendar file. I then told him that he must come to the office nights and do nothing but try to recall what he had forgotten that day, told him to put his card in the file for the night work. He remembered well enough to come back but forgot to hand in his file, which proves that his was an extreme case,—a case that no device would be expected to remedy.

The average employee will do a thing that he forgets to do tomorrow. He lacks continuity of memory; pertinacity of purpose; longevity of interest. He is like an old-fashioned clock; he must be wound up once a day to keep him going.

**TEST TASKS FOR PUPILS**

Let me suggest something that will give your pupils one of the best tests for practical business that you can possibly make. Take any small order for a pupil and make it a slight task to be performed each day at a certain hour. Ask one, for instance, to write his name on a slip of paper and file it on your desk at exactly ten o'clock; ask another to sit down and write a paragraph on a sheet of paper and file that sheet in a cer-
Methods of Classifying and Managing a Large Shorthand Department

The methods here presented are now in use under actual conditions, and, to say the least, are accomplishing satisfactory results. They are not such as I might consider ideal; practice has taught me the impracticability of conditions. It has appeared to me that much time is quite frequently consumed in telling what might, could, would, or should be done under certain circumstances, which could be more profitably employed by relating what is actually being done under real conditions. If I cannot use the time allotted to me by your Executive Committee in a way which will be profitable to you by taking a class and having them actually made use of to secure the results which we have achieved, it is quite certain that I could not hope to do so by giving you a recitation of what I should do under certain imaginary circumstances and ideal conditions.

The average working conditions

It may be well first to refer to some of the conditions which surround us, and to get the "lay of the land," as it were. Students enter at any time. Some enter for the shorthand course only, others for the full course, which with us includes both the shorthand and keyboarding. The maps actually made use of to secure the results which we have achieved, it is quite certain that I could not hope to do so by giving you a recitation of what I should do under certain imaginary circumstances and ideal conditions.

DEVELOPING SPEED

In addition to a review lesson per day, the student is given the correct outlines for a certain amount of matter which he prepares by writing it a specified number of times in a specified way. This matter is dictated to the class over and over again by the teacher the following day. Each dictation is carefully corrected before the preceding one, so little that it is hardly apparent. Very gradually the student is thus led to the very highest speed on this matter. The inevitable tendency of all kinds of dictation is to quicken the student's outline considerably. This we provide against by having him do a certain amount of very careful copying of shorthand each day. This matter is carefully examined by the teacher and all mistakes or shortcomings of every description are pointed out. In this way the teacher frequently arrests improper tendencies in the student's work, which it allowed to continue would retard his progress, and jeopardize his success.

The rapid dictation on prepared, as well as new matter, brings out the student's speed, while the careful writing of correct shorthand cultivates and preserves a correct style of writing. Each dictation period lasts for one hour. I do not believe in short dictations. There is nothing that will so train a student for actual work as dictation for at least a reasonable length of time. We shall expect the student to become very tired by the time the dictation is completed. If this is not the case, we feel that we have in a measure failed of our purpose. In the words of David Wolfe Brown: "There seems to be an additional benefit to the young stenographer from writing up truly past the point of muscular fatigue. Shorthand writing long after the student is sitting up to the limit when the writer has become thoroughly weary, appears to hinder the machine in its manner as well as else." Again, in the words of Mr. Ireland: "Write from dictation on the board only if your friends whom you have ascertained as your readers, fly at the sight of you."

DICTATING NEW MATTER

After the review of the manual has been completed, this hour is devoted to dictation of new matter. The number of hours' dictation per day from this time to the end of the course. A portion of the new matter which the student takes from dictation is transcribed and handed to the teacher for review and for correction. The student is carefully proof-read and returned to the student for correction by re-writing, and when rewritten they are again handed to the teacher. This routine is kept up until the matter is rendered in every respect. The new matter thus transcribed is also written once in shorthand by the student. After each line of shorthand he is required to leave ten blank lines. Nine of these lines are used for the review of shorthand notes already referred to. All the shorthand written by the student in preparing his lesson is placed in his note book which he hands to the teacher daily for his inspection. The student is required to have one hour and fifteen minutes per day; business shorthand, forty-five minutes per day. I refer now to recitation periods. The entire time to be devoted to these branches is, of course, much greater and requires a greater amount of preparation out of school hours. These branches are not optional, but must be pursued by every student of this department. If the student considers himself proficient in any other subjects, he is required to have one and one-half hours per day for taking an examination such as all our students must pass before they are graduated. Supplementary to the work in the English branches, all the matter transcribed by the student is carefully examined and all errors in punctuation, spelling, capitalization, and spelling, which may be pointed out. Not only are they pointed out, but the student is required to correct his errors by re-writing and submitting copy again for examination.

We do not desire to impress on the ground of another paper, but will simply say in passing that we consider it highly advantageous for each shorthand student to be a good manual and longhand writer, since we find that such students are the best shorthand writers, others things being equal.

DISCIPLINE, THE BASIS OF GOOD RESULTS

In conclusion, I desire to call attention to discipline, a very important factor in the proper management of a shorthand department as well as in the management of a commercial school. Order and discipline form the basis of all good results in the schoolroom. If there is disorder and poor discipline, the best by touch the best methods, the best facilities, and the best teachers in other respects, will be of no avail. No teacher can reach the best results unless he is a good disciplinarian. The best disciplinarians are born, it is true, but it is also true that one who is naturally deficient in firmness, executive ability, tact, and influence, can cultivate these qualities, which are so necessary to maintain good order, if he is educated to be one, and trained in the art of discipline.

We are accomplishing results with the touch method, both in speed and accuracy, such as we were unable even to approximate by the old method. A large share of our success in teaching our students to operate is due to the use of a device known as the Touch Typewriter Copy-holder, which was invented at the suggestion of Mr. Bartlett. This copyholder makes it inconvenient for the student to see the keyboard while it places his copy in the most convenient position. Each machine is supplied with one of these holders. Not until the student has fully completed the course in touch typewriter is he permitted to transcribe from his notes. In other words the student must be able to write miscellaneous matter without a desire to look at the keyboard, before he is permitted to transcribe.

COLLABORATIVE SUBJECTS

We give special attention to business correspondence, two hours per week; grammar three hours per week; punctuation, two hours per week; grammar, four hours per week; business shorthand, forty-five minutes per day. I refer now to recitation periods. The entire time to be devoted to these branches is, of course, much greater and requires a greater amount of preparation out of school hours. These branches are not optional, but must be pursued by every student of this department. If the student considers himself proficient in any other subjects, he is required to have one and one-half hours per day.
Higher Education For Stenographers and Typewriter Operators

PAPER READ BY F. W. WILLIAMS, PRINCIPAL WILLIAMS BUSINESS UNIVERSITY, SPRINGFIELD, O., BEFORE THE OHIO COMMERCIAL AND SPECIAL TEACHERS' ASSOCIATION, COLUMBUS, O., MARCH 20, 1903.

Mr. CHAIRMAN, LADIES AND GENTLEMEN:

While my paper is intended to relate more particularly to shorthand and typewriting, I am fully convinced that all I shall have to say applies with equal force to all the other subjects pertaining to practical education.

In the first place, there are by no means too many good schools, and the very best are none too good.

There has been a tendency among authors of special text-books and teachers of special branches to take advantage of the general ignorance of the public, and to carry to an extreme, the supposed American idea of, "How soon and how cheap."

PHONOGRAPH NOT A STENOGRAPHER:

I am aware of the fact that a fairly good pupil can master the rudiments of any of the standard systems of shorthand in from eight to twelve weeks, but he is not a stenographer, and unless practice like book-keeping, house-salt and pepper, is made to cover a multitude of evils, practice will not make him one. The ability to write 250 words in a minute is not necessarily constitute a stenographer, nor does the fact that it is accurately done, at that speed, of itself, help it much. A Phonograph will do that, and not only not make a mistake, but will repeat itself, and after the system is learned, until the crack of doom, yet a Phonograph is not a stenographer, and the material reason it is not, is because it has no brains.

CHEAPNESS MEANS POORNESS:

The Commercial Schools are largely responsible for public opinion in regard to the subjects they teach. The public has been led to believe that the school offering the greatest amount of instruction in the shortest of its course, the cheapness of its tuition and its guarantee of positions to its pupils, is the school. Now the shorter its Course, the less its tuition and the better its guarantee, is the school. A first-class teacher can command good pay. If a teacher cannot command good pay for his services, what can his pupils expect for theirs? And as for positions, I am of the opinion that with the short Course of Study and his cheap tuition, has already earned his money by sheer physical effort, and in no other way, without going into the question of tuition fees for all his flock. Shorting is not different from other professions. A first-class Medical College would consider it unprofessional to cut its course in halves and its rate in quarters, and a course that was taught by an untrained man was at hand, that people would get sick and hire its graduates.

MAKE OR BREAK:

The Commercial College is the school of last resort; it stands between the other institutions of learning and the Business Life. It is the school last attended. Whatever needs yet to be learned, must be learned there. This school does much either to make or break the pupil. It is not only essential that his teachers be persons of education and ability, but that they be persons of the highest integrity. If he is deceived by the very people who were to teach him the duties of the Commercial Office, he goes into the world with the impression that the criminal or sharp practice is the proper way, so long as he is not found out. He will have to be made of very good material if he is not easily ruined.

The Commercial School has been sneered at by the Public School, but Garfield said: "Business Colleges originated in this country as a protest against the insufficiency of our system of education—as a protest against the indifference of our American schools and colleges to fit young men and women for the business of life. These Business Colleges furnish their graduates a better education for practical purposes than either Professor, Harrow or Yale."

"Shorthand, when properly learned, will prove to be not only a most agreeable and remunerative profession, but in many cases, the stepping-stone to something better, and as a means of mental training, it is without a rival."

MUST REMODEL PUPILS:

Now the fact about it is, if all Public Schools were as good as they ought to be, the Commercial Schools would not need to be supplied. But we have only a really competent stenographer or book-keeper, even though our pupils are graduates of the Public Schools, we must teach them not only arithmetic, grammar and their spelling, the most ordinary words, tell what they mean, how they are to be used, and not only that, they actually have to be taught how to write longhand. All this and more is put upon the special teacher. He must somehow create in his pupil a desire for something higher and better all the time, a desire to study and read good books and to be an intelligent force rather than a senseless mechanism, and the special teacher is expected by some people to accomplish all this—to remodel the pupil, as it were, in three to six months for twenty-five or thirty dollars, and then get a position for him that will yield to a really self-sufficient for a king's ransom.

COTTON UMBRELLA LUXURY:

The time should be increased, the Course of Study should be broadened and the tuition should be raised so as to allow the school proprietor a sufficient income to keep him on good terms with his washwoman, and enable him to pay his assistant teachers the proper salary that they may enjoy the luxury of a cotton umbrella on rainy days and have time and money to attend the Association once a year.

The Commercial College needs more dignity. Its Course of Study, from an educational standpoint, should be worth the tuition charged. Its advertising should be in keeping with other professional institutions. Its influence is felt. Its reputation adds much to its tone and dignity by advertising on fences and barns like a circus or a grocery.

A CRIPPLE, A FREAK, OR A GIANT:

Our schools are largely responsible for the cheap stenographer. He has been inveigled into the business by misleading advertising and been told over and over again of the success and salary of such stenographers as Dennis Murphy, and is given the impression that it only requires three or four months time and thirty or forty dollars outlay to do the same thing; but life loses half its poetry when he finds that such work as he can do is usually rated in the market at three dollars per week. At this rate, the man with the pen (nigher than the sword) is below par when compared with the "Man with the Hoe." At this rate, it is likely that the truckers and cab drivers will be asking us for our stenographers on trial" at three or four dollars per week, to "break them in" for us. The dignity of the work is threatened unless all reputable schools devote themselves to correcting public opinion by raising and maintaining the standard. These pupils who have been fooled, but who have a small amount of money, take these beggarly positions, finding out they can't hold better ones, go back home disgusted with the business, say it is over-done, and if they can't get work at common labor, they get up classes and teach for practice. This state of affairs is perfectly abominable. The business is in its infancy, and it rests with reputable teachers whether the infant is to be a cripple, a freak, or an intelligent and useful giant.

LIFE WORK:

The average pupil, before he can be taught to do really artistic work in his specialty, even though he be a High School graduate, needs a special movement and English training. To many of them, very ordinary words are a perfect nightmare. If he happens to hear someone say, "like man," for instance, he has not the slightest idea how to spell it, and as for its meaning, he does not even know whether it is a man or a woman. The bark is better than the fish that is referred to. To such a person simply a knowledge of stenography is useless. Whatever may be learned quickly, easily and cheaply, is worth very little. It is life work, and as such the subject must be read and studied if he ever hopes to be an artist at the business.

A COMMON BROTHERHOOD:

I cannot imagine any material competition between really good schools, since the highest aim of all should be to furnish the very best technical education possible, combined with good training in all collateral subjects, and the observance of correct office manners and business integrity. The Business and Shorthand Colleges having the last and best chance to influence and elevate the educational and commercial standard of the community, an immense responsibility rests upon them. They should be banded together, shoulder to shoulder, in a common brotherhood, and if there are such things as peer or worthless schools to contend with, they can be so out-classed by superior merit that they will cease to exist. In my judgment, these special schools are a world power for good on the one hand, and even I am sufficiently convinced to believe that he must learn his specialty for the sake—not so much for what he can make out of it, but what it will surely make out of him. The chief worthless, useless schools, if there are any, bear the same relation to our profession that the street-organ grinder bears to the musical profession. Why not out-class them, as the street-organ grinder is out-classed? They would need a placard like this, "Give me what you have, if it is only a penny, Oh, pity the blind!"

FLOCK NOT FLEE:

A stenographer is not simply one who can "scrawl strange words with a barbarous sound."

Continued on Page 298.
schools. Able speakers from the penmanship, educational and business worlds should be secured to vent their views on the subject of modern writing. The Executive Committee, Messrs. C. N. Crandle, Chicago, Rt. J. F. Barnhart, Des Moines; and W. F. Gieseman, Des Moines, Iowa, are hustlers and will doubtless secure the Association to the best that is going in the way of enthusiastic, brainy, practical, thought provoking speakers. We can, on hand. Make the penmanship section the star attraction. Your presence will help to do it. You cannot afford to miss the to be notable gathering.

Forward

It has been but a few years since it was thought that there was some one style of writing best for all, and that there was some one way of executing it that was best for all. Some still believe it. They, as a rule, who teach in the school of twenty years ago. But the great majority now recognize the fact that there are a number of styles of writing upon the market any one of which produces readable, rapid writers, if taught correctly. Too, are beginning to recognize that there is no one way of holding the pen, no one position of the paper, no one movement that is suited to all. Individuals differ, and as a consequence, under the instruction, their product and method of producing will differ quite as much as they. Indeed, people of intelligence and discrimination now know that no one can produce the twenty-six characters with one movement, but with a number of movements. Then why advocate that which is impossible and impractical? Theorists do such things not the practical, head-on, up-to-date fellow. "One way for all," "One style for all," are things now being shelled with the past. The modern, progressive, practical teacher adapts penmanship to the individuality of each student. He has quit the "hand me down," "ready made," "straight jacket" methods of turning out writers and is recognizing individuality and flexibility in pupil and penmanship. He is teaching a "forward" and he advocates today that which he advocated a dozen years ago is as many years behind the times. He who does not progress goes back. Our motto is, therefore, "Forward." Be up and doing. Adapt and develop is the watchword. Profit by the experience of others, experiment, study, and practice. These are the tools of progress. "I know it all" is the tool of the fool. Forward!

Vertical for Bookkeeping

"Can vertical writing be written small enough for bookkeeping?" is the question asked by us a correspondent. Our answer is yes. Vertical writing is one of the most compact styles and can be written quite as small as any other. Vertical occupies a trifle (only a trille) less space from left to right than normal slant writing.

At a recent meeting of the officials in charge of the Pittsburg, Pa., public schools a change was recommended from vertical to slant writing. This was due, in some measure to the bankers who declared that vertical was not equal to the demands of the business world. One thing seems to us rather queer. It is this: Of all people who tangle their names most, the banker and his cashier easily take the lead. It wouldn't be a bad plan if they would take a dose of their own medicine. But all this change from slant to vertical and from vertical to slant only proves that the old and the new are alike defective. Everything points toward simpler writing. Slant is a minor essential. Plainness and speed are not dependent upon any degree, but up and down and a light line, retrace and loop. These are stronger in Simplified writing, as advocated by the PENMAN ARTIST AND BUSINESS EDUCATION, than in any other. And it is winning. Give it a trial.

E. C. T. A. Committees

Mr. Gaylord announces the following committees for the Eastern Commercial Teachers' Association:

Take Notice

The PENMAN ARTIST AND BUSINESS EDUCATOR will not be published during July and August. They are vacation months. We need a rest and so do you. Look for me about September 1st. We hope to greet you then with renewed vigor, and to sustain it clear through the year. To make the time seem less long between this number and our next, we have purposely delayed this number about a week.

Penman on to St. Louis

It is none too early to begin to think and to plan concerning the coming meeting of the National Penmanship Teachers Association, next holidays at St. Louis. The meeting it seems to us, ought to be a distinct success. If we all "put our shoulders to the wheel" we can make it the largest ever held. And why should it not be so? Was penmanship ever so widely discussed? Were methods ever so diversified and, seemingly at least, antagonistic? Now is the time to get together and "strike while the iron is hot." Supervisors from the public schools are expected to be there in full force. Let the business college penman meet them and battle for better penmanship. Now that many believe that less writing should be taught in the primary grades and more writing be taught enthusiastically in the grammar grades is the time to determine by discussion and experiment what is best. Provision should, and will no doubt, be made for extensive displays, not of wind, but of pupil's work from public and private schools.

Is Writing an Unhealthy Business?

"Penmanship is nice as an art but very unhealthy as a business." Thus wrote a correspondent. We want to say that penmanship is as healthful as the average profession. Far more healthful than many lines of effort. Twenty years ago the writer was working on the farm and at any rate he would not live without six months. He thought so himself. He left the farm and began to improve and is today enjoying good health and has no intention of dying for another century at least. Penmanship discourages strong drinks and tobacco, and encourages correct living, both of which prolong life. Penmanship encourages correct position of the body and thereby aids in keeping the machinery straight.

Pittsburg for Slant

"The New York Association

Mr. Charles E. Cuty, Certified Public Accountant, and Mr. Edgar M. Barber, Supervising Assistant, United States Appraiser's Office, were the speakers at the New York Commercial Teachers' Association, May 13th, 1901, the topics being respectively, "What a Boy Should Know on Entering Business," and "Customs, Administration and Methods of Accounting.

Mr. Barber drew a comparison between the receipts and expenditures of the Government, during Albert Gallatin's time, and the year just past, as shown by Treasury Reports, reciting that the expenses of the Civil establishment, as one item, had increased a hundred times in one hundred years, from $89,000,000 to $89,000,000.
He traced an invoice, in detail, from the time of its presentation to the Council for certification, through the various steps of official procedure until its final liquidation at the Custom House, and, in the case of an advance, either in value or classification, the procedure before the Board of U. S. General Appraisers, the Circuit Court, the Circuit Court of Appeals, and, finally, the Supreme Court. This entire gamut of official procedure was fully illustrated in the history of the celebrated St. Gall embroidery case, which passed through all of the stages indicated above, and resulted in increasing the valuations of a single line of goods from six million to ten million dollars per year, which, at sixty per cent, duty increased the revenues over two millions of dollars per year.

Certain technical processes peculiar to the appraisal of various classes of goods, as textiles, sugar, etc., were illustrated. Specimens of the record books in the Customs were exhibited and their uses explained.

At the port of New York sixty-five per cent. of the customs duties are collected, $35,000,000,000 total, the U. S. of $250,000,000,000 during the last fiscal year, at a cost of collection of only two per cent. or one-fourth of the entire income of the Government.

F. L. Haebeler, Fairbault, Minn., and C. W. Stephens, Lincoln, Neb., have pooled their interests and abilities in the purchase of the Globe Business College, St. Paul, Minn. This means that the Northwest is to have another A. I. Business institution. Our best wishes.

Mr. J. M. Hinkle is now supervisor of writing in the public schools of Vincennes, Ind.

R. L. Rudy, recently of San Francisco, Calif., was called to his old home in Middle- town, Md., to attend the funeral of his father. Mr. Rudy expects to remain there to administer his father's estate and to then return to his profession. He has unusual talent in penmanship.

Messrs. Williams and Rogers, of Rochester, N. Y., have placed the publishing of their text books in the hands of the American Book Company. Messrs. Williams and Rogers will, from this on, give their entire attention to the superintendence of the text books and let the A. B. C. go to the balance.

The Salem, Mass., Commercial College gave, on April 8th, a reception, banquet, dance, etc., which was attended by about two hundred and fifty students. Principal Lord knows how to conduct school as well as a banquet.

Mr. J. C. York, Alliance, O., will teach penmanship in the Mt. Union Summer School.

L. L. Weaver, superintendent of writing and drawing, Alliance, O., will teach writing, drawing and bookkeeping in Wooster, O., Summer School.

G. A. Henry, of Des Moines, Ia., is now with the Central Business College of Kansas City, Mo.

G. W. Brown, of Illinois, the business college expansionist, has recently absorbed the Rockford Business College of Rockford, Ill. This makes it the tenth institution in his chain of schools.

The Broken Bow, Nebraska Normal and Business College will open its doors to the public September 2, 1901, with C. W. Kosch, President, and S. M. Blue, Secretary. Success to all concerned.

"The Gregg Writer" comes to our desk regularly. It has been much improved in every way in recent months, and is now one of the brightest, best, and most practical exponents of a shorthand system, that we have seen.

Mr. J. W. Warr has recently run for the mayorcy of Moline, Ill. He ran well, but the other fellow got under the wire first. He says it was Warr against whiskey, and whiskey won out. He put out a spicy sheet in the interest of the Citizens' party during the campaign.

The Spencer Memorial Library, of Geneva, Ohio, has now $827 in the memorial fund. Henry E. Spencer's subscription of $50 having been recently paid by his sons, Henry C. and Leonard G. This movement to give tangible form to the memorial in which penmen hold the name of Platt E. Spencer, ought to command the cooperation of every man in the profession which Mr. Spencer founded.

Speaking at a meeting held in the Mun- sion House, Lord Roscbery emphasized the necessity for commercial education if Great Britain was to successfully meet systematized competition. He said that much more than half the foreign policy of all the intelligent nations of the world was a commercial policy, and that the incident at Trenton proved this.

Higher Commercial Education received a column editorial in "The Boston Herald," April 29th. The editor maintained that the classification and subdivision of High School work into Latin, English and Manual Training would soon result in Commercial High Schools in our large cities, and that commercial training of college grades would follow. The Commercial High School will be as common as technical or trade schools are now.

L. J. Watrous, who was some years ago keeper of the Saturday Post, is now located at Atlantic City, N. J., as bookkeeper in the Royal Palace Hotel. Mr. Watrous is a good writer and artist, a good fellow, and in a fine place.

The South Bend, Ind., Commercial College recently gave a reception which was attended by about seven hundred people.

Mr. E. S. Frye, president of The Practical Bookkeeping Co., Chicago, Ill., writes that their new system of bookkeeping is being very well received. He states that they are enlarging the work and that a good deal of the new matter is taken directly from the best Chicago business houses, and that it is therefore strictly up-dated in every sense of the word. An advertisement of the work appears elsewhere in our columns.

"The Gregg Shorthand Association of America" will be held in Milwaukee, July 13-16, 1901. For particulars concerning the excellent program, address J. E. Gill, Quincy, Illinois.

The Department of Business Education of the National Education Association, De- troit, Mich., July 26-29, 1901 has a good pro- gram. Write to W. E. Daggett, Brooklyn, N. Y., 1260 Bedford Avenue, President, for it.

These announcements came too late to give them the space they deserve.

W. L. Thomas is now teaching in the college in Abilene, Kansas. Mr. Thomas is a man of ability and a strong teacher.
Higher Education.

Continued from Page 285.

pen." A man who is thoroughly master of his profession is, and should be, both a scholar and a gentleman, and the only inducement a high-grade Business College can afford to hold out, is the proof it gives of its educational merit. "The flock, and not the fleece, should be the object of the shepherd's care."

Let us say to ourselves, and say it honestly, "We have a good school; we will make it better." We have no truant officers, are not supported by state, county, or private endowment, and if the "laborer is worthy of his hire," we must stand on our merits. Let us practice what we preach. Let us as a body, stand out against questionable methods, misrepresentations, cheap tuition and fraud—against whoever seeks to take advantage of the credulity of the public by offering a bankrupt sale of commercial education, at a cut-bargain price.

If we are able and willing to assume the responsibility and raise and maintain our commercial educational standard on a higher and better plane, we ought to be well paid for it, and being well paid enables us to do all the better work. It is better to have forty pupils at one-hundred dollars apiece, than one-hundred pupils at forty dollars apiece. It is better for the pupil, better for the school, better for the business man, better for the community, and better for our own consciences. Let us stand together for whatever makes for higher and better things. We will not only have more and better pupils in the end, but a respectable income and the better recognition we deserve.

In most Shortland Schools, the hours are too short. The school should open 7:30 and close at 4:30, with two hours' evening work at home.

PREPARATION MEANS SUCCESS

Our Course in Shorthand and Typewriting should include in addition to the regular text-book and dictation work, intelligent instruction in Touch Typewriting, care and handling of machines, daily rapid movement exercises, as in longhand, spelling and defining, rapid calculation, correspondence, English with a big "E," and penmanship. They should have regular talks and exercises on forms of commercial and legal papers, foiling, enclosing, endorsing, etc. They should be taught to use the letterpress, the duplicating machines, and how to manifold. Many pupils must be taught, before they can even properly direct envelopes. They must be taught to capitalize, punctuate and paragraph. As indicated before, they must be taught office manners and habits, and every course in shorthand should include a general course in evening reading, good books, approved and selected by the teacher. They should have at least a general idea of accounts; they should be instructed and encouraged in every possible way to improve their general education in all directions; taught that preparation means success. Now all this should be done in addition to simply learning how to write shorthand and thumb a typewriter. Won't it take some time to do all this work thoroughly? Won't the pupil be amply repaid for all this extra preparation, and shouldn't a teacher who does it thoroughly, receive at least $100 apiece for his pupils in the shorthand department alone?

Stub-Pen Penmanship

The Twelfth of a Series of 24 Script Alphabets, Illustrating as Many Practical, Unique, Ornate, Freakish, Characteristic Hands

[See Following Page]

To produce this style of writing, hold the pen between the fingers and use combined movement, but more of arm than of finger action. Indeed, it may be written with little finger action as the usual hand. Hold the pen in some one position so as to insure uniform slant. Use a sharp-edged stub-pen, about number four Sommenick. Study the forms closely to determine the location of shades and shapes of letters, and then practice intelligently. Such as penmen have discouraged the use of and denounced the stub-pen, it is used more universally than ever before and possesses merits not generally conceded. It requires a less dainty touch, and it can be written quite successfully without the elbow rest. Then, too, many who make a failure with the semi-angulare, light-line style, make a success of this. It will do you no harm and it may do you much good to give it an honest, fair, open trial.
Stub-pen Penmanship.

Plain, simple, practical, rapid, uniform, unpretentious writing.

Lessons In Automatic Lettering—No. 1—By E. E. Evans, Streator Ill.

These lessons are designed to aid penmen to cover a larger field as well as students to learn a practical line of business that brings good money to the bright and energetic. They should be followed closely.

First, get a No. 1 Marking pen, 1 bottle of black Shading pen ink and twenty-five sheets of cross-ruled practice paper. I will send same prepared for sixty cents.

Position—Sit facing desk or table, with line of writing parallel with edge of same. Your base line should always be about eight or ten inches from edge of table.

Position of Pen—Take hold of pen same as in writing, then let arm and hand fall to the right until they rest on side. Always keep pen on same slant, about forty-five degrees: but in the letters K, M, U and V the pen is turned on one of the strokes.

Practice—Take up the first character and do not practice any other until you have mastered it. Practice and master all characters before attempting the letters. Keep glass with one-half inch water in to clean pens.

Notice—This is the most important alphabet in Auto work so don't shirk it in the least. Copy is reduced. Letters with No. 1 pen should be about seven-eighths of an inch high and nearly as wide. Keep a memorandum book and jot down the height of letters as made with the different size pens. It will help you.

Now if there is anything you want to know or don’t understand, just write me, enclosing stamp for reply.

I would be pleased to hear at once from all who intend following the course.
Sloping Penmanship

BY E. N. HUNTSINGER, HARTFORD, CONN.

The following is nearly a third of the above named paper read before the Eastern Commercial Teachers' Association, Space for the second page missing from paper, which was a very vigorous one from start to finish.

Which style of penmanship shall we use, sloping or vertical? For business schools the answer is sloping penmanship. For the boy who has to earn his living by doing office work, there is but one kind of writing demanded, and that is good writing, which means sloping penmanship.

What style of writing shall it be? Ask your constituents, ask the community which hires your graduates, whether they want poor penmanship, or its equivalent, perpendicular penmanship.

Office requirements have produced our present practical, sloping style, and office requirements have lopped off the excrences of ornament, as well as set aside the exact copy-book styles. The business colleges have schooled the public to good business penmanship, a style which com- bines in the largest degree the elements of clerical slanting with vertical elements, a style which meets the demands of the high pressure office needs.

PUBLIC SCHOOLS ASHAMED

The public schools could not, or did not, meet this demand, hence, the business colleges must teach them how, as applied to public school writing. The public schools were evidently ashamed of their fruitless efforts to make fair penmen, and in sheer desperation, and yielding to the increasing importance of business, they have been most energetic, and finally succeeded to the entreaties of publishers and introduced perpendicular pen- manship, with the result that public schools now have a style of chirography in vogue two hundred years ago.

The public school men are attacking business college penmanship, but they do not attempt to say they have been, as applied to public school writing. The public schools have demanded the ornamental penmanship, the birds and the eagles, the swans and the dragons, the things in vogue twenty-five years ago, and now but seldom seen. They are beautiful to the artist's eye but getting scarcer every year. A sample of such work is in Mr. Stowell's office, a large spread-eagled, flourished some twenty years ago by the speaker. I hope Mr. Stowell will shortly let this noble bird of freedom break its bands in this building, dash its kec yoke, and its characteristic scream and cut a few oval exercises in the air above the goody city of Providence and soar to my home at 312 cone street, Hartford.

SLOAN TWICE AS RAPID AS VERTICAL

In the past, the time of drills of penmanship in the public schools was so short that even superior teachers of penmanship were not able to make business men out of their pupils—thirty to sixty minutes per week for writing drills, while other studies of an ornamental character got a full quota of time daily. Penmanship and arithmetic were the most important subjects, and the fact that over 10,000 young people attend business colleges annually emphasizes strongly the great value of business college training. And in this training for the stern realities of life there are no stronger studies than mathematics and penmanship. They are the foundation for the superstructure of business training, because they are the two branches of education most used by men in business. As to the claim that perpendicular penmanship is more economical in space on the line than sloping penmanship, it may be put down as a fact that such statements are made by persons who either don't know anything about it, or won't admit the truth when it is shown to them.

Which style of penmanship shall we use, sloping or vertical? For business schools the answer is sloping penmanship. For the boy who has to earn his living by doing office work, there is but one kind of writing demanded, and that is good writing, which means sloping penmanship.

SLOPER OF MELODY OF LINES

 Shall it be vertical writing? It is pre- proper to ask that question. As well ask, shall we return to our respective homes in the old fashioned stage coach or by steam cars?

The success of any system of penmanship is measured by the uses to which it adapts itself. In sloping penmanship, as it is taught by the best teachers, pupils are working through a shower of melody of lines.

In writing, as in everything else, example is more stimulating to a pupil than precept. In general work, the messages are sent out only in one direction, and there can be no divers- ity of transmission. Every well written letter beats the penmanship track a little smoother. In sloping penmanship every hour's correct practice gives the penman- ship muscles the right of way. But it is impossible to change from a poor hand- writing as easily as we slip out of an old coat into a new one.

NO NEUTRAL GROUND

In sloping penmanship impression in the one becomes expression in the other. Here we train in a definite, serious and purposeful way, and with a knowledge of its possibilities. In sloping handwriting the hand becomes the de-fendant and ready servant of the will. The eye training, the hand training and the mind training go together, and the only rule of training for prac- tical work is that which develops all the best qualities in the student.

There is no neutral ground in penman- ship. Vertical it cannot be, because it is not practical. The standard or natural handwriting of the day is the sloping style in its best forms, as it is taught in the most progressive business schools today. Sloping penmanship is only another style, and stands only second to arithmetic in a young man's business education.

SLOANT SIGNS STRONGTH

As a teacher of twenty-six years' experi- ence, and having placed thousands of pupils in business schools, I have seen the fact that over 10,000 young people attend business colleges annually emphasizes the great value of business college training. And in this training for the stern realities of life there are no stronger studies than mathematics and penmanship. They are the foundation for the superstructure of business training, because they are the two branches of education most used by men in business. As to the claim that perpendicular penmanship is more economical in space on the line than sloping penmanship, it may be put down as a fact that such statements are made by persons who either don't know anything about it, or won't admit the truth when it is shown to them.

While the business colleges have schooled the public to good business penmanship, a style which com- bines in the largest degree the elements of clerical slanting with vertical elements, a style which meets the demands of the high pressure office needs.

PUBLIC SCHOOLS ASHAMED

The public schools could not, or did not, meet this demand, hence, the business colleges must teach them how, as applied to public school writing. The public schools were evidently ashamed of their fruitless efforts to make fair penmen, and in sheer desperation, and yielding to the increasing importance of business, they have been most energetic, and finally succeeded to the entreaties of publishers and introduced perpendicular pen- manship, with the result that public schools now have a style of chirography in vogue two hundred years ago. The public school men are attacking business college penmanship, but they do not attempt to say they have been, as applied to public school writing. The public schools have demanded the ornamental penmanship, the birds and the eagles, the swans and the dragons, the things in vogue twenty-five years ago, and now but seldom seen. They are beautiful to the artist's eye but getting scarcer every year. A sample of such work is in Mr. Stowell's office, a large spread-eagled, flourished some twenty years ago by the speaker. I hope Mr. Stowell will shortly let this noble bird of freedom break its bands in this building, dash its kec yoke, and its characteristic scream and cut a few oval exercises in the air above the goody city of Providence and soar to my home at 312 cone street, Hartford.

SLOAN TWICE AS RAPID AS VERTICAL

In the past, the time of drills of penmanship in the public schools was so short that even superior teachers of penmanship were not able to make business men out of their pupils—thirty to sixty minutes per week for writing drills, while other studies of an ornamental character got a full quota of time daily. Penmanship and arithmetic were the most important subjects, and the fact that over 10,000 young people attend business colleges annually emphasizes the great value of business college training. And in this training for the stern realities of life there are no stronger studies
SLANT SPEAKS FREEDOM

The slope of penmanship was not brought about by fashion, but by high pressure business needs. Sloping penmanship has stood the severest test of time. No other style of penmanship serves its possessor so well, and no other style of penmanship has ever given so much inspiration to its learners. No cramped rules, no limitation, absolute liberty in style, in size and in character, it partsake of and bespeaks the freedom of the land.

ANY SLANT WILL DO

Excellence is the fruit we seek in penmanship, and the business community values the magnificent results of penmanship as taught by business colleges, those which are the standard schools in the land, and are above reproach. Gentlemen, slant writing must stay at the top; the business world demands it and does not argue the point. The matter of any particular degree of slant is taste. It is not necessary to adhere to a slope of 35, 34, 60, or even 70 degrees, so long as the general building up of the letter is based upon the natural adaptation of the style to the writing muscles. And that natural motion must conform in whatever style is written to the requirements of rapidity of execution, combined with legibility of product.

MUST MEET REQUIREMENTS

In our longhand the pen slips right along without any effort. But the business penmanship of the future is likely to slope a trifle less than some of the writing books now in vogue. It will probably be about seventy degrees above the horizontal for the down strokes, depending largely upon individual taste.

One cause of unsatisfactory work in sloping writing is the past has been the persistent effort of copy-book makers, as well as some teachers, to popularize a style of penmanship with tall capitals and tall, extended letters, and very fine strokes, which style has the tendency to produce hesitancy in writing and uncertainty in stroke.

The business college man's first duty is to the young people who come to be educated. His second duty is to the business man. We must consider his requirements and meet them.

Sloping penmanship is the standard handwriting of the civilized world.

FIRST THE TADPOLE—THEN SLANT

Why do all civilized nations write the sloping hand? Asking the question is answering it. The behind-the-age nations, who are still living in the past, write something of the hieroglyphics, and according to penmanship history, their next style of writing would be vertical, and then modern, sloping hand.

Handwriting, like other branches, passes through stages of progress. At first the tadpole, and when he grows his legs he drops his tail and slips. So in writing, vertical first then sloping.

We are not living in a Duntonian, Payson and Hammond, or Spencerian age of writing, but the age of business writing; not the theoretical age, but the practical age, which has adapted sloping penmanship to muscular movement. As the demand of the times brought the steamer across the trackless ocean, so the demand of the times killed the old style of heavy, slow penmanship, and produced what we now have in our light-line sloping hand.

SLANT, WITH HALF THE CARE, AS LEGIBLE AS VERTICAL

I champion the cause of sloping penmanship, and wield my pen in defense of innocent boys and girls. I am a crusader against the vertical for the welfare of the thousands of boys and girls who are unable to judge the merits of any style. Did the parents realize the real situation, and the weakness of vertical writing, the return to sloping handwriting would be speedily consummated. There is too much blind following of impulsive superintendents, and not always well informed school committees. With half the degree of care exercised in writing sloping penmanship as is exercised in perpendicular it is every whit as legible. Allow the pupil the same number of minutes to write sloping, give him the same attention when he writes, give him the same encouragement when he writes the sloping hand as he receives in writing the vertical hand, and the pupil will not only write sloping as plain, but very much clearer and very much more easily, and write as he will not only want to do, but must when he engages in office duties.

SLANT HAS NO SKELETON IN ITS CLOSET

In the practical side of education, and that means the public schools as well as the business colleges, we are not allowed to do as the artist does, paint in a sky where there was none, put in a tree here and take one out there, and so on. In business we must stick to facts, and the furniture of the thought is but another word for penmanship. In sloping writing we direct the effort to its exact use, and there is small opportunity to improve on our very best light-line writing. Sloping penmanship is like a family living in a tent, it has no skeleton in its closet.

An author or a teacher may try his hand now and then at a different style or slope; a different character of form, indeed; some of the most skilled penmen have done it, are doing it, and will continue to do it for diversion. Such liberties are indulged in by devotees of all kinds of art and skill, and this includes the utilitarian art of penmanship. Obeying the laws of steam, man has an engine; obeying the laws of fire, man has warmth; obeying the law of speech, man has eloquence; obeying the law of the construction of the arm, man has good sloping penmanship; and disobeying the same law, man has poor perpendicular burdock.
The Handwriting Expert and His Work

BY WM. J. KINSLEY, NEW YORK

The term "handwriting expert," according to the dictionary, means "skilled or experienced in handwriting." In legal circles and to the general public it has come to mean "one skilled or experienced in identifying the individual by means of his handwriting."

For more than 30 years practically since script writing became at all general the handwriting expert has been called upon to testify in both civil and criminal courts in regard to the genuineness or spuriousness of writings, and to the identity of the writer. But it is only within the past generation that he has achieved his successes and prominence. During the last four or five years, in which handwriting played a prominent part, have drawn public attention to this subject.

And as a result there has been all sorts of speculation as to what the handwriting expert could do, and how he did it.

The public know next to nothing about expert witnesses and the field of knowledge in which they operate. As a rule, nearly everybody is more or less jealous of any knowledge beyond an art or science of which they may be wholly or partly ignorant, being used by others in the witness chair. This jealousy becomes prejudice, and you will hear people expressing the most positive opinions about expert witnesses which a few questions will demonstrate are based on ignorance. But comparatively few people really know what the handwriting expert can do—or what he claims to do. Many persons think he can do more than he is able to do, while others, because they can't see through his methods, think he claims too much.

The professional handwriting expert works by juxtaposition comparison, that is, he places the genuine and disputed writings side by side and institutes a comparison of the peculiarly personal characteristics found in the two pieces. He endeavors to determine whether or not both were written by one and the same hand.

Through countless repetitions every adult handwriting becomes made up of an almost infinite number and variety of peculiarities, habits, marks, and traits, as it were, called by the expert "characteristics." It is the presence or absence of these characteristics in a piece of writing that determines its genuineness.

There are but five or six men who devote the major portion of their time to this work, and these few are able to handle all the cases of prominence in the United States and Canada. These are usually located in the large centers of population and are frequently called to distant parts of America, and even give opinions on cases arising in Europe, as in the recent Dreyfus case.

Expertism is a profession which demands prompt responses to telegraphic requests calling the expert to distant cities. He cannot follow any other business in conjunc-

tion with expertising, that would be injured by dropping it suddenly.

The courts permit any one who sees or does much writing to qualify as a handwriting expert, and as a consequence, in every trial of case involving handwriting, there are some amateurs and semi-professional experts.

To prepare for his work the handwriting expert should first of all secure a good general education, the better his education the greater his success. He will be associated with judges and lawyers who are among the best read of any of the professions. A successful lawyer must be a widely read man and it doesn't heighten his opinion of an expert, who, no matter how well informed he may be in his profes-

Second, he must make a good witness. I don't know what the two requirements— to know your business completely, and to be able to demonstrate it on the witness stand, is of greater importance, since both are so vitally essential. No one can succeed who is not a master of his profession and himself.

Several days of tantalizing, aggravating cross-examination is likely to worry and annoy anyone so much that he will want to throw up the work in disgust. A lawyer with a bad case will often do his best to "rattle" the expert witness and to abuse him to the full limit, and the expert must know how to carry such onslaughts without losing his temper.

In a recent case the lawyer asked the writer, "As a matter of fact you experts are just like lawyers, in that they can be hired to take either side of a case, are you not?"

The answer, "No, we are not like lawyers. We must believe what we say," brought a smile from the judge, a roar of laughter from the crowded court-room, and turned tables on the lawyer (who was well known locally) and put everybody in good humor.

In another case, a lawyer, knowing the writer was a poultry fancier, remarked, during cross-examination, "We'll make a Minorca chicken of you before we're through with you and your这么 specialized skill."

"Don't crow about it too soon," was the answer.

A second tilt between the same lawyer and the writer was: "Do you claim that you cannot be mistaken?"

Witness: "No, I do not claim to be infallible."

Lawyer: "Ah, then you're not a descendant of the Pope?"

Witness: "No, the Pope has no descendants."

While the witness will see many opportunities for repartee and telling of amusing stories, he must restrain himself, as a court room is a dignified place.

There are all grades of men among lawyers, as in other professions and occupations. Some lawyers are willing to do everything they can to prevent the expert (and other witnesses) from telling "the whole truth and nothing but the truth." They argue with Aaron Burr, that "Law is anything that can be forcibly stated and plausibly maintained."

Honesty is absolutely essential if the expert will win lasting success, to say nothing of the ethical and moral questions involved. Many persons believe that experts, like lawyers, can be hired on the wrong as well as the right side of cases. This is not so of course.

I know a young penman who endeavored to become a handwriting expert, and who informed a friend of the writer that his plan would be to always get on the side with the most money. So far, the career of this would-be expert has not been such as to attract world-wide notice.

Handwriting experts, as a rule, differ very seldom and not "frequently" as some lawyers like to put it. There may be cases where honest differences of opinion may arise.

Assistant District Attorney James W.
Osborne, of New York, the man who managed the prosecution of Molineux, Patrick and others, in the Rice will and murder case, the third trial of Dr. Kennedy, and many other criminal trials, and the man who is the best posted on the laws and decisions covering handwriting expert testimony, and who has tried more cases involving disputed handwriting than any other man in the world, has a high opinion of expert handwriting testimony. Recently he said: “Expert witnesses are more careful about what they swear to than any other class of witnesses. They are like women in one respect — extremely careful and jealous of their reputations, because they realize that when their reputations are lost, their future is gone, too.”

The field of work for an expert in handwriting is one offering many opportunities of doing good. The property, liberty and lives of persons are in his hands at times, and his profession requires that he bring to it, broad knowledge, through special training and a well balanced, conscientious desire to do what is right and just by his fellow man. Fortunes, liberty and life may be saved or lost by his testimony and it behoves him to do his work thoroughly and honestly. He should live with himself the balance of his life, and has a future beyond that, so nothing should tempt him to swerve from the path of justice and right in his work.

Good Art in Illustration — What It Is, How to Recognize, Enjoy and Appreciate It

This is not a good illustration because it represents skillfully (rapidly) made lines but because it typifies and expresses that quality in human nature which crops out in excited controversy, impetuous debate, and heated argument. How the central figure is clinching his point! How tense are the other's faculties as evidenced by his tense hand and ready-to-speak his-piece countenance. Notice how the little patches of black are placed here and there so as to bring out or accent the figures. See how the figures near the outer edge are merely suggested — the details having been omitted. This helps to centralize the vision on the two principal figures.

This drawing is by Mr. Carl Streib, pupil of the Pennsylvania Academy of Fine Arts, and now in the Drexel Institute. He excels in Mural Painting — Allegorical subjects. We have more of this kind of work for future use.

BOOKKEEPING MADE EASY BY CHARTS.
The above represents the countenance of Mr. E. E. Evans, the Automatic Pen Artist, of Streator, Ill. He first saw the light of day in Wales, in 1851. The same year he came to this country, first to Pennsylvania and then to Illinois. In '86 he entered the commercial department of Streator High School and received instruction in penmanship from A. C. Keeder. From Mr. Keeder he also got his start in autograph work. For a couple of years he kept books and perfected himself in autograph work. He finds it an excellent thing with which to earn money as his work is in constant and increasing demand. He understands the practical side of the art (the desirable side) from A to Z. He begins a series of lessons in this number, which, for a beginning, is second to none other. You will do well to follow Mr. Evans to the end of the series. Let him know how you are progressing, now and then, by sending him work for criticism.

**Obituary.**

We regret to learn of the death of Mr. F. H. Sweet of Strong, Me. Mr. Sweet contributed the October, 1890, title page to the F. A. & R. E. He was an artist of considerable ability. We hope he is now painting as never before.

"Reading and Writing Exercises in Gregg Shorthand" for student and amanuensis by W. E. Van Wern, Wheeling, W. Va., is a tablet containing facsimile reproductions of notes written in a very systematic and uniform manner. Short-hand exercises to coach the student easily from one lesson to another and therefore successfully from start to finish constitute the key of character of the publication.

"Instruction in Legal Work," by Henry W. Thorpe, published by Isaac Pitman & Sons, 33 Union Square, N. Y., price twenty-five cents, is a neat little booklet of important information to those who desire to become reporters.

"Handwriting Experts Defended," by William J. Kinsley, is a little white booklet containing a reply to an editorial in the "New York Times." Mr. Kinsley easily disproves the statements made and thereby places honest, competent, expert hand writing upon a more secure plane than ever before.

"Learners' Lettering Lessons," by W. F. Giesseman, Des Moines, Iowa, is a compact, simple, plain, to-the-point booklet for students in practical lettering. The preface is worth considering: "In every school there is someone hungry for instruction in lettering with talent enough to develop. In every community there is profitable employment for one who can do this kind of work well. Try it." The price is but twenty-five cents. Address as above. It is worth looking into.

Modern Publications for Penmen, Artists and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books are sent prepaid by mail or by prepaid express.

Portraiture—The best book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book, luxuriously printed and bound, containing hundreds of examples and explicit instruction. $1.50

The New Zanerian Alphabets—A guide to engraving, containing a great variety of alphabets, designs, such as diplomas, resolutions, etc., with complete instructions. A substantial book bound in cloth. $1.50

Zanerian Theory of Penmanship—A thought-provoking work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should read it. A book of 176 pages, cloth binding. $1.50

Sketching from Nature—A most beautiful book that teaches how to sketch from nature. Contains a large number of examples with fascinating text and instruction. Get this book and go out and learn to see and sketch nature. Bound in cloth. $1.00

Lessons in Ornamental Penmanship—A work in slip form embodying the $10 mail course formerly given by us, with some extra plates. A thorough and complete work for home learners. 50c.

Compendium of Simplified Vertical Penmanship—in book form, and by far the most thorough and complete instructor in vertical writing yet published. 50c.

Manual of Simplified Script—A work containing a thorough, graded course of photo-engraved copies from the pen of that master penman and artist, C. P. Zaner, all in the simplified style. For rapid business purposes many persons believe this style of writing unequalled. 50c.

Pen Studies—A portfolio of twenty-four pen drawings, consisting of scrolls, objects, birds, fruit, scenery, etc. It begins at the beginning showing the pupil how to make the simplest strokes and to gradually evolve the finished design. 50c.

Zaner's Gems of Flourishing—A book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the student how to make the simplest strokes and exercises and finishes with a great variety of designs, showing the highest degree of skill yet attained in this art. Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published. 50c.

Progress—C. P. Zaner's masterpiece in flourishing. It represents an eagle, forceful and lifelike, winging himself through intricate curves and branches. It is on the finest of plate paper, 22 by 28 inches. The original of this design hangs on the wall of the Zanerian Art College, and is valued at $100. "It's great," "It's certainly a bird" are some of the expressions many have made on seeing it. Let the reader remember also that it's no Spanish bird, but the American Eagle—that old national bird of ours that must now be especially proud. In tube. 50c.

Light and shade—A manual on drawing by Mr. Zaner. It contains 168 pages, 8 by 7 inches, of illustrations, and plain, simple, instructive text. It is just what home students need, and what all others who are not at home in drawing need to make things feel at home. Any one can learn to draw by the aid of this book. Only 25 cents prepaid. The illustrations are the actual pencil drawings and are much finer than photo-engravings.

Sample pages of Portraiture or Sketching from Nature mailed for 5c stamp. Cash should accompany all orders. Remit by money order, check, or stamps for small amounts. Do not send personal checks. Address, ZANER & BLOSER, Columbus, Ohio.

We need many well trained teachers of Commercial Branches, Penmanship and Drawing for good positions in City High Schools, Normal Schools, Colleges, Etc. Good Salaries. Send for 16th Year Book.
German Text is a standard letter for diploma work and general engrossing. The copy for this lesson was made with a No. 1 Sennencken pen, using a three-fourths of an inch space for capitalls and one-half inch lower case. The paper may be held in any position in which it is placed without being dislocated. The copy in the lower line of the page is made with a No. 1 nib, and No. 1 nibs are well suited for practice. The paper may be held in any position in which it is placed without being dislocated. The copy in the lower line of the page is made with a No. 1 nib, and No. 1 nibs are well suited for practice.

S. F. Felder, 309 Broadway, St. Louis, Mo., is putting out an attractive circular containing stock cuts in script, flourishing, etc., for business college people.

Jones' Commercial College, St. Louis, Mo., prints a creditable catalogue of large size with gill embossed side stamp and some specimens of ornate penmanship by the skillful penman, E. L. Rubin.

W. A. Thompson, Pontiac, Ill., is putting out a very creditable catalog to hold his sign-card lessons. No one to our knowledge ever done a work with so much business-like horse-sense and capacity as Mr. Thompson, and as near as we can learn, he is doing well. One thing, his pupils do well.

A neat little circular from Mr. W. C. Faust, supervisor of the penmanship, announces that he is now ready to give Art Entertainment Talk Trails. Mr. Faust is an artist as well as a true gentleman.

A richly embossed folder circular came to our desk from McPherson, Kan., College, containing half-tone portraits of the faculty with important announcements concerning the school. The school, like the folder, is O. K.

The Correspondence Institute of America, Scranton, Pa., greets us with a flaring red-ribbon catalog announcing courses in Illustrating, Writing, Bookkeeping, Journalism and Stenography. It is creditably written and printed and indicates that Scranton has more than one correspondence school.

Chas. M. Miller, of the Miller School of Business, New York, has put out one of the most original and effective four-page advertisements we have seen. Those who are looking for ideas in effective advertising might do well to write to Mr. Miller, enclosing stamp for reply, and requesting a copy of "Higher Education in Typewriter Operating."

SPANISH, SHORTHAND and BOOK-KEEPING free by mail: NEW FIELD; large salaries. Send stamp. PROF. STERNER Lexington, Ky.

H. E. WYGAL, Engrossing Artist.

Copy-Book Script a Specialty. Diploma, Letter Heads and Resolutions Neatly Engrossed. Card Writing done to order. Write for estimates. Address all orders to

1232 Curtis Avenue, CLEVELAND, OHIO.

Isaac Pitman Shorthand.... OFFICIAL PLEA FOR UNIVERSAL ADOPTION.

DR. A. H. MACKAY, Supt. Education, Province of Nova Scotia, officially says:

"It is desirable, first, to select the best; and, secondly, of greater importance, a system which, even should its being the best be doubtful, gives promise of becoming universally used. The Isaac Pitman Phonography is undoubtedly, when all points are considered, the best system.... There are various systems, the best of them on the lateristic principle, which will serve well enough for the taking of notes and their conversion into typeset or longhand copies by the stenographer. There is positively no advantage in any of these systems over the Isaac Pitman System. The most of them fallopian short of it. It is the duty of the State to foster that unity of system which will increase the utility of shorthand a thousand fold. The Isaac Pitman System, too, has a more extensive literature than all the other systems combined. It is, however, clear that the duty of the Council is to encourage the study and use of only one system; and as the Isaac Pitman system seems to have the fairest promise and potential of becoming universal, it is the system to be encouraged in the Public Schools of Nova Scotia."

* * * Since the above was written the Isaac Pitman System has been exclusively adopted in the above schools.

ADOPTED BY THE LEADING BUSINESS AND HIGH SCHOOLS.

Isaac Pitman's Complete Shorthand Instructor, 152 pp., cloth, $1.50.

Isaac Pitman's 20th Century Dictation and Legal Forms (in ordinary type) 500 pp., $5.00.

Isaac Pitman's Practical Spanish Grammar (An up-to-date text book) 112 pp., cloth, $0.50.

Send for "Which System?" Twenty-four page catalogue of over 150 works in Isaac Pitman Shorthand, and copy of "Pitman's Shorthand Weekly." Free.

Isaac Pitman & Sons, Publishers, 33 Union Square, NEW YORK.

OFF-HAND FLOURISHING

In white ink on black card-board is the latest thing yet; it is easy, attractive, beautiful, and up-to-date. It will advertise your school, college or writing her clearer than anything. Send me a trial order and I will supply it, $2.50 each designs, $5.00 10, $10.00 50, $15.00 100, $25.00 250, $50.00 500. They are bold, neatly, artistically, and catch the eye of the passer-by. Write today. Prices tax free.

M. B. MOORE, Box 7, MORGAN, KY.

THE LEADING AUTO. PENMAN.

I give Lessons in Auto. Work and guarantee my work to be the best in the business. Any style alphabet 50c., two for 75c. A beautiful flat or Book Mark, any name on silk ribbon in White and Gold, 25c. Copy Books, (the best,) 50c., and $1.00. Lord's Prayer, (can't be beat,) $2.00 and $4.00. Beautiful Motto, 90¢. Auto Cards, (your name, my autograph included,) 25c. A pretty specimen, 50c. Sample Show Card, 15c. and 25c. A large specimen for framing, 25c. and $1.00. Have you some Auto. pens that won't work just right? Just send them to me, with stamps to return, and I will fix them for you, 5c. apiece.

Do you want some special pens at 25c. each? Now is the time to get interested in Auto. work, for you can work up to perfection during vacation.

E. E. EVANS,
806 E. Hickory St., STREATOR, ILL.

ESTERBROOK'S STEEL PENS
THE MOST POPULAR IN USE

Each pen carefully examined and absolutely guaranteed.
Always ask for Esterbrook's Pens. All Stationers have them.

26 John Street, New York,
AND
Works, Camden, N. J.

GREGG'S

SHORTHAND

Its success is unprecedented in the history of business education.

As stated in the Penman-Artist and Business Educator for October, it is "capturing a good many of the shining shorthand lights of the profession."

With such men as G. W. Brown, Chas. M. Miller, Geo. P. Lord, W. C. Stevenson, C. M. Bartlett, D. L. Musselman, and a host of others, singing its praises, it is not necessary for us to say much.

But do not take the word of anybody—investigate for yourself. Impartial investigation always means adoption.

The Gregg Publishing Company,
57 Washington Street,
CHICAGO.
Lettering and Designing—No. 6—By E. L. Brown, Rockland, Me.

Here is some lettering and drawing for diploma heading, containing, we believe, some good ideas for pen workers. Diploma work, as a rule, should be smooth and accurate for the best results.

INSTRUCTIONS

Rule head and base lines with compass to govern height of letters, then proceed to pencil out the letters, very roughly at first, merely indicating space each is to occupy, then finish the line up with care. See that the letters conform to the curve properly—this is of much importance. Study form and shading of the scroll work. Don’t add any ink until your pencil drawing is just right in every particular. These letters were outlined with the aid of a T-square and ruling pen, and the tinting was all executed with a Day Spacing T-square, which accounts for its uniformity and smoothness. Those who have only an ordinary ruler will find it necessary to test the accuracy of the eye in shading the letters.

The vignette is very appropriate for diploma purposes, containing symbols of education, industry, etc. With the exception of the two figures, the young pen artist ought to have no difficulty in drawing this design free hand. A pantograph may be used for enlarging the vignette to the proper proportions, and this instrument, costing from fifty cents upward, is a most useful thing to include in your outfit. The light and shade and drawing of this vignette will afford considerable study. You will find it to be excellent practice to draw from these figures free hand.

The Benn Pitman System of Phonography

Is the only system of shorthand which has stood the test of forty-five years of hard wear in the hands of writers of all grades—from the business clerk to the reporter of the National Congress; and it is the only one called by the United States Bureau of Education

The American System of Shorthand.

WHAT A PROMINENT INDIANA COURT REPORTER SAYS:

The only one on earth. I never had any instruction except what I got myself from private study of the "Manual" and "Companion."—Jacob F. Denney, Official Court Reporter, Jay Circuit Court, Indiana.

Principals of shorthand schools, business colleges, academies, and private teachers of shorthand are invited to correspond with us. Full information will be cheerfully furnished.

We take especial pains in assisting principals to engage competent teachers of phonography.

THE PHONOGRAPHIC INSTITUTE COMPANY,

BENN PITMAN, President.

CINCINNATI, O., U. S. A.
E. E. Evans, Streator, Ill., sent us some automatic work which is first class in every particular. Mr. E. is a master at this line of art and we hope to see more of his work and know more of him in the future than we have in the past.

Miles K. Stabler, Mr. Carmel, Pa., sent some specimens of flourishing as a result of practising from "Zaner's Gems of Flourishing" which but few professionals can beat. They were executed on blue paper with white ink. Mr. Stabler also writes a masterful business hand.

J. W. Peterson, Hazleton, Pa., is swinging a very graceful pen as evidenced by some cards recently received.

H. G. Reaser Pittsburg, Pa., sent some black cards written with white ink in a very artistic and bouncy manner.

H. A. Franz, Minneapolis, Minn., recently favored us with some of his ornamental penmanship in the form of combinations on cards which show good taste and a high degree of skill.

Some well written cards in artistic style is at hand from J. A. Borlace, Port Orant, N. J.

Some exceptionally effective examples of ruling hand, lettering, etc., are at hand from A. McMichael, Lexington, Ky. He is quite versatile along art penmanship lines, and a good fellow.

J. Truman Evans, accountant, etc., Wilkes Barre, Pa., is an unusually skillful penman for one who has never received instruction, or who is not following penmanship professionally. He writes beautifully as an amateur. As a professional, he would make a fine one.

W. X. Currier, Rockford, Ill., submits some of the best cards and business writing received during the month. Mr. Currier is not only a skilled penman but a hustling practical teacher as well.

We acknowledge the receipt of a splendidly written page in the ornamental style and a number of very well written cards and pen and ink specimens of the Elliott Commercial School, Wheeling, W. Va. Mr. Caskey has much talent for handling the pen. He was formerly principal of the Marion, Ohio, Business College.

Some well executed ornamental writing and some good business writing has been received from K. L. Dickensheets, of Boulder, Colorado. Mr. Dickensheets is now Manager of the Western Correspondence School of Penmanship of that place, having succeeded Mr. J. D. Long. The PENMAN-ARTIST AND BUSINESS EDUCATOR wishes Mr. Dickensheets much success in his work.

We acknowledge receipt of some marvelously skillful penmanship from F. B. Courtney, of Milwaukee, Wis. Mr. Courtney receives our specimens of penmanship, and2 writing in a large blue envelope addressed most artistically in white ink. Whenever a letter comes to our office from Mr. Courtney there is usually a socking of a scramble for his famous signature. We regret that the ink used will not allow reproduction, or our readers should enjoy the feast as well as ourselves.

If there are any persons who think that Madaras cannot write as he once did, they would change their opinion if they could see some of the ornamental writing that was recently received at the office of the PENMAN-ARTIST AND BUSINESS EDUCATOR. The specimen is in the form of a verse, and is in every way exquisite as of yore, showing all the dash, grace and strength he possessed fifteen years ago. We have long cherished the hope of running in the PENMAN-ARTIST AND BUSINESS EDUCATOR a course of lessons in ornamental writing from the hand and pen of this past master of the art.

Some artistically written cards are at hand from J. C. Henager, Quincy, Ill. Mr. H. is a very fine penman indeed.

A QUESTION PLEASE.

Are you a finished business writer? Have you a diploma from a reputable school? If not, write us about YOCUM'S FAMOUS MAIL COURSE IN PENMANSHIP. School organized in '98. A thorough and practical course in rapid business writing. A completely revised course just out. Cost $300 to design, execute, engrave and publish. Both initiatory and graduating courses. Represents the skill of more than twice America's leading penman. Fine diploma granted upon completion of course. Terms exceedingly low. Professional as well as amateurs are taking this course. Send this ad and ten cents for sample lesson, fine specimen and full particulars.

Address: YOCUM'S SCHOOL OF PENMANSHIP, Massillon, Ohio.

IMPORTANT ANNOUNCEMENT

To Present and Prospective Students of the
Zanerian Art College,
COLUMBUS, OHIO.

Three Solid Gold Medals

Are to be awarded the three most deserving pupils; one to be awarded each year successively, beginning June 1, 1905.

These Medals

Are a gift by one who has attended the ZANERIAN and they are given with a view of stimulating excellence among practical and artistic lines; also as a means of showing his appreciation of the school and of its promoters.

The Gentleman Giving the Medals

Is doing so without any desire for personal notoriety or gain, but in a purely unselfish manner, doing it for what he believes to be the good of our beloved cause. He preferred to have his name unknown, but we insisted that it be given to the public in the announcement of the prizes. It therefore gives us pleasure in presenting his name, that of CAPTAIN C. H. G. STEVENS, of Detroit, Mich., formerly of that city; a former pupil of the State Normal School located there; a penman of more skill and modesty than is common pen. He was formerly secretary of the State Normal School located there; a penman of more skill and modesty than is common pen. He was formerly principal of the Commercial and Penmanship Departments of his alma mater.

The Medals to be Awarded

To the persons making the most improvement and receiving the best grades. Hand and persistent work as a student will be considered quite as desirable as excellence in result. The two will be considered together. True worth in character will weigh as well as skill. Persons using tobacco will be ineligible for the contest. The first medal will be awarded June first, 1907; the second medal, June 1st, 1908; and the third medal, Sept. 1st, 1909. Persons having entered three months previous to June 1st, 1909, are eligible and also those who enter not later than June 1st, 1909. No one shall be allowed to compete who has attended less than three months continuously or six months at different intervals. Candidates may compete but once for the prize, as they are intended to be given to three different persons.

The Question for You to Determine

Now is: Are you going to endeavor to win the two prizes that of the best grades which will cost about twenty-five dollars, and the still more valuable one of improvement and excellence?

Yours truly, we hereby welcome all that love and practice half a day and persevere to the contest. The winner's work and portrait will be published with the announcement at the end of each year.

Cordially,
ZANER & BLOSER, Columbus, Ohio.
A Word to Students

It is indeed a rare privilege to have the opportunity of following the lessons in writing that have just been begun in this journal, and we trust that all students will use these lessons to the best possible advantage.

Do not slight the first lessons simply because they are composed mainly of exercises. Many students make the mistake of waiting for sentences, etc., and not working faithfully on more elementary work. Master the elements, principles, movement exercises, etc., thoroughly, and the work that is to follow will be well begun.

These lessons will undoubtedly have a great influence on the penmanship practice in a large number of schools during the present year, and will do great good. Such an opportunity to learn to write has probably never before been offered.

Facts Concerning Writing

Vertical writing has had its day as concerns a boom or fad. It came, it conquered for a time, and it will in a measure remain. It came as a protest to extreme slant and it succeeded in banishing well-nigh universally the 32 degree standard. It has not, however, been universally adopted instead, nor will it be. Cities are discarding it for a medium slant—but not for the old slant. The causes for this discarding are numerous; sometimes political, sometimes prejudice, sometimes educational. In some (many) instances the vertical was put in by a small majority and then put out in the same way. The in's of the out's signed but little to those who are not looking for something to criticize. The handwriting of the immediate future will be rounding and slightly slanting. Rotundity insures greater legibility and less slant, both of which favor ease of execution and speed.

This company has just entered our columns as advertisers, and we trust that all teachers and school proprietors who are not familiar with their publications will write for their catalog. Their series of books are recognized as the very highest order of commercial publications.

Mr. Frasher Speaks His Mind

WHEELING, W. Va., June 10, 1909.

GENTLEMEN:

Enclosed find one dollar ($100) for which send the PENMAN-ARTIST AND BUSINESS EDUCATOR for one year. Please place my name on your permanent list.

The PENMAN-ARTIST AND BUSINESS EDUCATOR is more up to date and contains more real information for the penmanship student than all other journals that come to our desks combined.

Very truly yours,

GEORGE B. FRASHER.
Wheeling Business College.

H. B. Lemhan

It was our intention to present herewith the likeness of Mr. Lehman also, but somehow our efforts failed to secure a photo of him.

It is well known that he is rather modest and retiring in disposition, but it is also well known that his penmanship is par excellence.

Mr. Lehman has taught in many of the largest institutions in the country, and is recognized as one of the leading penmen of the profession. He is now teaching in the Spencerian Business College, Cleveland, Ohio, which position he has held for several years.

Surely all readers of the P.A. & B.E. will rejoice to learn that Mr. Lehman's lessons will run throughout the year, and that they will be the very best and capable of giving.

Two such noted experts as Messrs. Lehman and Mills have never before given such extended and comprehensive lessons in commercial penmanship in the same journal at the same time, and we feel confident that this exceptional treat will be highly appreciated by teachers and students everywhere.

Teachers can find no better copies to place before their students than will be presented in these lessons from month to month, and we advise all to make the greatest possible use of them.

About Funny Illustrations

Some months ago a series of pictures were run in the PENMAN-ARTIST AND BUSINESS EDUCATOR illustrating the defects of certain penmanship doctrines, such as the exaggerated view of vertical, whole arm movement, muscular movement, etc. Some of these pictures must have struck the editor of the Western Penman with considerable force. He says: "When our Columbian friends have used up their supply of funny illustrations, ridiculing muscular movement, we hope they will come into the (meaning his) fold." We notice that Mr. Palmer has begun to publish similar pictures from the Athenaeum copy-books, etc. We are not advocates of copy-books, such as are usually used, but whether he has intentions of entering the copy-book fold we know not. Mr. Palmer evidently reasons this way about such things: When they do a thing, it is all wrong; when I do a similar thing, it is all right. But then in this, as in other matters, verify the P.A. & B.E. leads and the others follow.

Greg Expands

The Gregg School of Chicago has added a Commercial Department to the school of shorthand, and it is therefore now a full fledged business college. It has recently been incorporated; John K. Gregg, President; C. S. Frye, Vice-President; Linn H. Young, Secretary, and Treasurer; and Rupert P. SoKnelle and Charles W. Kitt, as members of the faculty. Messrs. Young, SoKelle, and Kitt are from the Metropolitan Business College of that city, and Mr. Frye from the Athenaeum. Success to the enlarged institution.
Lessons in Rapid Business Writing No. 1.

BY E. C. MILLS,
16 Grand Avenue, Rochester, N. Y.

Our Purpose

It will be the aim of the author of this series of lessons to present the subject of business writing in such a way that the home student may acquire an acceptable style of muscular movement business writing in the shortest possible time. To all such, definite instructions will be given in connection with the copies and we can guarantee substantial improvement to each one who will faithfully follow every detail of the instructions.

It will also be our aim to grade the copies in such a manner that the teacher of rapid business writing will find in them suitable material to present to his classes and in that way make the copies a valuable assistant. The teacher may ignore the instruction features if he wishes, as every teacher has his own individual methods of producing results in the writing class. Where a student is under personal instruction, the teacher should always be consulted first as to the advisability of following our directions in conjunction with his own. The reason why we emphasize this point is because your instructor has a definite plan for you to follow and we do not want our suggestions to interfere with your teacher's methods in the least.

Preparatory

Before doing any work, if you decide to follow our series of lessons, we would suggest that you send us a copy of your present style of writing in order that an accurate comparison may be made from time to time. I would be glad to hear from each one. By this I mean you. The specimen should read:

E. C. MILLS,
16 Grand Ave., Rochester, N. Y.
Dear Sir:- I expect to do some practicing from your lessons given in THE PENMAN-ARTIST AND BUSINESS EDUCATOR during the coming year. I will practice as much as I reasonably can without interfering with other duties. (Here mention whether you are a "Home Student," or are "Under Personal Instruction." )
Yours truly,

Materials

Too many try to do good writing with poor materials. It cannot be done. The finest penmen are always the most particular about the materials they use. If you have an earnest desire to improve your writing, do not waste your time and energy working with a poor, scratchy pen, flimsy paper and muddy ink. Pay a little attention to the matter of materials at first and you will be surprised to see how your work will improve.

Ink should be used which flows freely and is black, or nearly so, when first used. Secure a pen that will make a stroke similar to the strength of line in the copies. Gillott No. 809, Esterbrook's No. A. J. Zanerian Business Pen or Gillott's Magnum Quill are all good pens. Some of these pens are coarser than others and you may select the one you prefer. A good quality of foolscap paper should be used. Get paper with a reasonably smooth finish and weight not less than twelve pounds to the ream. Use a straight holder for business writing and one with the cork tip has always proven satisfactory to our students and to ourselves.

Pen-holding

While it is a fact that there are hardly two people who hold their pens in exactly the same manner, yet there are several rules which can be applied to pen-holding and still not interfere too much with the natural inclination of the student. The illustration presented herewith is an excellent model for study and the necessary modifications may be made to adapt it to your individual needs.

It is quite a safe rule to say that the holder cross the second joint of the first finger, and the illustration. The holder should cross the even a little higher. The hand should be turned fingers bent under the hand, resting on their it to touch the paper.

Position of

It is possible for one to learn to write well and arguments in favor of a good position are so sideration of all who would learn to write well, to do. It is sometimes very difficult to change a practice, but by careful, persistent watching a generic position.
For the Twentieth Century
ADAM'S COMMERCIAL GEOGRAPHY.
READY IN JUNE. It Will Surpass All Others. WAIT FOR IT.

CHARACTERISTIC FEATURES:

- Prepared expressly for educational purposes.
- Topics indicated in heavy type.
- 120 maps, 40 diagrams, 12 full-page half-tone illustrations.
- Full and statistical tables compiled from the latest data.
- Text not choked with statistics, but given in full at end of chapters.
- Dry details not massed, but facts given in proper sequence.
- Prominence given to inventions and processes that facilitate production.
- Gives basal principles of the geography of commerce, connecting effect with cause.

NEW YORK BOSTON CHICAGO LONDON

VULCAN STYLO FOUNTAIN PEN.

"THE ABOVE PEN IS NO GOOD" if you shade in your writing but, it is unexcelled for business and general writing purposes. It writes a fine line as with a sharp pencil and does not stick into the paper. It writes 10,000 words from each filling, and ink will not freeze or evaporate and cannot leak or blot. The Pen is made of best Para Rubber and has strong point of iridium which will outlast five of the $5.00 Fountain pens. It is the strongest, cheapest, and most reliable pen on the market. For manuscript, ruling, photogrophy or business writing it is unequalled.

VULCAN PEN CO. Box P. RACINE, WIS.

A REAL HELP FOR TEACHERS AND OFFICIALS.
It is our constant aim to be. We have increased in usefulness during our 19 years of successful existence. If you are seeking a Teacher or a Position, NOW is the time to communicate with us. Manual and blank for a stamp. Commercial Teachers a specialty.

Original and Effective Designs and Illustrations

Franklin ENGRAVING AND ELECTROTYPING Company
341-351 Dearborn Street CHICAGO
The Extraordinary Merit of the Various Commercial Publications issued by the SADLER-ROWE CO. has made it a distinct and recognized leader in its special field, while its business policy has won the esteem, friendship and support of the teaching fraternity.

It Treats All Customers Alike, supplies only first-class books in quality and subject matter on terms that are satisfactory and equitable and has unexcelled facilities for distributing supplies to customers through twelve (12) depositories located in the leading cities in the United States.

Now is the Time to get ready for next year's business. The best teachers want the best books. Look over the list below and see if there is not something to interest you:

**Commercial and Industrial Book-keeping**, a series of sets supplying a complete course of study. It has the unprecedented record of 1200 introductions within six months from its first publication. Send for booklets.

**Business Book-keeping and Practice--the First Budget System**, used in more business colleges and commercial schools than any other similar publication on the market. Making new friends continually because it is the most advanced and complete work of its kind.

**Sadler’s Commercial Arithmetics**. The standard reliable books that are kept right up-to-date; numerous changes in last editions. Find a commercial teacher and you will find with him one of Sadler’s Commercial Arithmetics.

**Richardson’s Commercial Law**. The record breaker that has gone through four large editions in one year; because it is the most practical and most teachable book on the market.

**Lister’s Budget of Writing Lessons That Teach**. The most inexpensive, practical and useful set of penmanship copies ever printed.

**English-Correspondence**. The little book that has supplied just the thing that so many teachers want—it coaches students on their weak points.

**Synthetic Shorthand, Graham-Pitmanic**. The book that makes it easy for the beginning student. It is hard to influence shorthand teachers to change books, but the Synthetic has made a lot of converts during the last year.

**Bank’s Touch Typewriting**. The only publication of its kind that secures a technically correct manipulation of the key-board.

**Maclaren’s Commercial and Industrial Geography** now in preparation. It reads like a story; intensely interesting and in every way a remarkable publication. Send for sample sheets and prospectus.

**American National Banking**. A revelation to those who want to know exactly what bank book-keeping is and who want to see and use business papers just as they are handled in banks.

We have calls for more Commercial Teachers than we can supply. The demand is for those who have a good academic education. Let us hear from all such teachers who want positions. No charge to either party.
The Benn Pitman System of Phonography

Is the only system of shorthand which has stood the test of forty-five years of hard wear in the hands of writers of all grades—from the business clerk to the reporter of the National Congress; and it is the only one called by the United States Bureau of Education.

The American System of Shorthand.

WHAT A FAMOUS CONGRESSIONAL REPORTER SAYS:

The "system" written by myself is substantially known as the "Benn Pitman," which, during years of professional practice, I have found admirably adapted to reporting use.—David Wolfe Brown, Official Reporter, U. S. House of Representatives.

Principals of shorthand schools, business colleges, academies, and private teachers of shorthand are invited to correspond with us. Full information will be cheerfully furnished.

We take special pains in assisting principals to engage competent teachers of phonography.

THE PHONOGRAPHIC INSTITUTE COMPANY,
CINCINNATI, O., U. S. A.

E. C. MILLS,
195 Third Ave., Rochester, N. Y.,
will send you a set of business capitals, arranged in systematic order for practice for 25c. They are fresh from the press and will encourage you to better writing.

When all the other systems fail,
And troubles come as thick as hail,
Don't say touch typing is not right.
For Rutherford's charts are "out of sight."

FINEST SUPPLIES FOR PENMEN AND ARTISTS

All goods go by mail postpaid except where express or freight is mentioned, in which case carriage is paid by purchaser.

Zanerian Fine Writer Pen—The best and finest fine writing pen ever made for engraving, card writing and all fine script work. Gross $1.60, 1 Doz. $1.60.

Zanerian Ideal Pen—One of the best pens made for general penwork—business or ornamental. Calveskin case. $1.20, 1 Doz. $1.20.

Gillott's Prinapen No. 1 Pen—A fine writing pen. Gross $1.20, 1 Doz. $1.20.

Zanerian India Ink—A fine drawing ink and letter preparatory script and drawings for photo engraving. 1 Bottle. $0.30.

Writing Paper—Finest 14 lb. paper made. 960 sheets per ream, ruled wide and fine. 1 ream by express $2.15.

Writing Paper—Same quality as above mentioned but 10 lb. per ream. 1 ream by express $1.85.

Practice Paper—Best for the money to be had. 1 ream by express $1.40.

Send stamp for samples of paper.

Bucie—100 fine white—36c.

Express—100 fine white—40c.

When you need anything in our line write us for prices, as we can furnish almost anything and save you money.

Cash must accompany all orders. Prices too low to keep accounts. Remit by money order or stamps for small amounts.

Address, ZANER & LEBER, Columbus, O.
Sit at the table nearly square in front, with both arms resting thereon. The left with the elbow on the table from two to four inches, the right with the elbow projecting over the edge about two inches. The right arm should rest lightly on the table and be free to move in any direction, while the body is supported on the left arm. The sides of the paper should be placed nearly parallel to the right forearm. The paper should be held with the left hand above the line of writing. Do not lean too far forward or bend over your work, but if your eyes are not defective keep them from twelve to fourteen inches from the writing. Sit close to the table, but do not lean against it. Keep the feet flat on the floor. Compare the above very carefully with the two illustrations and often during your practice read the above instructions.

Movement

The movement commonly known as "Muscular Movement" is the foundation for practical business writing. Exercises will be given from time to time to develop this easy way of writing and while the muscles may seem stubborn and unwieldy at first we must impress upon the student the necessity for the careful and systematic working of each exercise. No exercise will be given that does not have a direct bearing upon some letter or part of letter, thereby making every stroke in the students' practice count for the most. The different movements will be thoroughly explained as they are presented.

Instructions. Plate 1

Exercise 1 is one of the most essential movements used in writing. At first it should be made to fill two large spaces. We call the distance between two blue lines one large space. Now force the arm to make this movement just twice this size. Anyone who can make the oblique exercise with a free movement will not experience much difficulty in making the oval. This exercise is made by keeping the sleeve stationary on the table, and forcing the arm to move in and out of the sleeve, using no finger action whatever. Arm down. Next run the exercise across the page and try to make it black. This should not be done by pressing heavily on the pen, but by making a series of very light lines before moving toward the right. The compact exercises will furnish you the kind of material needed for practice for some time. Beginners should commence with the large exercises in order to break up the slow finger movement and to give the muscles reserve power. Then the motion should gradually be worked down to the smaller exercises for movement control. This small exercise practice is very valuable just as long as the motion comes from the arm and the fingers are kept quiet.

Make No. 2 to fill one large space. Exercise 3, one half space. Exercise 4 should be made with four rows of little compact pulling movements. Remember, it takes from three to five minutes to make a line of No. 1 properly, and about ten to fifteen minutes to make a line, i.e., four rows as shown in No. 1. Do not be discouraged if it takes a long time to fill a page of this work, but practice upon one thing until you become the master of it. Do not be afraid to spend considerable time in the practice of these fundamental exercises.
All the exercises in this plate are direct ovals. Notice the direction of the little arrows. Begin by making the oblique exercise as before and then swing to the left and form the oval. This will produce the pulling, or oblique motion as explained above and also the rolling movement of the arm. Use no finger motion in any of these exercises. Follow the same instructions as given in Plate 1 regarding the size of exercises, fine lines, etc.

Instruction. Plate 3

All the capitals in this plate are the direct outgrowth of the direct oval as explained for Plate 2. Exercise 9 is the retracing direct oval. Make seven down strokes in each and count 1-2-3-4-5-6-7. Finish with the small oval as found in the "O." No. 10 should be made with a free, pulling, rolling movement and aim to get a uniform motion. Count 1-2 for each letter. Avoid a jerky movement. Begin large and gradually work toward the small. Keep the movement alive while making the very small capitals. Nos. 11 and 13 should be treated same as No. 9, with the exception of first forming the capital and then making the oval to help establish the movement. The two down lines in No. 12 should be made nearly parallel and do not widen the letter too much. On the other hand, if the letters are too thin, practice making oval exercises very wide; then gradually apply the same movement to the letters themselves. Begin No. 11 with the dot and make the top part of "E" a little larger than one-third height of letter. Make the loop small and nearly horizontal to base line. Nos. 15, 16, 17 and 18 are reviews and all the letters are made the same height.

Instructions. Plate 4

First turn the page lengthwise for practice across lines as the perpendicular blue lines serve as excellent guides for correct small letter spacing. Count out fifteen lines, which is half the distance across a page of foolscap. No. 16 is the straight line made across and back without lifting the pen. Count one for each stroke and secure uniform speed. Adjust the paper that the arm may rest at the center of the space to be filled. Notice that the hand is resting on the two nails and also that it does not turn toward the right in moving across the page. No. 30 is same as 19, only shorter. No. 31 is made by using the under pull motion a little. This is important as it helps in building up the upward strokes. No. 32 is the figure "1" and should be made with a definite downward stroke. Know right where you should start and then finish at same place every time. Nos. 33 and 34 are a combination of Nos. 31 and 22. Count one for each down line in No. 34. No. 35 is the "naught." It should be made carefully, closed at top and rather oblong. No. 26, the naught combined, forms the small "o." This is an excellent drill for class time work. Count one for each letter and make them on the blue lines. No. 25 is a review of the figure "1" and the "o."

Send Practice Work

It will aid me in mapping out future lessons if you will kindly send a few practice sheets of your work when they are finished. By doing this I can get a good conception of your ability to digest the copies that are given. If the instructions are not clear, please say so and I will try to improve my diction. Please mention that your work is from THE PENMAN-ARTIST AND BUSINESS EDUCATOR.
MOVEMENT EXERCISES fill an important place in learning to write a good business hand. I believe that many who are ambitious to become good writers are retarded because they do not understand the real value of movement exercises, and make little or no use of them. It is not alone the special shape of the exercise that aids you in acquiring a good hand, but you get a free and easy movement which cannot be obtained in any other way. The more skillful you become in movement exercises the better your writing will be. No one can become a good writer without mastering movement exercises.

For good writing you must have a light touch and free movement. Some may write a fair hand with a finger movement, but those who have access to a free forearm movement write much better. Waste no time in planning as to how you can get out of these simple exercises, but take my word for it that it is the only short cut and the only method. It is not so difficult after all to acquire a good hand if you but devote a few hours each day to penmanship practice.

Do not think for a moment that your hand writing is good enough, nor excuse yourself by saying that you do not intend to become a professional writer. The writing of the average student is not what it should be and if you would be successful in securing the best and most lucrative positions you must write better than the average. Business men like to see good writing, they admire it and talk about it, and the bookkeeper, stenographer or clerk who can write a good business hand is always sure of getting first place and promotion.

There are other reasons why you should be a good writer. It is a rare accomplishment and affords abundant inspiration to others. We lift ourselves above the common plane of living through the most excellent examples set by others. Thousands upon thousands of great men are striving to be still more eminent not merely out of a selfish motive, but to open the way for others. Fame and honor crown the lives of our great educators, because of the good they do in the interest of their fellow-men. If you are a good writer, a good teacher, or have good qualifications in anything, others will follow you; and it is in this that we are fully compensated for our labors. You may write a fair hand; it isn't good enough; it should be extraordinary, and it is within the reach of any student.
3. The letters selected for this course are thoroughly practical, and while there are many styles, several of which may be used in business writing, the writer believes that none are better than the copies given. Select a firm and undisputable style, and stick to it. You should not limit your practice on any of the letters or exercises, but practice frequently on these copies during the month. Take one copy at a time, and practice on it long enough to show some improvement.

It is necessary to have access to a good forearm movement that is fairly well under control, for the best results in making small letters, for which reason we have arranged capitals and exercises first. Follow the outline and you will make no mistake. Neglect nothing. Keep a supply of good ink, pens, and paper, and practice as though the fate of the universe depended upon the results.

**Lehman's Position**

[The cut to the left illustrates Mr. Lehman's position of the hand. It came too late, however, to be properly incorporated in his lesson.]

The exercises below are from the pen of that young and skillful penman, S. M. Blue.

They are a splendid supplement to the work of Messrs. Mills and Lehman.—Editors.

**Use the Penman-Artist and Business Educator in Your Classes**

A. S. Combs, of Draughorn's College, Little Rock, Ark., writes that he has been using the **Penman-Artist and Business Educator** in his penmanship classes and is well pleased with results.

Hundreds of teachers will undoubtedly use our journal this year. Messrs. Mills & Lehman's lessons will furnish the very best material for class use that can be had in this country. Be wise, and use these lessons freely.
Mr. E. Ardon Plummer, of Jamestown, N. Y. Business College, sent some specimens of students' work which, for accuracy and business-like qualities, we have never seen excelled. The work done by the ladies excels that done by the gentlemen.

Miss Sue E. Andrews, Supervisor Penmanship and Drawing, Duquesne, Pa., sent specimens of freehand perspective drawing which demonstrate that the pupils are grasping the subject in a practical manner. Miss Andrews is a practical teacher.

W. H. Lyon, Ft. McPherson, Ga., writes a strong, practical hand. He followed the lessons in the P.-A. & B. E.

L. M. Thornburg, Principal Commercial Department, Patterson, N. J., High School, submitted specimens in the form of recommendations from students, which we have never seen excelled, if equaled, by any other. From the standpoint of actual business penmanship they demonstrate that Thornburg is getting that which has heretofore seemed impossible.

Some of the best "first grade" specimens of writing we have ever seen came to us from Miss Jeanette A. Krebs, Ashland, O. She is a success as a teacher of writing—there is no doubt about that.

By Burnette
In looking over the past in regard to art in writing it would be interesting to know just how many of our penmen have been encouraged by the wonderful work of John D. Williams, Fielding Schofield and others who gave much attention to flourishing. This art seems to grow less in favor year by year, while the practical side of penmanship is more in evidence than ever before.

Notwithstanding the criticisms and abuse given Gaskell's Compendium, it was a valued book to many young writers of that day. The writing is crude and rough, yet it is a book deserving of mention if only on account of its many friends and enemies.

There are many who remember with pleasure the time spent in practicing the numerous styles of letters of that publication.

Then we have Williams and Packards Gems, Ames Compendium, The Real Pen Work Self Instructor, Palmer's publications and many other books and journals which have given their influence to art in penmanship. The penman who possesses a library of these publications is fortunate indeed, and any pupil who can secure any of these books at moderate cost is advised to do so. Most of the old penmanship publications are now out of print, and copies in good condition are increasing in value rapidly.

Much credit for the advancement of art in penmanship is due the business schools of the country who have used it for years as a means of aiding and advertising the cause of business education. Credit is also due the Zanerian Art College, established in 1888 by C. P. Zaner, E. W. Bloser and L. M. Kelchner. This school at one time (after being established) had the prosperous outlook of three teachers and one pupil. But merit has won, and we of the penmanship profession know where the Zanerian stands today.

Among the writers of ten and twenty years ago and of the present time, there is great diversity in the style of the leader's artistic writing. These styles can be divided into three classes, namely: the small, round, heavily shaded style as written by L. Madaras, F. B. Courtney and others; the larger, accurate, fine lined style of which the late A. D. Taylor was the unequalled advocate; the medium size, angular, accurate writing of E. W. Bloser, L. M. Kelchner and others. The first style has speed and dash, the second and third accuracy, and all have grace and beauty. They first shows to advantage in card writing, the others in page writing. These classes of writing cannot be compared to advantage, and the writing that appears best to one person is sure to be another's second choice. These styles have their many admirers, but it is not generally conceded that any one style is best.

Specimens for criticism should be sent to C. C. Caxan,
Duke Centre, Pa.
Stamps for return postage should be enclosed.
Editorial Gossip

The editor in the latter part of June, became so sick as to escape with the pale cast of thought," (!) and the rippling waves of his lameness, as well as to jester, that his friends urged him to do something. As that is just what he has always tried to avoid, and as his solicitous friends grew daily more anxious, he hailed with great joy the announcement of his long desired return from the Pacific Coast on account of the Epworth League, and, after a resting (300 mancallions) set off a huge bonfire, within forty feet of his house at midnight.) Fourth, he started for the "land of fruit and flowers," also of Redd, Atkinson, Capp, and Isaac.

As we strolled along the Liberal Arts Building in Buffalo, we met the Misses Reichardt and Biervahl of the Van Sant School of Omaha, operating by the Touch Method for the Smith Premier Typewriter Company, Dr. Biervahl, of the Omaha Commercial College, Mr. Mosher's department, representing to interested spectator what could be done on the Kenington; and the Misses Carrington and Schriner naively by showing with. Griffin could do in preparing "touch" operators who could switch over to the Underwood, and evoke from its beautiful key board, music sweet to the ear of a harried office man, longing to have his litterless soon as he be able. These two young lades got some unusual work. They are of advantage to the excellent companies that employ them, and they are good advertisements for their respective schools. We found Western schools are using the Touch Method, and almost every manager confident to us the sweet secret that his school was the original school to take up typewriting by touch. The world is wise; priority in this movement is of slight significance at best; it is pleasant to please, and so, teach one of our confiding friends we expressed successively our satisfaction on having seen the original Touch Method school. Results vary, but the consensus of opinion seems to be that the Sight Method is soon to be a thing of memory only. Many use blank keys, and most schools have some kind of copy holder, these being quite frequently made by a local carpenter. Some teachers have their machines on opposite sides of long tables, with a roof-shaped copy-holder arrangement extending the length of the table between the rows of machines. A few have single copy-holders for each machine. The systems used are as numerous as the authors of Touch Systems.

In Chicago, we found Mr. John K. Gregg smiling, gracious, and hopeful. He had just closed the first day's business under the new combination: Gregg, Frye, Young, Kitt, and O. Kelle, the last three having been with the Metropolitan Business College during the last year. Those who attended the conventions and read the class papers will notice that this group of teachers is of long standing. Nevertheless, the faculty is a large one, and these teachers, although men of experience, are young, vigorous and enterprising, and we predict that they will build a large and successful school.

The Chicago schools appear to find a summer session a profitable feature of school work. Throughout the East, it is commonly found that business schools have terms agreeing with those of the public schools, and in many of them the close of June finds the teachers having away to some resting place, where, by change of occupation and scene, they recuperate their powers for the intense strain of the succeeding year. Peirce School, Philadelphia; the Stewart and Rider Moore schools of Trenton, N. J.; the Packard School of New York; the B. & S. and Butler schools of Boston; and the H. A. S. school of Providence, R. I., are good examples of this class. It would be better for all the classes if this practice were extended to all business schools.

We found the Western Iowa Business College of Council Bluffs, under the management of Mr. Witt, a prosperous condition. Mr. Witt and his pupils are practicing simplified writing, and are enthusiastic supporters of the P. A. and B. E. Indeed we found a surprising spirit of patriotism for the paper everywhere throughout the West.

J. W. Lampman has to some extent, relaxed his grip on the penmanship work in the Omaha Commercial College, and is giving instruction in other branches in that school. He is easily able to do this, being one of the few professional penman who are college men. Penmen generally are finding that they have less flying eagles, and flying through the airless, though no birds are ever over the people. The people have come to see, and managers of business schools have been quick to recognize, that writing is but one of a group of closely related subjects, which, when mastered, form a foundation for business life. Therefore the penman who can do nothing but write, has come more and more to "lag" upon the stage." We know of several expert penmen who do not command more than $75.00 a month, but who could have had almost their own price ten or fifteen years ago, and who could today have many positions open to them at annual salaries ranging from $1000 to $2000, if they were as capable in other subjects as they are in teaching writing. They ought to emulate the example of Mr. Lampman.

Much the largest school in Denver is the Modern Business College, managed by W. T. Parks, a friend and disciple of the Zanerian system is a beautiful city, though beauty is marred somewhat by smoky smellers. The climate is delightful, and the views of the Cyclopean Rockies are enough to inspire young people to live lives lofty and great. For Mr. Parks' windows the snow-capped Rockies eighty miles away can be seen, as well as lesser elevations fifteen miles distant.

Denver is practically the center of a circle bounded by schools in which there is no business city of considerable size. There are no other large schools in Denver and the field is therefore a splendid one, which Mr. Parks is rapidly and successfully developing.

The Central Business College of Denver, has very pleasant rooms, and is well equipped, but, as at the other called, the attendance was very light.

The Woodworth Wallace schools of shorthand and business training had a good attendance, and is under the control of energetic gentlemen. Mr. W. A. McPherson of this school is an enthusiastic advocate of vertical writing, the only business college in the country that exhibit a favorable view of this strange doctrine.

The Salt Lake Business College, under the management of Mr. Joseph Nelson, is prospering. Mr. Neese, a member of the Latter Day Saints' Church (otherwise known as the Mormon Church,) and was formerly in charge of the commercial work of the Latter Day Saints' Business College. His influence with the powers that be in the Church, and his wide acquaintance among the business men of Utah, give him unusually good opportunities, and he is improving them. This school stands for high grade work and yet the soliciting bacillus has got in its work, several men being kept out among the mountains soliciting continually for the school. We can't help wishing that all commercial schools might abandon this unworthy method of getting business.

The Latter Day Saints' Business College, is in an excellent new building. The rooms are splendidly equipped, while the course is comprehensive and thorough. Few Eastern schools can exhibit a more satisfactory or elaborate equipment for Office Practice than can this school. The principal of the Commercial department, Mr. Bryant S. Hinckley, has traveled quite generally among the Eastern schools and, in planning his course, has made excellent use of what he found. We shall have an illustrated descriptive article on this school in an early number.

Salt Lake City is well worthy visiting. The Temple erected by the Church of the Latter Day Saints, is imposing edifice of rare architectural beauty, constructed of white granite, even to the pinnacle of the tallest tower. It cost as much as the Congress-
ional Library in Washington, and was forty years in building, having been finished in 1883. None but members of the Church ever see inside its doors. The Tabernacle is an immense turreted-back auditorium containing a wonderful piece of architecture and enjoying such marvelous acoustical properties that any one of the 15,000 auditors it can seat, may hear a pin drop on the speaker’s platform. There are two gates whose entrances, with no windows. It is situated within the same general enclosure as the Temple, and is used for all ordinary services.

Visitors to Salt Lake City are told all sorts of incredible yarns by those who delight to play upon the credulity of Easterners. They point out a house within an inclosure belonging to the Church, and gravely tell you that each of the many buildings which represents one of Brigham Young’s wives, that this building is where he used to keep them. Then they point out the crude pillars in the rude wall surrounding the enclosure, and solemnly remark that under each one lies one of Young’s wives.

A Canadian minister asked us, as we approached the city, whether we had noticed the signs of Mormon life. We replied in the negative, telling him we were passing several buildings each, and that he had no doubt each house was for a different wife. Another gentleman called to our attention the presence of more than one entrance to the various houses we were passing. He was perfectly sure that each entrance signified another “half” of some Mormon patriarch. Truly the power of suggestion is great, but, of course, sincefact, Mormons do not wear horns, nor is any of their habits so distinctive as to set them out from other people. We talked for two hours with a gentleman, supposing him to be a Gentleman of the Conversation brought out the fact that he is a son-in-law of the President of the Church, the most powerful official in the Church, save one. After an hour with another gentleman, we were convinced, in general, a question brought out the fact that he was the son of a polygamist. But there was nothing about either of these men that would mark them as different from ordinary men.

**

The ride from Salt Lake City to Sacramento was across dry desert wastes, the monotony broken only by an occasional humorous scene, such as a desert stationer receiving from one car to another, and glimpses of widely separated groups of squallid and board buildings called, by courtesy, towns. In one of these, to our infinite surprise, we were told that a business, (of course it was a “college” there) was maintained during several months of the year, that they had a splendid school system, fine libraries, and, in the eye of the newsboy, and — well, we listened for the rattle of the street cars and the cry of the newsboys, and, suddenly remembering that we were yet in the midst of the alkali deserts of northern Nevada and Oregon, the population by the last census, is less than 30,000, we asked for the population of the city and were cheerfully told that it was six hundred.

We stayed from the canvas lunch tent with a great desire to meet the genius who could successfully conduct a business school in that oasis of the desert.

**

We walked into Mr. E. C. Atkinson’s yard in Sacramento, in time to receive an invitation to step into the basement, and sample some of his peaches. The occasion is not to be described here, but, with boxes and tubs full of peaches standing about, it may be imagined that we thought of our absent Eastern friends, with profound pity. Mr. Atkinson is one of the pioneers in commercial training, and takes great pleasure to visit with him, recalling men whom we each knew. He is conducting a good school, has a charming home, and is in possession of enough of the physical requisites that he has left the music in the afternoon of the life. It was with regret that we said “Goodbye” to Mr. Atkinson. Perhaps we shall continue this record of “Impressions by the Way” in our next.

**

Methods in Business Arithmetic

BY WALLACE H. WHIGAN, CHICAGO, ILL.

Business Arithmetic is the application of arithmetical processes to the affairs of business.

In Primary Arithmetic the student is supposed to possess or to acquire a knowledge of the fundamental operations and their applications. In Business Arithmetic he must know, and must be able to make the proper applications, but the result must be correct. We must in Business Arithmetic lay great emphasis on accuracy. In fact, the foundation stone of no little importance in all calculations is accuracy. Probably if the arithmetical progress of the student had been properly guarded as he advanced, in proportion to development, with a proper allowance of time, the latter would need no special attention. However, we are talking of conditions as they exist and not of what they might have been.

"A MISTAKE IS AS GOOD AS A MILE."

It should be forcibly and continually impressed on students that anything short of the correct result is a failure. From the standpoint of the teacher, it is such a thing as 75 per cent. accuracy. The work in question is either correct or incorrect. There are no degrees of accuracy, 50 per cent. is not excellent. They are both failures, and must be corrected.

There is no arithmetical work that so tends to produce accuracy as thorough and frequent drills on the fundamental operations. The subjects of addition, subtraction, multiplication, and, occasionally are not common receive sufficient attention: here a conflict of the mind as to proper application of principle is not present. The mind is concentrated on the result. Frequent oral drills should be interspersed at all stages. The work must be varied; monotony is not conducive to the best results. The mind is concentrated on the result. Interest must be aroused and kept throughout. The work should have a purpose to the student.

Great care should be exercised in writing the figures, so that it will not be necessary to stop in any of the computations to decide on the identity of a figure. This is often mistakenly frequent for each other are 3 for 5, 7 for 1, 9 for 7, 6 for 0.

RAPID ADDING IS RAPID READING.

Spelling and reading are not confined to text-books on these subjects. They are indispensable factors of intelligent work in arithmetic. Thus the student may call the letters of each word, resorting to the A-B-C method of reading, or he may recognize the word, or even a sentence, by sight as a unit; likewise in arithmetic, in adding a column of figures, the student must recognize combinations, which are analogous to words, in reading. Thoroughness and practice in exercised in the simple combinations. They are generally known as the 15 simple combinations. Combinations may be arranged in pairs, the figures to be added in pairs vertically; the sums which are to be called off rapidly by the student:

1 4 3 8 2 5 4 3 8 9 6 3
7 6 9 4 6 3 7 2 6 2 1 2

He should not pause at each combination. The result should be pronounced as soon as the numbers are seen. Practice, until a column or line of combinations can be called as quickly as a column of figures. One can pronounce, say ten words swiftly, the syllable each, as quickly as he can pronounce any ten separate letters of the alphabet. This is a student to see whether he is increasing in speed.

In order to acquire the proper degree of speed, practice should be had by simply increasing each total by the next number: that is, adding up, 1, 2, 3, 4, 5, 6, 7, the student should not be asked to say 4, 7, 10, 13, 16, 19, 22, 25; are 11, and 6 are 17, but should name the results, 11, 17, 23, 29, and so on. Do not attempt complex combinations until simple additions are both rapidly and correctly pronounced. Then combinations may be picked up here and there in the column. It is not a good plan at the beginning, to attempt combinations of such figures as 7 and 5, or 6 and 5. For some time combinations are best—never exceeding 10 or 12—which can very readily be added to the previous total.

Many expedients should be resorted to for the purpose of creating enthusiasm and interest. Each ten can be made to devise all the necessary changes that his class should have. No set rule can be established. Classes, as well as persons, differ.

BEING OUT THE RELATION OF SUBJECTS

In developing the subject of Arithmetic, do not treat each of the different departments which are given in many of our arithmetics, as separate and unrelated subjects. The best teachers of arithmetic at the present time, admit, that these subjects, When fundamentals are being taught, some idea of common fractions is also brought into use. Then, as a knowledge of common fractions is acquired, some of the simpler decimals may be introduced.

Percentage is closely allied to decimals and should not be put off until the subject of decimals is entirely finished. A subject which a class seems very proficient at the time of finishing it, will need reviewing from time to time. There is nothing new to learn in percentage, after having mastered the principles laid down in common fractions and decimals, and the application of old principles to new fields. To solve percentage problems on the common fraction basis is an excellent drill. When taking up a subject, a problem should be prepared and solved to show all its possibilities. That is, exhaust the sequence before attempting a new case. If two numbers added together give a certain result, it is no difficult feat for the student, having the total given and one of the figures, to find the other. He will get a better knowledge of the subjects by associating addition and subtraction as he advances. Likewise in the study of fractions, he should not be kept on the first case, as is ordinarily done, until he is tired of that section; then be given the next in like manner. Review previous work that is related to the subject or division in hand.
THE SIMPLICITY OF PERCENTAGE

It is known that \( \frac{3}{4} \) or \( \frac{1}{4} \) of a thing or quantity equals the whole of it. It is to be known that \( 100\% \), a new term, also represents the whole of a thing or quantity. Therefore \( \frac{3}{4} \) or \( \frac{1}{4} \) of a thing or quantity each equal \( 100\% \) of it.

\[ \begin{align*}
1 \times 3 & = 3 \times \frac{1}{3} = \frac{3}{3} = 1 \\
1 \times 4 & = 4 \times \frac{1}{4} = \frac{4}{4} = 1
\end{align*} \]

One fourth of a thing or quantity is formed by getting one of the four equal parts into which it may be divided; likewise, \( 25\% \) of it is equal to \( \frac{1}{4} \) of it. Review and apply partial fractions.

ILLUSTRATION

1. \( \frac{200}{4} \) of \( 85 \) is \( 20 \). \( \frac{200}{4} \) is \( 20\% \) of \( 85 \).
2. \( \frac{20}{4} \) of \( 9000 \) is \( 225 \). \( \frac{20}{4} \) is \( 25\% \) of \( 9000 \).
3. \( \frac{1}{4} \) of \( 8000 \) is \( 2000 \). \( \frac{1}{4} \) is \( 25\% \) of \( 8000 \).

The DISCIPLINARY VALUE OF MEASUREMENTS

There is no better work in arithmetic for the development of all the students, than is furnished in measurements. The student must recognize lines, surfaces, and solids. Develop the relationship of line to line, as feet to yards, rods, miles, etc., surface to surface, solid to solid. As soon as he recognizes the value of lines, locate a certain length, and while measuring be comparing with the length of the school room, or the school yard. In considering surface measurements, the student should be asked to find the surfaces of many objects, with which he has a fair acquaintance, of different sized cubes, finding length and width of objects of paper to cover cubes, and so forth. This could be covered by leaves of arithmetic, etc. Make use of measurement problems in percentage and its applications.

EDUCATE THE SENSE OF PROPORTION

Construction problems that are devised, call for a close application of known principles of our subject and school yard will furnish many valuable problems in surface measurements. After plain surfaces can be handled readily, make allowances for all of the jogs and irregular points in the surfaces of these. In finding the surface of a room, let all openings be excluded. It will give a great opportunity for measuring. Problems that require some imagination and general knowledge on the part of the pupil, who are also of great value; as, say: A farmer came to town this morning with a load of wheat. What is the value of the wheat? This will call for considerable time and work, but worth it. He want to know how many horses were hitched to the wagon. He will have to take into consideration, the roads, in order to determine how much the food which will have to find the market price of the commodity for sale. Such problems will, of course, bring out many results by the class. It will afford, however, an excellent opportunity for them to compute notes to note their powers of observation, and see which one is the most reasonable, and which are incorrect. Such problems are interesting. You will find that your students will hand in many reliable results after doing such work.

THEORY AND PRACTICE IN BANK DISCOUNT

When the subject of bank discount is taken up, the first thing to do is to discuss the commercial law of the note, in its various phases. Nothing better can be had than to have a number of notes written upon, dated some time in the past, that will mature in some future time. Teachers who have carried their classes successfully through interest, discount, and partial payments, will be surprised at the inability of their students to make the application from the book to the actual note in question. Many of them will be unable to take even the first step. They have not been taught to make the application. They are used to the problem as it is stated in arithmetics. They have been taught to figure, but not to appreciate the practical value of the subject.

Report of Business Department National Educational Association

The fourth decade of the N. E. A. is just completed, and the beginning of the fifth comes with the undoubted assurance that Commercial Education has been stamped with the approval of our leading educators. A few years ago the Business Department of the N. E. A. was tolerated; today it is considered one of the strongest sections of the organization.

From the annual conference of Commercial teachers on Wednesday afternoon to the close of the convention the greatest enthusiasm was manifested not only by old commercial school men but by educators in every department who wished to learn the purpose of this new section.

"The Commercial Study Conference" on Wednesday afternoon was led by Thomas H. Knight, of the Girls' High School, Boston, Mass. Commercial teachers were present from all parts of the country and following out the suggestions of the leader expressed themselves freely on the subject under consideration.

W. E. DOGGETT

Mr. Davis suggested a large number of culture subjects as a fitting foundation for the purely business branches. His remarks called forth a sharp discussion as to just what branches should be included in a purely commercial course. Some of the more radical teachers maintaining that few culture subjects were required, others contending, with equal earnestness, that at least Algebra, Geometry, Economic History, and one or two modern languages should be taught. All united in the belief that the commercial department will command higher respect as its teachers stand for higher work and secure better results.

THURSDAY, JULY 11

The regular sessions of the Business Department began in the rooms of the Detroit Business University. The President, Mr. W. E. Doggett, Commercial High School, delivered his address. Mr. Doggett always has sound ideas upon the subject and upon the value of association meetings. He suggested, among other things, that the program of the department should be of a more connected nature, that it should be well to devote whole sessions to the discussion of some one question, vital to the interests of this department. That a committee should be appointed to investigate and report on the various phases of such a subject, and that this committee should be made up of prac...

The Business-Artist and Business Educator

Mr. T. W. Doonker

Experience in the conduct of affairs is absolutely essential to the completion of a commercial education. There is much needed also which cannot be obtained in a business concern. Business training, we will say, is then the preparation for actual business, and does not claim to be complete in itself.

Under the following heads we may include the most important subjects which must constitute the purely technical side of the curricula of commercial schools, namely: Book-keeping and Accounting, Correspondence, Commercial Law and Business Practice, Money and Banking, Corporation Finance and Securities, Transportation, Insurance, Private Administration, Commercial Geography, Technology and Economic History.

Business teachers are, or should be, masters of their subjects, and furthermore teach them with an eye single to the training of young men and women for the conduct of actual business enterprises. Their instruction, therefore, must be technical, practical and efficient. They must possess the ability to teach, for without it, it is not possible to obtain satisfactory results.

Training of at least four years is necessary in a commercial education:

1. A general all round education, such as gives a person command of all his powers, intellectual, physical and moral, and equips him with the tools of his profession.

2. Special training in the subject to be taught.

3. Business experience. The teacher must know what the problems of business life are, in order to give his pupils the requisite training.

4. Pedagogical training. The teacher must be an expert in securing the necessary equipment for teaching business subjects, and must be familiar with the work of various colleges and universities, especially the University of Wisconsin.

Mr. Schock distinguished between work done by business colleges and the real business education. The ideal business training would lead the young man to possession of an expert in intellect, and to a preparation for his business as a whole, and sound as that furnished his brother by the liberal arts course for entrance upon a professional career.

From this phase of the subject Mr. Schock treats the subject under five sub-topics. These were well presented; in fact, in reporting this paper, as much of these read, it was difficult to decide what to omit, as they were of such an extremely high order.

1. The condition of commercial education in the United States today as a gauge for the need of specially trained teachers.

2. To what extent has the need for this class of teachers been met, and through which channels?

3. What constitutes an adequate education and training for the commercial teacher?

4. What kinds of institutions are best equipped to furnish this training, and what suggestions can be made for an enlargement and betterment of the facilities?

5. What are the opportunities and rewards which commercial teaching holds out to those who contemplate entering upon this field of educational work?

FRIDAY AFTERNOON, JULY 12.

Myron T. Seubler, Principal State Normal School, New Palz, N. Y., read an excellent paper on "The Duty of the Public School System with respect to Business Men." No educational subject is more prominent before the public today than this one of business training. Everywhere school boards, boards of trade, schools, colleges and universities are discussing ways and means of providing thorough, liberal business education.

It has been assumed in America that success in business depends upon natural sagacity, and that foreign youth lead others in business pursuits because they are so thoroughly prepared for their life's work. It must be our aim to furnish equally good or better courses of study in this country.

An interesting part of this paper was the description of qualifications desired in office assistants as evidenced by the want ads, and
reply of business men to the following question: "In what respect do you find the young people who come to you for employment deficient?"

Almost any boy in almost any school is more than likely to be a slovenly penman, an unreliable speller, a poor reader, unable to compose a creditable letter, and you cannot be certain that he can add, subtract, multiply and divide with even fair accuracy to say nothing of rapidity. His attitude toward the world and his disposition towards work is not likely to be as helpful, cheery and willing as we would wish. Further than this, if he should go through the high school or even college, he would be but little, if any, better in respect to the simple essentials of a business education. Yet if the same boy after leaving the seventh or eighth grade, or completing grammar school, should enter a reputable business college, it is more than likely that he would come out in six months or a year a good penman, a fair speller, reliable in fundamental rules, and acquainted with business forms, besides having picked up some knowledge of book-keeping, shorthand and typewriting. Is there not something we public school people can learn from the business colleges? What is the secret of their success? It is devoting nearly all the time for six months to three or four essentials instead of diffusing attention by pursuing a large number of subjects at the same time.

Mr. Scudder, however, favors ethical instruction, nature studies and sociology, besides the ordinary necessary subjects. This he says is the old call for more subjects in the curriculum with no let-up on the thoroughness of the work.

There must be more snap and go in the teacher's work, less carrying out of some patented method.

The useless following of methods when direct approach to the subject is better, wastes much valuable time. "Sugar coating" the lessons and "jollying pupils along" has but a limited place in Mr. Scudder's idea of the model school. He considers that much waste of time results from the beginning of subjects at the wrong stage of cerebral development.

Below is given a suggestive three years commercial course without foreign languages, which is interesting from the fact that it represents the consensus of opinion of hundreds of business and professional men in New Haven.

FIRST YEAR

English (literature; composition; grammar; rhetoric) (4).
History (with special reference to the development of industries, trade and commerce) (3).
Algebra (5).
Physical Geography (3).
Book-keeping; commercial arithmetic (5).
Drawing (1).

Stenography may be taken as an additional subject in the first year by pupils whose work in every other study is entirely satisfactory.

MIDDLE YEAR

English (literature; composition; grammar; rhetoric) (4).
Geometry (4).
Modern History (3).
Business Practice (4).
Commercial Geography (1).
Chemistry and physics (half year of each) (5).

ELECTIVE

Typewriting and Stenography (5) may be taken only by those standing in all other studies is good.

SENIOR YEAR

English (literature; composition; grammar; rhetoric) (4).
Business Practice (2).
Physics or Chemistry (5).
U. S. History and civil government (4).
Commercial Law, 20 lessons.
Political Economy, 10 lessons.
Sociology, 20 lessons.

ELECTIVE

Typewriting and Stenography (8).

Since making up this course Mr. Scudder has decided that Shorthand and Typewriting should be compulsory, because tending to quicken thought, save time, improve spelling and promote the power to read well. He also desires the "true education—the education that exalts the soul above all material things," the humanizing and civilizing influences.

Mr. F. F. Musrush.

Mr. F. F. Musrush, Lakewood (Ohio) Schools also read a paper upon the subject of writing. Discussing the subject from somewhat the same standpoint as Mr. Barnhart, he believes that not so much depends upon the style of writing as upon the manner of presentation.

Any child possessing a fair degree of intelligence and perseverance may learn to write well. He favors teaching vertical writing during the primary school course. Practice drills should be taken up in the fifth year. Copy books are a needless expense in many schools, besides tending to discourage pupils because of the absolute accuracy of the forms.

Grade teachers are inclined to neglect writing, but can we blame them when we reflect upon the stupendous amount of work required of children for which the grade teacher is responsible. In this, as in other subjects, we must work in order to secure results.

A pleasing break in the program came when Mr. Theodor Frame Lake, Commercial High School, Brooklyn, N. Y., described and illustrated the use of the phonograph in teaching shorthand.

In keeping with the spirit of American progress educators may take advantage of any mechanical aid. Up to a short time ago, however, the sentiment has been that, with the exception of the time honored fermata, the teacher's profession has not been open to mechanical invasion. There are "machines" in the profession but we attribute them to Divine oversight rather than to human ingenuity.

The largest school of correspondence in this country has taken up the use of the phonograph in teaching languages.

The use of the phonograph in the Brooklyn Commercial High School was a necessary step, as several hundred boys must receive daily shorthand with forty-five minute periods.

Mr. Lake divided shorthand study into three periods: acquiring principles, vocabulary period and the dictation period. During the period of early dictation work all the teacher's attention would be devoted to individual instruction, but what shall do the purely mechanical work of dictating? The phonograph may be utilized.

The machine relieves you of an immense
amount of purely mechanical work, and you are at liberty to pass among your students and bestow such individual instruction or assistance as they may need. The speed may be easily regulated, and it is essential that your dictation is uniform. No hesitation after difficult words with its tendency to cultivate a halting style, but dictation as it will be the method of commercial pupil self-reliance and quickness of thought.

Mr. Lake then turned on the phonograph, illustrating a lesson in dictation. He gave an outline of instruction for a shorthand lesson, and the phonograph played letters, testimony and general literary matter.

Considerable interest was shown in the last number on the program because of its unique character, and Mr. Lake’s happy manner.

The business meeting resulted in the election of Mr. I. O. Crissy, Albany, N.Y., as President; Mr. Francis, Los Angeles, Calif., Vice-President; and Templeton P. Triggs, Detroit, Mich., Secretary. The election of Mr. Crissy is particularly appropriate as he is the state representative of Business Education in that state, which has taken the lead in this important training.

All in all the convention just past was the most successful ever held, due in part to the greatly increased interest in Business Education, and in large measure to the energy of Mr. W. E. Doggett, President of the section.

In concluding this report I wish to express my obligation to Mr. Theodor F. Lake who furnished me with most of the data.

A. E. KIP
Brooklyn, N.Y.

The Education and Training of Commercial Teachers

By William A. Scott, Phil.D., Professor of Economic History and Theory, and Director of the School of Commerce, University of Wisconsin, Madison, Wis.

Delivered Before the Section on Business Education, of the National Educational Association, at Detroit, Mich., July 12, 1912.

Before beginning the discussion of my topic it will be necessary to give precision and definition to the term “commercial teacher.”

Commercial usage would seem to warrant its application to teachers of almost every grade, and in schools of very different sorts. In the work of commercial education all business colleges of various kinds, and departments in our high schools, normal schools and colleges are engaged. The subjects taught vary from elementary English grammer to the intricate matters of international finance. Some definition of the term, or at least some limitation in its use seems, therefore, to be necessary.

Limitations of the Term “Commercial Teacher”

For the purposes of this discussion, I shall exclude from the category of commercial teachers all those who teach branches common to many departments of education; and second, teachers of such technical subjects as are not strictly preparatory to the business of commerce.

Commercial, like every other branch of technical education, must be based upon foundations laid by instruction in subjects designed to train the mind and to give the student control of his faculties. Teachers of mathematics, English, history, and the various sciences are, therefore, quite as essential in schools of commerce as elsewhere, but the training demanded for teachers of these subjects does not depend primarily upon the re-organization of the curriculum to be built upon the results of the teaching. Certain branches of technical instruction designed for the training of business men have become specialized in the manufacture and teaching of business in the past years, and made a part of our country. The teachers of technical subjects in these schools require special training, but their needs will not be considered in this paper, because the branches have already been given long in the category of commerce. The term commercial teacher as I shall use it applies only to those persons who give instruction in the technical subjects necessary for the training of men and women for the business of commerce, strictly so-called.

What is Commerce?

As a branch of business, commerce is ordinarily contrasted with agriculture and manufacturing. Agriculture being defined as the industry required for the extraction of the raw materials from the earth, manufactures as that which works up these raw materials into the commodities needed for human consumption, and commerce as the exchange in the exchange of these commodities, and their delivery to the consumer. In the work of commerce thus defined, a number of highly specialized branches of industry are engaged, that being the very word of one’s mind. In its various branches this great industry is concerned with the carrying on of goods and men from one part of the state to the other in the processes of manufacture and sales, and the jobber and wholesaler are also specialized commercial agents who intervene between the manufacturer and the retailer, and the retailer completes the chain by delivering the goods finally into the hands of the consumer.

The business of banking is another specialized department of commerce. It is divided into a large number of still more specialized sections, the one most delicate and complicated processes of exchange. Another important field of commerce is represented in the stock and produce exchange of our country, which are the markets of the world. Commerce is as far produced, on which are determined the prices which, in the last analysis, condition the success of every branch of industry. Consular officers are also commercial agents who represent the government to protect and direct the interests of our commerce in foreign countries.

The most important branch of commerce, however, is not represented in any of the highly specialized industries which I have mentioned. Every manufacturing establishment and every farm has its commercial side. Indeed, it may be said that in the commercial sense, the only main product is the most important branch of every one of these departments of industry, because to it all the others are in a degree subordinate. The aim of all classes of producers is to earn as large a profit as possible, and this profit is never produced, in the last analysis, by a process of buying and selling so conducted as to produce a balance on the right side. In addition to the mechanical or chemical processes involved in its peculiar work, every establishment engaged in manufacture, mining or agriculture must conduct departments for buying raw materials and supplies, for selling the finished product, and for accounting and auditing. All other departments are subordinate to these, and must be manipulated by them. The work of organizing a great industrial plant in such a way as to secure the greatest economy of energy, physical and human, and the administration of the various branches of the company in such a way as to make secure the best possible returns are also branches of commerce.

The Work of a Commercial Teacher

The work of the teacher whose special training we have under consideration, therefore, is to train young men and women for the work of such highly specialized industries as transportation in its numerous branches, the various lines of trade, agriculture, banking, and produce and stock exchange brokerage, the Consular Service, and the various commercial processes involved in every branch of business.

Teaching Tools

We must next consider the educational instruments which the commercial teacher must employ, the tools of his work. Two obstacles confront us at the outset in the discussion of this topic, namely: the unorganized condition of some of the branches of knowledge necessary in the work of commerce, and the fact that very common among business men, that there is no way of acquiring the training needed for these branches of business except through actual experience in the establishments themselves.

Regarding this latter point I wish to admit frankly that experience in the conduct of affairs is absolutely essential to the completion of commercial education. No experienced teacher would for a moment assert that all the necessary equipment for the successful conduct of business can be acquired in schools. On the other hand, however, no one who has carefully studied the problem can fail to recognize the conviction that very much is needed in preparation for this experience which concerns themselves do not and cannot furnish. Let it be understood, therefore, that commercial training in schools is not a substitute for actual business, and does not claim to be complete in itself.

The fact that many branches of knowledge, which would be extremely helpful to the commercial teacher, are not taught in school, commercialized does not imply that we are totally bereft of technical instrumentalities for commercial education, but rather that the task of the commercial teacher is more difficult than that of his comrades in other branches of the teaching profession, and that his equipment must be so much the better.

Technical Subjects for Commercial Training

Under the following heads we may include the most important subjects which must constitute the purely technical side of the curricula of commercial schools.

1. Book-Keeping and Accounting

This seems to have been the earliest subject to attract attention, and is everywhere included in the curricula of commercial schools. To one quite familiar with the work found in business offices, we are apt to overlook the importance of the determination of the methods and forms of accounting to be employed, which involves the
Minutes

The meeting was called to order by Mr. Geo. P. Lord, President of the federation. The following members were present:

The first matter considered was the election of the St. Louis meeting. After discussion, Mr. Marshall moved that the first session be held Thursday evening, Dec. 29th, and the last session Tuesday morning, Dec. 31st. Seconded by Mr. Frye. Motion was carried.

By vote it was decided to leave the time for the election of the officers of the different sections to be settled by the different executive committees, with the recommendation that the elections all take place before the election of the Federation officers.

Mr. Bookmyer moved that the election of the Federation officers be held Sunday afternoon. Seconded by Mr. Marshall. Carried.

Mr. Marshall moved that the section meetings be held in the forenoon, and the Federation meeting in the afternoon. Seconded by Mr. Frye. Carried.

The matter of the program was next discussed and it was decided to place no one on the program who does not unqualifiedly promise to be present.

Mr. Bookmyer moved that the exhibition rooms be locked during sessions of the sectional and Federation meetings. Mr. Hiner seconded. Motion carried.

Mr. Lord suggested that the control of the exhibition rooms be turned over to Mr. Fritch. The matter was so decided.

Mr. Marshall, chairman of the Federation Executive committee, called for suggestions and asked the opinion of those present as to securing some prominent business man to talk before the Federation and that we open that meeting to the public of St. Louis and hold it in some large hall or auditorium.

After discussion, Mr. Lord moved that Friday evening be set apart for a public meeting under the auspices of the Federation, and that Mr. Bookmyer be authorized to advertise the same through St. Louis, invite the public and get some prominent commercial man of national reputation to deliver the address. Seconded by Mr. Miller. Carried.

It was decided that the Thursday evening social meeting at the beginning of the convention be held in the parlors of some hotel, to be decided later.

It was decided that two papers will be enough for each meeting of the Federation. Mr. Marshall suggested the discussion of the topic: "What Commercial Training Should be Given to Commercial Students?"

Mr. Marshall moved that each member of the executive committee be required to send to the chairman of the program committee within the next two weeks three topics which would be desirable to be discussed. Mr. Lord amended by making it the Executive Committee. Seconded by Mr. Kennedy. Carried.

Mr. Lord moved that the executive committees of the different sections be instructed to get their programs in the hands of the President on or before the first day of October. Mr. Marshall seconded. Carried.

Mr. Marshall moved that the president be given the authority of superintending the printing and publication of programs. Mr. Fritch seconded. Carried.

Mr. Marshall moved that the matter of hotel entertainment and accommodations be left to Mr. Fritch to report to the president. Mr. Kennedy seconded. Carried.

Mr. Marshall moved that the members of St. Louis be made chairman of banquet committee, and that the remainder of the committee consist of the following St. Louis Business College members: Perkins and Herpel, E. H. Fritch, J. Bohm, L. S. Oliver, Dr. W. M. Carpenter, Mr. Hayward, Mr. Draughan. Motion seconded by Mr. Kennedy. Carried.

Mr. Lord moved that we leave the matter of securing accommodations either in Mr. Fritch's or Mr. Carpenter's school, for the Federation meetings to Messrs. Marshall and Fritch, they making the arrangements and reporting to the president by the first of October. Seconded by Mr. Bookmyer. Carried.

Decided that Friday afternoon be the time on which the Business Manager's Association will hold its banquet.

Mr. Lord moved that Messrs. Young, Lyons and Marshall be appointed a committee on transportation. Seconded by Mr. Bookmyer. Carried.

Get Ready for St. Louis

The following letter and minutes have recently been received from President Geo. P. Lord, of the National Commercial Teachers Federation. Of course everyone interested in business education should attend, as it promises to be the greatest gathering of commercial educators ever known.

SALEM, MASS., Aug. 1, 1901.

MESSRS. ZANER & BLOSER,

Columbus, Ohio.

DEAR SIRS: Enclosed, I hand you a copy of the minutes of the meeting of the executive management held at Chicago, July 29th.

You will notice that the convention will be called to order Thursday, Dec. 29th, with sessions on 30th, 31st, and first of Jan. Lay particular stress upon the fact that we shall have an opportunity to rest and see the city on Sunday. You will note that the sectional meetings will be held in the forenoon, and the Federation in the afternoon. You will also note that we are going to try a new move on Friday evening.

The program has been left in my hands, and it is imperative that every program reach me before the first of October. The sooner the better.

We trust to have your cooperation to carry out these plans, and I shall be glad to hear from you at any time.

Yours very truly,

Geo. P. Lord, President.

SUBSCRIPTION RATES.

1 subscription, $1.00. 2 to 3 subscriptions, 85 cents each. 4 to 10 subscriptions, 75 cents each, 10 or more subscriptions, 60 cents each.

ADVERTISING RATES. Made known upon application. Write for them.

Change of Address. If you change your address be sure to notify us promptly (in advance, if possible) and be careful to give the old as well as the new one. We lose many papers each issue through negligence on the part of subscribers or postmasters.
J. C. Temple of Wichita, Kans., has had charge of the penmanship in the County Normal Institute during July, and will now handle that work in the Wichita Business College.

E. H. Miller of Marietta, O., is now teacher of Penmanship in the Anson Academy, N. Anson, Me.

Mr. R. C. King and Miss Flora Penrose of Osage, Iowa, on June 27, 1901, took upon themselves the marriage relation. May happiness and prosperity be theirs.

M. E. Fouch of Upper Sandusky, O., is now located at Batavia, Ill., teaching Penmanship and Commercial Drawing.

W. X. Currier of Rockford, Ill., has contracted with the Danville, Va., Military Institute for the conduct and promotion of the business and shorthand departments. Currier is a hustling, rising young man.

We were much pleased to learn of the sudden death of Mr. James C. Elston of Canton, Ohio. Three children, two boys and a girl, are left to mourn their father, and our sympathy goes out to them. Mr. Elston was one of the noblest young men it has been our pleasure to instruct and to know, and his wife was a most worthy companion.

On June 12, 1901, Mr. J. E. Cunningham and Miss Clara Morgan of Backhannon, W. Va., were married, and June is the greatest month of roses and of weddings. May their honey moon be long and sweet.

Geo. W. Sanford of Plainfield, N. J., goes to the Elitch, N. Y., Free Academy to organize the Commercial Department.

K. J. Bennett, Secretary of the Woodstock, Ont., Business College, recently possessed the Examination of the Institute of Chartered Accountants of Ontario.

A. S. Heagney, Providence, R. I., Principal of the K. L. Commercial School, reports such prosperity as to warrant him to arrange for twice as much space for his school as heretofore, and the same amount of additional furniture. This is good news.

"The Jacob Tone Institute Monthly," Port Deposit, Md., W. C. Stevenson, Managing Editor, is one of the very best things of the kind that reaches our editorial den.

J. D. Carter of Missoua, and recently of the Zeta Phi Institute, is teaching penmanship in the Edmiston Business College of Cleveland, Ohio.

K. C. Attucks, Millersville, Pa., again goes to the Mishawaka Business School to teach writing and the commercial branches.

H. G. Yocom, proprietor of the Massillon, O., Actual Business College, recently purchased the Riker Business College of Wooster, O. He will now conduct the two schools. Mr. J. E. Kobrin of Wichita, He is principal of the Theory Department of Bookkeeping.

J. A. Elston of Canton, Mo., has recently embarked into the illustrating and ad. writ- ing business. Success Bro. Elston.

Mr. A. E. Kibbe has accepted a position with the Notbook Commercial College, Olean, N. Y.

L. L. Weaver, supervisor of writing and drawing in the public schools of Collegeville and Salaman, O., has been reelected at an increase in salary. This means that Mr. Weaver and his school officials are doing a first class job, and the school boards wish to retain a good man.

Mr. A. R. Burnette has reengaged to teach in the Free (R. X.) Business and Normal School.

Mr. L. C. Horton, formerly of Bank's Business College, Quincy College, Pa., has purchased and is now conducting the Western Commercial Teachers' Association, Providence, R. I., last Spring. Sent free upon application to the author and publisher, J. W. Warr, Moline, Ill.

MUSIC AREAS

I want to say amen to your article on "Simple Writing." It's just what we need. One idea, one movement, and one way for all methods are the thing of the past. They are dead and buried and had but few mourners at attendance at their burial. Thank God, penmen are awakening to the fact that it takes more nowadays than the ability (2) to write half ashamed, half shaded caps, screaming birds and eagles, to become a thoroughly practical, up-to-date penman. Business men demand clerks, bookkeepers and stenographers who write a practical, legible, rapid, un-shaded hand. Parents demand that business colleges and penmen teach their boys and girls a style of writing that they may retain it into a practical, everyday use in the business world.

J. A. ELSTON, Canton, Mo.

Amen

Catalouges

"What They Say," with the compliments of the Bliss Business College, is a booklet printed containing full and frank testimonials from the work of the many students who, after being nourished by the half-torn catalogue of the Missouri State Fair, has been sent to the Western Commercial Teachers' Association, Providence, R. I., last Spring. Sent free upon application to the author and publisher, J. W. Warr, Moline, Ill.

"Books" is a blue backed catalog, finely illustrated with pen stippled headings, and tersely written, put out by the Western Commercial Teachers' Association, Providence, R. I., and is the kind with which you ought to keep in touch.

Purple and gold cover, enameled paper, half-tone pictures, and the qualities comprising the catalogue issued by the Bliss Business College, is the best received at our office.

Spencer's Business School, Kingston, N. Y., issues quite a large and costly catalog, indicating a prosperous condition. The green cover is especially pleasing. It is the best received.

"Business Education Tax?" is the title of John A. Miller's latest book, issued by the Missoura Shorthand College catalog, Knoxvile, Tenn. The book is right advertising literature—first class style, indicating a prosperous institution.

"Souvenir Edition of Salt Lake, Utah, Business College Journal," is in book form and illustrates a school of considerable magnitude and elegance of equipment. We have no good reports from the institution, and therefore doubly impressed with the work done.

The Union Business College, Quincy, III., greets us with a broad sheet of blue, yellow and brown and black, which appeals to us strongly as a student winner. It is finely lettered and printed and written and cut and all in all, a good thing issued by a good school.

W. A. Thompson, the home correspondence man of Pontiac, Mich., sends out some very attractive sheets and is most acceptable. The specialties of sign-card lettering, etc., is O. K.

The South Bend, Ind., Commercial College greets us with an unusually attractive and thoroughly printed and written, it is finely illustrated and splendidly written and printed. It is a first class school in a prosperous condition.
ability to grasp and understand the organization of a business in its minutest details, to work out an efficient system of administration, to invent methods of checking and balancing, and the means of detecting errors and frauds. This branch of the subject is difficult and requires a much more extensive knowledge of affairs and a much higher type of training than the mere clerical work which is ordinarily associated with the use of the term.

II. COMMERCIAL CORRESPONDENCE

This is another branch of commercial training which has not failed of recognition and which is included in the curricula of our schools. Instruction in this field is usually confined to typewriting, stenography and English, but we should remember that now-a-days in great branches of business and commercial correspondence must be carried on in all the languages employed in the commercial world, in German, French, Spanish, Italian, Russian, and the oriental languages. Preparation for these branches of commercial correspondence requires a very great amount of linguistic training, more indeed than is acquired by the ordinary high school graduate. In the conduct of foreign commerce one must master his foreign language, and that means very much more than the acquisition of a reading knowledge of it.

III. COMMERCIAL LAW AND BUSINESS ETHICS

I put these two subjects together, not because they should be taught necessarily by the same person nor because they cover precisely the same ground, but because of their close relationship with each other. A business man needs a knowledge of commercial law for the purpose of acquainting himself with the legal forms and facts with which he must comply in the transaction of his business. Very similar in character are the various business practices which vary in different countries, in different parts of the same country, and with different firms. These grow out of national and local peculiarities and idiosyncrasies, as well as real differences in need. A business firm with large connections must adapt itself to these varying practices, and they are of such a character as to render instruction in them extremely valuable.

IV. MONEY AND BANKING

The elements of this subject must be known to any man who expects to be successful in business. For bankers and men associated with the financial side of great business concerns, a profound study of this subject in all of its varied and intricate ramifications is essential.

V. CORPORATION FINANCE AND SECURITIES

The corporation is now a day's the dominant form of business organization, and the methods by which its institutions are complicated, and subject to frequent change.

Success or failure frequently depends up on the manipulation of the securities of such corporations, upon the form in which they are issued, and upon the placing of them in proper hands. The study of the organization of stock exchanges is an essential part of the subject, and no person who has attempted it will fail to appreciate its difficulty as well as its educational value.

VI. TRANSPORTATION

This subject, too, must be taught in an elementary way and in a profound way, ac-
cording to the needs of the students in question. Every business man needs to know something about the structure of the transportation system of the world, about the methods of determining rates, about the location of lines, etc. Persons who are especially engaged in this branch of commerce need, of course, to know the subject to some extent. A study of a tolerably complete department of transportation, the study of a great many specialized branches of political science as well as of a large number of technical topics which are usually taught in connection with our schools of engineering.

VII. INSURANCE

Insurance enters as an item of expense into practically every department of business, and is a subject upon which accurate knowledge is extremely desirable on the part of every commercial student. Preparation for this branch of insurance must be given in the schools.

VIII. PRIVATE ADMINISTRATION

This is a field of study which has been left almost entirely unworked. Public administration has been a subject for investigation for more than a century, and a large amount of our private industry has been produced in connection with it.

It has been systematized and reduced to text-book form, so that with comparative ease a student can pass through its various branches and taught the principles upon which it depends and the technique of the various branches of the public service in the different countries of the world. Private administration, on the other hand, is that, to say, the business of administering private institutions and private corporations as distinguished from the public, has been left to people engaged in that business, who, for the most part, have not been trained to do it, and the standard methods developed by centuries of business experience have not yet been collected, systematized and published in such a form as to render them available for educational purposes. This statement to the extent of saying that during the past year a good deal of work has been done along this line by a few specialists in this country, and at least one successful course of instruction has been inaugurated based upon the knowledge which has been accumulated through these special studies. That the formulation of the results of business experience of the world would be of great value to practical business men, as well as of the first importance to the commercial teacher, no one can for a moment doubt.

IX. COMMERCIAL GEOGRAPHY

Most of the subjects which we have previously enumerated are useful in the training of persons who are manager business plants. The subjects which I am about to enumerate are needed rather for the understanding of the location of the branches of business, with each other and to the world in which they are obliged to work. Under this head comes commercial geography, which treats of the location of the various branches which enter into the determination of the success or failure of the various enterprises, of the structure of the commercial organism. Every branch of business

is a wheel in the great industrial machine, and its success depends quite as much upon the way in which it fits into the other wheels of industry as upon the control of its own special plant. This subject has been recognized, and in one form or another is taught in a large number of our commercial schools. The possibilities of it, however, are enormous. Perhaps, it is the missing element in the training of it has been of the most elementary sort, few of the teachers having had the breadth of training necessary to give the subject its greatest educational value and the practical importance which belongs to it.

X. TECHNOLOGY OR THE STUDY OF COMMODITIES

This is a subject which, so far as I know, has hardly been touched in the schools of this country, and yet it is a subject the study of which is certainly one of the most important, as well as the most interesting, of the schools which are confined in the various quarters of the globe. They pass through a variety of transformations before they reach the stage of completed commodities. The study of the processes through which materials pass, is the one to which I refer. Commercial geography does not include this subject. It describes to us the sources from which commodities are derived and the location of the various institutions to which they obtain, but the technical history of the products themselves is not included in commercial geography or in any of the other sub-divisions of commerce that I have spoken. The nature of this study, of course, varies greatly with the particular commodities in question. Frequently a great amount of scientific knowledge of various sorts is necessary. The process of manufacture is a chemical one. Usually persons with ordinary chemical training are the only available for this work, as well as the training which is required must now be obtained by experimentation in connection with the firm itself. Most of this work, however, could be much better done in connection with some university laboratories than in the commercial schools. Other products require knowledge of other branches of science besides chemistry, notably of physics, biology, geology, etc. Then, is a department of study which needs developing and which will certainly occupy a very important place in the curricula of the commercial schools of the future.

XI. ECONOMIC HISTORY

I have reserved for the last the subject which, in a way, comprehends all of the others and in which the student is living in an age of change. If he hopes to succeed, he must be prepared for the solution of new problems which the constantly changing conditions of economic life will certainly force upon him for solution. He must be poorly prepared for this task unless he has had instruction in economic history.

This subject, as its name implies, has for its object the tracing of the development of industries and the effect of the changes which have taken place in their industries and of the interpretation of those changes by the skilled historians of the present day. No sub-

Continued on Page 22.
Some splendidly written cards came from L. A. Ziegler, Wolf's Store, Pa. Mr. Z. recently made $25.00 in five days writing cards, etc. Mr. Ziegler knows how to utilize skill—he puts it into dollars. Skill, backed by a little gumption and hustle, means money.

John K. Peterson, Hazleton, Pa., recently sent us a photo of some exceptionally fine blackboard writing. Mr. P. is working hard to see what the "top" looks like.

W. A. Bode, Pittsburg, Pa., enclosed some well-written cards in ornamental style.

Some splendidly written cards direct from nature are at hand from E. E. Bush, supervisor of writing and drawing in the Sandusky, Ohio, public schools. Mr. Bush is developing into an artist of no mean ability.

Lovers of the beautiful in penmanship should take advantage of the opportunity to secure some of the masterful work of C. C. Canan. See his advertisement elsewhere in these columns. A specimen recently received from him comes as near equaling in style and finish the best work A. D. Taylor used to do as any we have ever seen. Mr. Canan is certainly a great master, and his lessons in our journal will no doubt be appreciated by a very large number of ambitious students.

For an easy and very rapid-looking style of business writing, few penmen excel L. E. Stacy of Spencer's Business College, Kingston, N. Y. Judging from specimens received, we think that Mr. Stacy has the ability to become one of the finest penmen in the country.
ject has a higher educational value, either from the general or the technical point of view, and it certainly must fill a very large place in the work of the educational system. I have spoken thus in detail of the various branches of study which must be included in the curricula of commercial schools because, if we may say, we can obtain a definite notion of the qualifications needed for commercial teachers.

They are, or should be, teachers of the subjects which have been mentioned, and furthermore than that, they must be subjects with an eye single to the training of young men and women for the conduct of actual business enterprises. Their instruction, therefore, must be technical, practical and efficient, and it must be needful, they say, to have a special qualification for the commercial subject.

What qualifications ought such teachers to have?

THE REQUIRED QUALIFICATIONS FOR COMMERICAL TEACHERS

In the first place, they must be masters of their subjects and in possession of the ability to teach. Both are equally essential; indeed, both are absolutely indispensable. We have too many so-called teachers at the present time who possess neither qualification, and, unless I am greatly mistaken, the chief public and commercial schools at the present time is the acquisition of teachers who know their subjects, and who know how to teach them in such a way as to secure the ends desired. Now, it should be remembered that the very object of the commercial technical training, means more than its mastery for purely scientific purposes. We want to teach another person actually, to do a certain thing, and must know how to do it more thoroughly and to be master of it in a much more comprehensive sense, than does the man who is simply taught to handle information, to take it in, understand it, use it for information purposes, or to a person who simply seeks to know it as a branch of general culture without any desire to use it in the actual work of life. In other words, the teacher of it, through, as it were, a sort of knowledge, and one's ability to teach is the thing we want, and one's ability to know it more thoroughly and to be master of it in a more comprehensive sense.

For the mastery of the subjects which have already been indicated as essential in a commercial education, training of at least four years is necessary.

I. GENERAL TRAINING

A general, all-round education, such as gives a person command of all his powers, intellectual, physical and moral, and equips him with the tools of his profession. No person can be a successful teacher who has not acquired something of a broad and general foundation. The power of the human mind and the power of concentration, the holding in mind a large number of facts and principles at the same time, and the power of clear and logical thinking. These acquisitions come only with training of a high order, with education in the very best sense of the term. Equally important is the equipment of the teacher with the power of investigation, and the ability to sharpen the wits of his pupils. By the man's material must be the best possible, and the man who knows how to organize it and make its sufficient for educational purposes. No person whose ability to teach is limited to the power of reading a text book and interpreting its contents to the pupil, is fit to teach in that subject, let alone a teacher of technical branches, to students who are supposed to acquire the power of actually doing the work. This investigative and organizing ability is all the more necessary for the commercial teacher, because, as we have already seen, many of the fields which he must enter, as has been pointed out, are new and entirely unexplored, and, moreover, all ready for investigation. Knowledge lies about on every hand, and the commercial teacher must be the specialist who can collect and organize it, and reduce it to the form best suited for commercial purposes.

II. SPECIAL TRAINING

The commercial teacher must also obtain special training in the subject he is to teach. This must be thorough and complete. As has already been intimated, one must know the principles of the subject he is to teach, must indeed be absolute master of it, if he is to make it an efficient instrument in the technical training of students.

III. BUSINESS EXPERIENCE

is essential to the commercial teacher, but practically the specific subject which he must possess in the actual conduct of affairs. I have already said that the completion of a commercial education can only take place in a successful business establishment, and that the primary function of schools is to prepare students to take advantage of the experience of the commercial world, and to give them the ability to acquire that experience. A complete mastery of the particular field which is to constitute the work of their lives.

Business experience, however, is necessary not only for the teachers, since they must know exactly what the problems of business life are, in order that he may teach the subjects which constitute the curriculum of the commercial school in such a way as to make them of actual usefulness to the students. One may teach the principles of commercial geography or economic history, or commercial law, or bookkeeping or insurance, in such a way as to make them of actual usefulness to the business man; or they may be taught in such a way as to give young men the precise preparation needed for the solution of the actual problems of business life as they arise.

IV. PEDAGOGICAL TRAINING

Some knowledge of the science of education is as much needed by the commercial teacher as by any other member of the educational branch. I have no doubt that this training can best be obtained in the subject which I shall leave to the discussion of experts, some of whom are to give us the results of their wisdom and experience during the sessions for the next few years.

THE NEED OF COLLEGE TRAINED TEACHERS

In closing I wish to say a word in regard to the manner in which the qualifications for teaching which I have laid down may be acquired. I have already intimated that the occasional examples of self-made teachers are found, but they are so rare and unusual that their consideration will not assist us in laying down general rules for the guidance of the generality of persons. Any man who is familiar with educational work and with the real meaning of the qualifications which I have indicated as essential, will not hesitate to declare that the education of a commercial teacher must be secured outside of the colleges and universities of our country. The general all-round training, which gives a person command of all his powers, and equips him with the tools for independent investigation cannot be acquired by a person who stops with the secondary school. It is a rare thing indeed to find a student prepared for college who has acquired the power of concentration and of clear thinking, to say nothing of the special equipment for independent investigation of which I have spoken. Indeed, college training and professional training are different, for the purposes of college training are to give the student command of his own powers, and it is rarely found profitable to begin his training in the time of independency of investigation. It is hard reached. The experience of educators everywhere indicates that a long period of careful systematic, specially directed training is necessary to acquire the sort of power that I have been describing.

Until the present year much of the technical training necessary for a commercial teacher could not be obtained even in the colleges and universities of our country. Fortunately, during the last twelve months several of our universities have made special provision for this branch of instruction. The Universities of California, Pennsylvania, the City of New York, Michigan, and Wisconsin have established model schools of commerce or commercial courses designed to furnish precisely the sort of training which is here under consideration. The curriculum of some of these institutes resembles our own, while others, in fact, have done little more than make a beginning; but all expect in the very near future to complete their equipment. The University of Wisconsin has at the present time entirely rounded out its four years' course, with graduate attachments for those who desire it. Candidates for positions as commercial teachers are given a series of exams. Because of not being able to obtain the special technical training which they desire. It can now be furnished in the institutions mentioned, and one and all are cordially inviting young men to take advantage of the opportunities which now exist.

The acquisition of the business experience necessary for the commercial teacher could, in my opinion, be obtained during the present or any other year; but in view of the other requirements of the course. It would be entirely possible, in my opinion, and highly desirable, for young men who are preparing themselves for the work of teaching to avail themselves of the normal three months' vacation for the acquisition of business experience. Positions of various sorts can be obtained and a considerable variety of experience could be acquired during the four vacations, the whole period aggregating one year of business training. I am well aware that the standard which I have laid out is a high one, and that comparatively few of the commercial teachers are to be found who can measure up to it. It is eminently desirable, however, that a proper standard should be placed before us, and that we should comprehend the requirements of the situation in this respect. The Summer sessions of the Universities are now in full swing. The University of Wisconsin is this year holding a special session under the title of a school of commerce and will doubtless continue so in the future. It is entirely possible, therefore, for persons already engaged in commercial work to supplement their training and approach the ideal without dropping their present occupations of earning a livelihood. No teacher can afford to be behind the times, and if we find it possible still, each one of us must constantly increase and improve his equipment, and hold on to his opportunities. The conditions at the present time may be, we should not be too proud, but the contrary determine to constantly improve and enlarge our equipment, until we have such an approximation to the ideal as is possible.
The drawings herewith represented are well suited for decorating school catalogues, circulars, etc. It is very important for beginners to pencil out the details of a design before attempting to add the ink, as it requires the skill of an experienced artist to work up a drawing from rough suggestions.

Lamp and Books—Use a Gillott 170 pen and Higgin's drawing ink. A coarse pen may be used on the darker portions of the design. Study the light and shade with care. Use short parallel lines, making them heavier or cross-hatching wherever dark shadows occur. Don't use too many lines—just enough to produce the required effect; no more, no less. Outline the cupid and scroll work, and suggest all the shadows which should fall on the right side. Make the darkest shadows on the scroll under the cupid.

We believe we have said enough. If we knew any tricks whereby skill might be attained by a single bound, we would gladly disclose them, but we do not. There is only one safe way to acquire skill, and that is by hard work.

The Gregg Meeting

The Gregg Shorthand Association of America held its first meeting in Chicago, from July 15th to 20th. About one hundred members attended. The mornings were devoted to instruction by Mr. Gregg, and the afternoons to convention work, such as papers, discussions, etc. Mr. Gregg gave an examination to determine whom should be granted diplomas. The result of the examination has not as yet been announced.

On Thursday evening, July 18th, Mr. Gregg chartered a steamer and took the entire convention to Manhattan Beach, nine miles from the city, on the lake front. Messrs. Van Sant, Rutherford, and Mosher were there and had expert operators.

The next meeting is to be held at Put-In-Bay, sometime in July, 1902.

The officers elected were:—President, E. C. Rogers, Columbus, O.; Vice-President, J. B. Knudson, Burlington, Ia.; Secretary, J. Clifford Kennedy, Salem, Mass.; Treasurer, Margaret E. King, Burlington, Ila.
**Scrap-Book Specimen**

A Beautiful Specimen of Ornamental Penmanship will be sent for 25 cents.

**C. C. CANAN, Duke Centre, Pa.**

Poor Writers May Become Good Writers at a Small Cost and in a Short Time.

Your handwriting don't suit. Young man, you will admit that. Your poor handwriting is one of your greatest embarrassments. You know this is true. When you answer an advertisement you don't hear from it. Why? When you get a letter that should be answered promptly, you don't answer it. Why? When you are asked for a specimen of your penmanship you don't like to write it, do you? The reason is plain: your handwriting don't suit. Young men who write a good hand are not long out of employment. If you write poorly take a course of instruction by mail from the WILLSON'S PENMAN PEN, P. B. Courtney.

Address, F. B. COURTNEY, BOX 970, MILWAUKEE, WIS.

---

**E. C. MILLS, 195 Grand Ave., Rochester, N.Y.,**

will send you a short letter in his business style, fresh from the pen, for 25c. It will be an inspiration to you in your practice.

---

**PRACTICAL PENMANSHIP**

Successfully taught by mail by West Virginian's best penman. Forty-five years in teaching penmanship. Forty-five years of careful, critical study of the art, places us in position to help you as few others can. Enroll at once for a three-months course in either plain or ornamental penmanship. Tuition, $2.00; advance. Not the cheapest, but the best.

J. F. CASKEY, Penman, Elliott School of Business and Shorthand, WHEELING, W. VA.

---

**The Universal Dictation Course**

Is a GRADED dictation course for the study of shorthand arranged under twenty-six different heads of business, and contains Legal Forms and Court Testimony in Civil and Criminal cases. Each case and selection of letters is arranged separately, and is preceded by a vocabulary of words and phrases with the proper shorthand outlines to be practiced preparatory to taking dictation.

Especially adapted for use by teachers, students in school, private study, and stenographers who want to review and increase their speed. Single copy $1.50, postage paid. Special price to schools. Be sure to state what system you want. We have the same thing in different systems.

Single copy 60c. Special price to schools.

---

**“The Leading Auto. Penman.”**

I gave Lessons in Auto. Work and guarantee my work to be the best in the business. Any style alphabet 25c., two for 25c. A beautiful Hat or Book Mark, any name on silk ribbon in White and Gold, 25c. Copy Books, (the best) $2.00 and $5.00. Lord's Prayer, (can't be beat) $2.00 and $4.00. Beautiful Motto, 50c. 100c. Auto Cards (your name) my autograph included, 25c. A pretty specimen, $1.00. Sample-Shoe Card, 15c. and 25c. A large specimen for training, 50c. and $1.00. Have you some Auto pen that won't work just right? Just send them to me, with stamps to return, and I will fix them for 5c, apiece.

Do you want some special pen at 25c. each? Now is the time to get interested in Auto. work, for you can work up to perfection during vacation.

E. E. EVANS,

806 E. Hickory St., STREATOR, ILL.
realize my dreams. For it means an education, and it will require great effort, but I am willing to work for it.

I intend writing you some lines from the Poems of the Penmen, which might please you.

We would see between the penmanship and the handwriting, the latter will now hardly an impossibility, but before the reading public of America showed far exceed any cash value I could possibly put upon the lessons of handwriting.

As much as I should like to find, I have not made an effort to write with accuracy, and the result is that my penmanship drifted into a backhand. No. 8 was executed in a thoughtless and rapid manner by one who teaches penmanship professionally in a large Normal. No. 8 is the unconscious hand of one of the leading penmen of the day. No. 7 is the product of a leading practical educator who was trained in the 52 degree style of writing. No. 9 is from the pen of one whose writing is known for its great accuracy. No. 9 is from the pen of one whose penmanship when thoughtfully done is known for its Spencerian beauty and accuracy. No. 9 is from the pen of one whose penmanship author, No. 12 is the business style and product of a very practical penman.

In looking these hands over we find that accuracy is out of the question. We also find that the tendency of the majority of them is to slant less rather than more than 52 degrees. We also find a tendency in the direction of rotundity rather than angularity. All these things would indicate that the standard, semi-angular hand of 52 degrees was not the true standard, for if it were certain professionals would adhere more closely to it. This page also illustrates the fact that legibility and accuracy are not synonymous terms, and it would further indicate that in the future we should lay more stress upon the reading qualities of writing than upon the beauty qualities so far as the many are concerned, or so far as concerns practical writing.

SPECIMENS OF ACTUAL, UNSTUDIED PENMANSHIP FROM THE PENS OF PENMEN—SOME FROM EXPERTS AND SOME FROM EX-EXPERTS.

The above specimens are clippings from letters from prominent people, the most of whom are professional penmen to-day, or have been in the past. No. 1 was written by one of our recent most skilled and successful teachers of writing. No. 2 was written by one not a professional penman, and is here given as one of the best specimens of extremely slanting penmanship of a practical nature that we have seen for many a day. No. 3 was written by a young man who started out as a professional penman, but who drifted into office work with the result that his penmanship drifted into a backhand. No. 4 was executed in a thoughtless and rapid manner by one of the most accurate penman the world has ever known. No. 5 is the thoughtless style of one who teaches penmanship professionally in a large Normal. No. 6 is the unconscious hand of one of the leading penmen of the day. No. 7 is the product of a leading practical educator who was trained in the 52 degree style of writing. No. 8 is from the pen of one whose writing is known for its great accuracy. No. 9 is from the pen of one whose penmanship when thoughtfully done is known for its Spencerian beauty and accuracy. No. 9 is from the pen of an ex-penman. No. 11 is the hurried hand of a penmanship author. No. 12 is the business style and product of a very practical penman.

In looking these hands over we find that accuracy is out of the question. We also find that the tendency of the majority of them is to slant less rather than more than 52 degrees. We also find a tendency in the direction of rotundity rather than angularity. All these things would indicate that the standard, semi-angular hand of 52 degrees was not the true standard, for if it were certain professionals would adhere more closely to it. This page also illustrates the fact that legibility and accuracy are not synonymous terms, and it would further indicate that in the future we should lay more stress upon the reading qualities of writing than upon the beauty qualities so far as the many are concerned, or so far as concerns practical writing.
Simplified penmanship means larger minimum letters; sharper angles; more rounding turns, fewer initial and final strokes; shorter, fewer, fuller loops; smaller, plainer, easier capitals; and simpler, energy-saving movements.

It means maximum legibility (easy to read) and minimum effort (easy to write). It is more easily acquired and retained than the usual long-loop, skillful-capital hand.

The above is a specimen of rapid, practical penmanship. It was written with but little thought upon the penmanship. It is not a copy of something that had been thought out and written previously, but is simply the first off hand product of the mind and hand. It is therefore not given as a specimen of accurate penmanship, or as being a fit model for imitation. It has too many imperfect forms to serve as a good model from which to form accurate percepts. At the same time it illustrates fairly well what can be done in the way of good legible, rapid writing.

Columbus, Ohio, 8, 1902

Mr. H.L. Kenzleman,
Long Run, N.J.

Dear Sir: In answer to your letter, I will say:
the demand for legible, rapid, practical writers seems to be on the increase. You will therefore do well to qualify yourself in good, plain English as well as in practical penmanship.

The world needs better men, broader intelligence, and higher skill. I believe you can, and I hope you will, meet the demand.

Very truly yours,

Frank C. Benjamin.

These are given as specimens of simplified vertical penmanship. They are given for study and imitation. They were not written rapidly. Their purpose is to create accurate percepts of letters. At the same time they illustrate a certain kind of grace and freedom of movement that is essential in practical writing. You may do well to endeavor to reproduce them as best you can, first in a slow manner, in order to see how perfectly you can perceive the forms, and then in a free, off-hand, graceful, easy manner, to see how well you can control your movement. Remember that writing, in order to be practical as a means of expressing thought, needs to be at once and the same time legible and rapid. The more rapid it is the more inaccurate it must necessarily be, and on the other hand, the more accurate it is, the slower it must necessarily be. Keeping these things in mind will aid you in determining whether or not your writing needs more freedom or more form.

Orangenville, Pa., Nov 9, 1900

Nine months after date I promise to pay

Solomon H. Williamson, or order, ________________

Eight Hundred Sixteen ________________% Dollars.

Alexander Klayman
On Fancy.

Fancy! Thou brute offspring of the Mind
Thou roving, ranging Rambler, unconfined:
Pleasing, displeasing, aping, marring, making;
Oft Right for Wrong, and Wrong for Right mufitaking.
Refits your self, won't let poor Me alone;
Thou something, nothing, any thing in One.

Designed and drawn nearly two centuries ago. The poetry is quite apologetical for the freakish forms and flourishes.
Lessons in Automatic Lettering

Number Two

By E. E. EVANS, Streator, Ill.

This month you get the Marking Alphabet, a rapid yet plain and very practical letter. It might well be termed the Show-card alphabet, for its shape is designed for beginning teachers. Letters can be made vertical as well as slant and is also adapted to the shading pens. When you get this and the preceding handouts, you will be able to sell a few display signs.

You should try a few different styles of pens. With No. 1 pens, either shading or marking, the caps should be one inch high; slight border. With No. 2 and No. 3 pens: Caps one and one-half inch, small letters one inch. No. 3 pens: Caps two inches, small letters one and one-fourth inches. No. 20 pens: Caps one-half inch. letters five-sixteenths inch.

Now don't be afraid to work a little on it and you will be well repaid, for you can sell cards and price tickets at low figures. Auto work is much quicker than the Brush.

For a small amount of Flock, Diamond Dust, Metallics, Adhesive Ink, a few different styles of pens as well as a variety of inks, and make money from the start. With a little hunting you will find a good sale for your work.

Don't be afraid to ask questions on the work.

I will send an outfit as described above, including one package each of Flock, Diamond Dust and Metallics, one bottle Adhesive Ink, three sizes pens (fine, writing order) and three colors Ink, for $1.00.

If you fail to make the letters at the very beginning to get discouraged, but have a little patience and it will all come at once. Perseverance will surely win.

The Fountain Shading Pen

advertised elsewhere, seems to be a practical instrument in drawing letters of shading where rapidity is an essential.

Will make FIRST-CLASS BOOK-KEEPER of you in six weeks for $3 or RETURN MONEY; discount and experience immaterial: may find good POSITION for you, too. placed put at $2 weekly December 1 to another at $2 weekly January 2. Send this and write J. B. GOODWIN, Expert Accountant, Room 742, 1215 Broadway, New York.

An important announcement is made by Isaac Pitman & Sons, 37 Union Square, New York, to the effect that they propose to commemorate the beginning of the new Century by the issue of a greatly improved presentation of the Isaac Pitman system Copyright Del. in an entirely new edition of their "Complete Shorthand Instructor." In this edition, which will be known as the "Twentieth Century," to distinguish it from previous issues of that standard phonetic textbook, the rules of the system have been entirely re-cast, and are arranged in what, it is believed, will be the best order for teaching. A large number of new exercises have been introduced, so that the work not only contains complete and carefully graded instruction in the whole system, but a series of model exercises on every principle and on the various lists of abbreviations. In order to display the new matter to the best advantage, and to allow of the engraving of the shorthand in one uniform style throughout, a number of additional pages have been added to the work, making it two hundred and seventy-eight pages. The advanced style for the first time is so arranged as to give an orderly presentation of the abridged principles which have rendered the system popular among students, and the time saved in the present volume is more than compensated by the execution of the work being of a more rapid style than was heretofore the case. The first six months of the new edition is devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing how to write in a graceful and satisfactory manner. It is intended for the man of business, and for those who are desirous of acquiring the simplest strokes and to gradually evolve the finished design. The Zaner's of Flourishing, $1.50, is a similar work, but not intended as a first book.

H. E. WYGAL, Engrossing Artist.

Copy-Book Script a Specialty. Diplomas, Letter Heads and Reputation Need Emphasis. Can give estimates. Address all orders to 1232 Curtis Avenue, CLEVELAND, OHIO.

Modern Publications for Penmen, Artists and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books are sent postpaid by mail or by prepaid express.

Portraiture—The best book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book, luxury bound, containing hundreds of examples.

$1.50

The New Zanerian Alphabets—A guide to engraving, containing a great variety of alphabets, designs, etc., as diplomas, invitations, complete instructions. A substantial book bound in cloth... $1.50

Zanerian Theory of Penmanship—A thought-provoking work on the mysteries of the Zanerians problems pertaining to penmanship. Some have termed it The Shakespeare of penmanship literature. All who intend to teach writing should read it. A book of 600 pages, cloth binding... $3.00

Sketching from Nature—A most beautiful book that teaches how to sketch from nature. By Corlett. It is a plain book, luxury bound, containing hundreds of examples.

$1.50

Lessons in Ornamental Penmanship—A work in slip form embodying the $10 mall course for given in the above. A thorough and complete work for home learners...

50c

Compendium of Simplified Script—In slip form, and by far the most thorough and complete instructor in verbatim yet issued...

50c

Manual of Simplified Script—A work containing a thorough, graded course of photo-engraved copies from the pen of that master penman and artist, C. P. Zaner, all in the simplified style. For rapid business purposes few persons believe this style of writing unequalled... 50c

Pen Studies—A portfolio of twenty-four pen dresses, consisting of Letters, Figures, Birds, Fruit, scenery, etc. It begins at the beginning of the classroom, and is the simplest strokes and to gradually evolve the finished design...

50c

Progress—C. P. Zaner's masterpiece in flourishing. It represents an eagle, forceful and lifelike, winging himself through intricate curves and branches with the speed of a plate paper, 2 x 28 inches. The original of this design hangs on the wall of the Zanerian Art College, and is valued at $100. "It's great," "It's certainly a bird" are some of the expressions of praise made of it by the students. Let the reader remember also that it's no Spanish bird, but the American Eagle, that old national bird of ours that must now be especially proud. In tube... 50c

Light and Shade—A manual on drawing by Mr. Zaner. It contains 48 pages, 6 x 7 inches, of illustrations, and plain, clear, instructive text. It is the most indispensable book that students need, and what all others are not at home, drawing in need to make them feel at home. Any one can learn to draw by the aid of this book. Only 25c. Bound. The illustrations are lithographed from actual pencil drawings and are much finer than photos. Sample pages of Portraiture or Sketching from Nature mailed for 2c stamp. Cash should accompany all orders. Retail, 50c, wholesale, 20 percent, for 25 or more.

ZANER & BLOSER, Columbus, Ohio.
Good Art in Illustration—What it is, How to Recognize, Enjoy and Appreciate it

This illustration is a reproduction from a copper-plate engraving of a painting by Rosa Bonheur, the famous animal painter. It appeared in "Woodland and Wild," a book published in 1885. It is evidently one of her early productions and not her best, as the dog's tail seems to be out of proportion with everything else. The rabbit is English, not American, neither of the common or jack-rabbit varieties. The anxious, doubtful, hesitating, graceful, almost pathetic pose of the rabbit is excellent indeed. The twilight, so characteristic of England, half-way between day and moonlight, is splendidly represented by the light in sky and reflected lights on and about the animal in the foreground.

The horizontal, parallel lines in the illustration were made by a ruling machine. It is a quick method of securing a low-toned effect, and is frequently produced nowadays by drawing upon paper ruled to order.

The human, soul-like, intelligent aspect of the rabbit is what raises this production, in spite of the defect before alluded to, above the ordinary. Bonheur saw these qualities in animals and expressed them in an admirable and masterful manner. So intense was her sympathy with animal life that she seemingly saw more of the Divine in the rabbit than in the man, as no one would suspect, for a minute, that the rabbit would be so cruel as to "go gunning" for other animals, either larger or smaller than itself. So much for good art.

A Unique Catalogue for 1902

Will probably find your business college competitors seeking and enable you to outdistance them in securing a large attendance. An attractive cover, some decorative headings, a few tall pieces, and an ornate grouping of the photographs will only require an expenditure of $5 or $6 and will be the means of bringing you many times that amount. Now, if you agree to the above, it remains for you to make a wise choice of an artist and I request that you correspond with me, allowing me to furnish estimates and sketches, before you place your order.

DESIGNER AND ENGROSSER, ROCKLAND, MAINE

Lessons in Engraver's Script
Number Ten
BY CHARLTON V. HOWE, WITH FIDELITY MUTUAL LIFE INS. CO., POLICY DEPT., PHILADELPHIA, PA.

Instructions for Practice

The first part of the standard Z is same as modified H and K; the third shaded stroke is same as capital stem, except finishing dot is omitted; the fourth shaded stroke is shaded, extending to the small base line at top added after the letter is finished; the loop at the bottom is finished with delicate shade. The compound hair line should cross the stem a space and a half above base line. The space should be more of a sweeping curve. The shades on ovales are added after the letter is completed.

The third Z is like the Q, with the exception that such slight shade on the tail of a dot, except it is more graceful, the oval having more of a sweeping curve. The shades on ovales are added after the letter is completed.

The oval of the Y is same as oval of the B, K and P. The second shaded stroke is a space and a half long; the third shaded stroke is compounded same as third shaded stroke of the G, and is finished with a dot. The third Y is same as first except small loop at top is added, base line as small.

In the third Y, the second shade is two spaces in length, and rests on the base line. The third shade is made same as the J. The loop is also same as the J, and is finished with a delicate shade.

The oval of the U is same as oval of the Y. The second shade of U is same as second shade of the modified Y; the third shade is same as small L, and is two spaces and a half long; and is finished with a delicate shade, except third shade only extends above base line two spaces and a half, and instead of being square at top is finished with a small loop same as Y and Z. The third U is finished with oval which extends below base line and half a space, and is shaded same as oval of that.

The oval of the X is same as oval of U and Y. The second shade is a space and a half in length, and is finished with a dot and shaded iner; capital M is too wide at the top. Capital X is too narrow, and the loop is too small. Small space and half a space, and shade should be the same as oval of that.

C, F, G. Shade on loop of H commences too high up making it too long. Loop is too narrow, and shaded too heavy. First stroke is shaded too much, and shaded too straight. Make first hair line stroke straight and finish with a dot, and base line is reached when it is full and rounded.

J, N, D. The ink you are now using is a great improvement over that which you have used in the past; and, as a result, your script looks much better. I would suggest that you pay closer attention to details such as dot, second letters, ascenders, capitals with more curves, and strive to improve upon your small letters by confining them within the limits of the guide lines.

"A PROGRESSIVE DEVELOPMENT OF UPWARDS OF SIXTY YEARS."

READY ABOUT OCT. 1ST.

Isaac Pitman's Shorthand Instructor
TWENTIETH CENTURY EDITION.

ENTIRELY REVISED, ENLARGED AND GREATLY IMPROVED.

In the preparation of this new edition of Isaac Pitman's Shorthand, (Copyright 1903,) to which the distinctive term of "Twentieth Century" is given, two objects have been kept in view: 1) To incorporate EVERYTHING which can be reasonably looked for in THE standard and complete exposition of the Isaac Pitman Phonography. (2) To present the system throughout in the form best adapted to its ready mastery by students of EVERY description. Fully recognizing that the MODERN shorthand text-book must of necessity be arranged to promote the successful PRACTICAL employment of the art. The "Twentieth Century" edition is a new presentation of the Isaac Pitman system of the lines above indicated, and in its preparation is incorporated the ACCUMULATED experience of OVER SIXTY YEARS in the production of shorthand text books, together with many valuable criticisms and suggestions of practical teachers and expert reporters.

Cloth, gilt, 275 pages, size 4, 169 inches, price $1.35. Also issued in two parts as follows: COMPLETA PALÆNA CURSUS (now ready) 144 pages, boards and cloth back, 75c; cloth, gilt, $1.00. Specially adapted for Common and High Schools.

THE NEW PHONOGRAPHER REPORTER. 192 pages, boards and cloth back, 75c; cloth, gilt, $1.00.

All progressive schools and teachers will investigate the merits of this work before making adoptions.

Single copies for examination to known teachers and schools sent postpaid on receipt of one-half the above prices. Specimen pages and illustrated prospectus free. Liberal discount to schools and teachers.

The Reward
OF MERIT IS SUCCESS.

The remarkable success of the Sadler-Rowe Commercial Publications is not accidental. Each one is the product of skilled talent and extraordinary ability, based on a comprehensive knowledge of the subjects treated, both from the practical and educational standpoints.

Teachers prefer them because they are easy to teach and will produce the best results in the schoolroom.

Students prefer them because they are attractive in subject matter and get up, and impart instruction in simple direct language that is easily understood.

Educators prefer them because they provide mental discipline and develop self-reliance and accuracy.

Lessons in Engrossing

**Number Ten**

**BY H. W. KINSEY,**

**14 Tremont Street, Boston, Mass.**

Old English is a standard letter; has always been popular and probably will be as long as the world stands. It can be condensed or extended at the pleasure of the executor. The copy for this lesson is about medium. The original is executed between lines three-fourths of an inch apart, using one-half inch for the small letters. The angular shoulders are formed by a backward movement of the pen without lifting it from the paper. Practice the size of the original, using a No. 1 Sonnecken broadpoint. Put the finishing touches on with a common pen, filling out the corners where desirable for effect. See figure 9. If the tops of the long small letters are spread a little with the common pen it adds to the solidity of the effect.

**E. C. MILLS,**

**120 Strand Ave.,” Rochester, N.Y.**

will send you 10 lines of fresh from the pen copies for 50c; 20 lines for 50c; 40 lines for $1.00. The $1.00 package is quite a complete compendium of business writing.

**AMES’ NEW COMPREHEND OF PRACTICAL AND ARTISTIC PENMANSHIP.**

Is without doubt the most elaborate and costly book ever published on this subject. It measures 11½ x 14 inches; weighs over four pounds; contains 70 leaves (140 pages); gold title and edges; bound substantially in cloth; and printed on extra heavy, fine paper. The price is $5.00. It contains full page plates in script, flourishing (two double-page specimens suitable for framing worth alone $1.00), alphabets, headings, designs, resolutions, family record, marriage certificate, diplomas, etc., etc., and we have purchased the entire edition of this work and no more will be published. The edition is very limited. Orders before all are gone, or before the price goes up, which it will as it becomes scarcer. Our price now is $2.50, prepaid. Address,

**ZANER & BLOSER,** Columbus, Ohio.

**IT WILL BE Elegant WHAT WILL?**

The new edition of Faust’s Compendium of Automatic Pen Lettering and Designs. ENLARGED, BEAUTIFIED and PRICE REDUCED.

The new edition will contain sixty-eight pages: sixty plates of alphabets and about sixty plates of designs, nearly one-half more than the old edition. The following are the few important additions: Eight beautiful Easter, Christmas and New Year cards, Faust’s famous shaded base writing with instructions, German text, Old English and Medieval alphabets with graded copies accompanied by two pages of high-class engraving in which all these alphabets are used. Space does not allow us to enumerate one-half the special features contained in the new edition. A circular giving a detailed outline of the work willingly sent for the asking.

On account of the enormous expense connected with publishing a large edition of a color plate book of this kind, we have decided to accept advance orders at 50c, former price, $1.50

**FAUST’S NEW IMPROVED AUTOMATIC SHADING PEN?**

The large out put during the past year has demonstrated very clearly that it is superior in every way to any other automatic pen on the market. The three main points of superiority are: Elasticity of material used, beauty of appearance and high grade engraved holders. Why buy a common antiquated style when you can get an up-to-date one for the same price? We guarantee all our pens,

**IT’S A WINNER.**

THE MYOGRAPH is steadily gaining favor: 6,000 sold during the past year. This demonstrates, in a measure, the regard in which this useful device is held by the users of the pen. Solid German silver, sample mailed for twenty-five cents. The following testimonial is a sample of many unsolicited expressions of praise that come to our office daily.

**Dear Sirs:** The “Myograph” ordered of you last week was received yesterday. My penmanship pupils are very enthusiastic over the results obtained by its use, and I therefore enclose another order for one dozen, which please send at the earliest possible date. I consider them almost indispensable in starting a class in muscular movement penmanship. I will undoubtedly send you another order soon. Induce please find money order to balance.

Appleton School of Business, Appleton, Wis.

Yours truly,

**FRED BURNEY.**

**SUPPLIES**

When in need of Automatic Shading Pens, Gold or white Ink, to use with the Automatic or ordinary pen, adhesive ink, screw head files, cross ruled practice paper, Japan writing ink, written or blank cards (white or colored), bronzes, bronze inks or writing pens, any make, send your orders to headquarters.

**The Auto Pen & Ink Mfg. Co.**

C. A. Faust, the “Auto Man,” Pres.
W. I. TINUS, V-Pres. and Bus. Man

73 Rush St., Chicago, Ill.
M. A. ADAMS, Expert Penman
Marietta, Ohio.

In order to convince the readers of the P. A. & B. E. that my pen work is extra superfine, I will write 24 of the finest cards you ever gazed upon for only 20 cents.

Colored cards written in white ink at 20 cents per dozen.

Your name written from 12 to 26 different ways for 20 cents. 24 ink recipes—gold, silver, white, black, and 20 others. 8 cents—worth $1.00 to any penman.

Page of artistic signatures. 10 cents.

Each letter of the alphabet written in from four to nineteen ways. 40 cents.

Send for circular.

POSITION WANTED.

TOMCH. POUND DESIGNER
NO CATALOG
SEND COPY FOR ESTIMATE
HIGH GRADE WORKMANSHIP, CONGRESS BARREL.

QUALIFY IN PENMANSHIP AND DRAWING

There is a greater demand today than there has ever been before for persons who are thoroughly qualified to teach writing, drawing, and the commercial branches.

The public schools of our country need a large number of special teachers of writing and drawing. These positions can be had by the competent.

Commercial schools need more teachers of penmanship and of the commercial branches than ever before, because they have more pupils.

Then in the lines of illustrating, engraving, designing, etc., there is much more work to be done at good prices than ever before.

Why not consider the matter of taking a three, six, nine or twelve months' course in the Zanerian Art College to prepare yourself in one or more of the lines of work mentioned?

Regarding the practical value of such a course, many hundreds of former pupils are ready to testify.

The Zanerian Art College is very liberally patronized, and is one of the most successful institutions in the country in securing profitable positions for its pupils.

Rates of tuition are no higher than they have always been. Good board and room can be had at a very reasonable figure.

Large, finely illustrated catalogue of the school, worth one dollar, free to interested persons.

Read below an unsolicited testimonial from an appreciative student.

In another month I expect to send you something in payment for your services in helping me secure this position.

And do not forget that I intend to enter the Zanerian again as soon as circumstances will permit. To the instruction received there I owe all my success.

Yours very truly,

C. R. TATE.

With Bartlett's Commercial College, Cincinnati, Ohio.

ADDRESS:

Zanerian Art College,
Columbus, Ohio.
The Mills-Lehman series of lessons are receiving unusual attention. Nothing so fine have heretofore appeared. The work is high-grade without being slow. Some people object to copies being good because they suppose that all good copies are slow. But these are an exception. The copies in both series are off-hand, neither being slow nor finger movement in character. The consequence is that we have here the merits of form and movement blended in one and the same product.

Give these gentlemen the benefit of your best efforts and they will better your penmanship. You will do well to place the work before your pupils if you have not already done so. The inspiration to be derived from such copies will do much to encourage that kind of effort which leads on to excellence.

The Mills-Lehman or Lehman-Mills series of lessons are going to be record-breakers as well as reputation-making affairs. Get tickets on the first floor at $1.00 to see the entire performance. It will last ten months. Or if you prefer to come in clubs, then send us the club rates and see the same performance.

**Remarks**

The work in this and in the succeeding lessons is dependent in a large measure, upon the mastery of the exercises and principles given in the September lesson. If you have gone over all the work in the first lesson in a thorough manner, you should have such a command over the arm movement that these copies will seem comparatively easy. The more you practice, the more you will be convinced that it is the time spent in practicing the foundation exercises that lead to the shortest and surest way in learning to write.

---

**Lessons in Rapid Business Writing – Number Two**

**BY E. C. MILLS, 185 Grand Avenue, Rochester, N. Y.**

---

**Plate 5.**

![Plate 5 image](image)

**Instructions Plate 5**

While making the continued exercises as shown in Numbers 28, 29, 30 and 31 the whole forearm should be used, and notice especially that the hand is resting and gliding on the nails of the third and fourth fingers. Do not turn the hand over on the side toward the right as the pen travels across the page.

The little exercises mentioned above should receive a good share of your attention. Although the small exercises may seem of minor importance to you, they are really of great importance, as the movement must be brought under control before satisfactory work can be done in small letters. Write page after page of the exercises before starting the word copies, and do not tire in well doing. Be content to work on the elements at first.

In practicing the word copies, first ascertain on practice paper just how many you can write to the line without crowding the work, then write just that number throughout the entire page. We must urge all to be systematic in their practice if permanent results are desired.
Instructions Plate 6

No. 30 is the reversed oval retracing exercise and make seven down lines in each. Begin by making exercise to fill all the space between two blue lines, then one half space, then one fourth space. Use the arm movement, and keep the fingers quiet. Use a continuous rolling motion in making 35. Go from the large to the small without lifting the pen, and try to keep down strokes parallel. Number 38 is one of the most important little exercises we have. The strokes are all compound curves. In making 39 make the compound curves and the straight line. This finishing line should be made with the upward-stroke.

Follow the same directions as given previously for the word copies, and practice each line in the order given.

Instructions Plate 7

Numbers 45 and 46 are direct oval. Notice the direction of the little arrows. Number 47 should receive your greatest attention of all the copies in this plate. Begin by making the small "e" then gradually merge into the "i" exercise. Observe uniform spacing and use a strong, forceful movement. Do your best to apply the muscular movement in all your word copies. Whenever you find the movement degenerating, go back and review the lively movement drills.
Instructions Plate 8

As will be readily seen, the small "a" as found in 56 contains many valuable lines, and is the foundation for several letters, the "g" and the "o." The oval part is slanted a trifle more than the small "o." Close at top. Number 58, the "g" the "a" part should rest on base line and allow the straight line to extend below. Do not make the loop too long in the "g," and finish same as copy. The open finish is not as neat as the one given when the work is written rapidly. The "d" is the same as the "a" only use a little more of the pulling motion and extend the up stroke two spaces and retrace. We prefer the form of "c" as shown in 97, to the old small letter "c" style, with loop at top. It should be practiced carefully at first until the form is established, then gradually increase in speed.
The Penman-Artist and Business Educator

Instructions Plate 9

In making the "A" the down stroke is curved considerably, but the up line is made nearly straight. Do not finish the capital with the stroke below the line; finish same as copy. This finishing line is more practical, as the small letters may be easily connected with the capital. Be careful not to form a hook at the beginning, and see that the letter is nearly closed at the top. Make the capitals occupy three-fourth the space between blue lines. Number 68 is the retraced form. This should not be taken until after the letter itself has been practiced upon. It is intended merely to establish the movement already partially formed. Number 69 will help you in joining the capital to a small exercise. Study carefully and write with a free movement. The "r" is the outgrowth of a portion of the "n" and should be practiced at this time. Make the cross short and straight, and avoid carelessness. The "r" is made with the right curve, a very short straight line, then a straight line on main slant, then finish with another right curve. Notice the formation of the final "r" in 73. The "s" is started and finished same as "r," but the down stroke is a compound curve.

I would be glad to receive specimen pages of practice work from all who are practicing from this series of lessons.

Lessons in Practical Business Writing—Number Two

By

Spencerian College, Cleveland, Ohio.

PLEASE READ THE INSTRUCTIONS BEFORE BEGINNING TO PRACTICE

In giving you this course of lessons in Capital letters, I shall under no conditions attempt to explain all at this time that you should know in regard to these letters, but I expect you to make a strong effort to discover as least some of your mistakes. All I can do at the present is to call your attention to some of the general mistakes. Kindly read all instructions connected with these lessons over at least once before you begin to practice, and then turn your attention to the first letter with a determination to better that letter before you leave it, and if you follow out this plan of practicing and studying each letter carefully, I am convinced that you will be a good writer.

If you are now in college or if you are a student at home, make up your mind to devote a certain length of time each day to practicing writing, and allow nothing to interfere with this arrangement, for if you wish to succeed in acquiring a good hand-writing, you must keep at it constantly. The student who will practice a while today and neglect it tomorrow and the next day, will lose so much interest in his work that it will be almost useless for him to undertake the work at all. Do not waste your paper, but have plenty of it and a good quality is the only kind to have. The best material is cheap. To attempt to practice writing on poor paper is too trying, to be successful.

O O O O O O O

A A A A A A A

I I I I I I I

X X X X X X

Instructions

In making the capital letters, you should never forget to use the forearm movement, and by retracing the large or lower part of the capital E quite frequently, you will find it much easier to make the letter regular. Notice that the upper part of the letter is only one-third the size of the lower, and the loop used in joining the two ovals should be made small and should always point downward. With a little care in curving your downward strokes, you can always bring about a neat small loop. Do not stop between ovals, but continue the stroke from the beginning to the end. You will find it profitable to retrace the A also a number of times before taking up the regular letter. The capital letter A should not be closed at the top. Begin three spaces above the base line and continue the left curve to the base line, you should be very careful then to make a short turn and extend the upper stroke only two spaces from the base line.

Write a whole page of the sixth principle before you take up the capital letters. The X is made with two strokes; the sixth principle and short left curve which should touch one and one half space from base line and half the length of the letter.
The two downward strokes of capital \( N \) should be made just one space apart. The width is controlled in making the turn at the top of the second part. This turn is frequently made sharp at the top which always makes a poor letter. In making the capital \( N \), see that you make all your downward strokes straight, and also see that you make a neat short turn at the top of each part. The capital \( H \) should be made one space in width, and is finished with a very neat small loop which should not extend more than half way across the letter.

Much depends upon the neatness of this small loop for a good letter. Never allow the finishing loop of the \( H \) to cross the entire letter.

---

In making the capital \( K \) you should not place the loop lower than half the height of the letter. This loop is made very small and extends upward toward the left. You will also notice that the finishing stroke of the \( K \) begins with a left curve which is gradually changed to a right curve in order that you may produce the small loop at about one-half the height of the letter.

It is not necessary to lift the pen at all in making the \( W \), especially not when you use a medium coarse pen and write without shading. It is no more difficult to learn the form of the entire letter than it is to learn the form of a small part of it, therefore, you must study the letter as a whole and take the greatest care possible in making the beginning and finishing strokes. The left stroke of the \( W \) is frequently made the entire length of the letter, which can not help but produce poor work. This should be about one-half the height of the letter and should curve from the base line. The capital \( Q \) should also be made without lifting the pen as you will find it more convenient and much easier after some practice and study without lifting the pen. The \( Q \) is made in two styles; the first in this lesson is the standard \( Q \) under the full sixth principle; the second is made exactly the same as the figure two, and I remind you especially of this fact so that you will always see that the capital \( Q \) is made the right size and proportion, so that it can be easily distinguished from the figure.

---

You will find these retracing exercises extremely important, and I wish to again remind you of the fact that it is impossible to become a good fore-arm movement writer without practicing carefully on these exercises, and especially the retracing exercises for practice, made in the shape of letters. The capital \( Z \) is a very pretty exercise and you can practice with profit several pages before taking up the slanting letter. After practicing carefully on the retracing exercises for a while, take up the regular letter and be sure that you place the small loop on the base line, and that the fourth principle, or loop below the base line is not made long enough to interfere in any way whatever, with the short letters of the line below.

What I said in regard to the \( Z \) is also applicable to the \( J \). I might however, mention the fact that the lower part of the \( J \) should be only one-half the width of the upper part and the lines cross on the base line. The upper part of the \( J \) should be one space in width. The capital \( I \) is made very simply and but little needs to be said about it. The capital \( I \) is made one-half a space in width and the standard height of three spaces. The lines should cross one space above the base line. The sixth principle the beginning stroke of the capital \( B \) must be changed to a very slight left curve just as you reach the base line. This must be done in order to make the short turn on the base line which needs careful study. The letter is one-half a space in width, and the finishing stroke should be two spaces in length.
The capital U is made very nearly the same as the V. It is made one space in width and is finished with a short downward stroke which may end on the base line or turn up not more than one space. The upper part of the Y is exactly the same as the capital U, but it will be necessary to call your attention again to the fact that the loop below the line must be made short enough to not interfere with the small letters on the following line. Make a whole page of the stem part of the T. Make the stem only two spaces in height, and see that you curve the stem a little at the top a trifle more just as you finish the stem. Do not cross the base line, but turn up slightly from the line. After making quite a number of stems, select the good ones and place the cap directly over it, leaving one space between the stem and the cap. Your greatest trouble will probably be in making the cap, which should always drop down enough on the right side of the stem to properly proportion the letter.

Having practiced on the stem of the T and F, you should now be quite familiar with the form; however, in the S the capital stem is made three spaces in height, the loop above the crossing should be one half a space in width and the crossing one half the height of the letter. The capital L is part of the S, which may be curved a little more in the beginning, and is finished exactly the same as the capital Q. The loop on the base line of the L should be about one half space in width and not exceeding one half space in length.

It would take whole pages to explain all of the details in making capital letters, and not having the space, we shall aim to point out only some general thoughts. You should try to discover some of your own mistakes, for the student who can discover his mistakes and correct them without the aid of a teacher or without having to be reminded of them, is always sure of making the best writer. Become self-reliant to an extent at least, and do not depend upon others too much to find all of your mistakes. After practicing writing in this way for a while, you will make twice the progress and become a better help to yourself than you can possibly gain in any other way. Many small points were left unexplained in these lessons which will naturally correct themselves if you will follow the instructions given. I have the greatest confidence in the success of all students, and do not believe that one could fail to become a fine writer if he but devotes himself diligently to the lessons with a mind made up that success is sure to those who try to learn. Carelessness is one of the sins of old, and failure is more often due to carelessness than in not knowing how. Then let me say to you again, detect your own mistakes as fast as possible, and I am sure that you will succeed in all your efforts.
Continuously practice and improve. Doing your best will win sometime.

Employ mind and muscle in writing. Freedom force and firmness.

Gaining gain, surely gaining.

---

P. J. Furr, Fort Mill, S. C., sent some very well written cards.
F. S. Heath, Concord, N. H., swings a finer pen than ever. The work before us is very artistic.
J. G. Christ's work of Lockhaven, Pa., is becoming more and more accurate and professional. A package of specimens before us evidence quite a variety of styles and consequently a like range of skill.
L. L. Gatewood, Albuquerque, N. M., recently submitted the proof of a design recently made for a Loan Association of that city which displayed splendid artistic judgment and technical skill. Mr. G. is an artist by nature, and a worker as well. He is a genius but not one of those who think they must drink whiskey to keep up enthusiasm, or one who throws up his hands at the approach of danger.

---

This is a style of vertical penmanship not very often seen in print, yet it is one commonly used by penmen. It is usually executed with a free, fore-arm movement. It is a good thing to encourage freedom, but it is not an accountant's hand, being too wide, and requiring a stable elbow rest. Why not try it to see how well you can execute it, and to determine its worth?
Progress. We have learned to speak long distances by the means of the telegraph and telephone. The phonograph is the latest marvel of transmitting and recording permanently human speech. We have learned to travel almost with the wind and to sleep, dine, and transact important business at the same time. All of these and hundreds of other no less marvelous things we have learned to do, not by increasing human activity, but by and through invention.

The art of writing, of recording human thought, has also made many strides. The first great improvement, and the most important thus far, was the invention of the printing press. For, after all, printing is but an improved method of writing. Then came shorthand, a swifter method of recording thought. And last came the typewriter. All of these have had much to do with modern civilization. The printing press has, perhaps, done more than any other one thing to educate and to bring about progress.

But all of these things have been, to a considerable extent, radical departures from previous modes of doing things. The question naturally arises, is there no way by which our present long hand may be improved so as to admit of greater speed and less effort? For the present, there seems to be none. The only thing practicable seems to improve, even though slightly at a time, our present script characters. This series of lessons is intended to present such a step forward. Not a step toward beauty, but in the direction of utility. To make writing plainer, swifter, and easier is the aim of the author.

The Essentials Of good writing are care, close observation, and perseverance. Do all work carefully. Critically examine the work to be done and the work after it is done. Endeavor to discover the correct method of practice, then persevere. One thing is necessary for success — repetition. You must make at a time sometimes hundreds and even thousands of times before you can make it well. Therefore you must not conclude that because this series of lessons is somewhat simpler and easier than others that you will be able to acquire a good hand without careful study and practice. Nothing worth having is easily won. Work as faithfully on this style as upon the orthodox standard and success instead of partial failure will be the result.

Correct position of body, hand, and paper is essential to good work, therefore be careful concerning the same. The illustrations given herewith are for the purpose of giving suggestions as to the position used in preparing the lessons herewith. The body should be straight but not necessarily vertical. The penholder may point over the elbow or over the shoulder. The paper should be turned at an angle of about twenty degrees from the edge of the desk — similar to compromise illustration (No. 2.)

To make the above, see that the arm rests and falls freely upon the muscle in front of the elbow. A loose sleeve is essential. Do not use the fingers except to hold the pen. Let the hand glide freely upon the little finger. Practice the compact oval exercise till page after page of it until you can equal, or nearly equal, the copy. Make it at the rate of about 30 down strokes to the minute.

Then make the C, using the same, easy, rolling, arm movement as in the oval exercise. Make about 50 or 60 per minute. Use no finger action. After writing a line of them stop and examine them carefully. Discover wherein they are good and wherein they are bad. Then endeavor to correct the errors. This is the only way. There is no other royal road.
The little, lateral, straight line exercise at the top of the above illustration is a good one to develop a free, left-to-right, small letter movement. Move to the right briskly—not sluggishly. Then take up the second line, and then the third. Keep the forms sharp at the top and rounding at the base.

Make the right curve upward and the straight line downward. Use pure arm movement in making the up strokes, and nearly the same in the down strokes. The down strokes need not be made quite as rapidly and the little finger need not slip as freely as in the up or to-the-right strokes. Do all work freely and fairly rapid. No finger movement is necessary. Swing to the right with a good deal of snap and force, causing the fore-arm to act like a hinge at the elbow.

The \( i \) should have a sharp top, a round base, and a dot right over the letter. The \( u \) has two angles and two turns. The \( w \) is the same as the \( u \) with a small loop or dot as a finish. The finish is what makes it a \( w \); therefore, be careful with it at all times. Pause slightly in finishing the \( w \) in order to make it well. Do not make the loop large or it will look like an \( m \). Study the spacing between letters. Compare it with the spacing in letters. Use a free, easy, gliding to the right, semi-rolling motion in all of these forms. Do not draw the forms slowly, unless it is the large ones to get correct ideas or form. Practice as you wish to write. Use good common sense—it is the best theory. See that the power comes from the elbow and shoulder.

This plate is for the purpose of developing the two chief essentials in practical writing—rapidity and legibility. You cannot make these forms successfully slowly. You must hustle. The last form, however, is an exception. It must be made with deliberation and grace. See how gracefully, rather than how rapidly you can make it. See how gradually you can pass from the compact to the open form in all of these exercises. Work faithfully and enthusiastically. You will never regret it. They are the foundation stones of success in plain, rapid writing. Use no finger movement—let the action come from up the sleeve.

See how easily you can roll the ovals off, one after and over the other. Then see how perfectly and how freely you can make the \( Q \). Pause before making the compound curve in and through the bottom. Then try your hand at the word \textit{Quinine}. Watch the fingers to see that they do not act at the joints. Then watch the turns and angles to see that they occur at the proper places. Remember that \( u \)'s should be sharp at the top and \( u \)'s rounding. Be sure to loop the \( e \) and be careful to not loop the \( i \).

Students following this course are requested to send work on the fifth of each month to Zane, Columbus, Ohio, for criticism.
Editorial

With the exception of a very few schools, the territory between the Missouri river and the Sierra Nevada and Cascade Mountains, is occupied by small and relatively unimportant business schools. This is necessarily a concomitant of a sparsely settled region. Nevada, for instance, has fewer people than Dubuque, Iowa, or Dayton, Ohio. Spokane has two good-sized schools; Butte, one; Denver three of fair size, but none of the size that so large a city should support. Salt Lake City has two good schools. There are, of course, in all this territory, a number of excellent small schools, some of which are open for business only from six months to ten months each year. On the Pacific Slope population is less scattered and business education is represented by larger schools, of which we might mention the Woodbury and Los Angeles business colleges of Los Angeles, the Stockton business college, the San Francisco and Heald's of San Francisco, the Polytechnic of Oakland, Atkinson's of Sacramento, Holmes' and Armstrong's of Portland, and Wilson's and the Northwestern in Seattle.

The brethren of the Pacific Coast are almost as industrious as their brethren of the Atlantic Coast as far as the longer courses are concerned. The latter are able to maintain the much higher rate of tuition they can collect, and the possibility of enjoying a summer vacation of two months. The idea of holding a student one year—ten months—for a commercial course, and one year for a short-hand course is gaining ground, and, in time, this much desired form of expansion will come about. It will mean a great deal to the other two dimensions of an education; that is, depth and breadth. But there is a considerable difference in rates. Mr. H. E. Hibbard, of the Boston B. and S. school, gets $80 for a term of ten weeks, and the Packard school, we understand, charges $90 for a year of ten months, and this for service not necessarily superior to that given by Mr. E. P. Heald in his San Francisco school at $50 for six months, although the latter rate is considerably higher than that obtained by other schools on the Coast. In fact, in San Francisco there is a school that charges but $30 for a scholarship that entitles the holder to a complete course. The founder of this school sold a half interest in it two years ago, and left the school to be managed by his partner, carrying with him to the East $80,000 as the net "clean up" of fourteen years' work. We saw the books, for the story had a piscatorial flavor.

Business college men in the West are, however, largely guilty of the aspersions that they are trying to teach what they do not know, for it generally crops out that they have a few thousand dollars "salted" into fruit ranch, an oil well, or a mine. This means that money is not thrown away on worthless, though flashy and costly, advertising, and that school equipment sometimes smacks of the time of the golden age of '30. The school proprietors of the Coast, as a rule, are stingy too, in the matter of salaries. If work can be obtained for $90 a month it is poor business to pay $90 a month for it. On the whole, there are many first-class business school men in the Mississippi Valley and in the Eastern States who would be highly gratified if their lines were cast in as pleasant places as those of the brethren on the Pacific Slope.

Commercial departments in high schools are a new thing in the Rocky Mountain and Pacific Slope country. Los Angeles and San Diego, however, are decidedly up-to-date, having separately organized Commercial High Schools, properly equipped and with good courses. There are some queer arrangements, however, in some of the schools; for instance, Redlands (Calif.) High School has a commercial department, but the conditions of entrance being considered by the community somewhat severe, private pupils are allowed to go to the high school and receive the regular instruction, paying tuition therefor. In short, Redlands has a business college in her high school. The best thing about it is, that the commercial instructor, besides being paid a fair salary, has been allowed to retain these private tuition fees as an honorarium for his extra service. George N. Evans, formerly of Worcester, Mass., who has charge of the work, seems to have struck a very good thing.

In Bakersfield, the center of the oil industry of the San Joaquin Valley, the School Board said, "We want a commercial department in our high school as nearly as possible like a first-class business college." They have a two-years' course of purely commercial subjects. Naturally and justifiably the graduates of the four years' classic and scientific courses, protested against the granting of a diploma to two-year pupils that, to the uninitiated outsider, would stand for apparently just as much solid attainment, and just as much investment of time as their own diplomas represented. A compromise is being considered.

In Fresno, pupils of the commercial course, which is shorter than the other courses, get no diploma. In order to obtain the much coveted "sheepskin," they must allow their commercial work to be treated as substitute work for other studies that would have been taken in one of these other courses had it been pursued from the beginning. They must then go on and finish the regular course, whereupon they get the diploma. Strangely enough the pupils are said by the high school principal, to remain for graduation. This may be due to the fact that the principal has queer notions about commercial work, and therefore has in the course very little that might properly be termed commercial work.

San Francisco, Oakland, Stockton, Sacramento, and a number of smaller cities are carrying on commercial work of varying degrees of efficiency. The work here is as important as in any other experiment in our country, and in most high schools, everywhere.

Tacoa is the only city of importance in the "New Northwest" to maintain a commercial department in the high school. This city is a good field for a commercial school of aggressive qualities. There is but one high school of any note in Tacoma, the Tacoma Business College, and its enrollment is less than one hundred fifty annually. This school is in good quarters and in charge of pleasant gentlemen, but the city is the home of a region, has and populations enough to support a school having an annual enrollment of five hundred.

Mr. J. A. Wesco, of Portland, Oregon, is a veteran whom we had long desired to meet. The Penman's Art Journal, in the old days when we were imbibing chirographic inspiration from E. K. Isaacs, had considerable of Mr. Wesco's work on its pages, but for several years we have seen none of it. We found the cause. It is not that his skill has left him, for we saw work that would bear favorable comparison with that of Malaraz, Courtney, or Dennis. Here is the secret: Brother Wesco has a hobby-horse, and he rides it for both pleasure and profit. It is violin-making. All his leisure hours (and they are not many, for besides his school work he does an immense amount of the finest kind of job-work) are spent in making violins, which he sells for fancy prices, not only in this country but also on the continent of Europe. Another example of the business propensities of our Western friends.

While at Heald's Business College, we were reminded that Fielding Schofield, the famous penman of the Gem City Business College, Quincy, Ill., spent several years as teacher of penmanship in the largest school on the Pacific Slope. Mr. Heald's private office is ornamented with the originals of several excellent pieces of Mr. Schofield's work that appeared in the penmanship papers of the early nineties.
The Renman-Artist and Business Educator

Mr. Schofield enjoyed a handsome income while in the West, and was rapidly acquiring financial independence, when a San Francisco bank broke, sweeping away most of the savings of years; the Cleveland panic of 1873, and San Francisco, knocking the value out of both. His first wife, in her health's becoming so much affected by the peculiar climate of the Western metropolis, that the only hope of saving her life lay in returning to the East. He had suffered ill health for years before going to California, and found the climate there just what it had been at the West. He then was in poor health. He spent a few years, and then went back to the University school, and then went to Boston, where he is now living. Blaise, Davis, Liney and other notable friends enjoyed in given exchanges of experiences with this godlike hearted knight of the quill, who has met with misfortune that would have soared a man of less sunny disposition. His fortune is worthy of congratulation.

The Ludicrous in Government Examinations

Ex-Governor William R. Merrill, Director of the United States Census, contributed to The Saturday Evening Post a very interesting article describing his experiences in trying to assemble a competent corps of clerical assistants. He prepared an examination which elicited some laughable answers. He says:

"At some of the examinations we had some very ludicrous answers. On one occasion the candidates were required to tell something about Abraham Lincoln, and the following were among the answers:

"Lincoln was a great general, and distinguished himself in the war of 1812."

"He was a personal friend of the colored race, and was one of the original signers of the Declaration of Independence."

Abraham Lincoln was born in Illinois, where he worked from early man to dey eva as a farmer's lad until he became President.

At one examination the examiner asked the applicants to tell something of Jefferson Davis, and here are two of the answers:

Mr. Davis was President of the United States and wrote the Declaration of Independence. Davis was a famous general of the war of 1812.

One young lady evidently not much of a political reformed. She who William Cullen Bryant was, answered:

William Cullen Bryant was the Democratic candidate for President, a silver advocate and a reformer.

Another unfortunate, whose knowledge of geography was poor, said, the best way to reach the Atlantic Ocean by water from Chicago was in a boat. Another suggested, in answer to the same question: "To by rail to New York, take a boat and get there."

Still another said that John D. Long was "assistant secretary of the Cuban war."

A young lady, who, no doubt, an ardent "4th of July" critic, had displayed her small acquaintance with its fundamental law when asked to tell something about the Constitution. She said:

"I have the best Government on earth and the Constitution cannot touch it."

On a young man's papers were the following question and answer:

"Why were the mass of slaves held south of the Potomac River?"

"Because Africa is a hot country."

Examples of mistakes in spelling, arithmetic, common historical knowledge and English grammar are almost without number. The examples which have been given will suffice to indicate the deficient knowledge of many applicants in the elements which should be possessed by any person who has passed through the ordinary graded school."

Some Exercises in Letter Writing

The following letters are 'bish fish. They were actually received in the course of business, and were copied and submitted to us through the kindness of Mr. W. I. Staley, principal of the Commercial Commercial College, Scranton, Pa., who saw the letters, and, concluding that our readers would be interested in seeing them and using them as class exercises, we obtained Mr. Staley's consent, to see that they were copied and forwarded. The first was written with pen and ink, across the face of a statement blank:

"The others were typewritten by the business man who wrote them. They have reference to a bank failure in Oregon, in which the letters, a small country banker, had lost a deposit of about $6,000.00. J. W. Doe also lost money in the failure. The last one shows that Mr. Scranton desired to be appointed a receiver of the bank. Otherwise, the letters are self-explanatory. Of course names and addresses are fictitious."

February 1, 1891.

Sir: Send me 5 shillings by exchange and 5 of 10 cent wrens you no the wrens I got the night 1 got this paper and 1-50 lbs Lard or hand about 1 penny. Am I a disorder Lard wrens if you please. On the steamer Republic to Reimer Oregon Please send the Pill with the appointment of the boat he will pay you for the stuff.

Yours truly,

J. F. Campbell
Reimer Oregon

Office of Scranton & Walling, Bankers, Sandstone, Oregon. June 16th, 1901.

Mr. J. W. Doe
Salem, Oregon.

Dear Sir:

Will you kindly write us to inform us what disposition was made in the Matter of the suit against you. The Court has refused to run to give for them to be declared a bankrupt, please give us the necessary details in particular, the exact condition and what is the chance of the unsecured depositor at this date.

S. L. Scranton, Cash.

Office of Scranton & Walling, Bankers, Sandstone, Oregon. June 16th, 1901.

Mr. J. W. Doe
Salem, Oregon.

Dear Sir:

Will you kindly let us hear whether you have been heard for a possible order to the petitioners filed for you. Whether you have any claims against the Short Bros matter of which I like to learn as much as possible. If you have any new cases let us hear and we will do our best.

Yours truly, S. L. Scranton, Cash.

Office of Scranton & Walling, Bankers, Sandstone, Oregon. July 5th, 1901.

Mr. J. W. Doe
Salem, Oregon.

Dear Sir:

Please pardon me for bothering you so often but it is necessary for you to know that the Short Bros matter of which I like to learn as much as possible. If you have any new cases let us hear and we will do our best.

Yours truly, S. L. Scranton, Cash.

Office of Scranton & Walling, Bankers, Sandstone, Oregon. July 5th, 1901.

Mr. J. W. Doe
Salem, Oregon.

Dear Sir:

Hoping that we will be able to send you the enclosed letter with explanations itself, it is the first direct evidence that has come direct to us of the move on foot of wish you cautioned us of some time since, from the reading of the letter and known to the parties that Mr. Eames & Blackard in direct sympathy with are for the move that more than likely that later a trustee in the matter will halt to be selected, and we agree with you we cannot be too careful, in making this choice, as so much depends in the way matters of the bank at hand and uncertainty of any security which have been made with the intention of defrauding the honest depositor.

If you people who I have been talking with have made any an in now you can place explicit confidence in, would ask you to look the financial matters of myself up together with all necessary qualifications to fill the place and let me know your decision and what you think will be the chance for me to secure the place, as we ar over anxious to get all possible out of this and not fail again. If any reference is wanted let us hear as I think we can satisfy the most skeptical.

Yours truly,

S. L. Scranton
Cash

A Transportation Spelling Lesson

Have pupils spell the words and phrases, with proper regard for capitalization; direct them to write out abbreviations in full, and then require each one to be prepared as far as possible to tell some interesting fact in connection with each name; for instance, ports between which the steamers ply, location of railway lines, and what they carry, with what transportation line or what specific railway or phase of industrial life the men are identified, principal industries of terminal ports, and large cities at division points of the railways. There can be no more important class of words for the commercial student to learn to spell than the names of great transportation lines, important cities, and the foremost men in business and political life names that will continue to meet him in the business office. This lesson is merely suggestive. It can be extended largely by any well-read teacher.

Chips from Many Work Shops

It is evident that those more immediately connected with educational matters should give careful consideration to the head methods pursued and the subjects taught, and see to it that the children in our public schools are instructed in those things which will give them aid in gaining a livelihood, and that those things are omitted which, though they are graceful accomplishments, cannot be of any real benefit in actual life. — Wm. R. Merriam, Director of the Course.

A business man's protest against the superficiality of much of our school work.

For any one to take up the study of shorthand without sufficient English education is literally to throw time and money away. — Primary School Catalogue.

***

Few changes are made in our faculty from year to year, and we attribute much of our success to this fact. We have selected our teachers with great care, not only for their scholarship, but also for their influence on the students in character-building. We believe that we owe to our patrons to place not only competent instructors in charge of our students, but men and women whose influence will add character and force and self-reliance to the students as well. — Blair Business College Catalogue, Spokane, Wash.

The formation and strengthening of good character is surely the most imperative duty of every teacher.

***

The largest business houses in America have been built up, not by smartness, but by honesty. They are manufacturing houses whose goods are a standard in every market have won their reputation as much by honesty as by enterprise. Profit pays, and the young business man, whether in subordinate employment or working for himself, who will attempt to build up slowly on the basis of the inseparable connection between duty and advantage, will find that he has chosen not only the moral path, but a sure and certain way to reputation and well doing. — Head's College Journal.

An excellent thought for some proprietors of business schools, as well as for their students.

***

A good business education must mean today a good, practical training in English. Without this training a business college graduate is at a hopeless disadvantage in the commercial world. He must be able to express his ideas — to express them with clearness — to express them with ease. More than this, he must be able to say what he has to say whenever he needs to say it. He must not be under the necessity of locking himself up for an hour or two in order to write a speech, for good English will not come in that way. — Prospectus of Lotter Day Schools Business College, Salt Lake City.

How is this for a Mormon school? Could it have been better said even by the gravest pundit in the sagrest century of New England scholarship? We venture to say, from personal knowledge, that this intermountain school of business has a much higher standard of work than many of its Eastern contemporaries.

***

The value most apparent in commercial education is the money-making element. Commerce is carried on primarily for pecuniary profit, and training in commercial pursuits is regarded as training in money-making.

But while the primary intent of commerce is the making of money, commerce is itself the expression of civilization, of culture, of religion. It was a trading vessel that carried Paul upon his journeys to preach to the Gentiles, and it is a trading vessel that today carries the missionary to the islands of the seas, "brings the ends of the earth together." It is trade that builds nations and shapes their destinies. And as it is with nations so it is with individuals.

While the commercial training given in our schools is a training for the earning of bread and butter, there is nevertheless no factor more potent in the formation of character. Here the student receives the most practical lessons in honesty. His books must balance. His work must be based on correct calculations. Nothing short of fairness, truth, and right doing will bring the required results. The practice of these sterling virtues begets habits that remain through life. The whole arrangement of the course of study cries out against a disorderly and thoughtless manner. He must be obedient and subject to discipline and law. To recapitulate, he learns honesty, punctuality, system, order, obedience; these virtues crystallized into habit, form good character. — C. C. C. C. Catalogue, Des Moines.

It is refreshing to note the increasing number of business schools that are aspiring to character-building its proper place, first place in the business of school-keeping.

Commercial Geography in Current Literature.

MISS LAURA K. HORSE.

[It is designed that these references shall be cut from the paper and pasted on cards of uniform size, these to be filed alphabetically for reference. It is needless to say that this system will provide much valuable supplementary work in Commercial Geography and that it will greatly reduce the teacher's labor in preliminary reading preparatory to the assignment of such work.

Errors:]

ORES

This article treats of the most striking feature of the carryall trade of the Great Lakes, the crude material to the furnaces; the United States owes its supremacy in steel-making to mechanical genius rather than to physical endowments. "The intensification of working, labor-saving methods, and the utmost practicable development of mechanical devices for handling iron ore have more than overcome the high wages and the wide separation of ores and fuel."

FOREIGN TRADE—RUSSIA

The development of agriculture in Russian dependent upon American agricultural machinery; Siberia plants grass seed from Dakota to be haversted by mowers and reapers made in the Western States of America; the demand for this machinery doubled this year; the Russian duty of fifty per cent. not to be applied to agricultural machinery; the largest shipments through the ports of Hull, Hamburg and Copenhagen; Russia establishing agricultural schools patterned after those of the United States.

CONVERSE, HISTORY OF

An interesting article treating of the growth of agriculture, manufacturing and commerce: "agriculture and manufacturing united, make commerce"; in 1901 the United States competed at the great commercial exhibitions, this being largely due to the enormous expansion of the manufacturing industry during the last decade; a gain during the last ten years of one hundred and fifty times in number of manufacturing establishments, and one of million, one hundred and forty farms.

FOREIGN TRADE—LATIN AMERICA

Our export trade with these countries confined chiefly to Mexico and Central America and from South America we buy twice as much as we sell; articles of commerce.
PAN-AMERICAN EXPOSITION—MINERALS

ZINC

This paper deals with the mining and smelting of zinc in the United States. Important zinc districts are shown, giving the output of both lead and zinc, for 1901. Useful for reference.

ROUTES OF TRADE

This article shows how the location of commercial routes and commercial cities is determined by existing geological conditions. Mountain pass routes are in general found where the existing conditions are very flat. Table of mountain routes is given, showing the importance of great passes over them.

RAILWAYS

This article, besides giving in detail the great transactions which have recently taken place in the railway world, gives maps showing the lines under the control of the different railway managers, valuable for reference.

CUBA

A gigantic farm of 25,000,000 acres, a virgin forest, and coal in the United States, with a large area under cultivation. Possibility of vast market gardens for New York's winter market, large amount of fore-stuffs necessary to feed a large force of workmen, and the possibility of Cuba's becoming the great food basket for the United States.

FOREIGN TRADE—RUSSIA

An article of great value showing the magnitude of the trade of the United States with Russia, and giving a list of American manufacturers of machinery and tools in use there. The Russian tariff of fifty per cent. on American machinery is the chief obstacle. These goods being bought by German manufacturers so they can escape the duty and bring American manufacturers into Russia.

IRON AND STEEL

Factors which have led to the project take shape. The existence of vast fields of coal and limestone in Cape Breton, the discovery of different iron deposits in Newfoundland, the close proximity to the markets of the United States, and the stimulus which Canada gives to iron production by the bounty granted on all steel and iron manufactured in the Dominion.

MANCHURIA

A detailed description of the chief trade routes, with the articles of commerce carried over each, giving an excellent idea of the resources of the country.

OIL

Discovery of wells; immense yield; improved methods demanded; future; its future as a fuel and the consequent tendency to cheapen transportation, and also to develop the manufacturing industry here.

FORESTS

A useful article showing that forests increase the supply of lumber which may be depended upon for economic purposes; forests and irrigation; relation of forests to the mining industry; map of government forest reserves.

GEODESY, ERRORS IX

Subjects treated, ocean currents, causes and effect, western North America not affected by Japan current; little connection between the English Channel-Firth of Forth and the Gulf of Finland; Norway not caused by sinking of coast, but by glacial action. Of no special commercial value, but very interesting to teachers of geography.

FOREIGN TRADE CANADA

General analysis of Canadian trade, the only nations which surpass the United States in trade with Canada; importance of fostering Canadian trade shown.

IRRIGATION

A study of irrigation in the arid West; the industrial, social, and political development of the irrigation movement dependent upon the manner in which this problem is met.

A valuable article.

FRUITS

An up-to-date article giving a good idea of the rapid growth of this industry; localities favorable; kind of fruits grown; means employed to bring supply and demand into closer touch.

FOREIGN TRADE—GENERAL

Description of the change which has taken place in the standing of the United States in foreign markets.

COFFEE

Coffee a native of Mexico; its culture; the seedling, planting, pruning, flowering; the fruit, picking; yield per tree; drying, grading, and classification; shipping; and the import of Mexican coffee. Mexican labor.

STEEL

An advertising article describing the new product, Jupiter steel, made at Eau Claire, New York, by combined melting and re-casting old steel. Well worth reading.

Some More Letter Writing

PICKED UP IN THE SCHOOLROOM

Deer,—the reason that I didn't laugh when you laffed at me yesterday was because I have a bile on my face and kant laff and if i do it will bust but I love you old sweet thing bile or no bile laff or no laff you no i, do, p. s. burn this.

College Men in Business

In the New York Tribune of April 13, 1901, Andrew Carnegie outlined the fascinating subject, "How to Win a Fortune," and the article abounded in vigorous and striking statements, which caused wide interest and comment. Speaking of the old question of the education for business men, Mr. Carnegie said:

"The almost total absence of the college graduate in every department of business affairs should be deeply weighed. I have long urged and shall urge frequently in all quarters, and find scarcely a trace of him. Nor is this surprising. The prize-takers have far too many years the start of the graduate. They have entered for the race invariably in their focus in the best capable of all the years for learning anything—from fourteen to twenty. The college student has been learning about the petty squabbles of a far greater number. I am not talking about languages which are dead, such knowledge as seems adapted for life upon another planet than this, so far as business is concerned. The future captain of industry, if he is to get his work, must learn the experience, obtaining the knowledge required for his future triumphs. I do not speak of the effect of college education upon young men training for the learned professions, but the elevation above the grade of the graduate from the higher positions in the business world seems to justify the conclusion that college education, as it exists, is fatal to success in that domain. The graduate has not the slightest chance against the man who sweeps the floor and begins as shipping clerk at fourteen. The facts prove this."

As Mr. Carnegie's influence is far reaching and of great force, the Tribune interviewed several of the most famous business men in New York, in an effort to obtain a setting forth of the other side of the case. Most of the men who responded are very busy men, but they regard so highly the advantages conferred by college training that they gladly took the necessary time to set forth forcefully and lucidly their views. Through the firmness and the kindness of Mr. George S. Murray, of the Packard School, New York, we are permitted to reproduce, in connection with our editorial article, some of these expressions of opinion.

A salary of $100,000 a year is not an indication that a college education is fatal to success in the business world. This is the sum paid to the president of the Equitable Life Insurance Company of New York.

JAMES W. ALEXANDER

He says: "I am not intrepid enough to wish to cross swords with such a practical philosopher and thinker as Mr. Carnegie, in a field with which he is absolutely familiar. I have read with the greatest pleasure and satisfaction, the article of Mr. Carnegie in the Tribune, and find little in it which will not be subscribed to by the most ardent supporter of college education. The aim of the article is to guard against error, not to discourage the student. It is filled with just such practical common-sense as might be expected to flow from a fountain of useful knowledge, like Andrew Carnegie's reservoir of experience."

In just one part, however, of the admirable sermon to working-men, Mr. Carnegie seems to disparage college-made men, but it is only in appearance. Indeed, he could not misunderstand education without the grossest inconsistency, for the ability to reason, to what he finds in the
article under "Strong," is due to a thorough course of education, and it is no argument against the university that Andrew Carnegie and the late President of the Central National Bank; John A. Stewart, President of the largest Trust Company in America; Seth Low, who aims to educate our youths, in college, and to make them as well educated as Mr. Carnegie; Whitechapel, Proprietor of the New York Tribune: Abraham S. Hewitt, who began as a school teacher, and is now President of the Central National Bank; Alexander T. Stewart, who began as a lawyer and attained the highest possible eminence as a merchant; John Williams Porter, Vice President of the Pullman Palace Car Company, and of the Journal of Commerce; and to Mr. H. H. Clark, who is a goods merchant, and Ex-President of the Central National Bank; Joseph W. Harper, and Charles Schirmer, Publishers; Edward King, President of the Pennsylvania Railroad; Richard A. McCardy, President of the Mutual Insurance Company; Edgar S. Auchen- closs, the merchant; John William Attkin, of Attkin & Miller; John Crosby Brown, of Brown & Company; H. H. H. H.; Alexander Hamilton, and George Bagdon, of Clark Dodge, & Co.; Bankers; C. O. French, President of the Manhattan Trust Company; Harold Porter, of Brown Bros. & Co.; F. Wolfe Jackson, chief engineer of the New York Division of the Pennsylvania Railroad; James Murray, Steane, Carpet Merchant; James B. Clark, Bridge Builder; Calvin S. Rice, Railroad President; Jas. Baring, of the Banking- house of Murray & Co.; Standard Oil Company; Chas. S. Fairchild, President of the State Trust Company; Edward Cooper, Ex-mayor of New York, and Joseph of the Brewing Establishment; William H. Huibart, the Manufacturer of Hats; James Hampden Robb, the Park Commissioner; Logan C. Murray, President of the U. S. National Bank; A. M. Collier, President of Real Estate; C. C. S. W. W. T., of the Banking- house of John Payton & Co.; J. Geo. J. Magee, a prominent Iron and Railroad man; H. Seward Webb, lateely elected Vice-presi- dent of the Pennsylvania Railroad; August Belmont, Banker; S. Corbin, Banker and Railroad man; Horace J. Hayden, Vice- president of the New York Central Rail- road; Hamilton Macworthewell, Railroad merchant; A. E. Porter, Publisher; Charles F. Inabrie, one of the largest manufacturers of Sporting Goods; Spencer Trask, the Banker; Geo. Westinghouse, of the Electric Light and the Locomotive Company; President of the National Bank of the Republic; Heber R. Bishop, Retail Merchant; Franklin T. Thompson, of the First National Bank; Henry M. Day, Retail Broker; Chas. S. Colsby, President of the New York Central; Edward H. Abbott, of the Wisconsin Central Rail- road; Charles F. Thomas, President of the Union Pacific; Gardner M. Lane, Vice- president of the Union Pacific Railroad; Sycoonelli Fisk, President of the Illinois Central Railway.

This list might be indefinitely enlarged. The names are mentioned at random and without much reflection, and are almost all in the one city of New York. Surely the success of this book, and the attempts of those who are shining lights in the business firmament, notwithstanding the alleged fatal influence of education, let me point to Channey C. Depew, the President of the greatest railroad in the country, and to Bratton Eves, Ex-President of the Stock Exchange, who is the most fortunate investor in the finances, and who has just taken charge of one of the largest banks in New York, and that within the last five years, and sent its stock from ninety-five to one hundred and fifteen; to William L. Bull, President of the Stock Exchange; J. Edward Dodge, President of the National Bank; John A. Stewart, President of the largest Trust Company in America; Seth Low, who aims to educate our youths, in college, and to make them as well educated as Mr. Carnegie; Whitechapel, Proprietor of the New York Tribune: Abraham S. Hewitt, who began as a school teacher, and is now President of the Central National Bank; Joseph W. Harper, and Charles Schirmer, Publishers; Edward King, President of the Pennsylvania Railroad; Richard A. McCardy, President of the Mutual Insurance Company; Edgar S. Auchen- closs, the merchant; John William Attkin, of Attkin & Miller; John Crosby Brown, of Brown & Company; H. H. H. H.; Alexander Hamilton, and George Bagdon, of Clark Dodge, & Co.; Bankers; C. O. French, President of the Manhattan Trust Company; Harold Porter, of Brown Bros. & Co.; F. Wolfe Jackson, chief engineer of the New York Division of the Pennsylvania Railroad; James Murray, Steane, Carpet Merchant; James B. Clark, Bridge Builder; Calvin S. Rice, Railroad President; Jas. Baring, of the Banking- house of Murray & Co.; Standard Oil Company; Chas. S. Fairchild, President of the State Trust Company; Edward Cooper, Ex-mayor of New York, and Joseph of the Brewing Establishment; William H. Huibart, the Manufacturer of Hats; James Hampden Robb, the Park Commissioner; Logan C. Murray, President of the U. S. National Bank; A. M. Collier, President of Real Estate; C. C. S. W. W. T., of the Banking- house of John Payton & Co.; J. Geo. J. Magee, a prominent Iron and Railroad man; H. Seward Webb, lateely elected Vice-presi- dent of the Pennsylvania Railroad; August Belmont, Banker; S. Corbin, Banker and Railroad man; Horace J. Hayden, Vice- president of the New York Central Rail- road; Hamilton Macworthewell, Railroad merchant; A. E. Porter, Publisher; Charles F. Inabrie, one of the largest manufacturers of Sporting Goods; Spencer Trask, the Banker; Geo. Westinghouse, of the Electric Light and the Locomotive Company; President of the National Bank of the Republic; Heber R. Bishop, Retail Merchant; Franklin T. Thompson, of the First National Bank; Henry M. Day, Retail Broker; Chas. S. Colsby, President of the New York Central; Edward H. Abbott, of the Wisconsin Central Rail- road; Charles F. Thomas, President of the Union Pacific; Gardner M. Lane, Vice- president of the Union Pacific Railroad; Sycoonelli Fisk, President of the Illinois Central Railway.

This list might be indefinitely enlarged. The names are mentioned at random and without much reflection, and are almost all in the one city of New York. Surely the success of this book, and the attempts of those who are shining lights in the business firmament, notwithstanding the alleged fatal influence of education, let me point to Channey C. Depew, the President of the greatest railroad in the country, and to Bratton Eves, Ex-President of the Stock Exchange, who is the most fortunate investor in the finances, and who has just taken charge of one of the largest banks in New York, and that within the last five years, and sent its stock from ninety-five to one hundred and fifteen; to William L. Mr. and Mrs. Aaron Fannington.
A Miserable Failure

A gentleman enclosing his subscription recently wrote us as follows: "I have been trying to write for several years, but am just beginning to learn enough to know that I am a miserable failure, but I appreciate anything pertaining to this subject."

The writer of the above wrote legibly and neatly, but not clearly. His writing was defective, but not slovenly or untidy. In other words, it was readable and good. This person, like many more, has been taught to believe that accuracy and beauty were the best means to fitness in writing, and that anything not accurate, uniform, and pretty was not good.

As he stated, he has for years endeavored to write well but could not. What was the cause? Either he is very clumsy, or the thing he endeavored to acquire was too skillful for ordinary usage. And there are others in the same predicament—endeavoring to acquire something beyond the time and effort at their command.

The remedy lies in ceasing to teach that accuracy is essential for legibility, and that a high degree of skill is necessary to write practically. What such people need and they include a majority of humanity is a simpler, easier, plainer style of writing. They write illegibly because they were schooled to write accurately, and in some one cast iron position, and with some inflexible, uncontrollable movement on the one hand or with the fingers on the other hand.

Those who favor legibility more and accuracy less, who favor less effort rather than more effort, and who have failed to make a success of the usual standard, long-looked, intricate capital style, are hereby cordially invited to try their hands on the lessons begun in this number by Mr. Zener.

The Supervisor Question

Are Supervisors of Writing and Drawing, etc., necessary? If they are, the people ought to know it. If they are not, the people ought to know it.

Now and then school boards conclude that the money spent for supervisors is thrown away, and as a consequence a supervisor is dropped. A certain copy book concern has for some years been encouraging this idea by saying to school boards that if their books were adopted no supervisor was necessary. Special teachers or supervisors will therefore do well to see that such influences are counteracted, for it takes but little time to know that between the teacher and the book, the former is the far more valuable of the two. Penny- and pound foolish school boards sometimes see the distinction, and feather their own nests at the expense of expert instruction.

We have on hand a few articles bearing upon this question, which, if there are enough resounding little articles to justify, will be given in this journal, to start influences to work to combat superficial and dollar squeezing arguments against specialists as instructors.

Do you want the articles?

Automatic Lettering

The lessons in automatic lettering by Mr. Evans, are nothing if not practical. They are not fancy, invented by the schools, but something intensely modern and money-making in character.

Two characteristics of Mr. Evans' work are its simplicity and economy. After all, which is simplest is best, in painting, in dress, in architecture, etc.

Students will do well to give to Mr. Evans' lessons the attention they deserve. There is money in automatic work, and you might just as well have it as someone else.

Obituary

Benjamin Stanley Banks, Principal and Founder of Bank's Business College, Philadelphia, Pa., died August 21st. He leaves a widow and two children and a business school with a national reputation.

Mr. Banks was a graduate of Lafayette College and the University of Pennsylvania, and was admitted to the Bar in 1887.

Mr. Archibald Cobb, who has herefore had charge of the department of shorthand, is now principal of the college. With his supervision and a loyal faculty, Bank's College will continue to be one of the few large leading schools of the country.

National Commercial Teachers' Federation

OFFICE OF THE PRESIDENT
SALEM, MASS., August 20, 1901.

PENMAN-ARTIST & BUSINESS EDUCATOR
Columbus, Ohio.

DEAR SIR,—At a meeting of the Executive management of the Commercial Teacher's Federation held in Chicago, it was decided that the holiday session of the Federation at St. Louis, be held on December 27, 28, 30th, and 31st, as follows:

Thursday evening December 28, eight o'clock, social gathering at hotel headquarters.

Meetings of the sections will be held in the morning of the 27th, 28th, 30th, and 31st from 9:30 to 1:30.

Meetings of the Federated body will be held in the afternoon of the same dates, from 2:30 to 5:30.

Evening sessions of the Federation will convene at eight o'clock on the evenings of the 28th, 29th, and 30th.

A banquet will be held on one of these dates, probably the 30th. Other special features are being arranged and will be announced later.

Respectfully yours,
GEO. P. LORD, President.
Mr. Chalton V. How, the famous engraving-script expert, is now located in the city of Brotherly Love, as policy writer for the

He writes that he is receiving a good salary and that the work is pleasant. We have an occasional inquiry concerning the profit- ableness of policy writing or engraving, and we have reason to believe that it is a good thing. The pay is sure, the hours are easy, and the remuneration at least fair, ranging from $30 and up for an average day's work. The above is an estimate of his income for an average day.

Mr. G. F. Thacker, formerly of Springfield, Mass., and recently of the Zanerian, is now with Brown's Bridgeport, Conn., Business College.

G. T. Wiswell, formerly of Olean, N. Y., is now in charge of the shorthand department of the business school in Boston, Mass.

Mr. J. M. Reaser now has charge of the new business college at Centenary College, a department of the Readership of the New Jersey Convention. Mr. Reaser takes great pride in this new department and is doing a fine work.

Mr. P. A. E. wishes him much success in his undertaking.

Mrs. A. H. Tate, formerly of the Birmin- ham (Ala.) Business College, is now connected with Barthelemy's Commercial College, Cincinnati, Ohio.

If Mr. Tate continues to improve his penmanship, as he has in the past, it will not be long before he will be the top in that line.

The Crafords, Academy, located at Northcrafts, Va., will open a Commu- nity College for the fall term of this year.

F. S. Wolfe of Salina, Kans., has accepted a position with the Black Book Co., Salina, Kans., but will continue with this year's work. Miss Tina P. Hudson is to have charge of this department.

R. C. Bay will remain with Hammer's Business College, Akron, Ohio, for another year. Mr. Bay is quite a skilled penman.

Samuel M. Jones, the Golden Rule: Mayor of Toledo, delivered one of his characteristic addresses at the business school in Fremont, Ohio, Burt German, Presi- dent.

G. E. Spohn of Salina, Kans., has cast his lot for the coming year with the Northwestern Business College, Minneapolis, Wis.

L. J. Krohn, Grand Junction, Colo., is announceing by circular letter and card a Pitman system, with Kansas Business School, a new system of "Typewriter Short-hand," by which he claims the speed of the typewriter has been increased four times. This would be quite a revolutionary in- troduction to the business world, if it were true. After examining the card enclosed and reflecting upon the matter, it is a wonder to us that something of the kind has not, there- fore, been invented and in use.

The Mountain State Business College, of Parkersburg, W. Va., has made arrangements with the G. S. Finch, Philadelphia, who has started a branch school at Cambria, Md., with Joseph W. Smith in charge.

Harry E. Wilson, one of the brightest commercial teachers of the Middle West, formerly a professor at the Lincoln (Neb.) Business College, has been engaged in business college work in the Nebraska State College at Lincoln, some time ago, and has now set forth in the sacred domain of the law, having taken the bar in Seattle, Wash. J. B. Durve, by the way, has successfully associated in school work in the Shenandoah Normal School, Shenandoah, Iowa.

W. W. Bennett, whose name has been the subject of much discussion by pring- ping the school during the last ten years, is now at the South Side Business College, Chicago, one of the most successful schools in that city.

Mr. W. H. McCauley, who was long associated with the last Mr. J. M. Eaton, of the Capital City Commercial College, of Des Moines, Iowa, has assumed control of that school. In the reorganized faculty we note the names of W. E. Stockman, R. F. Will- iams, and Miss Carrie Clarke, teachers in the school. Mr. McCauley is successful in his new management.

Mr. and Mrs. C. H. Shuttrick of Altoona, Iowa, have been spending their vacation in Chicago, lei in the University of Chicago study dietetics and cooking, and in the Art Institute. This is the right thing to do when health permits.

F. R. Courtney, the famous penman of Milwaukee, is now with the Iowa Business College, Des Moines, Iowa.

F. O. Putnam is now supervisor of pen- manship and drawing in the schools of the city of Chicago, and we are of the opinion that he is doing splendidly well, and we congratulate the good people of Chicago on their securing his services.

The Capital City Commercial College, Des Moines, Iowa, presents us with a very attrac- tive catalog. But the beauty of it is, the pictures and etchings which are numerous and well presented, and the rates are quite reasonable. It is a little representation of one of America's leading Business Training Schools.

The National Business College, New York, Va., A. M. Cowger, Proprietor, presents its new catalog for the coming year, which is well illustrated, written, and printed.

The Empire Business College of Truro, N. S., greets us with a nicely gotten up catalog, Mr. G. L. Brown is the proprietor.

The Bethany College of Business, Linds- bury, Vt., has issued a nicely gotten up catalog, showing quite a large school, and indicating a prosperous and progressive condition.

The Stanberry, Mo., Normal and Business College Catalog, D. S. Robbins, President, is before us. It is a large, well printed and illustrated catalog. This is of as much value as the previous catalog, as well as to the cause of practical education.

The City College: Business College, Salt Lake City, Utah, occupies three floors of the city's most prominent building, and has an enrollment of 1,600 students. The course of study is outlined in the catalog before us, and seems to be broad and extensive. The catalog is a neat job on a par with the average Eastern school.

The Santa Barbara, California Business College issues a neat little booklet betokening a good school as well as a prosperous one.

The Georgia Normal College and Business Institute, Abbeville, Ga., publishes a 56 page catalog, which does credit to a credit- able institution.

The Spencerian College News, Cleveland, Ohio, announces its annual book, one of the very best journals of the kind pub- lished. Indeed we do not know of an equal. It is very well printed and well bound. It never fails to contain fresh, first-class articles, etc. Besides, the new features are gotten up in a very readable manner.

A booklet from Toledo, the business college of the University of La Crosse, Wis., contains half of the contents of the previous year's "Toldeo Herald," which is a monthly publica- tion, and which is, without cavil, the most stimulat- ing title "Toldeo Graduates Who Earn $175.00 per month.

The Danville, Ill., Business College issues a new catalog, which is a 4-page catalogue, a much larger than before.

One of the neatest and best illustrated catalogs of the month came from the Metro- politan Business College, Minneapolis, Minn. A poster above the ordinary was enclosed therewith, as was also a beautiful calendar. Success seems to have per-
College Men in Business
(Continued from Page 10.)

back just to that extent. But I can add that the boy who has within him the charm of some future master in affairs will be all the more of a leader by reason of a thorough college education, and even that he will outstrip in the mere matter of time the boy whose training was sweeping the shop or adding up columns of figures at a desk.

It is the successful men we are talking about. And when the shop-bred boy reaches the high station to which his abstention from college has assisted him, does it require argument to prove that he would be a more useful, a more influential, a more attractive man if he could have combined with his physical training that knowledge of science, literature and philosophy to the mastery of which the university is the open door?

This subject is frequently discussed on the assumption that the acquisition of material wealth by the individual is the supreme note of existence, if we would be willing to allow such a monstrous principle in so many words. And is the influence of a liberal education upon the formation of the character of an American gentleman to be ignored by business men? Is there any incompatibility between being an educated gentleman and a business man?

My answer ends, as it began, with the remark that there is probably little occasion for controversy on the subject between Mr. Carnegie and the advocate of the college, and it is to be hoped that Mr. Carnegie and other influential men will encourage a sufficient number of promising boys to avail themselves of the advantages of the university, to form a fair body of graduates, and to furnish the opportunity for just acquisition.

Perhaps we may be able to spare space to present the views of a few other important business men. We mean to clinch the point that the assertion that "College education is fatal to success in business," as stated by Mr. Carnegie, and that "Higher education leads down to ruin," as vehemently declared by a representative Western business college man in the Detroit convention, are fallacious statements, showing superficiality, if not ignorance.

OFF-HAND FLOURISHING

In white ink on black card board is the latest thing out. It is short, attractive, beautiful and up-to-date. It will advertise your school, college or writing class quicker than anything. Send me a trial card and be convinced. 25 free

Ornamental Penmanship

Article Number Three

When I first became interested in penmanship the penman's papers contained but few specimens of writing and most of those published were wood-cuts, which showed the skill of the engraver instead of that of the penman. Hand-engraved work is sometimes given at this time as fac-simile engraving. It is safe to say that in most cases the writing has been improved by the engraver. Penmen should learn to discriminate the hand-engraved work from that of photo-engraving. The latter gives the writing much as it really is, though unless there is a reduction in size the engraving the quality of line is heavier than in the original. Our finest writers have never done much work for engraving, because they realized that their work did not show to advantage by the photo-engraving process. For this process, the writing should be in black ink. India ink is best. No penman can do his best work with India ink, as it is too thick, and a fine line is uncertain. To get the fine line the penman must dilute the ink. This makes it pale and sometimes a pale line is "lost" in engraving. The engraver must then build this line which often prints rough or heavy. I have seen poor writing engraved into a good appearance (this is usual when the writing is greatly reduced) and I have seen good writing engraved in a manner to dissatisfy the writer. The best ink for photo-engraving is the stick India ink ground to the required density, but this is seldom used because of the time and trouble of grinding. Much of the writing that appeared in the penmanship papers of fifteen years ago was written large with a hard lead pencil and then traced slowly with ink. Many copy-book head lines are made in this manner, but the process is gradually being abandoned.

Artistic penmanship depends on curves and contrasts for its beauty. The firm and delicate line and graceful shade give this style of writing that pleasing appearance that delights the eye, not only of the beginner, but of the skilled penman.

The profession of penmanship has grown from year to year and there are more good writers today than ever before. It is worthy of note that the writing master of olden times has disappeared. The writing teacher of today is usually competent to teach drawing, designing and the branches allied to writing, and also the studies taught in commercial colleges.

It should be the aim of every penman to use his good writing as a means to an end, and many writers of a few years ago are now with business colleges or in positions where their skill is of much benefit to them. Specimens of writing will be criticised if sent to C. C. Canan, 3010 North Nineteenth Street, Philadelphia, Pa.

Stamps for return postage should be enclosed.

Specimen in the form of a superscription, "The most beautiful letter you have ever received," will be mailed to you for 10c in stamps or coin. It will illustrate the work of the finest shading penartist in the world.

Individuality in Writing

BY J. E. LEAMY

Individuality is conspicuous everywhere. One has but to observe the many peculiar personalities as he walks along the street to be convinced of the fact that nature has endowed each individual with a countenance, voice, manners, etc., that are peculiar to him alone.

It is through individuality that we recognize our friends, not always by their countenance, but often by their voice, manner of walking, or through some other gift of nature.

Man's individuality is not only shown in his personal appearance, but in nearly everything he does. Though his handwriting will show his personality, as in no other of his works. Nature has endowed each one of us with a distinct sort of writing. A quarter of a century ago the testimony of the hand-writing expert was of minor importance, but today his evidence carries weight in both criminal and civil cases, and has many times been the means of inducing a jury to decide one way or another. Someone has stated that “an individual’s handwriting is often times more personal than the individual himself.” This we are inclined to believe, because after a person has once adopted a certain style, there is less change in his writing from year to year than in his personal appearance.

Individuality in handwriting is acquired mainly by repetition. In school and during the early years of life, the handwriting is more or less formal and studied; but as time passes and repetition after repetition occurs, the writing becomes a reflex action like speech and gesture. Although during school days the pupil was forced to imitate one certain style as a copy and standard, yet individuality soon presents itself, and that person finds himself later on with a style that is unlike any other—a handwriting that contains peculiarities even unknown to himself. That writing may contain many of the forms and principles placed before him in childhood, yet those forms are untaught, unchanged, and in one way or another. When we consider the fact that it is absolutely impossible for an individual to disguise his writing, then are we convinced that that writing contains peculiarities unknown to the writer. The expert examiner sees the forged signature from the original, because it was absolutely impossible for the forger to know all of the characteristics entering into the writing of the person whose name he wished to forge, and to execute them at will.

An expert examiner of contested handwriting has stated that he does not believe there is a person living who can disguise his own handwriting or simulate the writing of another. We may be successful in imitating the primary elements of another person’s writing, such as form of letters, slant, spacing, etc., but it is utterly impossible to know all of the secondary and minor characteristics of that person’s writing and to execute them rapidly and at will. This tends to convince us that the style of writing is a personal one, and that there are as many styles as individuals. The latter statement may sound rather broad, but upon close investigation as to the number of distinct styles that may be written, it is found that there is a separate style for each individual in the world and many more to spare.

There is probably no one who disputes the fact that each person has a distinct style of handwriting; but the question that is uppermost in the minds of instructors along this line is, whether or not this variation in script characters should be recognized in the teaching of writing, and if so to what extent. Individuality in writing will develop of its own accord. It is not teachable. It should be allowed in the pupils' work just as long as it does not tend to make the writing illegible. Beyond that point it should be checked. The old idea that there is but one way to write legibly is being slowly but surely laid aside, and educators and instructors along the penmanship line are learning that the old saying “what is best for one is not best for another,” applies to handwriting as well as to other things. Instructors are convinced that pupils will write differently regardless of instruction or method, and that the best way is to build upon what the pupil has, even though it is defective, rather than force him to begin anew and adopt some style or course that means a radical departure from his present work. No one denies that pupils can learn to write a good legible hand by the latter named method, but that method certainly does not correspond to the present system of teaching along other branches. Show the pupil wherein his writing is illegible. Criticize certain por-

A Lesson in Drawing

Foreshortening

The word foreshortening is long but full of meaning. It means that the appearance of things is not the same as the things themselves. Figure one is a circle, Figure two is a picture of a circle. The picture is not round but it represents a round object. It is a picture of a circle seen at an angle, or in a foreshortened position. Figure three is the same circle seen edgewise. The drinking glass shows very plainly the way in which circles appear: some times nearly straight, as at the top, and in other positions quite rounding as at the bottom. Study this carefully. Hold a similar glass nearly level with the eye and see if it does not appear the same. A race-track, bucket, vase, etc., all appear much the same.

The square, Figure four, is square in fact. It is only half as wide vertically as horizontally, though it looks much more. Figure six, is the square seen edgewise. The door shows how many objects are foreshortened. While the drawing of the door is but half as wide as the opening, yet it looks as wide. That is, it looks as though it would easily close the opening if swung shut.

The difficult part about foreshortened surfaces is to judge how much they are foreshortened. This can be done only by practice. No one can do it for you. The time to begin to learn is now. It is not necessary to go to Europe or Boston to learn this. You can do it where you are if you but try.

Keep in mind that drawing deals with appearances rather than with facts. Perspective, is the facts of appearance. Foreshortening is the essence of perspective. In looking at objects, you usually see more of one side than the other. The thing to do is to discover how much more of the one side you see than the other.

Copying pictures is allowable, but it is better to draw from real things. Copying pictures is not unlike committing words to memory. You may understand their meaning, and you may not. Be on the safe side, study drawing, but draw from real objects.

FROM CHAPMAN'S AMERICAN DRAWING BOOK, COPYRIGHT A. S. BARNES & CO., NEW YORK.

This is a remarkable example of Line Work and Pictorial Effect. Made 50 years ago by J. A. Chapman. The above is one of many high-grade portraits found in "Portraiture."

Inspiration

S. G. Hurst Writes

FRIENDS ZANER and BLoser: — Permit me to say that I think the Lessons by Messrs. Mills and Lehman are going to be a great inspiration, both to pupils and teachers of writing.

One hundred degree weather takes a great deal of the enthusiasm and fire out of the "writing master" but a cool wave and a careful perusal of the good reading matter in the P. A. and B. E. brings him up to white heat again.

Very truly, C. C. LISTER.

September, 1908.

ALL THAT ITS NAME IMPLIES.

PRACTICAL BOOKKEEPING

The most practical and up-to-date method ever devised for teaching bookkeeping, accounting and office practice, the drawing of all forms of business papers and vouchers, the filing of incoming papers and vouchers, and the actual performance of the duties of the bookkeeper and accountant, by practical methods similar to those that are in general use in counting houses.

THE WORK HAS NO EQUAL. IT IS THE MASTER WORK OF THE CENTURY.

It is the outgrowth of many years' experience in practical business, arranged in teachable form for the class room. Your students should be familiar with special ruled books and the modern methods that are being adopted by the leading business houses in the largest cities throughout the country. This new work fully explains the workings of these new up-to-date methods in general use. You can't afford to be without the system. Address THE PRACTICAL BOOKKEEPING CO., 27 Washington St., Chicago, Ill.

Modern Penmanship Publications for Penmen and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All orders are sent postpaid by mail or by prepaid express.

Zanerian Theory of Penmanship—A thought-provoking work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should read it. A book of 116 pages, cloth binding. $1.00

Lessons in Ornamental Penmanship—A work in slip form embodying the $10 mail course formerly given by us, with some extra plates. A thorough and complete work for home learners

Compendium of Simplified Vertical Penmanship—In book form, and by far the most thorough and complete instructor in vertical writing yet published

Manual of Simplified Script—A work containing a thorough, graded course of photo-engraved copies from the pen of that master penman and artist, C. P. Zaner, all in the simplified style. For rapid business purposes many persons believe this style of writing unequalled

Zaner's Gems of Flourishing—A book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the student how to make the simplest strokes and exercises and finishes with a great variety of designs showing the highest degree of skill yet attained in this art.

Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published

Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks. Address,

ZANER & BLOSER, Columbus, Ohio.
The letter on the opposite page was reproduced from an old book published nearly two centuries ago. Look at the small letters carefully and critically and you will discover that people in those days wrote more freely than we give them credit for. They wrote many words without raising the pen, and not infrequently joined words. The movement was mainly combined, with sometimes a surplus of finger action chiefly in the small letters and sometimes whole arm movement in the capitals.

The plan of putting the body of the letter plain, neat, and solid by itself and the flourishes about the border is a good one from the artistic standpoint. Indeed, we can learn much from a page of this kind. We cannot only get ideas of beauty in curve and arrangement, but we can learn as well that the penmen of those days were skilled quite as much as those of today. And it is doubtful if our work will live as long as theirs and exert as lasting an influence. Toil and talent are not the product of the present alone.
Dear Daughter,

It is a great satisfaction to me to reflect on that dutiful behaviour, wherein you have hitherto demonstrated. I feel in my heart the first steps you have made in the practice of honest and particular virtue, and the improvements in the business of writing, which will always distinguish you among those of your sex. I shall, therefore, write you a few words of advice upon this subject, that you may see, that religion is a great refiner of reason, and a power over men's lives. I shall not mince my words, but speak to your face, and tell you the truth, and not constrain you to believe me by doing so.

Religion is the foundation of all religion, and the church is theVia. In order to become the power of your heart, and the guide of your conduct, you must not only love God, but also love your neighbour. The conversation of the wicked will not make you wise, but it will corrupt your mind. Therefore, be careful in your conversation, and keep away from bad company.

Your obedient and affectionate father,

W. H. Wallis.

Good Art in Illustration

What it is, How to Recognize, Enjoy, and Appreciate It

(SEE OPPOSITE PAGE)

The accompanying illustration is one of two hundred and twenty-six page designs in "The Holy Gospels" published in London over half a century ago. They were engraved on wood. The artist seems to have been V. Beaune, as his name appears on nearly all of the plates. This book, in our opinion, because of its illustrations, is one of the few great books of the past century. It is this because of the great number of ideas expressed in original, striking, impressive, technically artistic, unforgettable pictures.

Who can forget the parable of "the poor, and the maimed, and the halt, and the blind" after having looked upon this illustration? See how suggestively wealth has been depicted by the rich, fine art dishes and draperies. Also how wealth and poverty have been contrasted by crutches among the dishes at the top of the page.

The force and effectiveness of the whole is the result of careful, enthusiastic, conscientious thinking, and artistically arranged, and skilfully executed forms and lights and darks. See how the dark dish contrasts with the light ones; how the dark figures sitting at the table silhouette darkly against the back-ground and serve also as a back-ground to the lights in the two foreground figures; and how the widely different technique of forms in the foreground suggest variety of rags and raincoat!

We consider this great art because it came from the heart. Truth was the artist's motive, nature was his means of expressing it. This is the age of fine books, and beautiful and truly effective illustrations, but here is a book with over two hundred illustrations, published in 1860, that compares favorably with the best of the present day. In those days it cost forty thousand dollars to produce it, as each illustration had to be engraved (cut) into wood by skilled hands. Today it could be done nearly as well by purely mechanical means.

More of these illustrations and many others will be given, with critical text to explain their merits, if you desire it. A postal will do to tell us of your desires.

WILL make FIRST-CLASS BOOKKEEPER of you in six weeks for $3 or RETURN MONEY; does business and experience immediately; may find good POSITION for you, too; placed pupil at $35 weekly December 10; another at $24 weekly January 1. Save this and write J. H. GOODWIN, Expert Accountant, Room 742, 1215 Broadway, New York.
he said unto him, Blessed is he that shall eat bread in the kingdom of God. 16 Then said he unto him, A certain man made a great supper, and bade many: 17 and sent his servant at supper-time to say to them that were bidden, Come; for all things are now ready. 18 And they all with one consent began to make excuse. The first said unto him, I have bought a piece of ground, and I must needs go and see it: I pray thee have me excused. 19 And another said, I have bought five yoke of oxen, and I go to prove them: I pray thee have me excused. 20 And another said, I have married a wife, and therefore I cannot come. 21 So that servant came, and shewed his lord these things. Then the master of the house being angry said to his servant, Go out quickly into the streets and lanes of the city, and bring in hither the poor, and the maimed, and the halt, and the blind. 22 And the servant said, Lord, it is done as thou hast commanded, and yet there is room. 23 And the lord said unto the servant, Go out into the highways and hedges, and compel them to come in, that my house may be filled. 24 For I say unto you, That none of those men which were bidden shall taste of my supper.

25 And there went great multitudes with him: and he turned, and said unto them, 26 If any man come to me, and hate not his father, and mother, and wife, and children, and brethren, and sisters, yea, and his own life also, he cannot be my disciple. 27 And whosoever doth not bear his cross, and come after me, cannot be my disciple. 28 For which of you, intending to build a tower, sitteth not down first, and counteth the cost, whether he have sufficient to finish it? 29 Lest haply, after he hath laid the foundation, and is not able to finish it, all that behold it begin to mock him, 30 saying, This man began to
Lessons in Automatic Lettering

Number Three

By E. E. Evans, Streator, Ill.

After mastering the block, and the Marking Alphabets, you should be able to control the movement and thoroughly understand the workings of the Auto pen. Much is to be learned by the student himself. Constant practice and experimenting will do this.

It is very easy to work on Black Card Board yet the work is attractive and used extensively in the localities where signs play an important part.

Speed will naturally come to the student who uses his spare time to good advantage on solid practice.

The work given this month is the everyday rapid lettering that I turn out and is not "select or touched up" specimens.

Endeavor to equal them; they are simple, yet are just the things for practical use.

Draw the ruled lines in gold, silver or white ink. Colors can be used on black board by using white adhesive ink and pour Plock, or bronze over it.

The top and base lines used in the "Auto pen" are made with a compass. Retracing around "Signs" is with ordinary pen and gold ink.

Roundhand Engrossing Script

The Tenth of a Series of Twenty-Four Script Alphabets Illustrating as Many Practical, Unique, Ornate, Peculiar, Characteristic Hands

Engrossing Script, or Roundhand, as it is commonly called, is becoming more and more popular. And why should it not when it combines at one and the same time in such an unequalled manner the qualities of legibility and beauty? For engrossing resolutions, diplomas, charters, etc., and for advertising purposes where beauty and plainness are desirable, no other hand is so appropriate and quickly executed.

For superior effect in engrossing, a specially adjusted oblique holder is desirable. The pen should be fine and flexible, such as the Zanerian Fine Writer. The ink should be India of a special make and properly diluted with water. It is not necessary to use the proprionate as to produce a dainty hair line and a dense, brilliant, black shade.

The movement needs to be "slow but sure." Firm yet delicate and flexible. It should come principally from the fingers, hand, and forearm. The hand should rest substantially upon the little finger. The latter should serve as a stationary rather than as a movable rest. The forearm should cross the paper diagonally with the base line of writing. Do not hold it parallel with the base line nor at right angle to it, but about half way between the two extremes. That is, turn the paper until the fore arm crosses it at an angle of about forty-five degrees.

Study carefully the forms and use pencil head and base lines for the minimum letters, and for the capital and extended forms, if desired. Keep the mind the five S's—shape, shade, slant, spacing, and smoothness. Raise the pen as you come to the baseline in making all small letters. Make both sides of the base downward, the heavy side first. Raise the pen often and replace it skillfully. Aim to secure uniform slant and spacing. Make the up strokes on the same slant as the down strokes. Study such letters as a, e, and, critically. Several styles are given. Select those you like best and practice them patiently. Success in this, as in all things, does not come in a bound, but you must win and earn it by the sweat of thy brow. But the return in will even be in the proportion that you work intelligently and industriously. Work in the most advantageous manner.

E. C. Mills, 195 Grand Ave., Rochester, N.Y., will send you one dozen cards, your name in either plain or ornamental writing, for 25c. Address lines 10c. per dozen extra.

Lettering and Designing Number Eight

BY E. L. BROWN, ROCKLAND, MAINE.

Herewith is presented a drawing suitable for catalogue decoration, which is simple in design and quite artistic and pleasing in effect. Lay off the entire design in pencil, beginning with the Cupid and book. Note the position and expression of the cupid. The flowers were designed for decorative effect only, and are not given as models of anything that ever grew. Carefully suggest all the most prominent shadows before inking. In this drawing the light is represented as coming from the upper left hand corner, this fact is best shown in the light and shade of the cupid. A good pencil drawing is absolutely necessary for the best results.

Inking use a good India ink, and India ink, and aim for fine, sharp, clean lines. Give the lines of the copy careful attention. See that the shadows and half tones are properly shaded. Spots of color around the outer edges of the circle, and here and there under the edges of the leaves, will help to bring out the different parts, and tone up the design generally, but do not use too much solid black. Study all these little points thoughtfully before you attempt to give the expression, as this is the only way to practice intelligently.

Modern Art Publications for Artists and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books are sent postpaid by mail or by prepaid express.

Portraiture—The best book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book, luxuriously printed and bound, containing hundreds of examples and explicit instruction... $1.50

Sketching from Nature—A most beautiful book that teaches how to sketch from nature. Contains a large number of examples with fascinating text and instruction. Get this book and go out and learn to see and sketch nature. Bound in cloth...... $1.00

Light and Shade—A manual on drawing by Mr. Zaner. It contains 48 pages, 5 x 7 inches, of illustrations, and plain, simple, instructive text. It is just what home students need and what all others who are not at home in drawing need to make them feel at home. Anyone can learn to draw by the aid of this book. Only $1.50 postpaid. The illustrations are lithographed from actual pencil drawings and are much finer than photo-engravings.

Pen Studies—A portfolio of twenty-four pen drawings, consisting of rolls, objects, birds, fruit, scenery, etc. It begins at the beginning showing the pupil how to make the simplest strokes and gradually evolve the finished design...... 50c.

The New Zanerian Alphabets—A guide to engaging, containing a great variety of alphabets designs, such as diplomas, resolutions, etc., with complete instruction. A substantial book bound in cloth...... $1.50

Progress—C. F. Zaner's masterpiece in flourishing. It represents an eagle, forceful and lifelike, winging himself through intricate curves and branches. It is on the finest of plate paper, 22 x 24 inches. The original of this design hangs on the wall of the Zaner Art College, and is valued at $100. "It's great," "it's certainly a bird" are some of the expressions which have made an impression. Let the reader remember also that it's no Spanish bird, but the American Eagle—the old national bird of ours that must now be especially proud. In tabe...... 50c.

Sample pages of Portraiture or Sketching from Nature mailed for 2c stamp. Each should accompany all orders. Remit by money order, draft, or stamps; no checks. Do not send personal checks. Address, ZANER & BLOSER, Columbus, Ohio.

REPUTATION CARDS. One dozen of my very best cards written in ornamental or variety styles for 50 cts. I think I can surprise you if you order now. This offer not good after November 1st, 1901.
C. F. ZANER, Columbus, Ohio.
Lessons in Engrossing — Number Twelve — by H. W. Ribbe, 181 Tremont Street, Boston, Mass.

The person who aspires to success as an engrosser must be able to execute good strong script, rapid marking, text lettering, and the various styles which require outlining with a pencil. The present lesson is not given as an example of careful, accurate outlining but as a rough, rapid, and strong work. The originals are made between lines three fourths of an inch apart; the caps occupying the full space, and the lower case two thirds. First outline with a hard pencil and then with ink, using a very coarse pen. After making sets enough to have the forms thoroughly committed to memory practice them on a smaller scale without the pencil outline. Angular forms may be maintained throughout, if desired, but has the effect of cheapening the letter.

E. C. MILLS, 105 Grand Ave., Rochester, N. Y., will send you 16 lines of fresh from the pen copies for 30c; 20 lines for 55c; 40 lines for $1.00. The $1.00 package is quite a complete compendium of business writing.

QUALITY IN PENCIPHER AND PENSMAHIP DRAWING

There is a greater demand today than there has ever been before for persons who are thoroughly qualified to teach writing, drawing, and the commercial branches.

The public schools of our country need a large number of special teachers of writing and drawing. These positions can be had by the competent.

Commercial schools need more teachers of penmanship and of the commercial branches than ever before, because they have more pupils.

Then in the lines of illustrating, engraving, designing, etc., there is much more work to be done at good prices than ever before.

Why not consider the matter of taking a three, six, nine or twelve months' course in the Zanerian Art College to prepare yourself in one or more of the lines of work mentioned?

Regarding the practical value of such a course, many hundreds of former pupils are ready to testify.

The Zanerian Art College is very liberal in patrons, and is one of the most successful institutions in the country in securing profitable positions for its pupils.

Rates of tuition are no higher than they have always been. Good board and room can be had at a very reasonable figure.

Large, finely illustrated catalogue of the school, worth one dollar, free to interested persons.

Read below an unsolicited testimonial from an appreciative student.

I very often think of the time spent at your school. It was very profitable to me. My penmanship was the means of giving me a good start. I learned more business than penmanship while attending your school.

Yours very truly,
W. W. SMITH.

Concerning That Zanerian Gold Medal...

This is a recent portrait of Mr. E. S. Gause, Emporia, Kansas, giver of the three gold medals to the most deserving student each year for three successive years. The object is to stimulate enthusiasm which in the end will result in excellence. Mr. Gause was a student of the Zanerian years ago and is a lover of excellence in good penmanship as well as in good character. He gives these costly medals out of his hard earned money because of his esteem for the school and for the profession. You ought to show your appreciation by endeavoring to win the Gold Medal as well as the golden medal of improvement and excellence. Are they not worth securing? No such an honor has heretofore been obtainable in the penmanship world.

PLUCK AND CHARACTER CAN WIN IT. HAVE YOU GOT THEM?

A slight pressure of one finger on the shift key of the

Remington Typewriter

brings all of the capitals under your hands. No duplicate set of keys to remember. No continual reaching after distant keys.

This fact, and its easy springy touch, enables Remington operators to write more and write longer with less effort and less fatigue than the users of any other writing machine.

Wyckoff, Seamans & Benedict, 327 Broadway, New York
Uneducational.

Requiring children to write under ten years of age, as they do in our public schools, is uneducational. It does more harm than good. It injures the child and the child's future writing. It injures the child because it is not old enough to perform with ease the art of writing. Childhood is the period of growth and activity, but the art of writing demands almost complete quietude. It suppresses breathing, and what could be more harmful? The ages from ten to fourteen are suited to pursuits of a skillful but not of a heavy, exhausting nature. The art of writing is the most skillful art we have to learn, and not being of a heavy character, it is specially suited to these ages. The arm muscles are more manageable at this period and it can therefore be more successfully taught.

The harm done to the child and the child's future writing, at from six to eight years of age, is far greater than most people suppose. It is during these years that excessive finger movement—the foo of easy writing—is established. Premature teaching rather than the copy book is responsible for cramped finger action. It is during these early years that gripping is also established. Gripping is not taught; neither is finger movement, but both develop because the child is endeavoring to do something that adults master. Childhood is naturally the whole arm (muscular) movement period, but the art of writing as usually taught is too small and difficult for the child to perform in a free manner, and as a consequence it resorts to a slow, labored, cramped, drawn, finger action, which is rarely ever successfully broken short of special effort and training by the few in a business college.

Why continue to cry copy-book or muscular movement, or to denounce the regular school teacher, when the root of the penmanship evil is allowed to thus flourish in the primary grades? Why denounce the teacher when we as specialists have known so little as to the real root of poor writing?

The remedy is pen. Require less writing in the primary grades. Let writing be done large enough so that children will use the arm movement in preference to the finger movement. Use the blackboard more and pencils less. Pens cause gripping—also fine pens. Chalk or coarse pens should be the implements. The minimum letters should be upwards of a half inch in height. Arm movement will then be as "natural" as finger movement and far more efficient and healthful. Then, as the pupils advance in years and skill, reduce the size of the writing until it becomes small enough for general usage.

Simply a Matter of Guage

The Western Penman, September number, commenting upon "funny illustrations," as touched upon by us, among other things in its random remarks asks, "why does the PENMAN-ARTIST AND BUSINESS EDUCATOR ridicule muscular movement and then secure services of leading advocates and teachers of muscular movement to give its lessons in business writings?"

Our answer is, because we are not narrow enough to think our own way is the only way. Because we believe in giving others an opportunity to express their views. As a journal of and for the profession of practical education, the PENMAN-ARTIST AND BUSINESS EDUCATOR offers its columns for the expression and discussion of ideas of various hues, and not as a vehicle only for those with which we agree. Our contributors are told to give that which they think is right regardless of our own opinions. We do not refuse articles of merit simply because we do not think their way, as does our western brother. We are not running a narrow-gauge journal. We are not advocating "one movement for all," or "simon-pure muscular," of the wild and wooly sort—simpler, plainer, easier, swifter writing for the many is our creed.

As a journal of and for the profession we must reflect opinions as divergent and prolific as its leading members hold. We debar none because they differ from our own. The PENMAN-ARTIST AND BUSINESS EDUCATOR is an open court in which all may speak who speak interestingly, instructively and timely. The PENMAN ARTIST AND BUSINESS EDUCATOR is a vehicle whose track is not of the narrow-gauge. Upon other topics our western brother seems sane and liberal, but the minute you pull the penmanship string he becomes excited and at once yells "muscular movement" and the night-mare of copy-books is upon him.

After all, it is simply a matter of guage as concerns the Western Penman and PENMAN-ARTIST AND BUSINESS EDUCATOR. The one is broad enough for muscular movement followers; the other is a standard guage upon which all may ride and enjoy the fellowship of the best our profession affords.

A Deserved Compliment for Mr. Gaylord

EDITORS PENMAN-ARTIST AND BUSINESS EDUCATOR:

I am in receipt of the last number of your magazine and wish to congratulate you upon the many good things it contains. I was especially pleased with the article in regard to western schools as given in Mr. Gaylord's department, and have written him expressing my appreciation of the same. It is out of the ordinary; not and gives us some very helpful information.

I think you are very fortunate in securing such a man for that department. He is one of our brightest and most progressive teachers and one who is bound to do much, both for your magazine and for its readers.

However, this is something you know as well as I do, for you are always striving to obtain the best possible talent and doing everything possible for those who come in contact with you.

With best wishes for your prosperity and trusting you are enjoying a very successful year. I am Sincerely yours,

A. H. Bartleby.

St. Johnsbury, Vt., Oct. 1, 1901.
Instructions Plate Ten

In making $\text{C}$ use a rapid, uniform, circular or rolling fore-arm movement. The reduced forms will demand a reduced, well-controlled motion the same as the first, but smaller. See that the beginning stroke of each capital is well curved. Too many make it straight and that robs it of grace. Endeavor to make these capitals without raising the pen. Finish these letters with a small turn—not with a large, round one. By so doing capitals join successfully with small letters. Check the movement slightly in finishing the capital so that the final turn will be narrow and so that the following small letter will not be made too recklessly.

Instructions Plate Eleven

In making the straight line exercises of $\text{H}$ do not raise the pen, and make strokes up as well as down. In the right curve forms, make strokes upward only. Study the loop letters closely. See that the $\text{J}$ below the crossing makes a good $\text{t}$. Avoid an angle at the top of the loop and use but little finger action. Instead, see how gracefully and how freely you can make the tail letters by simply causing the forearm to act in and out the sleeve and like a hinge at the elbow. Keep the last down stroke of $\text{h}$ and $\text{k}$ on the same slant as the first, and watch the final turn in order to keep it as narrow as other turns. In all this work, rely mainly upon the forearm or muscular movement, and do no work slowly.

Instructions Plate Twelve

Practice $\text{H}$ diligently. Do not slight these basic or preliminary exercises. As before stated, your final success will depend upon the skill with which you make these. The down stroke in these capitals is slightly curved. Note how the $\text{Q}$ resembles $\text{Z}$ and how the second part of $\text{A}$ resembles $\text{G}$. Note also the fact that the second part of $\text{H}$ is like a final $\text{t}$. Make the letter without raising the pen. Keep the lower loop of $\text{Z}$ rather small and the final crossing on the base line. Be careful how you join the capital to the small letter. Harness your effort to do it successfully. Close attention to detail and a determination to do all work freely and with the arm movement is the secret of success in good penmanship.

Value the present moments. Value

g g g g g g g g g g g g g g g g g g g g}

quinine quinine quinine quinine qu
Instructions Plate Thirteen

Practice faithfully and freely. Fill page after page of the exercise and go no further until you can make it well and much better than when you began. No. 104 should receive your most skillful attention. The loops below the base line should be made the same in size and shape as those above. The crossing should be on the base line and not below. It is so easy to neglect this and then wonder what is wrong with the appearance of your work. Skill in seeing is quite as essential as skill in doing. Neither can be acquired in a day or by a few efforts. Constancy in this as in other lines is the key to excellence.

Instructions Plate Fourteen

Number 114 is one of the most skillful of penmanship exercises. It demands a movement as graceful as the form. You now have a chance to see what you are made of. If of clumsy material, this exercise will help you to become graceful as well as a good writer.

Study the lower part of q and f. The loop should be the same in size as other loop letters but is made the reverse way around. Finish the loop part of these letters on the base line, and not above. Keep the back of the f comparatively straight and the lower loop no larger than the upper.

In all of these copies, use a free movement but always have it under control, or at least put forth your utmost efforts to have it under the command of the will.

Lessons in Practical Business Writing

BY

SPENCERIAN COLLEGE, CLEVELAND, OHIO.

Number Three

Combination work is the penman's delight. After acquiring a good movement it will be an easy matter for you to combine a number of letters.

The finishing stroke of one letter is practically the beginning of the next. Make the letters the same size.

In business writing it is best to not always combine capitals, for some letters do not join well, but I see no reason why capitals should not be combined when this can be done legibly and conveniently.
After practicing these lessons thoroughly, combine different capitals in each group, being careful at all times to secure gracefulness, which insures ease in execution. 

You should fill several pages of each letter and study the letters so carefully that your efforts to improve your writing will not be in vain. All the capitals should be made of uniform size.

It is by repetition that we gain most in learning to write a good hand. Do not hesitate to fill a number of pages of each letter. Strive to excel your previous efforts. Learn how to utilize your energies by endeavoring to make each letter better than the preceding one.
The above is a good set of capitals for general business writing. Avoid different styles; however, should you have another style that is plain there can be no objection to it. Keep in mind legibility, etc.

Supplementary Sentence Practice by S. M. Blue, Columbus, Ohio.

Huntington is a nice little city.
I am trying to improve my writing.
January and June are coming soon.
Kindness begets kindness always.
Learn to write in good, strong hand.
Maintain uniformity in your spacing.
Nineline bracketing is admirable.
One thing at a time and that well done.
Penmanship is Queen of All Pen.
Quinine is a very bitter dose to take.
Improvement

About the time Columbus discovered America, the scribes discovered a more expeditious method of writing. Round-hand or Engrossed writing was the new hand. Previously they had employed chiefly the Italic or print-like, disconnected characters. By the change more words could be written in a minute and with less effort. The change, however, was not a radical one. Speed was not even doubled, but it was increased perhaps a half, and effort was saved.

From the time that Independence was declared to the writing of the Emancipation Proclamation, there was a gradual change being made in our penmanship. As it took our people upwards of a half century to evolve the ideas of human independence and freedom (improved methods of living), it took them about that long to change from the old round-hand to the light-line characters of today. Spencer, Dunton, and others were advocates of the new standard, and it was quite an improvement upon that which it preceded. Not radical, but swifter and effort saving.

Thus it was that when it became necessary that people should write faster, it also became necessary that they could change the character or style of their writing. Today there is a demand for plainer, easier, swifter writing. If we wish to meet or fulfill that demand as the scribes did in the fifteenth century and as the Spencers and Duntons did in the nineteenth century, like changes must be made. As an effort in that direction, this series of lessons was evolved.

This plate needs careful attention. By careful I don't mean slow. Make all forms quickly. The little finger should slip more freely in making up strokes than in making down strokes. There are two reasons for this. Up strokes were created for speed purposes; down strokes for legibility. Then, too, the up strokes being longer can be made relative faster. Notice carefully the difference in slant between up and down strokes. Make a strong distinction between turns and angles, keeping the turns on top as in the plate above.

The small n is composed of three turns and but one angle. Be careful to always maintain a distinction between turn and angle, and to see that there are three turns in the n and your writing will be at least readable. It may not be beautiful but it will be plain, the chief essential of good writing.

The m has in it four turns and two angles. Be careful to not finish the last upper part with an angle. Finish letters and words as carefully as you begin them. Never practice carelessly nor thoughtlessly. Watch turn and angle, spacing in and between letters, height, width, etc.
Make the oval exercise freely and forcefully. Use no finger movement. Make about two hundred down strokes to the minute. See how freely, how easily, and how well you can make it. Then try the capital A. Make it large only at first, then reduce it gradually as given in the copy until it becomes a small letter.

Learn to be sure. Sureness is the result of being skilled and skill is the result of the right kind of practice. To be master of a subject, one must be familiar with it. Are you thoroughly familiar with the shape and proportion of letters, and do you know the difference between finger and arm movement? If not, familiarize yourself concerning the same by study and observation. Read carefully the instructions accompanying these lessons.

The words given are easy but important. Spacing can be learned by their practice. Turn and angle should be made strongly unlike. Care should be exercised in the dotting of the I. Study the spacing between letters and compare it with the spacing in letters. You should learn to do this work well and rapidly. No slow, sluggish motions should be used. Instead, a free, apparently easy, and graceful movement should be employed at all times. Remember that it is not pretty writing but practical writing that I am endeavoring to teach.

The x contains two turns and a straight line made upward on the same slant as the first stroke. See how gracefully you can produce the letter. The r is begun the same as the x but it finishes with a blind loop. Be careful about the finish so that it does not look like re. Begin it with a turn or it may resemble o. The x should be retraced so that it will not be mistaken for r. It can be made without raising the pen and should be so made.

Let the arm roll freely on the muscle in front of the elbow to make the retrace oval, also the c. Place the pen on the paper firmly and quickly and then make the C with a quick, circular movement of the arm, not of the fingers. Write the word without pausing or raising the pen. Keep the o's rounding and closed, and the m's rounding also. Do not drop to the base line with the last stroke of o or it may resemble a.

You must, if you wish to become a good, rapid writer, wash critically all tendencies toward illegibility. You need not be technical but you do need to be observant and careful. If you were aspiring to become a professional penman, I would recommend that you be technical about your criticisms, etc. But it is not accuracy but plainness that is needed in the business world of writing.
The National Commercial Teachers’ Federation

The next meeting of the National Commercial Teachers’ Federation will be held in St. Louis, beginning Thursday evening, Dec. 29th, and closing Tuesday noon, Dec. 31st. For commercial teachers, this is one of the most important meetings of the year. It has both the beauty and growth in numbers, in enthusiasm, in breadth and in practical value to its members. It is national, not only in its name and in its scope, but also in its ideals. It is representative of one of the most important components of our educational system, albeit a part of the system which has risen with phenomenal rapidity into national importance, within a period almost concurrent with President McKinley’s administration, so great has been the effect of a political policy, in business affairs, and through business men, in shaping out educational plans. Politics, business, and education have a sympathetic interrelation.

The Detroit meeting of the Business Education section of the N. E. A., was of great importance, though, of course, not nearly so large as the sessions of the meetings of the Federation and of the Eastern Association. These meetings are each and all,—whether city, state, or national,—of great value in disseminating information regarding the plans, policies, and results of commercial training, as well as in helping to remove the prejudice that, in many places and among many otherwise broad-minded men, still minimizes the worth of this form of education.

Divergent Opinions

That there is a wide divergence of opinion among notable men who support the cause of commercial education, will be evident to those who read Mr. W. A. Scott’s scholarly article in our September number, and who read in this number the thoughtful paper by Mr. J. O. Cristey, with Mr. L. L. Williams’ trenchant reply. These gentlemen stand at the opposite poles of thought on this subject. There are two sides to the question, and we expect to present other views in our December number. Meanwhile we invite your opinions, in the form of correspondence or special articles. The distance between the exponents of higher commercial training and those who champion the cause of private business schools as now conducted, can be very materially decreased by the associations enjoyed and the common understanding reached in such gatherings as the forthcoming meeting at St. Louis.

The ‘Professor’

The Western Penmen’s Association was formed, back in the eighties. Then from twenty-five to fifty good fellows could ostensibly find enough in the single subject of penmanship to keep their brains busy and their tongues wagging for a three-day meeting. But in the Chicago interest in this single subject had so far waned that the Public School Writing and Drawing Teachers’ section was combined with the Western Penmen’s section, and last winter at Detroit this combined section could not draw, out of a total attendance of one hundred fifty, enough to justify the carrying out of the entire program. This was not half bad, for it has lost its absolute importance, but because its relative importance has declined. The “professor,” with his silk hat, long-tailed coat, and tidal wave of hair, has slipped out, and with him have gone sprawling, shaded capitals, many obsolete penholders, glossy ink, whole-arm movement, the impossible creations formerly labeled “Pens Art,” and much intolerable affectation and ignorance. In the professor’s place, the commercial man, a brisk, business-like gentleman in derby and cutaway, is modest, intelligent, sincere, aggressive. His appearance would command respect in a business office; he has ideas, and, if he has heard of P. D. Armour as well as of A. D. Taylor; he teaches plain, unshaded business writing, using, generally, a rather coarse pen, straight holder, writing fluid, and combined movements.

When the writing class is dismissed, this modern teacher steps into the law class and demonstrates that he is as familiar with Anson’s Contracts as the professor was with Anson’s Dictionary. He can draw a Bill of Sale more satisfactory than he can draw Moore’s mocking bird. He reads the Review of Reviews and the Saturday Evening Post as well as The Penman-Artist and The Bookkeeper. In short, the former writing “professor” is our modern all-around teacher of business branches, and he wants to know what is going on in the Business and Shirttail Sections. He will be much in evidence in St. Louis. Go and meet him.

New Sections

As interest in our Federation meetings has increased, and as the attendance has been enlarged, new needs have been made manifest. The Business Managers’ Association, organized in Chicago in 1899, meets a well-defined need. It is proving to be one of the most useful of the associated organizations, although it has been knocked about from pillar to post in trying to hold its meetings without conflicting with other meetings. It should be treated as coordinate with the other Associations, in planning for its sessions. Its deliberations are probably more important to its members than are the discussions in any other Association.

A committee appointed at Detroit will make an exhaustive report of the High School Commercial Education, at a special meeting of high school commercial teachers, during the meeting, we shall, if possible, take action to organize a High School Commercial Teachers’ Association. A separate section, organized for this purpose, would meet the needs of this class of teachers, if possible, considering the wide difference between public and private schools, in motive, point of view, organization, management, hours of work, length and breadth of course, etc. Everybody to St. Louis will find pupils in high schools, academies, or universities should make a special effort to be in St. Louis to give impetus to this movement, which may mean much to the cause. In that city, and for that month, the number, make some comment on the weakness of high school commercial work as now carried on in most high schools.

St. Louis

The convention city chosen for the year is one of the great cities of this continent. It is the wholesale grocery store of the Southwest. In manufacturing tobacco, beer, bricks, machinery, and shoes it is one of the foremost cities of this country. It is the greatest river port in the United States, and its railway connections are probably not surpassed by any other city, excepting Chicago. There are, in this great city, some of the most delightful residence districts to be found anywhere in the world. We recall Westminster Place, in particular, a semi-public street along which are palaces probably none of which cost less than $50,000, and some of which are said to have cost more than $500,000. The winter climate of St. Louis is not severe. Its educational interests are large and varied. Everyone will recall Washington University, which recently repealed, from two wealthy residents of St. Louis, $5,000,000. The several business schools under the direction of Mr. E. H. Fritchie, Doctor Carpenter, Perkins & Herbel, J. G. Bohmer, Peter Kitter, A. J. Brown, and S. F. Hayward, are progressive, and their genial managers will put forth a united effort to help make the meeting of 1903 the largest meeting of the organization. The country tributary to St. Louis is large and varied; and the smaller cities will roll up an unprecedented registration.

Why?

Because it will keep you out of a rat, about the only fate that teachers and preachers need fear.

Because you will meet the leaders in our profession, and will experience some of the pleasures of an enlarged acquaintance.

Because you may be able to offer, in debate, some suggestion that will help a fellow worker.
The author mentions the various uses made of the most common waste products. Coal tar, distilled, yields aniline dyes, antiseptics, and perfumes; garbage is made into a fertilizer; sawdust produces wood-alcohol, gas, and acetic acid; tar furnishes benzol, petroleum, creosote, carbolic acid, oxalic acid, and various explosives; slag from blast furnaces is made into tiles, bricks, porcelain, cement, and building stones; from skinned milk, a water-proof glue and a sizing for paper are made; and gas, derived from the bottom of wine casks, furnishes cream of tartar and tartaric acid.

ILLUMINANTS

The author asserts that acetylene is the cheapest illuminant known, not excepting kerosene. In addition to the lighting of houses, where its value has already been demonstrated, he thinks it will also come into general use in shildights for steamers, for signalling devices, and for search-lights.

COALING STATIONS

An interesting article dealing with Tutuila, giving a good description of the climate, products, and customs of the people. The author considers the harbor at Pago Pago the best in Polynesia, and emphatically states its value to the United States as a coaling station.

COTTON

In the Cotton-Field. Max Bemuet Thrasher. Outlook, September, 1901.

This article is a sketch of the growth of the cotton industry in the South, giving a description of the plant and the conditions necessary for its cultivation, with the details of its culture. It also deals with the products of cotton, the author stating that $40,000,000 is invested in mills and apparatus for utilizing every part of the fiber of the cotton plant.

CANALS

Ship Canals in Austria. Geographical Journal, September, 1901.

In the Geographical Journal for September is a map showing the proposed routes of these canals, the main artery of which runs from the Danube to the Oder, to the Vistula, and thence to a navigable branch of the Dnieper. The Danubio-Oder canal will be 170 miles in length. The whole work is to be completed within twenty years.

SHIPPING

This article is a description of the New Celtic, which is 700 feet long and 20,880 tons register, the largest ship afloat. The designer tried for greater carrying power rather than for speed, her fastest time being only 17 knots. The author believes in the economy of large tonnage, and speaks of the industries which will be wrought by large ships, such as harbor improvements, wet and dry docks, and better shipping facilities. He mentions Southampton as a port which owes its growth to the improved shipping facilities which it offered to shipbuilding companies.

KANSAS

Kansas After the Drought. Prof. Frank W. Blackmar. Review of Reviews, September, 1901.

This article not only deals with the conditions existing in Kansas this summer, but deals with the resources of the state. The author states that the Kansas farmers are relying more and more upon alfalfa, a species of clover, for feed, as it is possible to raise it without irrigation. Other kinds of feed are Kaffir corn, which stands the drought better than any other kind, and sorghum. Among the minerals which are of immense value to the state are coal, zinc, silver, and various precious metals. Handling the raw products of the soil gives rise to the principal manufacturing industries, such as pork and beef-packing, flour-milling, and cement and brick making. The author's final purpose is to teach the farmer to take greater precaution about water supply and surplus feed.

POPULATION

The Rise of the American City. Walter Wellman.

Mr. Wellman says that the American cities are gaining in population much more rapidly than the rural parts of the country. Every census shows a steady growth of rural population, which has doubled during the last half-century. If the cities have waxed mighty and prosperous, it is because the country behind them is progressive and active. Labor-saving machinery and improved processes have lessened the number of men required for work on farms, so that the growth of the city does not necessarily mean the depopulation of the country.

CATTLE

The Economics of Cattle-Raising in the Southwest. Robert M. Barker. Review of Reviews, September, 1901.

The author says that the business of cattle raising is a serious undertaking, the two greatest problems connected with it being the land and the stock. From fifteen to twenty-five acres is required per head, and in Texas this land is either leased or owned from one to two dollars per acre, or three cents an acre, or bought outright, when it costs from fifteen cents to ten dollars an acre. Texas has several thousand ranches varying from a few thousand to several million acres, each containing from 1,000,000 to 3,000,000,000 acres. In New Mexico and Arizona there is free range. Ranchmen now are recognizing the value of finely-graded stock in preference to the long-horned, unbroken Texas variety, and there is a tendency to breed out the horns because they increase the cost of transportation. Except in summer, when it snows rains, but improved systems of well-draining and wind-mill construction have made the water problem a simple one. Disease is one of the greatest drawbacks to cattle-raising, and wild animals are a constant menace.

POPULATION

This article states that the city population of the United States during the last ten years has increased by 50 per cent. While the increase of the total population during the same period was not quite 21 per cent. In 1900, there were 131 cities having a population of over 25,000; 19 contained 250,000 or more; 19 had between 100,000 and 250,000; 10, between 50,000 and 100,000; and 8, between 25,000 and 50,000. Massachusetts has the largest number of cities of 25,000 or more; namely, 20, and this state is followed by Pennsylvania with 14, and New York.
with 12. The most significant growth is that of the three cities in Washington, Seattle, Tacoma, and Spokane, the increase during the decade being equivalent to 57.2 per cent. Nebraska is the only state where the combined population of the cities shows a decrease. In the North Atlantic States, 58.5 per cent. of the population lives in cities.

IRON AND STEEL

The writer tells how an American company, the Pennsylvania Steel Company, of Steelton, Pa., secured the contract for the Golftek viaduct on the English railway eighty miles from Mandalay, in Barnum. This viaduct is 2240 feet long, it being the longest in the world, and is about as high as the Brooklyn Bridge. It was made in sections, shipped half way round the world, and erected in the estimated time, by American workmen, notwithstanding the temperature of 125 degrees. From the bottom of the gorge, the train to Mandalay can be seen 220 feet above, drawn by an American engine across an American bridge.

FRUIT RAISING

Mr. McAdie says that formerly one-third of the citrus crop of California was killed during unfavorable winters, but for the last two years the loss has been less than five per cent. The method pursued is to produce crops of oranges, lemons, and grapefruits, thus preventing loss of heat by radiation, and also obtaining the latent heat of vaporization. For this purpose baskets of coal are placed in different parts of the orchard, and the heat from the coal evaporates the water near by. Sometimes the same result is obtained by "smudging" that is, by the burning of sticks and other refuse material which has been soaked in oil of turpentine.

MINING

This article states that prosperous mining is increasing. Numerous forest fires in the Cripple Creek district mining has thrived temporarily on the destruction of forests near at hand, but already the demand for timber has become so great, and the supply of nearly exhausted, that the mining coal used in this district is brought from 60 to 100 miles, and the heaviest timbers are brought from Oregon. A prominent mine owner gives the rule as his motto, "When some radical change takes place, the rapidly increasing cost of timber will, in five years, seriously threaten the profitable working of the mines.

If the great natural resources of Colorado are to be developed anywhere near their full extent, the present destruction of its forests must stop, and the remaining timber lands be dealt with in a sensible manner.

IRRIGATION

The author says that the value of irrigated land is governed by its nearness to markets, by the climate, which governs the kinds of productions, and by the distance and cost of railway transportation to the great markets of the world. In Southern California, where the citrus and other high-priced fruits can be raised, it reaches a value of $800 an acre, and water has a corresponding value, instances being known of its rent reaching $65 an acre per year. But in the northern Pacific Coast region, the portion that competes with the district east of the Rocky Mountains, there is cheaper land and cheaper water.

The needs of the live-stock business have been met by irrigation. In northern Minnesota, where the world calls success without the aid of schools, and with almost every condition that can be conceived of apparently against him. Once driven north, the brilliant phenomenon hits like one of those splendid October meteors across our horizon, leaving in his train a line of fiery light. But let not our eyes be blinded by the spectacle; we must be shown the method of securing himself such a genius or of supposing that genius can be made a successful substitute for the systematic training of the schools.

What constitutes a Business Education

1. O. Crissy, R. Y. State Inspector of Business Education.

PAPER READ AT X. E. A., DETROIT, MICH., JULY 8-12, 1901.

The term business education means, in a broad sense, any method of training that aims at giving a man capable of doing some kind of work in a business capacity, and that he should be educated on a plan radically different from that usually pursued by the business colleges. The American Bankers' Association took up the subject, and in 1892 sent Prof. Ed- mund J. January to investigate commercial
education in Europe and to make a report thereon. This report was widely read in the United States, and it showed quite conclusively that in many matters appertaining to business education we were far behind Germany and other countries of Continental Europe. In his plea for the establishment of commercial high schools in America, which formed the subject of an address before the Bankers' Association on his return from Germany, he said that we could "do no better thing than to follow carefully the course of educational experimentation in Western Europe." He found there in the schools of secondary grade, in addition to bookkeeping and accounting, business arithmetic, business practice, shorthand and typewriting, many subjects of which the American student had had no conception. There were, for example, two or more modern foreign languages, commercial geography and history of commerce, including distribution and modes of manufacture, the law of merchandise, the study of merchandise and raw materials of commerce, of money, banking and insurance, and of tariff legislation, transportation and maritime and international. We have heard from Prof. James and have followed the course of the experimentation of which he spoke, and have done much thinking and some experimenting on our own account. In this as in many other countries today in the United States a distinct grade of secondary business education, of which the typical exponent is the four-year commercial course to be found in many high schools throughout the country. It is the aim and purpose of this course to do all that may be done within the time limitation, not only to train the youth in the most approved modern methods of recording business transactions and to train him as a man, in the general way how business originates and how it is done. While fully recognizing all that is implied in the adage, "Knowledge is power," it is recognized also that the getting of knowledge and the knowledge of how to study and study develops the very highest power — the power of intelligent thinking, of getting at the very heart of things.

To accomplish its object, then, this course must not be the collection of business subjects, but rather the studies that best make for development of faculty must have first place. While the paramount object is thus to teach the students how to get knowledge, it is a part of the course to teach how knowledge is used in daily life, and how to use it in its most practical form. Our schools are the storehouses of knowledge. In the high school, the instruction in which is the province of the college and university. While we cannot at the present time, perhaps, point to any typical example of this in the high school, yet I believe that it may be said that much has already been accomplished in that direction. The Wharton School of Finance and Economy, attached to the University of Pennsylvania, has had for many years a four-year course, the nucleus of which is the study of economics and politics, supplemented by practical courses in accounting, commercial law, and mathematics. E. C. Biddle, the Registrar of the University of Pennsylvania, is of the opinion that the course of study originally given in my paper, and quote only the following from the concluding words of Dr. Scott:

We expect to place this course in commerce as a result of the studies in the semester courses in the college of letters and science, and of engineering, and to grant to the student who completes it the baccalaureate degree. We believe that the educational value of this course will be of the same order as that to any other course given in the university, and we expect to keep in mind the fact that the young man who expects to do business on a large scale needs to be educated in the arts of bookkeeping, as well as equipped with the technical knowledge which the prosecution of his business requires.

The course outlined and the words quoted make up the most circumstantial and satisfactory statement that has, within my knowledge, been put forth by any American institution that has engaged or proposed to engage in this work, the work of commercial education. The unqualified declaration that the commercial course will be in no respect inferior in educational value to any other course in the university, and that the baccalaureate degree will be conferred upon the candidate upon completion, will be gratifying to the friends of business education. If the universities cannot offer a four-year course in higher business education that will earn the degree, it seems to me, that it would be well to begin with their high dignity not to offer any.

Since this paper was written, I have received and read with much pleasure the announcement of a course in higher commercial education that is being begun. This is not, in its organization, a separate school, but a special course within the department of literature, science and the arts. The course is intended to "provide an educational basis in the highest degree of discipline to any course which the university offers." Students who enroll in the course at the beginning of the third year receive the degree of bachelor of arts at the end of the two years, and the degree of bachelor of arts at the end of three years' residence.

In the course of this paper I have alluded often to the advantages we have been able to derive from a study of the schools of commerce in Europe. We have

the sciences dealing with the various departments of the world's trade.

During the past year the University of Wisconsin determined to open a college of business. In an interesting paper read before the Sharon Commercial Teachers in Detroit last December, Prof. R. B. Johnson, who served as chairman of the committee of the faculty of the university, in formulating the course of study, gave in the language of Dr. William A. Scott, director of the new school, the work outlined for the current school year. As Prof. Johnson's paper has been given in full, the readers of the P. A. B. E. (Feb., 1901) can consult the course of study originally given in my paper, and quote only the following from the concluding words of Dr. Scott:

We expect to place this course in commerce as a result of the studies in the semester courses in the college of letters and science, and of engineering, and to grant to the student who completes it the baccalaureate degree. We believe that the educational value of this course will be of the same order as that to any other course given in the university, and we expect to keep in mind the fact that the young man who expects to do business on a large scale needs to be educated in the arts of bookkeeping, as well as equipped with the technical knowledge which the prosecution of his business requires.

The course outlined and the words quoted make up the most circumstantial and satisfactory statement that has, within my knowledge, been put forth by any American institution that has engaged or proposed to engage in this work, the work of commercial education. The unqualified declaration that the commercial course will be in no respect inferior in educational value to any other course in the university, and that the baccalaureate degree will be conferred upon the candidate upon completion, will be gratifying to the friends of business education. the sciences dealing with the various departments of the world's trade.
The Weakness of the University Commercial Course

BY MR. L. I. WILLIAMS, OF ROCHESTER, NEW YORK.

(This paper was read by Mr. Williams, at the Detroit meeting of the N. E. A. He was the leader in discussing Mr. I. O. Crissy's paper, which appears in this number.)

Mr. Crissy's broad definition of the term "business education" seems to me concise and accurate. It can be as correctly stated that an engineering education is any and all education that will assist in making the pupil a capable engineer, and a medical education is any and all education that will assist the pupil to become a skilful physician.

A part of the education for all special activities must be fundamental, a part must be disciplinary, and a part must be technical. The common school supplies the first, the secondary school and the college the second, and the professional school the third. It must be admitted, however, that all courses of study, whether elementary or professional, are disciplinary; practicing professionally is also disciplinary; work is disciplinary. Business education is, therefore, elementary and disciplinary education plus the technical knowledge necessary to enable the pupil to adapt his knowledge to business purposes.

The question is, how much and what kind of special training do young people require to prepare them for business life? Is it wise to permit young men who design to engage in business, but who have not decided what branch of business to follow, and who cannot so decide, because they cannot choose, but must engage in something without delay, to study a course of study incomparably better designed for the long commercial course prescribed by some of the leading universities? The course of study outlined in the announcement of a school of commerce of a leading state university is fundamental, industrial, physical, chemical, economic, legal, and business organization. If the following graduate is expected to become a bookkeeper, he must have a course in bookkeeping. But this course is not offered at the university. It is offered at the commercial school. It is taught by the instructor chosen by the commercial school to teach bookkeeping, and not by the instructors chosen by the university to teach English literature, mathematics, and the like.

I do not believe in educating a boy with the sole idea that he is to become a bookkeeper or clerk. If a university will give him such an education as will fit him for life, and qualify him (so far as education could qualify him) to become a successful business man, I would do this even if it were absolutely certain that the boy would begin active life as a bookkeeper. The more education he possessed besides his training in bookkeeping, the more intelligent bookkeeper he would be, and the greater would be his chances of promotion and increased usefulness. I believe that education pays in dollars and cents, no less than in personal gratification and better citizenship.

The business colleges have supplied a well-defined lack in the American educational system. They have not been, and are not now, perfect, but the phenomenal popularity of the better class of them seems very good evidence that they are doing useful work.

With regard to those American occupations which are spoken in a territory not larger than our state of Texas, but such a feature in a commercial course in this country is absurd; in all the countries where modern business organization and management, he will still have to begin as a clerk, and, by the time he climbs in business to a point where he can hope to apply his theoretical knowledge of it, there may be a very different business and business conditions and methods will have so changed that he will probably find his knowledge worthless. It is apparent that the prospectuses of the German and French commercial schools are more or less imitated by the faculty of the university in question in preparing the course of study of that institution. There is some sense in teaching six modern languages in Germany and France, but it is absurd to teach the French of commercial business, and business conditions and methods will have so changed that he will probably find his knowledge worthless. It is apparent that the prospectuses of the German and French commercial schools are more or less imitated by the faculty of the university in question in preparing the course of study of that institution. Bookkeeping in High Schools and Academies

G. W. Brown, Jacksonville, Ill.

I really do not know what kind of a course nor how extensive a course in Bookkeeping should be arranged for academies or public high schools. I do know that in order to teach bookkeeping to young people they must handle the subject very profitably anyway, unless they give it an amount of time out of all proportion to the other branches of the course. The pupils, as a rule, are too young to take in the whole process of bookkeeping, and it is a question whether it is not about as good as time wasted to undertake the subject at all in such schools.

To make bookkeeping courses entirely general in their purpose and should devote their efforts to general instruction and training. The children are not there for the purpose of receiving a special or professional education, they are too young, generally, for that sort of work. If it can be shown that a certain amount of bookkeeping is really a part of a general education and should, therefore, be incorporated in the courses of academia and high schools, then I should say that whatever is done in bookkeeping should be of an entirely general character and should only cover the fundamental principles or general processes of single and double entry bookkeeping, without attempting to make any application of general principles to the records of special lines of business. Do you get my point? It does not seem to me that there is much ground here for an extensive course in bookkeeping, subject. Either bookkeeping should or should not be taught in such schools as you have in mind. I do not undertake to say whether it should or should not, but I am inclined to believe that much of what is taught upon bookkeeping in such a course could be more profitably devoted to something else. But if bookkeeping be taught in such schools, I certainly would not be of the opinion that it could be done as it is now done in the traditional way.

The Nature of Bookkeeping

In the course of my teaching, I have come across many books and articles dealing with bookkeeping, and the more I read the more I am convinced that bookkeeping is a very useful and important subject. It can be taught in such a way that it will benefit the students. I have seen many students who have learned bookkeeping in this way and have later become successful in business.

For instance, I have seen a student who was not very successful in school, but who learned bookkeeping in a practical way and became a successful bookkeeper. He was able to do the work that was expected of him, and he was able to do it well. This is what I mean by the importance of bookkeeping in the curriculum of a school.

The Importance of Bookkeeping in Business

Bookkeeping is an important part of business. It is a way of keeping track of the money that is coming in and going out. It is a way of keeping track of the accounts of the business. This is what I mean by the importance of bookkeeping in business.

In conclusion, I would like to say that bookkeeping is a very important subject. It can be taught in such a way that it will benefit the students. It can be taught in a way that will help them to become successful in business.

G. W. Brown.  

Program

Rational Shorthand Teachers' Association of the Commercial Teachers' Federation

Here are the names of those who will present papers before the shorthand section of the papers. The members of the committee may be added to this list. The time of assignments has not yet been decided upon, but every person on the program has positively promised to be present and handle his subject.

David Wolfe Brown—Success in Shorthand Writing

Fred Irland—The Art of Shorthand Reporting

Jerome E. Walker—How I would Teach Shorthand.

Isaac S. Dement—Popular Delusions among Shorthand Writers.

Chas. H. McGurkin—How I Would Teach Typewriting.

Patrick J. Sweeney—The Demands upon the Shorthand School in Large Cities.

J. A. Lyons—What a Vegetable should I Study next time I enter a Shorthand School with a View to making myself an Expert Am pennissan.

E. Hatchings—What a School Can Do Toward Teaching Reporting.

John K. Gregg—Address, subject not announced.

Charles T. Platt—Where are We At?

W. J. Durand—Discipline in the School Room.

Miss L. L. Ely—Duties and Opportunities of the Shorthand Teacher.

P. B. S. Peters—Value of Completing the Shorthand Course.

Mary A. Healey—The School Side of the Incompetent Amennissan Question.

F. B. Moore—The Phonograp in the School Room.

J. Mosher—Teaching Shorthand Students to Spell.

Miss Frances Gillespie—Hand and Finger Training of Typewriter Operators.

A word to the wise: Mr. David Wolfe Brown and Mr. Fred Irland are reporters in the National House of Representatives, and need no introduction to the Shorthand fraternity. They are authorities and have no use for bookkeeping.

Mr. Howard, of the Pitman-Howard firm, publishers, of Cincinnati, Ohio, is known to every member of the Association.

Mr. Charles Walker, of Louisville, Ky., Mr. Dement of Chicago, Mr. Sweeney of New York, and Mr. Hatchings of St. Louis, are all known as expert reporters.

Mr. McGurkin, Mr. Mosher, and Miss Gillespie are authorities in typewriting.

Mr. Lyons, of the firm of Powers & Lyons of Chicago, has a very interesting subject and will handle it in a very interesting manner.

Mr. Gregg, the author of the Gregg System, needs no introduction to any shorthand writer in the United States.

Platt, Mr. Durand, Miss Ely, Mr. Peters, Miss Henley, and Mr. Moore are all well-known and successful teachers, and have interesting subjects.

The Executive Committee has certainly prepared an excellent program and has made preparations in advance. Other announcements may be made later.

Very truly yours,

J. Clifford Kennedy.

The Penmanship Teachers' Association

Chicago, Oct. 2, 1901, Messrs. Zane & Blower, Columbus, O., Gentlemen:

The outlook is very encouraging for an excellent programme for the Penmanship Teachers' Association. The meeting is to be held in St. Louis, December 26, 27, 28 and 29. It is too early to secure definite promises from many of the prominent men we hope to have take part. The correspondence thus far is favorable, and some of the strongest men in the work have chosen their subjects, and said "I'll be there."

The public school supervisors are especially interested in this meeting, and a large number of teachers will be invited to attend. Appropriate displays will be made for these displays, and there should be an interesting contest.

Any supervisor who wishes to exhibit the work of his pupils should present it at the conference. All papers will be placed at the disposal of the secretary. No person can take part who is not a member of the Association.

Very respectfully,

Charles V. Crandall,
Chairman Executive Committee.

School Openings

"School opened much better than we anticipated, and very much larger than it has ever been at the same season of the year." A. A. Kuhl, Georgia Normal College, Abbeville.

"We opened up yesterday with a good enrollment, and the prospects are excellent for the rest of the school year." Mrs. L. T. Blair, Hope College, Lyman.

This report comes from Spencer's Business College, Kingston, X. Y.

W. H. Carrier, of the Neville (Pa.) Commercial College, sends a club to the P. A. & B. E., and reports that "School is opening up in fine shape. We are now 49 ahead of last year at this time."

The attendance in the Commercial Department of the Colby Academy, New London, N. H., has nearly tripled in number during the past three years. This speaks highly for the principal of this department, Mr. X. W. Colly.

W. D. Chamberlain, who for the past seven years has been the principal of the Commercial Department in Ionia (Mich.) High School, writes that his department this year is larger than it has been any previous year since his connection with the schools.

"School opened with an enrollment far above our expectations. The increase this year over last year is about forty per cent. Over one hundred more than we have enrolled thus far," writes H. C. Bentley, of the Winsted (Conn.) Business College.

Stokes,

The inventor of the Automatic Shading Pen, recently favored us with a sample of his new pen which seems to be even better than his previous one. Mr. Stokes is a reliable business man, and a careful, painstaking worker.
The Penman-Artist and Business Educator

"Funny Illustrations" Again
A Reply to Editor Palmer

In the September number of our journal appeared the following editorial:

Some months ago a series of pictures were run in the Penman-Artist illustrating the defects of certain penmanship doctrines, such as the extrovert's view, weak cart, whole-arm movement, etc. Some of these pictures must have struck the editor of the Western Pennsylvania Business Educator as humorous, he says:

"When our Columbus friends have used up their supply of funny illustrations ridiculing muscular movement, we hope they will come into the making of his fold. We notice that Mr. Palmer has been to the New York office of advertising copy books, etc. We are not adroit artists, but we purposely do not use, but whether he has intentions of entering the copy-book fold we know not. Mr. Palmer evidently reasons this way about his illustrations:

"When they do a thing it is all wrong: when I do it, it is all right.

In the September number of the Western Pennsylvania Business Educator Mr. Palmer quotes the article under the heading of "Those Funny Illustrations," and then writes a lengthy and sarcastic criticism of the Penman-Artist and Business Educator, after taking us to task for doing the same thing, and not being able to defend a palpable inconsistency in this particular, lest we be cornered, leaves the subject forthwith, and at once mounts his ever present "muscular movement" hobby horse to ride agai.

One thing now seems certain: No matter on what subject Mr. Palmer starts out, he is bound to finish on "muscular movement." We think this is a rather strange position, however, which he again brings up, as he did the illustration question. Our investigations of this subject, with many years' daily experience in teaching, have led us to positive conclusions which we believe to be superior to, and which shall be free to state again from time to time.

We were once as enthusiastic advocates of muscular movement as any of the following eras, but we have now arrived at the conclusion that it not through desire but through conviction. The results we now obtain in teaching tend only to convince us of the error of our former ways. We are, of course, aware that many advocate the advantages of what is known as muscular movement, and we are also aware that it would no doubt mean dollars for us to advocate the same thing. Our readers can depend on our honest, straightforward, and it is, that the editors of the Penman-Artist and Business Educator shall never stifle science for "boodle."

Mr. Palmer writes: "What the Western Pennman would like to know is, why does the Penman-Artist and Business Educator ridicule muscular movement, and then service the leading advertising copy books, etc. We have been an advocate of some other movement or movements we have not engaged for him for that reason either. We engaged him because he is a superior teacher, and because it is not necessary to agree with him in every particular to commend his work in general. Were we to approve of the work of those who are not in every particular, whose but our own could we commend? We would approve of Mr. Palmer also.

We are not the only one who suggests in this way, what is now done. We assured him, however, that we give unreservedly what he believes best, and that we should not allow any of our opinions to hamper him in the least. On this subject we had the following to say in our own September number:

"We believe in giving what others believe to be the best, and not only that which we believe to be best, for this you can justly infer that we do not disompose everything that he shall say, and give, as being in our opinion the best for all. We think, however, when we asked him to give the lesson itself, in practice, and we wanted him to give it that which he believes to be the best, and he assures us that is just what he is doing."

While quoting from our columns, Mr. Palmer also writes: "In this number you can justly infer that we do not disompose everything that shall be quoted in this way. That makes our position clear. We believe in giving others the same rights we claim for ourselves."

But the Penman-Artist and Business Educator does not write anything else also, its bumptious inquisitiveness gets aroused sometimes, too.

About a year ago Mr. Palmer wrote an article strenuously objecting to the idea of attempting to give lessons in penmanship and psychology, yet, in his September number of the present year appeared Mr. Palmer's unconditional approval and recommendation of the only work we know of that is intended to help the teaching master on psychology. The Penman-Artist and Business Educator asks, why? If the fusing of penmanship and psychology was written in it, and Mr. Palmer should not mislead the public by commending a bad book. Again, we notice in a recent number of the Penman-Artist and Business Educator that the only book mentioned by one of the large copy book publishers, setting forth in glowing terms the superiority of a certain series of copy books, in this instance Mr. Palmer allowed in his columns. In other words, he has hypnotized books, which, according to his utterances, he believes wholly harmful. We know that he received good pay for the advertisement, but surely his consistency would not allow him, this time, to do this only for himself. So be it, the Penman-Artist and Business Educator should simply like to know, why?

We should not ask these questions were Mr. Palmer not so free to comment what is or is not inconsistent in the policy of the Penman-Artist and Business Educator. Certainly the editor of the Western Pennman has forgotten about glass houses, stones, etc.

We hope that we are not only liberal enough to think that others as well as ourselves have ideas worthy presenting. In the Penman-Artist and Business Educator it is not enough to believe that any ideas on the subject of penmanship not conforming to his own ought to be suppressed.

In harmony with the tenor of his editorial referred to, he should place on the title page of the Western Pennman the following: "No opinions allowed in this journal that do not agree with those of the editor."

The Western Pennman stands for Mr. Palmer's ideas only, while we intend that the Penman-Artist and Business Educator shall represent the whole profession.
Mr. J. M. Balzer has opened a new school at Minneapolis, Minn.—The Eclectic Business College. Success to the undertaking.

L. O. Haynes, formerly of Russellville, W. Va., is now principal of the Commercial Department of Morris Harvey College, Barbourville, W. Va.

Mr. O. P. DeLand, of Appleton, Wis., has sold his institution bearing his name at that place, and now desires to purchase an interest in some good school.

Miss Clara Ashton, Monroeville, Ohio, a recent Zanesville pupil, and one of the finest lady penmen in the country, was elected to supervise and teach penmanship in the public schools of Warren, Ohio.

L. B. Smith is the new teacher of penmanship and the commercial branches in the Normal School, Millersville, Pa.

Mr. E. T. Zerkle was recently elected to supervise penmanship in the public schools of St. Paris, Ohio. Mr. Zerkle is well qualified for the position, and no doubt the right man in the right place.

W. M. Blankenship, formerly connected with the Shelby Business College, now has charge of writing and drawing in the Marion (Ind.) Normal College and Business University. Mr. Blankenship is quite a fine penman.

Before his recent departure from the Birmingham (Ala.) Business College, the students and faculty of that institution presented Mr. C. R. Tate with a fine silk hat and a case for the same. This speaks highly for Mr. Tate and we have every reason to believe that he will be held in high esteem in the new position he has accepted with the Bartlett Commercial College, Cincinnati, Ohio, as he was in the former institution.

J. W. Mannell, formerly of the State Normal School, Clarion, Pa., is now connected with the Muscogee Business College, Houston, Texas. The P. A. & B. E. wishes Mr. Mannell much success in his new field of work.

S. C. Bedinger of Spokane, Wash., is now located in Kansas City, Mo.

N. S. Beardsley, a professional penman of a decade and a half ago, is again engaged in the business with the Hess Business College of St. Paul, Minn. A club from him evidences his old-time enthusiasm.

In our last number it was stated by mistake that S. P. Wiswell now has charge of the Shorthand Department of the Penn school, Boston, Mass. Mr. Wiswell is at the head of the Department which was recently added to that institution.

Mr. Wiswell has settled nicely and that the department is an assured success.

In our October issue, it was stated that J. C. Murdock had charge of the Cumberland, Md., branch of the Mountain State Business College. He kindly informs us that he has charge of the Commercial Department only. Mr. Smith evidently wants commercial branches in the school.

Under the title "Corporation Bookkeeping," that indefatigable worker, G. W. Brown, of Illinois, is sending out one of the best school advertisements we have seen. Better show your interest in a good thing and induce him to send you a copy.

D. W. Springer, of Ann Arbor, Mich., bears a unique relation to business education; he is director of the Commercial Department of the Ann Arbor High School, secretary of the Cleary Business College, Ypsilanti, and lecturer on the science of accounts at the University of Michigan, Ann Arbor, thus touching the commercial trinity in all its phases. His many friends will congratulate him on the recognition of his versatility.

K. A. Spellman, who teaches penmanship and commercial branches in the Spencerian Business College, Philadelphia, last year, is now with the Rhode Island Business College, Providence, R. I. We congratulate both Mr. Spellman and Mr. Pugh.

H. E. Hibbard, the energetic proprietor of the Boston B. & S. School, has been seriously sick, but he is now convalescent.

The Lynn Business College, Lynn, Mass. has prospered under the management of H. W. Pelton and C. C. Dexter. They are about to move into a commodious new building of their own.

E. M. Barber, supervising accountant in the large stores of New York, took a three-day vacation recently, and spent the time with E. E. Gaylord, of Beverly, Mass., and A. S. Beane, of Providence, R. I. Mr. Barber is an exceedingly busy man. Besides the heavy duties of his government position, he teaches bookkeeping five nights each week for six months of each year, and he finds time besides for special study along various lines. He is a splendid specimen of the broad range business man and commercial teacher.

L. E. Dwyer, of the West Springfield (Mass.) High School, is teaching the commercial courses in the Springfield Commercial School, Springfield, Mass., a school which he is gaining the popular affection of his pupils.

Our friend S. McVeigh, of the Bliss Business College, North Adams, Mass., gets out a very attractive catalogue, a copy of which we acknowledge.

The Brooklyn Law School, first of its kind, announces evening sessions from September to June. We note that N. P. Helly is president, and W. P. Richardson dean of the faculty, which consists of a number of notable New York and Brooklyn lawyers. We wish the new school the success it certainly merits.

The Practical Fellow is the catchy name of a bright periodical that comes to our desk from J. P. Wilson, proprietor of Wilson's Modern Business College, Seattle. The paper is breezy enough to be a practical advertising scheme, but Mr. Wilson's charming rooms and property shown in the copy we received owing to defective press work on the half-tone illustrations.

Norman Proch, last year principal of the commercial department of Holness Business College, Portland, Oregon, has accepted a position in the office of the City Auditor of Portland, in order to get some actual business in public accounting. He does not expect to remain long out of the school room, however, and this is good, because he is one of the Christian young men in our profession, who are an honor to us.

Mr. Henry M. Sheehan, our old friend, is now teaching penmanship and commercial courses in the new Manual High School, Fall River, Mass. It is a bundle of the simple letters from business men commencing the work of Mr. Sheehan's students. The collection is bound with a manuscript cover, perforated at the end, and tied with blue card. On the cover is reproduced a letter in Mr. Sheehan's handwriting, saying that he couldn't produce a budget of stronger testimonials if he had written them himself. The letter is a very clever adaptation of Frank Munsey's cover school, and is a fine illustration of the opinion of his work. The Sheehan & Clark School of Business gets out nothing that is not exceedingly well done.

Without doubt the handsomest, most aggressive monthly school paper that has reached our desk this month is the Rider Moore and Stewart College Journal. The general tone of the board and the combination of schools is our old friend, F. B. Moore, than whom no commercial teacher today is more clearly typified in the name "A Human Dynamo." We gladly wish him and his excellent associates the utmost success in their ongoing "community of interests" idea.

PUBLICATIONS RECEIVED

"Roll Call of the Commercial Teachers' Federation in Memory of S. S. Packard, at a Meeting Held in Chicago, December 25th, 1895" is the title of a beautiful book of about eighty pages, bound in soft gray with white lines, containing an excellent portrait of the deceased, recently received at this office, with the compliments of Mr. S. S. Packard. The book is a compilation of the words spoken by commercial teachers at a memorial meeting held in memory of the work and worth of Silas Sailer Packard, a life long advocate, and a most able and creditable one of Business Education.
What Teachers of Penmanship Today Most Need

By E. H. Crandle, Chicago, Ills.

First, the teacher should know himself—not a superficial knowledge, but one acquired by the most careful investigation. Satisfaction with self is dangerous. It is sure to lessen his desire for research, which will eventually place him in a monotonous rut, where his usefulness ends. The requirements of the teacher of penmanship are many. He must be a teacher—not a machine. He should have the ability to readily determine the needs of the individual pupil, then be capable of supplying these needs. He is supposed to know the kind of writing best adapted to the wants of the business men of his community.

Individuality in hand-writing is always desirable, and the teacher who can recognize the good qualities in the writing of a pupil, and encourage development along these lines, has one quality which marks a good teacher of penmanship. He must be a strong blackboard writer. The inspiration of the writing class depends largely upon the teacher’s ability to put life in the copies. Copies should be of a high grade—the nearer perfection the better. The mere execution of such work is an incentive for better results on the part of the pupils.

The teacher should know how to direct the pupil’s work in a way that will insure an individual hand, instead of making him an imitator. The fact that a student writes “just like his teacher,” is not necessarily complimentary to his teacher; it merely shows that the pupil has a clear conception of form, and possesses executive ability.

The teacher of penmanship should know more than the subject he is teaching. His knowledge should be broad; he should be able to express himself correctly and clearly. A few incorrect expressions by the teacher will send his influence on the downward course, and create unfavorable comment. Pupils are always on the alert, and few things give them more desirable subject matter for discussion than the errors committed by the teacher. He should not only know what to say, but how to say it, and his voice should be cultivated. The size of the room or the noise on the outside should be carefully considered, and the tone of voice governed to suit the surroundings.

A thorough knowledge of, and ability to dictate business letters is indispensable to the writing teacher. It affords him material for practical page work—the real test in business writing. It is not uncommon for a class to be drilled for months on single words and simple sentences, thus depriving the pupil of the practice which would be most practical. The teacher should know that almost invariably the business man will require the applicant for a position to write a letter of application. Unless the teacher is capable of writing such a letter, he is certainly deficient in that extent. It has recently been my privilege to see a number of letters from teachers applying for positions in a high grade school, a school widely known on account of its thoroughness and success in preparing young people for business life. With one exception, these letters were true messages—bearing the seal of incompetency. The writers did not know that a teacher is judged by his ability (or inability) to do that which he would be expected to impart to others. Personal appearance must not be overlooked in this connection. Too many teachers are blind to this important requisite, which lessens their influence materially. “Clothes do not make the man.” Very true, but they add wonderfully to his appearance and the chance of securing a position in the best grade of schools.

Let the Truth be Known

(The following is a clipping from a letter recently received from a reader of the Western Penman and the Penman-Artist and Business Educator. It tells “The Truth.”—Editors.)

Mr. Palmer got absurdly stirred up over your reference to his funny illustrations. He says on his editorial page, under the heading, Enthusiasm in the Penmanship Class, “Let the truth be known.” If you cared to do it, you could emphasize the fact that he uses, no doubt, as much finger action in the writing he does for his pupils as you do in the writing that you do for your pupils. The difference between you men has been chiefly a difference of terminology, not a difference of principle, with the argument all your way, because of the greater regard you have had for exactness in your use of terms. Now, if he wants the truth to be known, he might rub a little of the bloom off the edge of his figurative language, so that the ordinary reader may come to understand that Palmer’s Penmanship Budget is nothing but a copy book, under a different name. To be sure it is less nearly perfect than a copy book, and yet that, to him, is one of its chief merits. The teaching of penmanship lies in the teacher, and not in the copy book, no matter whether the copies he Palmer’s, Shaylor’s or Farley’s.

Makes Better Men

I take this opportunity to say that the P. A. and B. E. is one of the best educational papers that has ever been published in this country. It is full of good solid matter every month and that of a kind that builds up the mind and makes better men of those who read it.

I enclose my card as one of the permanent subscribers, and trust you will be able to continue as you have begun by giving the best for the money.

J. F. CASKELL.
With the Elliott Corn’s School,
Wheeling, W. Va.

The Use and Value of Shaded Writing

This is not meant as a defense of shaded writing. No defense is thought necessary. The skilled writer of this style has an accomplishment that will give him satisfaction and almost certain advancement. My advice is strongly against the display of poorly executed shaded writing. Do not put forth your writing until it has the unmistakable stamp of "good." Shaded writing poorly written is worse than plain writing. Good writing makes poor spelling prominent and will be of most use to the educated. The many writers who misspell words are a weight to the profession. We are all liable to mistakes, but these mistakes should be few. Every writer should realize that he must be able to do something besides make script forms. A young man recently made application to a New York business school for a position, stating that he would be willing to work full time for $1,500 a week. This young man writes a better hand than some penmen who receive a salary of $1,200 a year.

Artistic writing will serve advantageously those who are capable in other branches of education. It has been said: "there is a culture, a delicacy of refinement in the nicely written hand that is admired by all."

The student of this style of writing will find that the quality of determination will be of great value to him. To any one who is not prepared to give his undivided attention to the work, part of his time, the road will be long indeed. Concentration of mind and energy will do much for the student who has little talent to aid him. There are persons who would never reach a high degree of skill in this work, no matter how much attention they gave to the subject. However, the members of this class are few and the average student will find that his progress will depend entirely upon his application and industry.

Some time ago I read of a young man who, years ago, did his writing on bits of bark from trees because he could not afford to buy paper. Paper is inexpensive in these days and for good shaded writing the writer must have a good quality of paper. This is important. The writer who uses poor material has no claim to the assistance of progressive penmen.

Specimens for criticism should be sent to C. C. Canan, Duke Center, Pa., together with stamps for return postage.

[By an oversight in proofreading the word "disappoint" was mis-spelled in Mr. Canan's article in the October number. We find it impossible to catch all of the mistakes due to typesetting and are therefore unable to avoid the embarrassment which necessarily results to the authors of the manuscripts. EDITORS.]

E. C. MILLS, 1951 and Art, Rochester, N.Y., is one of the few recognized leaders in this country in preparing fine script for photo engraving. If you have in mind script for any purpose you should send copy for estimate.
The popularity of script for commercial purposes is increasing yearly, and it is certain to continue, as far as trend and accomplishment are able to do this class of work with skill. It is used on sign work, show cards, headlines in periodical advertising and is especially well adapted to cut purposes where display and attractiveness are required. Advertising in newspapers with script headings—seldom fails to attract attention.

The small design was made for a newspaper and is quite strong and snappy in its way. Study it carefully. Note the character and expression of each letter, then make a pencil sketch of the same, working up the detail with critical care. The extreme height of the small "s" should be at least one third higher than the other letters, but care must be exercised in order not to get the shade too high. The spacing must be uniform. When the pencil drawing is finished trace the same with ink, using Gillott No. 10 pen and India ink. Be careful to preserve the written appearance in drawing out the script, as it is an easy matter to lose the hand effect of writing when executed in this manner. Much of our work is executed off hand, which is the better way for many purposes, and our suggestions given here are for those who cannot handle the pen with skill and precision in off-hand work.

Design number two should be treated in the manner above described. Rule height lines for short letters about three fourths of an inch apart, one and one half inches between the lines. The capitals are on the Spencerian order of beauty, and are quite strong and dashy. This design is quite worthy of careful study. Devote the larger portion of the time to the pencil drawing and endeavor to get all the details correct before applying the ink.

**CATALOGUES & CIRCULARS**

A little booklet from the Carlisle, Pa., Commercial College, indicates a successful institution.

The Union Business College of Elizabeth, N. J., Hobart Webster, Principal, issued a very fine catalog covered with heavy gray paper. The book bespeaks a sound institution and a prospective and successful one.

The Springfield Mass. Business School greets us with a handsome catalog printed in gray and black. The illustrations are unique and appropriate. Fred J. Hillman, the expert accountant and penman, has the editorship. The entire catalog is a fitting memento for the school which has a deserved reputation.

The Brooklyn Law School, a new departure by Norman P. Hefley, proprietor of the Hefley School, a very ornate and resident of the Law School, W. P. Richardson is Dean of the Faculty of the Law School, and Principal of the Business Department of the Hefley School.

One of the most novel, attractive, and artistic catalogues received by us for some time, came from the Dudley Business College, Marshalltown, Iowa. A. W. Dudley, Principal. The cover design is out of the ordinary, and the color scheme and portrait feature are novel and attractive. The entire catalogue, inside and out, indicates brains, good taste, and business.

The Ohio Business Institute, Columbus, Ohio, issues a unique and modern catalog; modest, not big, but first class. Other circulars and booklets accompany the same, all of which indicate a growing school.

Mr. H. C. Kowlond, one of the proprietors, was one of our first pupils, and naturally we are interested in his welfare.

The Great Business College, Braham, Pa., issues a neat little booklet covered in brown with a red border, giving information relative to the school.

The Springfield, Ill., Business College, issues a very creditable catalog of fifty-two pages, well printed and illustrated, and above all, well written. The following struck us forcibly:

"Students of the Springfield Business College have the satisfaction of knowing that its work is highly appreciated and approved by the business men of this city, many of whom have sent their boys and girls here for training. The advantages which accrue to a student of a large and flourishing school with an established reputation can hardly be over-estimated. Students are judged by the character and reputation of the schools they attend. A foundation can rise no higher than its head, and it cannot be expected that a graduate of an inferior school will bear a reputation for learning and thoroughness which the school itself does not possess. The student of a school, of which the business world knows nothing, or knowing, has no confidence in, is handicapped in the beginning of his career to an extent which will hinder him all through life."

Fitzgerald Shorthand and Business School, Schenectady, N. Y., issues a catalog up to the average received by us.

By far the finest catalog recently received and certainly one of the finest and most costly ever received at this office, came from Dallas, Texas, the Metropolitan Business College, W. W. Darby and A. Klagland, proprietors.

The cover is dark gray and uniquely fastened with a elaborate embossed design, printed in gold and red. The paper is of the finest coated plate, and the printing is excellent. The pages are ornamented with an illustrated initial printed in blue and yellow with a dainty, vignetted background of blue, running diagonally across the page, giving the appearance of hand work and water color.

Such art, such enterprise, and such expense means refinement, progress, and prosperity on the part of the proprietors. Texas is not only the largest state but one of the most cultured, as evidenced by an occasional catalog which drifts hitherward.

The Y. M. C. A. of Hartford, Conn., is nothing if not progressive. It provides instruction in the practical arts, has a fine gymnasium, baths, pool and billiard room, etc., etc. The character of the work done in the classes is way above that done by the average institution of the kind. A couple of booklets just received tells and shows all about it.

Dennis, the engraver of Brooklyn, submits a booklet of designs showing styles of work done by his fertile and nimble pen and brush.
Listen not to the tale-bearer—he tells thee nothing out of good will; but as he discovereth of the secrets of others, so he will of thine, in time.

Sokrates

NEW BOOKS FOR BUSINESS EDUCATION

INTRODUCTION TO THE STUDY OF COMMERCE

By Frederick R. Clow, Ph. D., State Normal School, Oshkosh, Wisconsin. Illustrated by 10 charts and diagrams showing demand and supply, exports and imports, market prices, etc., etc., $1.25.

The book is designed as a working manual of economics and industrial geography for students who are soon to pass from school into practical life. The governing purpose running through the work is not so much to prepare the student for practical business as to enable him to comprehend some of the principles which lie at the bottom of all business, and to give him that larger intelligence by which he may see the social significance of any detail, as well as its relation to his own pocket.

BUSINESS LAW

By Thomas Raeburn White, B. L., LL. B., Lecturer on Law in the University of Pennsylvania. Cloth, 367 pp. $1.25.

"I think it an admirable little work, well suited for both high school and college classes. It is sufficiently comprehensive, and the subjects treated are explained concisely and clearly. A careful study of such a work would give to a student much valuable discipline, and a great deal of useful knowledge."—J. E. LeRossignol, Ph. D., Department of History and Economics, University of Denver, University Park, Colo.

Our Catalogue and Circulars sent free upon application. Correspondence about any of our Books cordially invited.

SILVER, BURDETT & COMPANY

NEW YORK   CHICAGO

378-388 Wabash Avenue
Kansas Special Teachers' Federation

Convening at Topeka, Kans., November 29-30, 1901

Program

Friday, November 29th
1:30 O’CLOCK

Welcome Address, Prof. W. H. Wasson, Statistician of State Educational Department.

Reply, Mr. C. T. Smith, of Kansas City Business College, Kansas City, Kansas.

Professional Cooperation, Mr. C. H. Shattuck, of Campbell University, Holton, Kans.

Business College Outlook, Mr. L. H. Hansam, of Great Western Business College, Concordia, Kans.

Advantages and Disadvantages of Specialization, Mr. E. H. Roberts, of Wichita Business College, Wichita, Kans.

Henning's Straight Lines

EDITOR PENMAN-ARTIST AND BUSINESS EDUCATOR.

SIR:

It is said "Consistency is a jewel." I question the familiar words when applied to some teachers of writing. A notable example being W. C. Henning, who says, in the September issue of the Western Penman, "Be careful about straight lines. We do not use them." A plain and blunt statement. Yet, on the following page he presents four styles of script capital M's, and each capital has a line so nearly straight that it could readily pass for one made with a rule; following these appear three H's and the same straight line stares you in the face. There are few penmen whose work I admire more than Henning's, and although Henning was a former pupil at the Zanerian, I am sure he didn't imbibe that idea from that source, because all other Zanerians use straight lines and are not ashamed to say so.

Can you tell me where am I at, or what is the matter with Henning? TSETSE.

[We give it up.—EDITORS.]
Good Art in Illustration

What it is, How to Recognize, Enjoy, and Appreciate it

(SEE OPPOSITE PAGE.)

The accompanying illustration is a photo-engraved reproduction of a wood-cut from a painting by Giacomelli, the great French painter of bird life. A wood-cut is a finely grained, specially constructed piece of box-wood upon which the illustration is drawn or photographed and then cut or engraved by a sharp instrument called "burin" by a skilled artist-mechanic. Each white stroke or spot of the illustration was made or cut out by the tool, the black parts having been untouched. The illustration before us is one of the very finest examples of wood-engraving. The artist-engraver's name is in the lower right corner.

The drawing of the robin is wonderfully true to nature, while the artistic effect of the surroundings is truly beautiful, reflecting, as it does, sunshine, shadow, and nature to a remarkable degree. This is nature idealized through composition. The white, illuminated background of the robin and the deep shadow of the nest were doubtless created by the artist from his intimate knowledge of the habits and haunts of our red-breast, universally loved and recognized bird friend.

How beautiful! How natural! How effective! How happy! How innocent and human are the things one feels like exclaiming when beholding the masterpiece of genius and toil. The detail of the grasses, etc., is strongly and exquisitely suggested, but it is subordinate to the birds and their home. Truly, this is a "Home, Sweet, Sweet Home" picture. It drives hate from the heart and replaces it with fond recollections and sunshine. It awakens the emotions of innocence and harmlessness, and banishes thoughts of blood and gastronomic selfishness.

Let us have more such pictures and artists and we shall have more birds and fewer gunners—more happy homes and fewer murderers.

This illustration is specially suited to framing for the parlor or school room. How many will so utilize it?

GREGG TEACHERS WANTED.

We cannot supply the demand for teachers of Gregg Shorthand.

Every day adds to the list of business and high schools discarding the old-time methods and adopting Gregg Shorthand.

Teachers of the system—especially those who have had previous experience with other systems—are commanding exceptionally good salaries.

Why not investigate?

GREGG PUBLISHING CO.,

CHICAGO.
Recent Reforms in the Penmanship World

Twenty years ago speed began to be advocated in penmanship. The author and advocates declared that if children or adults were taught to write rapidly by practicing quickly upon exercises, elements, principles, letters, words and sentences that were national, rapid hand writing would follow. It seemed plausible on the surface. They said: "Sacrifice form for speed"—"a form can be made more accurately quickly than slowly"—"the lightning never struck slowly"—"the then popular Spenserian, when in reality the forms were the ones evolved by the authors of the system they denounced as slow, finger movement, etc.

About ten years ago muscular movement began to secure a foothold upon the young and enthusiastic. Its advocates declared that the fingers were the cause of slowness in writing and that they should be kept busy. Form never children be taught to not use the fingers (they were never intended for writing). The advice was "use the simple pure muscular, no matter if the forms are poor, they will improve later". As a rule the forms did improve—after the pupil quit using the arm to excess and began to use the fingers. Its greatest mistake was in going from one extreme of excessive finger action to no finger action—attempting to do so. Extremes should be avoided. Today many teach so-called "muscular" movement, but those who produce practical results do not prohibit cooperation of fingers.

These reforms, though somewhat extreme and surface like, brought about results well worth their existence. The first stimulated activity and enthusiasm, and the second developed power and endurance. Both enabled the people to get out of odd, deep rats, only to get into new ones, through shallow and narrow and more easily beaten down. They lacked breadth and depth, but they possessed wire and freedom, two essential elements in the forge that welds the links in the endless chains of progress.

Neither was scientific because both failed to grasp the whole penmanship problem. The one grasped speed—the other movement. Neither realized the importance of form nor grasped the difference between 6, 16 or 20 years of age, in the application of their theories. But both realized the need of more practical writing, and, in a measure, discovered it.

Nearly a decade ago vertical writing was proposed as a panacea for poor penmanship. It was largely adopted and is still in use. It emphasized the legible side of writing and understood the needs of the child rather than of the adult. Its leading advocates clearly saw that the standard slant hand was too slanting and angular for strong legibility but they failed to grasp the fact that that which they proposed was too round and printlike for great speed. Thus it was that this reform, like the others, grasped a part of the whole story of practical writing. Their upright forms seemed to shut out the other fellow's point of view and therefore the speed side of penmanship.

Speed, movement and angle of inclination are useful but a part of the art of teaching and writing well. How long will it take for some of us to recognize this important fact. Until we do, we must necessarily be more or less narrow, one-sided and one idea in character. If the PENMAN-ARTIST AND BUSINESS EDUCATOR stands for anything, it stands for wholeness—for all the forces that enter into the utilitarian in writing.

We do not know it all—we cannot, therefore we endeavor to give all sides to a question. In so doing we do not consciously or unintentionally suppress the good simply because it does not seem best to us.

Gillott's Pencils, The Most Perfect of Pens, Have Gained the Grand Prize, Paris Exposition, 1900. This is the Highest Prize ever Awarded to Pens.
Backhand Practical Forms.

Simple, brief, easy, plain, rapid, uniform, pleasing, unique, compact characters.

Writing is a useful rather than a fine art.
This month I will try to put you wise to a few pointers in Auto pen advertising.

The design herewith is a street card. It will fare well as a show card (different wording, though). To make same follow directions: Draw owl with pencil on white paper; then use No. 8 marking pen to go over pencil marks; while ink is wet apply Diamond Dust. Paste white paper in the left panel. Pencil the lay-out of wording.

The Wise is with small No. 2. The Big Store is with No. 1 pen. Use Old English letters and a white, adhesive ink; while same is wet apply yellow Flock. Heenan's & Streator with same ink but apply light pink and light green flock, using pink on upper half and green on lower half of letters of the "Heenan’s" and green or pink alone on Streator. Trade at and border is in pure white. Scroll lines in gold and grey ink. Retouch letters while wet and before applying flock, with same pen you use to make them.

To the one sending best copy of this design I will present one hand made, in colors on fine black card board. Don't be afraid of it. I sell the best materials made that are used for such work and see that everything is in working order before they leave my shop.

A. H. BURKE, DEXTER, IOWA. Teacher of Penmanship, Dexter Normal School.

Will make FIRST-CLASS BOOKKEEPER of you in six weeks for $3 or RETURN MONEY; distance and experience immaterial; I find POSITIONS, too; placed pupil August 2, at $8 daily; one September 9, at $15 weekly; perhaps can place you too. Save this and write J. H. GOODWIN, Expert Accountant, Room 742, 1215 Broadway, New York.
Lessons in Engrossing—By H. W. Kibbe, 181 Tremont Street, Boston, Mass.—Number Seven.

For this letter use the Gothic base shown in lesson twelve, leaving openings for foliage. Make the foliage next and then put on the black, using a very coarse or stub pen. Use India ink and be sure it is black. For the foliage use a coarse pen; Gillott's No. 293 was used on this lesson, and it illustrates the roughest, quickest way we know of for getting a foliage effect. Do not try to copy but learn the stroke and work as much as possible from left to right and downward. In making smaller letters a finer pen, a Gillott's No. 293, which has been discarded for writing, will be desirable. Do not put on many branches or birds. If, in making the foliage, places fill in solid black, where not wanted, wait until dry and with a sharp knife blade scratch in a patch of white. Originals are three-fourths of an inch high.

Album Engrossing

The accompanying illustrations give an idea of the inside and outside of a Memorial or Resolution Album. The cover is usually made of a good imitation of seal leather and bound with a black ribbon. In case it is a testimonial it is well to use brown or some other color than black.

The other illustration is a reduced page of the album. Usually these albums are about eight by ten inches and contain from six to ten pages. Sometimes they are made quite costly and elaborate, but ordinarily they cost from $10 to $20 in the smaller cities.

OFF-HAND FLOURISHING

In white ink on black cardboard is the latest thing out. It is showy, attractive, beautiful and up-to-date. It will advertise your school, college or writing class quicker than anything. Send me a trial order and be convinced. 22x28 inch designs, $3 to $10; 18x22, $2 to $5; 12x16, $1; 11x14, 9x12, 8x10, 5x6, 3x4, 2x3. They are bold, dashy, artistic, and catch the eye of the passer by. Write today. Circulars free.

M. B. MOORE, Box 7, MORGAN, KY.
The straight hair line is made first in the standard "5." Second part of the "5" should be full and round and is finished with a dot same as the "3." The shade at the top is added after the "5" is completed. Do not make this shade too heavy. The shaded "5" is same as the standard "5" except it is finished with a dot and hair line combined and is added last. The "G" is made without lifting the pen, the dot at the top and shade on the oval being added after the figure is completed. The oval is one space in height; do not shade it as heavily as first shade.

The "7" is made with the inverted wedge which is made first. Lift pen after this shade is completed and make second shade same as introductory or first shade of the "4." If it is on a much smaller scale; lift pen again to form third shaded stroke. It is permissible to extend the third shaded stroke below the base line nearly a space. The "7" can be modified by making a graceful curve out of the third shade instead of making it straight.

The "5" is considered the most difficult of all the script figures. It is easier to make it without shading and then add the main shade and the shades on the sides which should be very delicate. The upper half of the "5" is the smallest. Do not make it too large or it will appear too heavy. The main shade of the "5" is about a space line.

The "9" is same as "6" inverted. It can be made without lifting pen and adding shade to outside of oval, or the oval can be made by lifting pen and connecting second shade with the oval. The modified "9" extends below base line about a half space and it is optional whether it is finished with a dot or not.

The "0" is shaded on both sides. Do not make it too full and don't make shade too long. Lift pen when left shade is completed and form outside shade commencing at top. By this method shading is done quickly. Be sure to close top of "0."

ENGRAYER'S SCRIPT FIGURES

The script "1" is very similar to the modified small 1, the terminating stroke being omitted. The introductory stroke comes below the base about one space.

The "2" is almost same as modified Z, except oval at top is shaded on outside instead of inside and the lower loop is omitted. The oval is shaded after the figure is completed. Do not make the oval too large or the figure will appear too heavy. A delicate shade should be added at end of compound stroke of the "2" and it should rest on the base line. The shaded stroke to the right of the "2" is a fifth of a space in height above base line, the terminating stroke being the same. Lift pen at the end of compound stroke to make the finishing shade and terminating stroke.

The modified "2" is same as standard except it is finished with a compound shade which rests on base line. Do not make this shade too long. The pen should be changed so that it will occupy the same position as for those modified to make the compound stroke successfully. The "2" can be made with a wedge shade at top instead of the oval; the wedge should be inverted and not made too large.

The proportion of the oval of the "3" is same as that of the "2." The second shade is usually compound and retraced about a fifth of a space; the lower half of the "3" should be round and full and is finished with a dot. The "3" can be modified by substituting the inverted wedge shade in place of the oval. A light shade is added to the end of the compound stroke of the "3."

The first shade of the "4" is very slightly compound; the loop and compound hair line are both made without lifting pen; the second shade is also compound and is only three-fifths of a space in height. The first shade and small loop should extend about a fifth of a space above base line. The loop should be delicately shaded on upper left side. The modified "4" is shaped like a triangle, the compound hair line being shaded.
Criticism:

Marriage the happiest State of Life would be,
If Hands were only join'd where Hearts agree.

Great is the steadiness of Soul and Thought,
By Reason bred, and by Religion taught.
Which like a Rock amidst of stormy Waves,
Unmov'd remains, and all Afflictions brave.
National Commercial Teachers' Federation

Office of the President

SALEM, MASS., Oct. 10, 1901.

MESSRS. ZANER & BLOSER, Columbus, O.

GENTLEMEN: — In answer to your inquiry of the 5th inst., would say that you can announce the St. Louis meeting of the National Commercial Teachers' Federation at the Southwestern Business College on December 20, 27, 28, 29 and 31. Sessions of the various bodies will be held from 9 A.M. to 1 P.M. in the different departments of the Southwestern Business College.

Meetings of the federated body will be held on the afternoons of the 27, 28, 29 and 31. Mr. Pritch, who will be our host, has made arrangements whereby the Federation will have the use of a regular convention hall in the hotel headquarters for our Federation meetings, and has also placed rooms at the disposal of the Federation officers in the hotel, as headquarters, where a regular bureau of information will be established.

Teachers should remember that the National Commercial Teachers' Federation secures a special railroad rate of one and one-third fare. They should also remember that in order to enjoy this privilege it is absolutely necessary that they take a receipt for their money in purchasing a ticket, and turn the same over to our secretary at headquarters. This rate is conditioned upon one hundred members being present, but we hope to have five hundred at least.

I had hoped to be able to give you all the programs in time for this issue, but will have the same in your hands within a week. The writer would be glad to give any information in his power to members of the profession individually, and all our officers will be glad to do the same. I would suggest that any teachers who have not attended these meetings communicate with the nearest officer of the Federation.

Very truly,

GEO. P. LORD, President.

A Great Reduction in Prices
On Commercial Art
For 30 Days.

It is my wish to have my work known and appreciated by the readers of this magazine and, for the purpose of advertising, I will, during the next thirty days, take any thing in the line of Designing, Illustration or Penmanship for less than one-half my usual price. Everything entrusted to my care will be done in strictly first class order and, if not satisfactory, your money will be cheerfully refunded. Here are a few prices for superior work:

- Covers for Catalogues, Etc. — $5.00
- Bill and Letter Heads — 3.00
- Portraits — 1.00
- Initial Letters, Each — 50
- Cast Paper, Pice Doz. — 10
- Set of Capitals, Business — 10
- Set of Capitals, Ornamental — 10

I assure all that these prices will in no way affect the quality of my work.

W. C. SHEPHERD
Artist and Penman,
245 West 55th Street, New York.

Quality
in Penmanship and Drawing

There is a greater demand today than there has ever been before for persons who are thoroughly qualified to teach writing, drawing, and the commercial branches. The public schools of our country need a large number of special teachers of writing and drawing. These positions can be had by the competent.

Commercial schools need more teachers of penmanship and of the commercial branches than ever before, because they have more pupils.

Then in the lines of illustrating, engraving, designing, etc., there is much more work to be done at good prices than ever before.

Why not consider the matter of taking a three, six, nine or twelve months' course in the Zanerian Art College to prepare yourself in one or more of the lines of work mentioned? Regarding the practical value of such a course, many hundreds of former pupils are ready to testify.

The Zanerian Art College is very liberally patronized, and is one of the most successful institutions in the country in securing profitable positions for its pupils.

Rates of tuition are no higher than they have always been. Good board and room can be had at a very reasonable figure.

Large, finely illustrated catalogue of the school, worth one dollar, free to interested persons.

Read below an unsolicited testimonial from an appreciative student.

I very often think of the time spent at your school. It was very profitable to me. My penmanship was the means of giving me a good start, and I learned more lessons than penmanship while attending your school.

Yours very truly,

W. S. SMITH,
With Mussey Business College.
Birmingham, Ala.

ADDRESS:
Zanerian Art College,
COLUMBUS, OHIO.
NOW READY.
TWENTIETH CENTURY EDITION, REVISED AND ENLARGED. NEW FROM COVER TO COVER.

"ISAAC PITMAN’S SHORTHAND INSTRUCTOR."

Exclusively adopted by the High Schools of New York City, and leading business colleges throughout the country. 278 pages, cloth, gilt lettered, price, $1.50.

NOW READY.
THIRD EDITION, REVISED AND ENLARGED.
TWENTIETH CENTURY BUSINESS DICTATION AND LEGAL FORMS.
(In ordinary type.)

A complete Manual of Dictation, for all schools regardless of system taught, covering fifty separate lines of business, with chapters on Spelling, Punctuation, etc., and matter counted for speed practice. The most complete Dictation Course ever published. 272 pages, stiff boards and pocket margins.

All progressive teachers and schools will look into the merits of these new works before making adoption. Single copies for examination to teachers and schools sent postpaid on receipt of one-half the above price. Liberal discounts to schools and teachers. Illustrated prospectus and specimen pages on request.

ISAAC PITMAN & SONS, Phonographic Depot, 33 Union Square, New York.

---

E. C. MILLS, 195 Grand Ave., Rochester, N.Y., will send you a set of business capitals, arranged in standard letter order, postpaid for $1.00. They are fresh from the press and will encourage you to do better writing.

Modern Art Publications for Artists and Teachers

Our publications are universally recognized as the finest in their line. The prices are very low, considering the quality and character of the work. Each set contains many thousand pages, postpaid by mail or prepaid by express.

Portraiture—The best book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book, containing hundreds of examples and explicit instruction.

Sketching from Nature—A most useful book that teaches how to sketch from nature. It contains a large number of examples with fanciful settings. Get this book and go out and learn to sketch nature by yourself. Bound in stiff boards.

Light and Shade—A manual on drawing by Mr. Zaner. It contains 48 pages, 5 x 7 inches. Of illustrations, text, and methods of drawing and lettering. It is just what home students need, and what all others who are not at home in drawing need. It will enable them to do much better work. A new book of this kind.

Pen Studies—A portfolio of twenty-four pen drawings, consisting of scrools, objects, birds, flowers, etc. It is the beginning of the fine art to which the student is shown. It is contained in the portfolio and is much better than the regular book.

The New Zanerian Alphabet—A guide to engraving, containing a great variety of alphabets, designs, and characters, etc., with complete instruction. A substantial book bound in stiff boards.

Progress—C. P. Zaner’s masterpiece in flourishing. It represents an eagle, forceful and lifelike, with spectacular flourishes, curves and branches. It is on the finest of plate paper, 22 x 18 inches. The original of this design hangs on the wall of the Zanerian Art College, and is valued at $50. It is the best and most complete alphabet ever made on this continent.

---

The large out put during the past year has demonstrated very clearly that it is superior in every way to any other automatic pen now on the market. The three main points of superiority are: Elasticity of material used, beauty of appearance, and high grade corrugated holders. Why buy a common antiquated style when you can get an up-to-date one for the same price? We guarantee all our pens.

IT'S A WINNER.

The MYOGRAPH is steadily gaining favor: 6,000 sold during the past year. This demonstrates, beyond a doubt, that this useful device is held by the users of the pen. Solid German Silver, sample mailed for twenty-five cents. The following testimonial is a sample of many unsolicited expressions of praise that come to the factory daily:

Dear Sirs: The MYOGRAPH ordered last year is in constant use. The students are enthusiastic over it, and they are now trying to order another one. We shall place an order again in the near future. I am sure that you will have the pleasure of sending another order of the same kind of pens.

Good Books Help Good Teachers
Are You a Good Teacher? Do You Use the Best Books?

Our Commercial Publications are the product of superior authorship, a practical knowledge of the demands of the business world, and an intimate acquaintance with the requirements of the school room. They have come one by one as a revelation in the teaching of the various commercial branches. They are kept right up-to-date; they are vitalized with the true educational spirit and work wonders in the hands of the competent teacher.

The Budget System
For Business Schools, consisting of "Business Book-keeping and Practice" with the accompanying Budgets, is the famous publication which is used in a large majority of all the Commercial Schools of the country.

Commercial and Industrial Book-keeping
is the latest Budget system for public and private schools of every description, and has made the most remarkable record of any work on this subject ever issued. Over 2,000 adoptions since coming from the press. Now in the 32d thousand.

Macfarlane's Commercial and Industrial Geography,
Just from the press. An epoch marking book already widely adopted and recognized as the standard book of its kind.

Sadler's Commercial Arithmetic,
College and School Editions, and

Sadler's Essentials of Arithmetic
Are books that have a world wide reputation. Largely increased sales during this fall.

Richardson's Commercial Law,
A book without a peer. It has superseded others in scores of schools. So simple and easy.

Bank's Easy Method of Touch Typewriting,
Bound in book form and printed on cards. A method that produces results, not a plaything.

New Method Speller,
A little work that teaches correct spelling by association. Teachers praise it highly. It produces results.

Lister's Budget of Writing Lessons That Teach.
That's all. That's ENOUGH.

Earnest's English-Correspondence,
Another little work that is all kernel and no shell. It braves up students on their weak points in English and Correspondence.

Billing's Synthetic Shorthand Method,
Graham-Pitmanic, a book that gets the pupil over the hard places and makes him a successful writer, winning its way into extensive use on its merits.

Blank Books and School Stationery,
A full line to select from at lowest prices.

Depositories
In twelve leading cities. Send for price lists and full information.

Precocity

If the American people are smarter in any one thing than any other nation, it is in the education of their children. They can scarcely wait until they are well out of the cradle until they rush them into the kindergarten. From there they are pushed into the public schools as soon as the law will allow. This desire to have brainy children has led to a wonderful amount of precociousness on the part of young Americans. Precocious is the right term. It means to be premature; to be ripe before the proper time—before nature intended. The result of precocity is premature decay. As a rule, precocity stands for brilliancy rather than depth, and cleverness rather than permanence.

In no one thing, during the past decade, have we been so insane as about teaching children to write as soon as they entered school. Fortunately the tide is now in the opposite direction. For years we have insisted upon more and "more written work in the primary grades." The most conclusive reason was "to keep the little tots busy," which usually meant "quiet." Nothing is so killing to the child, both mentally and physically, as quietude of the enforced kind. Writing suppresses breathing and thus reduces heart action. Writing is a laborious method of telling something or expressing thought. It is the best method of condensing thought. Childhood is the period nature intended for expansion rather than contraction. The tongue soon lets out a multitude of ideas, while the pen hampers spontaneity. Childhood is and should be spontaneous. Writing is too slow. Childhood is the period of getting rather than of giving information. There are many other avenues of getting knowledge which far surpass that of writing. The ear and eye are far more alert and active than the pen, and more accurate. Oral rather than written instruction is the need of childhood. The sky, the field, the brook, the woodland, the animal kingdom, the insect world, the arts of agriculture and manufacture, each and all contain more valuable information than can be found in books. Books but tell about such things. Why not go to the things and see direct? "Seeing is believing."

And so it is in a few of our most progressive schools. Things, not books, are the things studied. As yet, writing is taught in most schools in too exacting manner to children. The advance educators are now crying "less writing and large writing in the primary grades." Let us, as specialists, help the good work along.

It is not a question as to whether children can be taught to write (draw), but should they? It is not whether they can work in factories, but should they? Our laws are emphatic upon that point, even though we are lax about enforcing the same. Children should not be taught to write, much less required to do so.

Precocious penmanship means poor penmanship in the end. Just as surely as child labor in factories means physical wrecks later on in life. Premature writing does not injure the child to the same extent that premature labor in factories does, but it injures the child's future penmanship. And that is what we, as specialists, are concerned about. As teachers of penmanship, let us learn to put forth effort at the right time. The grammar grade is the place for drill in writing and not the primary grade. It may be you are not in a position to practice this reform, but if you are conscious of its need, you can at least preach it. The ideals of today become the practices of tomorrow. Do your duty, do not delay. Remember, it takes no backbone to drift with the multitude, but it takes intellect, courage and will to direct the many. As a specialist, it is your duty to direct the many in penmanship matters. Are you dutiful to your higher self?
Instructions, Plate Fifteen

Make direct oval exercise; two large spaces in height and arrange same as copy. Make down lines light. Keep uniform spacing, height, slant, etc., in copies 124-25-26 and 27. The name Madagascar is given principally for the drill on small a. Practice systematically, and do no work without thought.

commerce commerce commerce commerce commerce commerce commerce commerce commerce commerce

Madagascar Madagascar Madagascar Madagascar

to vacuum vacuum vacuum vacuum vacuum vacuum vacuum

maximum maximum maximum maximum

Instructions, Plate Sixteen

In 135 make a very decided curve in first part of dollar sign. Do not make straight line too long, and finish carefully. In 137 the exercise should precede the practice on figure 3. Make with a free, careful, forceful movement.

Instructions, Plate Seventeen

Begin 139 two large spaces high and gradually work down. This is valuable as it helps to discipline the muscles in making ovals of all sizes. Finish with oblique movement. In making 142, the figure 5, see that last stroke is joined to first part of figure. The figure 7 should extend below base line as shown by the dotted line. Every figure should be made as carefully as is consistent with a free muscular movement.
Instructions, Plate Eighteen

All the exercises and letters in this plate are intended as a review. The movements should be worked just as given. Do not practice it in part but make the complete whole. This work will be found especially valuable to those who still have difficulty in movement control.

Instructions, Plate Nineteen

In this plate we introduce sentence copies. Great care should be exercised in the practice of these, and several pages should be written with one copy. Study the arrangement, spacing, slant, etc., and do not make loop letters too long. Be careful about the t crossings and dot over i. Hold your writing out at arm's length and perhaps you may discover some fault not before noticed.
Suggestions to Student Subscribers by E. C. Mills

A. G. J. Loomis—Movement good. Study sentence copies in this lesson especially. A. C. M., Rome, Ga. Make down lines in compact ovals close together. Splendid movement. Study form. Carl W. M., Mass. Review compact ovals. Practice on the small exercises in September lesson. J. S. J., Montreal—I would advise you to take up the lessons first as they are mapped out and do not neglect any of the work. Send work regularly. F. O. B., East Newport. Omit all flourish in business writing. Hold your pencil down to solid practice on the exercises and copies in the order presented. You can become a good penman. F. L. H. Huntington. You may use little more slant in drawing. Try plate again. Study details. F. W. K., Geneva. Paper and pen all right. More work on fundamental movement exercises. O. C. K., Alden. Send me several pages compact exercises, September lesson. Make black with very light, fine lines. Made close together. This practice will give you facility in writing shorthand. Geo. W. A. Jr., Va. Do not shade your capitals. Try to develop a light action of the muscles of the arm. W. K. H., Turk. Your foundation exercises good. Fine business hand, Study form if you wish to improve. R. H. M., Montclair. Start any time and go through all the work previously mapped out. Send specimens monthly. For twenty-five cents I can give you a personal criticism. You have a splendid start. I. D. S., Miles Station. Make lines in small letters light. Down stroke in a slight compound curve. Study form of small r. K. W. L., Oak Ridge. Send more work for criticism. Work hard and take up the copies as they are given. W. S., Brooklyn. Even though you are a bricklayer and your muscles are hard and stiff, there is hope for you in the writing line. Practice hard and faithfully and send work often. T. J. S., Stoughtonville. Your first work is good. Light shade in your writing. Do not hurry over any part of the copies or the instructions. W. B. M., New Albany. You have the foundation laid for a fine style of writing. Write to Zamer & Blower concerning length of time to complete a course in their school. They have the best school of penmanship in the world and you would make no mistake in selecting such an institution.

Lessons in Practical Business Writing

BY

SPENCERIAN COLLEGE.

CLEVELAND, OHIO.

Number Four

Instructions

Having finished all the capitals in systematic order, we shall now take up the small letters on a similar plan. Not enough attention is given to small letters, therefore, we expect you to practice very hard on the first, second, and third principals. In other words, the straight line, right and left curve. Since the first principal or straight line controls the slant of the writing, it will be necessary to devote considerable time to this short line. Make the stroke of uniform slant and length and entirely free from shading, and also make it only one space in height. The right and left curves begin on the base line and curve but very little to the right and left. After practicing a page or two of these simple strokes, take up the combinations of letters r and n and see that you distinctly separate the letters by means of spacing between about twice the width of the letter

M|M|M|M|M|M

The small n is a very pretty letter and requires study as well as practice, and while much could be said about this letter we shall only say now that each part should have a neat short turn at the top, and the down strokes must be made straight. Practice on these until you can combine six or eight letters nicely and make each letter complete, not omitting one turn. In our next line for practice you will notice that we have n and n combinations. Great care must be taken to see that you do not make the letters n and a line too long or too short. The n should be made sharp at the top, while n should have its regular short turns, both points are frequently overlooked. Having practiced some on the n, the m will not be so difficult, for we add one more part which will make the m. The r should be one-half space in width, and the one point to which I shall now call your attention is to make a short right curve at the point of leaving the second upper stroke, this will bring the letter out distinctly.
Very little needs to be said about the \( \text{r} \), for the first part is made exactly the same as the small \( n \) and the finishing part the same as the \( r \); by which you will understand at once that the first part is one space in width and the finishing one-half space in width, then please see that you do not make the two parts the same. The small \( r \) is made improperly, even by some teachers of penmanship, whether it is a matter of choice or not, knowing how will not be known; however, I will say that the \( r \) is made without lifting the pen, and the method of running a zigzag line and crossing down strokes afterward, is all nonsense when it comes to making a pretty and exact letter \( r \), besides it takes much less time to make it by the retracing process. Make the first part exactly the same as you would in beginning the small \( n \); retrace the down stroke to the top and again retrace to the base line, where you make a short turn to the right. By following out this plan you will complete each letter and will be able to combine a number of them without lifting the pen and make each letter better than you possibly could the other way. The small letters \( o \) and \( a \) should always be nicely closed at the top. The last downward stroke of \( a \) should not be a left curve, but a straight line. You should practice long enough on each letter to show some improvement before you leave your practicing table.

- Seeing a penmanship has admired R
- Some easy business penmanship
- This is a place like home for penman
Lessons in
Real Rapid Writing
by C.P. Vaner.

Longhand

Two problems confront us today as teachers of writing. How can we make the learning of writing easier and briefer, and how can we make writing better, swifter and easier? Not how can we do this with the few who expect to become professional penmen, and who expect to earn their living by the excellence of their penmanship, but how can we do this with the many who do not love penmanship more than other arts, or who do not expect to earn their living by writing?

Shall we accomplish these two things, that of learning and doing? Shall we do it simply by increasing the force and effectiveness of our teaching? Shall we do it by drilling pupils more than in the past? Shall we retain, unchanged, the letters we have had and put more and better effort in the learning? Or shall we change the style from that which is ornamental to that which is purely utilitarian? Shall we continue with the old, or shall we invent such letters as are plainer and less skillful? Shall we endeavor to improve the writers and not the style to be written? Or shall we improve writing by improving the forms as well as the methods of their production?

The road seems clear. Improve form in such a manner as to require less effort to write more legibly than in the past. Make writing easier and plainer, by evolving forms that are plainer and easier, and the writing of the word will be more legible and less tiring. Improve movement by simplifying the letters which require the movement. As the letters are, so will be the movement.

The forms given are simple in action and plain in form, the two needful qualities in modern writing.

This is a good plate to illustrate spacing. Notice that the spacing between letters is a trifle wider than in the letters. Be careful to keep each letter distinct irrespective of context. Watch that you do not loop the last of r and that you retrace the r. See how freely, how well, and how easily you can write these words. To write rapidly and well requires close attention to details until the habit of writing well is formed "and then some." Care is the secret of good penmanship, not talent.
The r and s are two rather difficult letters. In making the former, pause at the shoulder in order to execute it well, as that is the part which distinguishes it from other letters. Finish it with a turn on the base line. Do not make the shoulder sharp or it may resemble a small c similar to a capital. School the hand to do the mind's bidding. The s may be made very quickly. The down stroke should be well curved and closed. It is immaterial whether it is finished with or without dot.

The e and c are comparatively easy, especially the former. To make the c, simply use a rolling movement, curving the up and down strokes quite well. The word eee is a good one to practice as it gives practice in finishing the r and in looping the e. Never make it like a small i without a dot. The e is part of a circle. The down stroke is well curved. Make it as an exercise without raising the pen. Write the word success continuously without raising the pen.
Article No. 5

The Dawnings of Youthful Genius in a Plough-boy

Of he will stoop, inquisitive to trace,
The opening beauties of a daisy’s face:
Of he will witness, with admiring eyes,
The brook's sweet dimples over the pebbles rise.
—John Clare.

Many of the best penmen of America have come from humble homes and the broad acres of the farm. Something in the stolid farm life seems conducive to the qualities that go to make the penman of today. One of the qualities required by the student of fine writing is the power to concentrate the energies to the acquisition of some one thing. No discouragement should be allowed to creep in. Usually that which is easily acquired is worth but little, and almost invariably the difficult things to get are the things that are worth most. The student must learn to see the letter in his mind before it is made on paper. This power of perception is not always developed as fully as it should be. Many persons practice and know when they make a good letter, yet they do not know wherein the letter differs from the poorly made one. Sometimes we find that the writer’s perception is better developed than his power of execution. Then again, we find excellent shades and quality of line with poor perception of the correct form. All persons should be able to write a plain, rapid hand before attempting the ornamental style.

Practice is needed to give confidence and sureness. The young penman marvels at the confidence of the expert writer in making an intricate combination at the end of a well-written letter. He should realize that the penman is familiar with the work from long hours of practice, and that the signature is but ordinary to the writer.

Improvement is gradual. It grows steadily and surely. No one will be much surprised at his progress from day to day, but from month to month the change should be marked. A young man who, several years ago, wrote a wretched style, is now one of the leading penmen in the United States. His ambition was encouraged by the kind advice of L. M. Thornburgh, and he is now an example of what a young man, who is not afraid of work, can do with but little talent to aid him. Few penmen play so prominent a part in penmanship matters of today, as the young man referred to in the foregoing sentences.

The student who can afford to do so should keep a book containing specimens of the real work of the best writers. It is a difficult matter to get these specimens, but a liberal purse will get enough material for practice and study for weeks. The young penman should also begin a library of penmanship publications for reference and study. The subject of penmanship is uninteresting to the teacher who has not studied it deeply.

At the present time the writer has a book that contains the work of America’s finest penman. It is needless to say that a book containing such a collection is worth a great deal, because many of the writers are reluctant to send out their work at any price.

As in most other things the man who makes the most improvement is he who looks on all sides of the matter and makes use of the many adjuncts certain to help him in his study of the subject.

The capitals given here are of the style used by those great penmen, Courtney and Madaras.

Work from this month’s copies will be criticised if sent to my address, Duke Center, Pa. Stamps for return postage should be enclosed.
Higher Commercial Education

Believing that our readers will find far more profit in reading the communications evoked by Mr. L. L. Williams' trenchant article in our November number, than in anything we have written, we gladly yield our space to the able men whose views are presented herewith. We shall welcome expressions of opinion from advocates of either side of this great question. - Edtrst.

Dr. Cheesman A. Herrick

Director School of Commerce, Central High School, Philadelphia

To the Editor of Business Educator:

I have read with interest the papers of Messrs. G. W. Brown and L. L. Williams, appearing in your issue for November, and find in them issues so squarely drawn that I feel like asking for space for a counter statement. Stripped of verbiage, both discussions seem to me too complacent an acceptance of things as they have been in our educational organization.

Mr. Brown believes that pupils of high schools and academies "are too young to take up much of a course in bookkeeping," and that time spent upon this subject in such schools is "about as good as time wasted." Again, he thinks that if bookkeeping is undertaken in high schools it should be confined solely to fundamental principles, and should not be made to apply to any special line of business. Finally, Mr. Brown arrives at the conclusion that bookkeeping "carried to practical results" should not be taught in high schools, for all people permitted to be taxed for the support of these schools and "it is not just and right that all the people should be taxed for the benefit of the few."

Does Mr. Brown subscribe to the Mr. Brown statement that pupils who enter public high schools and academies are in general not as well prepared to take up bookkeeping or any other subject of study, as those who enter business colleges? To be consistent he must say this. Teachers of the subject will not accept Mr. Brown's method of imparting even a general knowledge of bookkeeping, to try to teach bookkeeping with- out its application to recording transactions of special lines of business, would result in failure—it is not a subject for the abstraction of a didactic method—to impart the general knowledge, the subject must be presented concretely in a set of given events and relations. Finally, Mr. Brown gets at the crux of the matter in the declaration against commercial instruction in public high schools. He answers himself completely in the statement that all the people support high schools, and therefore they are to be for the best interests of all the people. Mr. Brown believes in the democracy of the public schools. According to him, high schools are to be more than college fitting schools, or they remain class schools; it is not sufficient to add the manual training element, for still they represent but part of the community. High schools looking to the so-called liberal professions and for the handicraft trades do not, according to Mr. Brown, satisfy present demands; public schools must represent the community, and it is to satisfy a huge demand for this need in the complex of our social life that high schools giving commercial instruction are being established.

"Learn for life while at school" is a worthy ideal for public high schools. To learn, but to learn for life. In my humble judgment no more profound nor far-reaching or less, enumerated. If a curriculum as described exists, Mr. Williams would render a service by naming the institution providing it and offering the curriculum for publication. What is probably the fact is that students are given an election in the range of subjects including six modern languages and the rest. But this is a very different matter, and the course should be judged by its contents, not by the "scholastic mongrel" out of which the choice is made. Neither am I aware that in Europe students of commercial schools study six modern languages, would not subscribe to the statement that there is any sense in such a policy, even under European conditions.

I take issue with Mr. Williams on the basis of my statement that the gauge of business education should be the ability of the student to get a position. If the graduate of the higher commercial school must begin at the same place as the graduate of the business college, shall we say perforce that one training is no better than the other? I submit that success is not in the beginning. I have known graduates of engineering schools to begin as ordinary apprentices, but they shortened the term of apprenticeship, and became in the end superior workmen. Higher commercial courses can furnish a similar preparation for apprenticeship in business affairs.

"The absurdity of copying Production anything commercial from and Germany and France is apparent. How few now we are outstripping those countries in everything commercial." How after all are we outstripping Europe in commercial affairs? Is Mr. Williams aware that Europe has the market of her neighbors and natural customers in South America? The United States purchases largely of South American countries, and in return sells but a fraction of what they buy, and what we ought to furnish. The countries that Mr. Williams discredits have secured and hold from us what would be our most profitable trade, and moreover, these European countries are our agents in the pay- ment of the South American trade balances that we must settle in money. The success that the United States has had is due to her productive power, rather than to commercial intelligence or organization. This productive power, as compared with education other than commercial, and there has been a measure of success not because of, but in spite of, proper commercial education. What I want to urge is that we must add to an equipment for being a productive nation, a preparation for being an exchanging nation. That preparation is to be given by the schools which Mr. Williams criticizes. Shall we have industrial and commercial
progress if we are satisfied with the past and cling blindly to educational traditions?

Discipline and Utility

The common school, disciplinary given by high school and college, and technical or professional given by the business college, has all the formalism of an academic method. Such a scheme does not seem to me attractive as a theory, but if it were it would have to be dismissed as impracticable. I had hoped that we were beyond this mechanism when one institution should be limited to matters disciplinary, and another to matters technical. Mr. Williams admits the disciplinary value of the traditional high school and college, must have some commercial instruction in high school and college? To be disciplinary must a thing cease to have any utility to any human being? Granted for argument’s sake, a thing that can be proved otherwise, viz., that the industrial history of England is valueless to the business man of the present because economic conditions have changed. Mr. Williams business pursuits divided into, fundamentally to be given by

Mental Discipline Indispensable

As well might you attempt to teach Greek to a babe in arms, as to attempt to make such persons as these understand what is meant by a college course.

To persons who are really familiar with modern industrial life and who are genuine specialists in commercial education, two facts are already established. One is, that a training at least equivalent to that furnished by the university undergraduate course of the present day, is essential to the man who is going to succeed in the responsible positions of the industrial world of the present and immediate future. The second is, that every person must have a good deal of technical knowledge of the structure and workings of the present industrial organism, and must have acquired a good deal of skill in securing knowledge at first hand, and in interpreting the facts which come under his observation.

These two propositions established, the question simply is whether it is possible to substitute for some of the subjects contained in the old college courses, new subjects capable of giving this special knowledge and training without in any respect interfering with the disciplinary character of these courses. If this is not possible, the only solution of the problem is a university course with a couple of years of special professional study added thereto. Be it understood, that these special studies are not those available in the business colleges of the present time, but a class of studies far more difficult, extensive and enlightening than these.

A Question of Competency

Naturally the only persons really competent to solve this problem are the people connected with the universities who at the same time, by their special studies, have gained a knowledge of the modern business world and its needs. By a process of experimentation these people have demonstrated that many of these new subjects of study, capable of giving the technical training needed by business men, possess as high an educational value as do many of the subjects contained in the old college courses, and consequently that their substitution for some of these subjects will not in any wise, interfere with the disciplinary scheme. If this is not possible, the only solution is a university course with a couple of years of special professional study added thereto. Be it understood, that these special studies are not those available in the business colleges of the present time, but a class of studies far more difficult, extensive and enlightening than these.

Mr. I. O. Crissy

State Inspector of Business Education, New York

Editor Business Educator:

Your letter asks me to give you an answer to the paper of Mr. Williams, read in the discussion of my paper on Business Education, at the Detroit meeting of the X. E. A.

From what I remember of Mr. Williams’ paper as read, and also from a reading of the report which you have sent me, I am of the opinion that it does not require any answer from me. As a matter of fact the author agrees with the more important propositions of my paper. He subscribes to a broad definition of business education. He also agrees practically with my views in regard to the American business college, when he says:

The ideal thing, in my judgment, for every young man who contemplates a business career is to supplement a thorough rudimentary education with a good high school course, and, if possible, a college course, and after that secure such knowledge of business customs and office routine as is provided by the leading business colleges of the period.”
This is, in effect, what I have been saying ever since I went into the work. I have said and written so tirelessly, and I have said it in the Business-syllabus published first in 1898. Indeed, Mr. Williams has put it a little stronger than I did; for he would, if possible, have the finishing year in the preliminary instead of the college course, whereas the plan set forth in the syllabus was to send the student to the business school on completion of the high school course. It was a great objection to the plan, but I have sustained the degree which is the subject of the question, and I am distinctly on the other and modern side of the question. I believe in higher education for the business man just as I believe in higher education for the man in any other vocation requiring brains for its success.

Recollecting in his paper the subjects enumerated in the commercial course of a particular university, Mr. Williams says: “Some of these may be useful to somebody, some of it would be useful to everybody, all of it would be useful to nobody.” Yet, notwithstanding the chaste, epigrammatic style of this characterization, I think this attitude is entirely wrong. The selection of subjects for higher education, of the kind which is provided in the public schools should be general and of such a character as to supply the wants of the greatest number. It should be generally useful. What branch in the ordinary high school curriculum bears the slightest resemblance to the subject of bookkeeping? What boy or girl can get along well in life without a knowledge of commercial education and its uses? Surely the work of our public schools is vain if it does not teach our young people how to write a receipt, a bill, a note, a check or a draft with a proper understanding of the parties thereto and the obligations involved.

The selection of the consular service course as a special mark for criticism seems to me to be particularly unfortunate for Mr. Williams’ argument. No more useful work has been done by the Higher School of Commerce in Antwerp than the training of young for consularships. The Belgian government has not hesitated to select these men for its service; and it is high time that, in this country, with its fast growing commercial interests abroad, we begin to look for other qualifications than mere “political pull.” In this connection it is highly gratifying that our present chief executive has already given ample assurance that hereafter, in the appointment of United States officials, ability and merit, and not party service, will be the first consideration.

In conclusion, I have but one serious criticism to make upon the paper of my respected mentor and critic, and that criticism refers to the apparently intolerable and curiously discouraging attitude assumed toward the pioneers in this country of higher business education. I have said that the question can be solved satisfactorily only by experiment and experience; and hence it seems to me that those who are willing and able to take the chances of the early experimenting ought to be encouraged rather than decried.

Albany, Oct. 9, 1901.

L. O. CRISSY.

Quoted by M. E. Sadler, Director of Special Inquiries and Reports to the London education department.

Bookkeeping in High Schools and Academies

In the last issue of the Penman Artist, and Business Educator the above heading has been given to a letter from an old friend, Mr. W. Brown, in which he seems to think that a knowledge of bookkeeping is not part of a general education, but of a special education, and therefore, it should not be included in the course of study in high schools. He further says that it is “absolutely good as time wasted to undertake the subject at all in such schools.” Nevertheless he seems to be open to conviction, for he says that “if it can be shown that a certain amount of bookkeeping is really a part of a general education, * * * whatever is done in bookkeeping should be of an entirely general character, and should only cover the fundamental principles and general processes of single and double entry bookkeeping,” etc.

I am somewhat surprised that one who is so familiar with the subject of bookkeeping, and its value, should take this position. It is true that the information provided in the public schools should be general, and of such a character as to supply the wants of the greatest number. It should be generally useful. What branch in the ordinary high school curriculum bears the slightest resemblance to the subject of bookkeeping? What boy or girl can get along well in life without a knowledge of commercial education and its uses? Surely the work of our public schools is vain if it does not teach our young people how to write a receipt, a bill, a note, a check or a draft with a proper understanding of the parties thereto and the obligations involved.

What sort of education can be more valuable to the great majority of young people than to know how to keep the stub of a check book or make a deposit? In what position in life can a man be, who will not be more intelligent and better qualified to live a useful, industrious and worthy life, if he has a knowledge of the purposes and uses of accounts and the proper collection and relations of values as illustrated in everyday transactions, and the final statements of facts as exhibited in an ordinary set of books?

In this commercial and industrial age I can hardly conceive of a calling, trade or business, in which a knowledge of the subject of bookkeeping in its different branches would not be of great practical benefit, to say nothing of the educational benefits. Therefore, I think that, as a branch of learning, it can be safely classed as general.

I am only surprised that the only purpose of the business college of today is to prepare students to become specialists, and that the commercial branches have no value whatever for those who have not chosen to become bookkeepers, office clerks, etc.? If such is the case then indeed are the popular claims for commercial education false and unfounded. I have too high an opinion of the graduates of our best business colleges, to accept any such conclusion. If we have made one claim stronger than another for business colleges, it is that they train young men
and women for usefulness in life, whatever their calling or vocation may be.

Why cannot books on commercial law, commercial arithmetic, commercial geography, penmanship and correspondence be taught as well and as efficiently and as practically in high school as in any other school. In what way can instruction in these branches, covering two, three, or four years in connection with other branches, be inferior to the same instruction in the commercial branches condensed into six months or one year?

I admit that many teachers in high schools, who teach the commercial branches, are not well equipped to do so. This is a fault of commercial instruction and not of the course of instruction.

I am a warm advocate of commercial education everywhere, in high schools, academies, business colleges and commercial schools. I go a step further and advocate the introduction of elementary bookkeeping into the higher grades of the grammar schools. We are told that eighty per cent of the people of the country are no further than the grammar school. Give this eighty per cent, a practical knowledge of business papers and simple accounts, because the management and industry of our country is so closely interwoven into the lives of this eighty per cent, that they will find a practical use of this sort of training.

Shall We Teach Local Geography?

W. J. ANOS, PEACE SCHOOL, PHILADELPHIA.

In the September number of the PENMAN'S ART JOURNAL, the editor took occasion to discuss the importance of teaching local geography.

Personally, I cannot subject the pupil to a timely one; especially for young people who are preparing themselves for the immediate duties of commercial life. It has seemed to me, for a good many years, that the work of our geography teaching has been based on facts remotely related to our immediate surroundings, that too much time has been spent in studying foreign, rather than local conditions.

Most pupils employed near home.

It must be obvious to any one who gives this matter any thought, that the stage of activity for most of our young people will necessarily be limited to their own localities, and that consequently, a thorough knowledge of local methods, wares, routes of transportation, etc., should at least be firmly fixed in the pupil's mind, before he leaves the commercial school. For years I have felt that no young man should be sent out of a commercial school, especially if such school be situated in a large city, without being well informed with regard to the prominent street houses, routes of transportation, leading imports and exports, and prominent foreign markets for the purchase and sale of such goods; in fact, a complete knowledge of local affairs so far as one can and ought to secure it in a modern business school.

Names and position of streets

When a young man takes a position it is frequently necessary for him to travel over the city for his firm. If he is familiar with the position of the streets and locations of leading firms, time is saved. If he must spend hours seeking information, his employers are, in just this feature paying for what the young man should have learned in school.

Routes of transportation

A clerk is called upon to choose a route of transportation for the shipping of an invoice of goods. It ought to be clear to any one that the clerk who is familiar with all the prominent routes leading from his city, and can tell at a glance which are the most direct and cheapest routes, is of more value to his employer than is a young man who hardly knows that a railway or steamboat line reaches the city.

Local industries

Every city has some leading industry. Practically all other businesses owe their prosperity or failure to the leading business in a community. No two cities are alike in this respect, and, for this reason, no standard can be given. Enough so that pupils should not only know where these places of business are, but should also be taken through them, on tours of inspection; and, if possible, specimens of the goods should be secured while they are in process of manufacture. If your town contains a factory, take your pupils through it, and, above all, study the methods of making, routes of transportation, and leading markets for the sale of the product.

As it is done in Peirce School.

Below is appended a synopsis of the work done in Peirce School along this line. The outline is so arranged that pupils may add many items of interest as they advance. We frequently place unimportant items in our outlines in order to stir the pupil to choose the important parts. We pay a good deal of attention to making personal visits to points of interest. Pupils are required to make notebooks and secure notes for references, and we also make it a point to obtain specimens, although our Commercial Museum makes this feature of the work hardly necessary.

PHILADELPHIA

1. Location:
   a. Head of navigation on Delaware River.
   b. Eastern terminal of eight railways.
   c. Natural outlet for iron and coal interests of Pennsylvania.
   d. Proximity to foreign markets.

2. Populations:
   a. 1,297,697 (1900).
   b. Condition of people.
   c. Generally favorable.
   d. Energetic and shrewd.

3. Trade Conditions:
   a. Most favorable.
   b. Center of wholesale trade.
   c. Excellent transportation facilities.

4. Leading Industries:
   a. Manufacture of Carpets.
   b. Manufacture of Silk Goods.
   c. Manufacture of Locomotives.
   d. Manufacture of Warships.
   e. Manufacture of Street Railway Supplies.
   f. Refining of Sugar.
   g. Refining of Petroleum.
   h. Manufacture of Woolens.

5. Commerce:
   a. Export trade.
   b. Iron and steel products.
   c. Kerosene.
   d. Locomotives.
   e. Coal.
   f. Wheat.
   g. Cotton.
   h. Estimated total 1890: $89,000,000.

6. Imports:
   a. Cotton.
   b. Coffee.
   c. Rice.
   d. Sugar.
   e. Drew goods.
   f. Raw and manufactured silk.
   g. Fruits and nuts.

7. Transportation:
   a. Pennsylvania R. R.
   b. Baltimore & Ohio.
   c. Philadelphia & Reading.
   d. Central R. R.
   e. Phila., Wilmington & Batto.
   f. Delaware River.
   g. Delaware & Chesapeake Canal.
   h. Atlantic Ocean.
   i. Good country roads.
   j. Various trolley systems.

8. Banking Facilities:
   a. Excellent.
   b. Prominent institutions.
   c. National.
   d. Fourth Street.
   e. Market.
   f. Philadelphia.
   g. Central.
   h. Franklin.
   i. Girard.
   k. Private.
   l. Girard Trust Co.
   m. Provident Life & Trust.
   n. Pennsylvania Co.
   o. Fidelity Trust Co.
   p. Land, Title & Trust Co.
   q. City Trust Co.

9. Commercial Language:
   a. English.
   b. German.
   c. Italian.
   d. French.
   e. Spanish.

10. Units of Weight, Measures and Values:
   a. Weight: The pound of 16 oz.
   b. Measure: The yard of 3 feet.
   c. Value: The gold dollar of 80 cents.
The Study of Statistics as a Part of Commercial Education

BY FREDERICK K. CLOW, PH. D., AUTHOR OF "INTRODUCTION TO THE STUDY OF COMMERCE."

Statistics are the most condensed form in which information can be expressed or recorded. Therefore every line of activity, commercial or otherwise, in which it is necessary to use a multitude of data, whether they be gathered from the past to guide us in the present or collected to show the trend of development now going on, has its body of statistics which should be studied attentively by all who wish to succeed in the direction of large enterprises.

But to read statistical matter understandingly requires experience in work of that kind. Only a few of the figures can be carried in the memory, even for a short time. Therefore the reading of statistics requires at least two mental processes: First, the comparison of the items with one another to detect similarities and differences; second, the generalization of these similarities or differences into conclusions that can be remembered and expressed in words instead of figures. For instance, I lately gave my class in political economy the following table, and asked them to express the substance of it in words:

**Production of Pig-Iron**

From the Summary of Commerce and Finance for August, 1900, p. 242, Published by the U. S. Bureau of Statistics.

The following shows what could be extracted from these three columns of bare figures, and the reader is asked to notice that there are several facts which a person at all interested in the subject would be likely to remember:

The enormous growth of the United States in the iron and steel industry for the past quarter-century is indicated by the figures for the production of pig-iron. From 1876 to 1899 the number of tons produced annually increased over seven-fold. This increase came not steadily but by jumps occurring during the closing years of a decade. In 1890 the production was over twice that of 1883, but only a trifle behind that of 1885, and the production of 1899 was over twice that of 1898, and but a trifle less than that of 1885. The next jump forward came in 1890 and 1891.

The production in Great Britain during the same period has shown even greater growth, but great steadiness. That of the smallest year, 1876, was sixty-four per cent. of that of the largest year, 1899. The United States surpassed Great Britain for the first time in 1890 and has kept ahead ever since, except in the single year 1884. In 1899, the largest year for both countries, the production in Great Britain was seventy-eight per cent. of that of the United States.

**The Art of Compiling Statistics**

To compile statistics is an art in itself. Perhaps the first lesson to learn in it is to realize that there is more than one way to compile a table. The making of a few tables by a class, when each individual is left free to choose whatever form he pleases, will quickly show this. The compiler needs to know the different modes of arrangement, even if the statistics are designed solely for his own use as when they pertain to his private business; he must know how to make the figures talk: still more is this true if the figures are to give information to others. The various forms of graphic statistics require attention by themselves; they represent relative proportions in a way that appeals to the eye. Before an audience, statistics are most telling when in the form of coordinate diagrams, parallelgrams of various lengths, squares of various areas, circles, cubes, or emblematic solids, as shown by the adjoining illustrations.

Commercial Work in a Typical New England High School

H. G. Greene, Melrose, Mass.

In September, 1898, the Melrose High School held its first session in its new building. This event was accompanied by the inauguration throughout the school of a free elective system in choice of studies and the opening of a Commercial Department. Three years have passed. The designs entered upon in the beginning have been substantially realized.

The school authorities did not have any romantic notions about the functions of a commercial department in a high school. The local demand was for a practical course in the usual business subjects such as would give the boys and girls an introduction to the duties they would have to perform when going to work after their graduation. There was no thought of differentiating the commercial work from the other work of the school. Other departments were held to be educational, to give mental discipline, to impart culture, to increase the sum of a student's powers; these results must also be reached in the new department. Science had its laboratories with abundance of experimental material; literature had the best books for class use, and a fine library for reference. It was intended that the commercial department should have an equipment equally suited to its needs, and in quantities sufficient for the best work.

There was to be no distinct class of commercial students. It was made impossible for a pupil to find in his own year enough electives belonging to one department of the school to make the required program of sixteen hours of prepared work. This plan has done much to insure close relations between the various parts of the school.

First Course of Study

In the entire list of high school subjects, no studies were required except English, Music, Advanced Arithmetic in the first year, and English and Music in the three remaining years. The following table shows the distribution of commercial subjects as first arranged. The three terms of the school year in this school are respectively fifteen, thirteen, and twelve weeks in length.

</tbody>
</table>

The course of study in commercial subjects is thus arranged.

Among others, the following regulations appear in the Course of Study: "A pupil expecting to receive a diploma is required to take studies representing sixteen periods of prepared recitations each week. One who does not take the required amount of work is regarded a partial student and is not entitled to a diploma." "Pupils may select from the electives of their own years and from those of the year or years preceding." Sixteen hours a week is 640 hours a year or 2,560 hours of recitation for a course of four years leading up to a diploma. Since the commercial studies represent 1,160 hours, no course in the high school could be more than 45.16% commercial.

At the opening of the commercial department many pupils in the upper classes took advantage of the second rule quoted, taking simultaneously all the subjects offered, and this plan is still followed by many pupils; that is to say, they devote themselves to general subjects until the third or fourth year and then take every commercial subject available. This tends to maintain a sense of maturity in the work of this department.

The progressive increase in hours of commercial work from year to year should be noted. It represents an idea as to the fitness of pupils of high school age to take commercial subjects. It also stands for the theory that general education should precede special, and in a public school should constitute a constant, though decreasing, part of all work.

It may be interesting to observe that the general subjects of each year were so placed as to make a broad and symmetrical commercial course possible; in fact, to make anything like a mixed-choice impossible.

A New Course of Study Evolved

The Course of Study remained in this form but one year. Several changes were found to be necessary. In September, 1899, Typewriting was put into the third year also, increasing the total number of commercial hours to 1,280, or 51.916% of a complete course. Commercial Law was not well received in earlier years. Penmanship was dropped out over two years. There was a local demand for more commercial work earlier in the high school course. When the Course of Study was issued in 1900, Commercial Geography was added to the curriculum to follow Commercial Law in the second year, with three hours a week for two terms; that is, seventy-five hours. Commercial Arithmetic became a first-year subject with the same allotment of hours as before, followed, as before, by Correspondence. As thus revised, the commercial studies constituted 1,360 hours or 55% of a graduating course.

An unaccountable mania for taking writing seemed to possess the entering pupils. This resulted in excessive demands upon the time and effort of the instructor to teach an elementary branch in the high school. The Course of Study for 1901 requires that all pupils in the two upper classes who are taking a majority of commercial work shall be given a thorough course in practical business correspondance.

Thus reduced, the commercial work possible in this school in four years will require just 1,250 hours—precisely 50% of a course leading to graduation.

The Program

Bookkeeping. When studies are properly placed in an elective system, there yet remains a difficult task, to fix a program for the daily work of the school. At this point the introduction of commercial studies is usually expected to produce some friction, this remark applying especially to Bookkeeping and Typewriting. Uninterrupted work upon account books is indispensable. Eight of both rooms were put in the commercial department, and all students were back for from one and one-half to two hours of work. In addition to this, pupils were privileged to spend their study hours in a Bookkeeping room, another room belonging to the department, in which its general recitations are held. Rolling doors separate these rooms, and these being open, one teacher had oversight of both rooms, and contributed ample time for the required work in Bookkeeping. In those days complaints were heard of unprepared lessons in other departments of the school.
The high school sessions begin at 8:00 and close at 1:00. Few young people are so foolish as to want to give up entire afternoons of New England weather at its best to engrossing mental work. Each year has however a sound device by which the afternoon work in the commercial department could be diminished, the principal change being a proper allowance of time during school hours. The two periods following the dinner hour are Bookkeeping three days a week. On the remaining days Bookkeeping has one of the hours after recess. This provides eight hours for recitation and preparation and one hour for study, so that the pupil, in two sets of schools, has the time required except of delinquent pupils.

Typewriting—Many schools arrange for typewriting upon the theory that the best practice requires the constant presence of an instructor; the classes are divided into sections and enough machines must be provided to furnish the largest section. This invariably results in one of two excesses, a large number of old machines or a wasteful expenditure of a teacher’s time.

Another plan is to have the typewriter room open every hour of the school day. Formal meetings of the classes in typewriting do not occur more frequently than once a week. A program of practice is arranged for each pupil. A typewriting study of this school is so conducted. Each pupil has four hours of practice and eight machines suffice for fifty pupils. It has been found by experiment that the natural adjustment of individual programs leaves open the required number of hours. The individual programs fit together so nicely that each pupil usually does all his practice on one machine. About two weeks after the opening of school, a correct program of typewriting practice is mimeographed, and copies are furnished to each pupil and each teacher. This program shows exactly what pupils should be in the typewriter room at any hour of the school week, and at what machine a given pupil should be working.

**METHODS**

Frequent changes in the course of study and in the arrangement of hours in the daily program have not been due to instability of purpose. Such changes have been the result of recognizing the complexity of the administrative problem in an elective system. The ideal of public instruction should be to give the most and best instruction to the greatest number in the form best calculated to meet their needs. This is the guiding principle of a correct elective system.

**THE PECULIAR ADVANTAGES OF AN ELECTIVE SYSTEM**

There is now in the curriculum but one required study—English. This does not mean that each pupil takes what he desires and omits what he dislikes. It means that parents, principal and teachers, unhamped by regulations, may consider the needs of an individual pupil and turn his efforts in the direction where they will be most likely to produce good results. This adaptation of studies to individuals goes far to draw pupils into the high school and tends to keep them there. If a boy or girl is preparing for college, for a technical or professional school, his work in the high school is marked out for him by the institution for which he is fitted. But in this case to some extent, and in all others very largely, the elective system puts into the hands of the principal an opportunity to consider peculiarities of mental power and physical peculiarities of mental and physical so as not to delay a pupil from secondary education nor compel him to follow what would be to him an unnatural course of study. Into this work of adapting studies and methods to individuals, every teacher in an elective high school must enter.

**IS SUPPLEMENTARY TIME ALLOWED?**

To take properly prepared students through a six-months’ commercial course does require special methods which could not be used in a high school. But to take pupils who are thoroughly prepared by nine years of grammar school work to enter the high school, through four years of commercial training, properly distributed and intelligently joined to the general work of the school, is a problem of much larger factors.

The time given to this work is justly proportioned to that given to other subjects in the school, no lack of effort being felt. Much is lost from the dignity of commercial subjects by asserting that they must be taken hastily lest interest shall flag and desirable results be lost. Does it add anything to the import of commercial instruction to say that it has nothing in common with the customary work of a high school? Administrators of public school systems are very willing to accept such fallacies as truth because they are uttered by those who have much acquaintance with the content of commercial study.

**THE RELATION OF COMMERCIAL INSTRUCTION TO OTHER HIGH SCHOOL INSTRUCTION**

I believe that if commercial instruction in public schools attains a large place and high dignity it must proceed by the same methods in the same program with ordinary high school instruction, without causing insurmountable difficulties or impairing its own efficiency. Some educators maintain that this cannot be done. On the one hand we hear public school men declaring that commercial instruction has no educational value, and, on the other hand, persons interested in private business colleges hold that the commercial subjects are so technical as to be outside the proper scope and capacity of public instruction. The objection raised by the public school men is too sweeping to receive any consideration in this article. The postulate of the private school men was very aptly stated by Mr. T.W. Bookmyer in his address before the Federation at Detroit, in December, 1900, as reported on page 185 of the Penman-Artist for March, 1901.

**THE PROPER PLACE FOR COMMERCIAL INSTRUCTION**

The question is raised, if all persons have not the business relations sufficient to warrant public instruction in business subjects, how can we draw the line at that point so as to exclude other matters of yet greater importance and more constant frequency? All persons have teeth, either natural or false, and many have teeth that ache. Shall we therefore have a course in dentistry in the public schools?

The answer is, professional study seeks to make professional people; this, commercial instruction in public schools does not seek to do. No business man would accept the services of boy and girl graduates of a high school commercial department upon a professional basis. No business college with which I am acquainted offers a professional course in commercial science. Neither to the public school nor the private school can the term “professional” be properly used in relation to commercial instruction. It is worth while to determine by a case what professional training as applied to dentistry really means. A young man opened an office in this city last year and offered his services to the public as a dentist. He had spent two years in the office of an old practitioner, having left the high school in his second year to take up that work. He spent three years more in under-graduate work at Harvard University in the Dental School. He then offered himself for examination by the state authorities having charge of such matters. He made a complete set of teeth and filled several back teeth to the entire satisfaction of a board of experts who watched the
work. He returned to his old place in the office where he began, and after several months began the independent practice of dentistry. When some school offers such rigid instruction as this man passed through, when some school provides strict examinations by expert practitioners, then will be

A DISTINCTION BETWEEN THE GENERAL AND THE SPECIAL IN EDUCATION

Bookkeeping sufficiently studied and practiced is the equipment of an accountant; shorthand is the material used by a court reporter; typewriting, carried far enough, will make one a demonstrator of the "touch" method. But, as the study of physics, of chemistry, of physiology, of literature, and of history proceeds in the public schools without the taint or taint of professionalism, though the extended study of these subjects respectively will make a mechanic, physician, or dentist, an author and a historian, so the study of commerce and its mechanical and practical arts may appropriately form the medium through which the useful may be founded in the public schools. The end of public education is the training of individuals. The abstract theory of education—that a child's training must come to him through a medium which will be worthless the day that his school life ends—is no longer tenable. We work upon a better method in these days—the child's function as a member of society is the best medium for his education.

The Study of Statistics as a Part of Commercial Education

Continued on Page 12.

The Educational Value of Statistical Work

The use of statistics culminates the valuable habit of basing conclusions on definite and trustworthy information. Statistics cannot easily be other than definite; they banish vagueness sooner than any other form of information. Then it is easy to trace statistics to their sources and discriminate between original and secondary, between authoritative and doubtful. The best statistics can be obtained as readily as poor ones, and utilized with equal facility. They are the most convenient source material for the beginner to handle. The student who has once worked out from authoritative statistics a bit of information which is so interesting that he can never forget it, and which is utilized in later studies of research, and perchance seen the difference between solid conclusions and flimsy ones; his thinking may ever after have a more substantial character.

Law, and awards a distinction to those who have spent one year in actual public accounting.

In the training it may give in composition, Plagiarism is impossible: the materials to work upon may not even contain a phrase which can be copied. As a new batch of statistics comes to hand frequently, there is always the potential to work upon the written work of former classes can not tempt the student who is disposed to hand in another's composition as his own.

THE IMPORTANCE OF COMPARISONS

One fact the teacher should remember and impress upon the students repeatedly through figures. When run up into the thousands and millions, the human mind can form no conception of their significance except by comparison. To speak of thirteen tons of pig-iron, to one whose mind is not already stored with figures about iron in millions of tons, conveys no other impression than it would to speak of a hundred thousand tons or a million or a billion. Therefore such statements should be made only when comparison can and will follow; and a simple comparison can be had just as well without the absolute figures as with them, as in the illustration given above. To sprinkle large sums freely through the text of a paper is frequently the fault of the student. Such figures, if he can, should avoid it and to express the desired comparisons by means of simple ratios, fractions, or per cents.

WHEN, WHERE, AND HOW MUCH?

Now I imagine that most of my readers have said to themselves in reply to the foregoing argument: "But statistics must be dry and without attraction for the young student." I have two replies to make to that: The first is: urge you just to try it once yourself, either in your private study or on a class of students: the second is: to allude to my own experience. For six years I have had my classes in political economy abolished or less statistical work, and have never once complained to me that such work was dry; on the contrary they have often expressed their joyful surprise at finding for the first time in their lives that the statistics they studied were of practical use and interest. I am not a specially stimulating teacher and have seen plenty of spiritless work in my classes, but that has never been work on statistics. I might sum up my experience in these words: Give a student some figures, and a problem the scope of which he clearly comprehends, to answer by the study of the figures, and he is always interested. Commercial arithmetic, when it is applied to the interpretation of statistics, has the quality of original characteristics. Geometry becomes a living reality when used in the making of graphic charts. In a similar way, addition and subtraction.

The conclusion is that statistical work is both practicable and desirable in a normal school, a high school, or a business college. I do not mean that a course in statistics could only be given to the better class university; statistics should not even be mentioned in the course of study. But a little statistical work should be introduced into some of the studies. The best studies for that purpose are in graphic work, in physical and political economy. I am now persuaded that a very considerable part of the work to be the last named study, when only a short course is given, should be accompanied by the use of statistics.

Good for Mr. Cooper and the Penman-Artist and Business Educator

In a letter from Mr. J. F. Cooper, who recently assumed the principality of the Commercial Department of the Centennial High School, Pueblo, Colo., we note the following: "Notwithstanding the fact that the commercial work is a new feature in the High School here we have an attendance in that department of 275. I have also gained the thanks of the Penman-Artist and Business Educator may be found on my desk at any time, and it is not only that but I use it in my classes and find it is a good thing to have in my office. I wish you success and beg of you to send me your book."
Entered at the Post Office at Columbus, Ohio, as Second Class Matter, September 10, 1900.

SUBSCRIPTION PRICE, $1.00 A YEAR. 10c A COPY.

SUBSCRIPTION RATES:
1 subscription, $1.00. 2 to 5 subscriptions, 85 cents each. 4 to 10 subscription, 75 cents each. 10 or more subscriptions, 65 cents each.

Change of Address—If you change your address be sure to notify us promptly (in advance, if possible) and be careful to give the old as well as the new one. We lose many papers each issue through negligence on the part of subscribers or post-masters.

The Best Advertising Medium of Its Class

The PENMAN-ARTIST and BUSINESS EDUCATOR being a new and distinctive publication, and having a limited circulation, the most practical and effective way of reaching its readers is by personal contact or by advertising. It is designed to reach a considerable number of business men in a year.

Advertisements are absolutely necessary in order to make the publication a success. We are not in a position to originate ideas for our advertisers, but will do what we can to help them

Advertising in the Penman-Artist and Business Educator Pays

We confidently believe that persons who have something good to advertise, and then persist in advertising it, will find our columns unexcelled, cost considered.

"Be sure you have something worth the money, and then persist in calling attention to it. That seems to be the advice of all successful advertisers," says a rule, does not amount to much. To illustrate: Mr. M. M. Moore of Morgantown, Ky., who has been carrying a small advertisement in our columns for quite a while, recently received one order for pen work with the cash accompanying the same amounting to $3.45, and that too from a gentleman in England. Had Mr. Moore sent his advertisement once or twice, it is not likely that it would have accomplished much for him. Now he writes: "Business is certainly looking up, and my little ad in the PENMAN-ARTIST AND BUSINESS EDUCATOR seems to be getting in its work." Of course, it is quite different with some other advertisements, such as "School for Sale," "Position Wanted," etc., but in other lines it seems that the advertiser is expected to do something for the public. People forget, and will not hunt for forgotten addresses, etc. By being continually present, however, you familiarize the public with your goods and compel them to remember your name and address. Think of the advertisers who have compelled you to memorize their names and addresses, and you will find that as a rule they are the successful ones. They didn't do it with one advertisement, either.

Our Catholic Friends

Our Catholic friends have not been slow to recognize the value of the PENMAN-ARTIST AND BUSINESS EDUCATOR as an aid in teaching penmanship, and we are pleased to say that it has found a large number of parochial and convent schools.

Brother Phillip, of the Cathedral School, 1st and Race streets, Philadelphia, Pa., recently sent us a club, and had the following to say regarding our journal: "If I can secure any more subscriptions for you I will gladly do so. I consider your paper the best of its kind I have ever seen."
The Greatest Power

"I like your PENMAN-ARTIST AND BUSINESS EDUCATOR. It is a broad-minded, progressive journal that is a credit to the professions it represents. It is now manifesting itself as the greatest power in bringing about a universal change from the fancy, slow, infinitely difficult forms to the plain, sensible, practical style. The former style is called by its worshippers, "Rapid, Plain, Muscular Movement." I have in face of the Pen man who teaches in his class room a style of capitals which are really ornamental and each has a shade snapped in somewhere. At his desk he writes, when he is in a hurry, a simple style which can read and too. Now, if that is not a "hand-lacked," narrow minded way to conduct things, I should like to know. I cannot see how any broad-minded teacher, who is open to conviction, can read your journal and examine your "Simplified" style of writing, its possibilities for speed, etc., and then continue teaching that ornate, imperative style. Such teaching I believe has "tried" experience in a business office where they had to hustle. Their writing on a hotel register cannot be deciphered and their writing on a thick book, where they cannot get the ornament on the desk, is not even visible on the floor, etc., and then count for each stroke, would certainly "Shake the cherries on your bonnet." The "Simplified" is good enough for me. When it comes to hustling in any old position, I think my handwriting looks quite as well as some of our "star pen men." Teach business students for business, as business is done by business men, in a business way.

[The end of a hand-written letter recently received and is here printed without the writer's consent—and therefore without his name. —Editors.]

The Question of Supervisors

Number One

These articles are for the purpose of keeping before the public eye the object and need of supervision of penmanship, drawing, music, physical culture, etc. Also, as a protest against the growing influence of the superannuated school room which concludes that supervisors are an "unnecessary expense," and forthwith abolishes the office and its occupant. This frequently would not be done if a few sensible articles against such action would be published at the right time in the right daily papers.

We recognize that there are some superannuated supervisors that are discharged, but only enough to prove how essential and worthy the rank and file are. There are preachers, lawyers, and doctors galore who deserve the same fate, but there are enough church journals to prove the officers of the ministry, law, and medicine most worthy and needed. Why? Because the age in which we live moves too quickly for the individual to be learned and skilled in all things. These supervisors' talents and duties are assigned, which, if he develops, enables him to not only improve himself, but those about him. To another, certain other qualities are given which he has to make mankind better and happier. The "jack of all trades and master of none" is an out distanced individual. The "master of one thing" has taken his place.

All important enterprises are carried on through the agency of superintendents, overseers, foremen, etc. Our schools are, not an exception to the rule. The superintendent is an assured necessity. The principal, too, has come to stay. Their duties are general, however, rather than specific. Next to them come the supervisors. Their duties are specific, not general. The regular teacher is a specialist, too, these days of specialization. She is adept with pupils of a given age, and may only teach her pupils during a particular period of life, if she is proficient. The successful supervisor is not a teacher of many branches to pupils of a certain age, but he knows how to teach them by the proper use of teaching devices. This seems to be the difference between the regular teacher and the supervisor the one deals with many branches and one age; the other with one branch and many ages. In this sense, one is just as broad or narrow as the other, one as much a specialist as the other, and one just as necessary as the other.

As well revert to ungraded schools and grades, and grade schools and special teachers. But they are not being abolished except in extreme cases usually where politics become more urgent than the needs of the pupils of the public schools. Supervisors nowadays and the number of citizens not employing specialists are becoming fewer each year. And it is only a question of time now until all places will employ specialists and supervisors. In the meantime, if, at least, the branches previously named.

NEWS ITEMS

L. Madaras is teaching penmanship in the 23rd St. Y. M. C. A., and in the Wilson School. These two institutions are to be congratulated upon such talent in penmanship instruction.

J. A. Clark, recently of Cleveland, Ohio, is now located in Carlisle, Pennsylvania, and is teaching School and Business University. Mr. Clark has charge of the commercial department in the Penman-Artist and Business Editor and states that their penmanship department would be incomplete without that.

H. Weiss, formerly with Eastman Business College, Panama City, N.Y., is now teaching penmanship and part of the Commercial Course at the Morristown Business College, Morristown, N. J.

Mr. W. F. Kieh, of Millville, New Jersey, is continuing his teaching business and part of the Commercial Course at the Morristown Business College, Morristown, N. J.

Mr. J. A. Mack, formerly published the National Penman at Nashua, N.H., is now residing at Morristown, N.J. He states that he will likely remain there for some time.

Mr. E. J. Puglisi, of Newark, N.J., is teaching business and part of the Commercial Course at the Morristown Business College, Morristown, N. J.

Mr. W. S. Shattuck, of East Orange, N. J., is teaching penmanship at the Penman-Artist and Business Editor and states that their penmanship department would be incomplete without that.

Mr. J. L. E. Barnes is now Principal of the Waverly (Pa.) Business College. Mr. E. J. Peters, formerly business teacher in the Zaneerian.

Prestigious Girl in the State

Doubtless this is what Mr. and Mrs. S. V. Young of Hancock, N. Y., have done. Their daughter born October 7, 1901. They have certainly given their firstborn a name of honor. Zena. Mr. E. E. Funk, of Hancock, N. Y., was not pleased with this evidence of esteem. Mr. E. S. is a fine penman but not the finest, but the one to him, "I need not, in my estimation, play second fiddle to anyone."
Salem, Mass., Nov. 11, 1901.

To COMMERCIAL TEACHERS:

As every wide awake commercial teacher in the United States is aware, the great teachers' meeting of the year will be held before another issue of this paper reaches your hands.

I refer to the great national organization of commercial teachers known as the National Commercial Teachers' Federation, an organization made up of the National Business Teachers' Association, National Short-hand Teachers' Association, National Penmanship Teachers' Association, and National Private Commercial School Managers Association, which meets at the rooms of the Northwestern Business College, St. Louis, Mo., Dec. 26, 27, 28, and 31.

In many respects, this meeting will be an important one. Aside from the great good every teacher present obtains from these meetings, that participation is exerting a very strong influence upon educational matters, and no teacher can afford not to be connected with a movement that operates so largely for the benefit of all.

In many parts of the United States have signified their intention of being present. From Maine to California, from Mexico, to Canada, commercial teachers will be gathered in what bids fair to be the biggest and most enthusiastic convention of purely commercial teachers ever held.

It is practically certain that the passes of these associations will offer the same privilege as last year, and that every delegate desiring to attend the Federation, should have their tickets to St. Louis at the regular rate, taking a receipt from the ticket agent. This receipt should be presented to the secretary of the Federation at St. Louis, and counter signed by him, when a return ticket may be obtained at one third the rate. This convention is conditioned upon one hundred members being present, but the attendance ought to be much larger. Possibly the five hundred mark may be reached. The program in all its details is appended. Attention is especially called to the great banquet on Saturday evening. Those who have never had one of these banquets can hardly appreciate the enthusiasm that comes from sitting at meat with two hundred fellow teachers. This banquet is well worth the trip to St. Louis. New acquaintances and broader views are the inevitable result, while teachers and employers are brought into a contact that is of mutual help.

Friday evening, December 27th, has been set aside as the date of a public meeting. This is a new departure for the Federation and one that will tend to strengthen it in the public mind, and to increase the popularity of the practical training, for which this association stands.

The executive management of the Federation has a beautiful souvenir program in press, a copy of which may be obtained by any teacher or employer, by mailing a postal card to the president.

Any information concerning the meeting can be obtained from any member of the executive committee.

Geo. F. Lore, President,
C. A. Marshall, Cedar Rapids, Iowa.

Room 742, 1215 Broadway, New York.

Merry Christmas.
S. A. Bluett, 323 Main St., Galveston, 320 Penman No. 19, Pens, Pencils, Stencils, etc., 50c., 1 Doz. ... 1.00. A. O. Penman Co., 622 So. Main St., Galveston, 25c., 1 Doz. 

G. C. Walker, Louisville, Ky., favored us with a half-tone illustration of a memorial to William McKinley, which displays considerable skill and art. 

J. F. Caskey, Wheeling, W. Va., puts up some really artistic cards and pages as evidenced by the piece below. This incloses some for our readers some of these days. 

Mr. M. W. Cossatt, Richmond, Ind., recently favored us with some subscriptions—specimens of students' rapid business writing, and specimens of his own penmanship. 

Mr. M. W. Cossatt is the manager of more than the usual ability. He writes a very fine ornamental style as well as an intensely plain and speedy business hand. His pupils wrote well the word "umbrella" seventeen times a per minute. 

Mr. G. E. Weaver, by the aid of Uncle Sam, dropped a couple of finely written cards into our office and we will certainly use them. 

A recent letter received from A. K. Klotz, Portland, N. Y., written in the ornamental style, is the show for his lines some very rapid improvement lately. In fact, his work looks quite professional. 

Mr. Klotz is a student at B. St. Business College, Providence, R. I., and we favor us with a splendidly written letter, ornamental style. He states that their attendance is good and that school work is moving along nicely. 

Mr. E. W. Quuckenbush, of Lawrence, Kans., writes the engraving script in a manner that indicates that he has been closely following the lessons in this style given in the PENMAN ARTIST AND BUSI- 
NESS EDUCATOR. Certainly no course of lessons has been given before that did so much to develop the student's mind and certainly none have been so closely followed. Mr. Quuckenbush is on the right road and will become one of the very finest in this style. 

James Williams, of Butteville, Neb., is learning to swing the pen like a profession- 
ally. He could become a very fine penman, and ought to give attention to the work. 

E. M. Finkle, a farmer boy of Burnt Corn, Ala., is making very rapid improvement in his penmanship. He now surpasses the progress some of those boys are making down there and has lines some very rapid improvement lately. In fact, his work looks quite professional. 

Mr. Finkle has the material in him to become a master with the pen. 

W. D. Chamberlain, Ionia, Mich., writes the engraving script in a manner that indicates that he has been closely following the lessons in the PENMAN ARTIST AND BUSINESS EDUCA- 
TOR. 

Mr. Chamberlain has all the necessary material to become a master with the pen. He has the material in him to become a master with the pen. 

W. B. Walcott, Toledo, O., sends specimens of his ornamental penmanship, which style he states he has acquired by diligent practice. It is evident that careful each evening with the PENMAN ARTIST AND BUSINESS EDUCA- 
TOR has given him a remarkable the progress some of those boys are making down there and has lines some very rapid improvement lately. In fact, his work looks quite professional. 

Mr. Finkle has the material in him to become a master with the pen. He has the material in him to become a master with the pen.

A Reward

Obligatory

Professor W. T. Hammond, penman, author, and business educator, of Pasadena, California, whose portrait appears below, departed this life Sept. 29, 1911, after a heroic struggle with that dread disease, consumption.

Mr. Hammond was born in Pittsfield, Conn., in 1797, and was of the firm of Stewart & Hammond Business Co., Trenton, N. J., author of Potter & Hammond series of copy-books, teacher of penmanship in the private schools of Philadelphia, and supervisor of writing in the public schools of Pennsylvania. In 1896, his health began to fail, at which time he went to California.

Mr. Hammond was married and leaves a widow from whom we received the same details and photo. From a letter just received from her, we have every reason to believe she was a fit companion for one who was so widely admired. May she journey on through life cheered by the memories of by-gone days of one whom all respected and revered.

Mr. Hammond was happiest in the school room, and there are thousands who are glad to claim him as their teacher, and now bear testimony to his skill as a teacher and kindness as a man. He was a member of and worker in the M. E. church, also a charter member of Pasadena Commandery, Knights Templars.

Thus it is that another respected member of our beloved profession has gone on to meet and mingle with the Spencers, Dunton, Packard, and the rest. May we all be as worthy of our reward and as revered by those who remain.

Wanted

Every penman in the United States to attend the Penmanship Teachers' Association of the National Commercial Teachers' Federation at St. Louis, December 27 to 31, 1911.

PRACTICAL BOOKKEEPING

BOOK FORM.

The most practical and up-to-date method ever devised for teaching bookkeeping, accounting and office practice, the drawing of all forms of business papers and vouchers, the filling of incoming papers and vouchers, and the actual performance of the duties of the bookkeeper and accountant, by practical methods similar to those that are in general use in counting houses.

THE WORK HAS NO EQUAL. IT IS THE MASTER WORK OF THE CENTURY.

It is the outgrowth of many years' experience in practical business, arranged in teachable form for the class-room. Your students should be familiar with special ruled books and the modern methods that are being adopted by the leading business houses in the largest cities throughout the country. This new work fairly explains the workings of these duplicable methods more in general use. You cannot afford to be without the system. Bless THE PRACTICAL BOOKKEEPING CO., 52 Washington St., Chicago, Ill.
Lessons in Automatic Lettering

Number Five—By E. E. Evans, Streator, Ills.

INSTRUCTIONS ON HOLIDAY CARD

Get piece white card board, medium rough, with yellow post-label cover whole sheet of card board. Draw the oval with two circles about twenty-eight inches in diameter. Make some oval on green poster board and cut it out. Pencil lightly the Holly branch on yellow background, then grove the pencil lines with green ink and ordinary pen. Get piece of kneaded rubber and rub out the yellow from inside the trolley boards.

"Everything." is No. 1 marking pen, bright red ink. All other small lettering is in same color with large No. 9 marking pen.

"Christmas and New Years." is with No. 1 marking black ink. Capital C is with compass. When black ink is dry go over the upper parts with No. 1 marking pen and white ink. Put Diamond Dust on white while wet. It gives a frost or snow effect.

Outfit for making this sign will be sent prepaid upon receipt of $1.00. Samples of work accompany outfits.

Practice on this and you will be able to make some coin on holiday signs.

E. E. EVANS.

Lessons in Engraver's Script

Number Twelve

By Charles U. Hawes, With Fidelity Mutual Life Insurance Company,

Policy Department, Philadelphia, Pa.

We have laid the foundation in previous lessons, consisting of various letters and words, now we are ready for the superstructure—Body Writing.

Rule lines with section line an eighth of an inch apart or less and allow a margin of from an inch and a half or more, depending upon the amount of subject matter to be engrossed. Rule lightly so that the pencil lines can be easily erased with a sponge rubber. The distance to be allowed between the base lines is determined by the amount of subject matter. Place a small check mark in the third or fourth space (see illustration) to indicate the base line. This is important and will prevent error in allowing too much or too little space between base lines. Carefully pencil subject matter, commencing next space above base line as indicated by pencil check and aim to have each line reach to the vertical line to the
Dear Readers—

In closing the series of lessons in Engraver's Script which I have conducted beginning with the September 99th issue of the Penman and Artist, I desire to extend my sincere thanks to you for the generous appreciation which you have accorded me. I assure you that it is a source of much gratification to know that my efforts have merited your approval.

With best wishes for your success,

I remain,

Very truly yours,

Charlton V. Howe.
Finger Movement

There is one question in our schools which I think we have neither solved nor fairly considered, and that is the matter of finger movement in our primary grades. This question is in our opinion of finger movement the fact remains that the children can use no other, even when muscular movement is taught.

The present approved plan seems to be that writing on the blackboard is muscular movement, although we know they can not apply it, and will not be able to do so for years to come. We imagine that in some mysterious way the finger movement is being counteracted and neutralized. Does practicing muscular movement aid finger movement to any great extent, and is it good common sense to develop this in the future needs of the pupil? I believe it must be used, why should it not be taught and that thoroughly? I believe it is possible to sufficiently develop the finger movement to enable the pupil to write the modern styles with a considerable degree of ease and speed.

As long as these conditions obtain, why should our penmen be so terribly shocked to hear fingers mentioned, and why should they even deny that they wiggle them a little while writing? There is no question but that combined movement is the best for general writing, but business writing and primary writing are different things. They are as widely separated as the printer and Shakespeare's plays. I believe in less and larger writing in the

Supervisor Writing.
Akron, Ohio.

Lyman J. Gage
Addresses Students of the Spencerian Business College, Milwaukee

Following are extracts from his address:

"I am very thankful to Mr. Spencer for his remembrance of those early days and for the kind tribute of praise and appreciation which he has given me. I would not suppose that he would have remembered those early days. The impressions made upon his mind are those that are made upon the minds of the more matured, and I remember with great vividness my introduction into the school over which Mr. Spencer had charge."

And he might now in all truthfulness and sincerity, looking back now over the earlier days when educational influences were to some extent thrown over me, and in the experiences of later life which have given me a determination to examine my general course of thought, feelings and actions, there is no period, no episode in my career now stretching over a long period, that I regard with more desire to myself as that period spent in the Chicago branch of the Bryant & Stratton educational institution. It taught me what I know about accounts, it gave me the look around on this little proposition, it taught me to keep an eye on accounts, and if I passed away from the period of apprenticeship or clerkship to higher duties I was considering the question derived in that school to determine the quality of those discharging similar functions over whom I had charge.

I congratulate you, Mr. Spencer, that after a long life you are still fresh and vigorous, with all the bloom of youth upon your brow and forehead, with a promise of years of work yet to be. Before you, I cannot conceive of a higher privilege for a man in this world than to go on through a period of forty-five years in the discharge of duties to others.

The effect of such action is like compound interest—it goes on compounding over a generation.

Fraternally,
J. F. Barnhart.
Supervisor Writing.
Akron, Ohio.

Lower grades and I believe in the arm rather than the finger movement, but until this reform is adopted we must do something to help the children who are obliged to employ finger movement. What shall we do?

Finger Movement
period is well in the prospects of most of you; the population of the United States will increase, unless all reasonable calculations fail, to at least 300,000,000 of people. Think, if you can, of the enormous development of our natural resources and all that that means; think of the enormous development of business, of industry, of trade, of commerce, and then you will realize that the opportunities of life are not closed by the door that hides the past, but by the door which opens readily into a grand and noble expanse of the far-reaching future.

"Now it is your opportunity, young men and women, to prepare yourselves for that period that is just before you; we are coming to a time of specialization; the man that can do something difficult and do it well is going to be in great demand; the man that cannot do anything except manual labor, or who tries to do something higher but does it only indifferently well, is not going to draw the prizes of life. The prizes of life are going to be many, but they will be drawn by men who have the quality of mind, the quality of character, the absolute integrity, and the general ability and adaptation to circumstances, to take some strong and prominent and important part in this wonderful march of progress and civilization which the next fifty years is surely going to develop.

"I congratulate you all that you have this opportunity to prepare your minds with a useful specialization; it will serve you in every relation of life; but in a way it is only the kindergarten to real life; and real life comes after the school life has gone; and all life is an education to the man who will improve his opportunities. Experience is a teacher; reading is a teacher; reflection is a teacher, and all these atoms of self-improvement must be availed of by those who hope to win the prizes of life."

---

**Lettering and Designing**

**Number Seven**

By E. L. Brown, Rockland, Maine

We present for study and practice this month some more styles of script which are gaining popularity for business stationery and advertising purposes. The Empire Business College design was made for a letterhead. The original drawing measured 5½ x 20 inches, and the lines were made very coarse to allow for reduction in engraving. The line in the word Empire was made one inch in height and the line in the word college about ½ of an inch. Pencil out all the parts very carefully before tracing in ink. See that the thin line is uniform in thickness, and do not undertake to make this line with one stroke of the pen. It must be drawn out in this class of script, which is usually executed on a large scale. Look after the spacing, uniform thickness of shades, etc. The oval with decorations should be centered.

The II & B design was also designed for business stationery, and it presents a strong, effective style of modern script. This script was also drawn out after being carefully penciled, although it is full of dash and freedom. The thickest part of the small letters should be on the base turn. Make the shades on the capitals very bold. Study the slope and spacing. "High grade diplomas" is executed in a clean cut style, the effectiveness of which is increased by the solid background. Pencil out with care before adding the ink, and look after uniform width and spacing.

---

**Worth One Dollar a Copy**

Messrs. Zaner & Bloser:
Inclued you will please find $1.00, which is the amount due you for the Penman, Artist and Business Educator for another year. Your paper is very helpful to me as a supervisor of writing. I should be lost without it—yes, it is worth one dollar per copy to me. Wishing you great success, I remain,

Yours respectfully,

John L. Howard,
Malden, Mass., Nov. 1, 1901.

E. C. Mills,
30 Grand Ave., Rochester, N. Y.,
will send you 10 lines of fresh from the pen copies for 30c; 20 lines for 50c; 40 lines for $1.00. The $1.00 package is quite a complete compendium of business writing.

---

**A Great Reduction in Prices**

**On Commercial Art for 30 Days**

It is my wish to have my work known and appreciated by the readers of this magazine and, for the purpose of advertising, I will, during the next thirty days, take any thing in the line of Designing, Illustration or Penmanship for less than one-half my usual price. Everyone entrusted to my care will be done in strictly first-class order and, if not satisfactory, your money will be cheerfully refunded. Here are a few prices for superior work:

- **Covers for Catalogues, Etc.** - $1.00
- **Bill and Letter Heads** - $1.00
- **Portraits** - $1.00
- **Initial Letters, Each** - $1.00
- **Carnes, Pen and Ink** - $1.00
- **Set of Capitals, Business** - $1.00
- **Set of Capitals, Ornamental** - $1.00

Assure all that these prices will in no way affect the quality of my work.

---

Howard Brown

**HIGH GRADE DIPLOMAS.**

Rockland, Maine.
THE PENMAN-ARTIST AND BUSINESS EDUCATOR is a great favorite among our students. They like it very much. I think it is improving all the time, and in my estimation it certainly leads all others.

F. L. WILDEISH,
Pennman Metropolitan Business College
Dallas, Texas.

OFF-HAND FLOURISHING

In white ink on black card board is the latest thing out. It is very effective. We feel that this is a very good thing for you to use.

M. B. MOORE, Box 7, MORGAN, KY.

PRACTICAL PENMANSHIP

Successfully taught in many public schools by Miss J. E. CASKEY, the head of the class in the practical department of the school. The students have all passed with flying colors. J. E. CASKEY, Penman.

GREGG TEACHERS WANTED.

We cannot supply the demand for teachers of Gregg Shorthand.

Every day adds to the list of business and high schools discarding the old-time methods and adopting Gregg Shorthand.

Teachers of the system—especially those who have had previous experience with other systems—are commanding exceptionally good salaries.

Why not investigate?

Address, ZANER & BLOSER, Columbus, O.
Lessons in Engrossing—Number Fourteen by H. W. Kibbe, 181 Tremont Street, Boston, Mass.

Outlining this Gothic letter with a very broad face, using a medium coarse pen and with no endeavor to make smooth and true lines. Roughness of line, solidity of form and correct proportions are the essentials. For the black use a very coarse pen or a stub. The originals are three fourths of an inch in height. This letter is not suitable for small work.

"Never grow to demand as a right, what generosity extends to you as a courtesy. For politeness—like virtue—may shine for awhile in bad company, but it can never remain there long.

Art in Education

Extracts from address before the N. E. A. at Los Angeles, Calif. 1899, by Elmer E. Brown, Professor of the Theory and Practice of Education, University of California.

"A practical education which sets up an artificial opposition between the beautiful and the useful is in danger of defeating itself. Beauty is a permanent human need. An education without due attention to the things beautiful fails to give flexibility, elevation, freedom—qualities which are necessary to the all important business of life. It fails to give a certain buoyancy and interest which tone up endeavor and refine the temper of enterprise for all of the activities of life. A practical education fails to be practical when it concerns itself only with 'things done, which take the eye, and have the price.'"

"The taste which has been quickened by a noble picture is a new power for the appreciation of other pictures. A landscape from the prairies of Illinois once visited the Dresden gallery. The sight of the Sistine Madonna roused him from a mere tourist attitude, and gave him a sense of the beauty of the art of which he had never dreamed before. He spent many hours before the picture, visiting it day after day: 'and when I went away from there,' as he said long afterward, 'I found that I could see the beauty in other pictures.' And so this man became the center of a lively and elevated interest in true art in that little town on the prairies where he lived. The appreciation of the beautiful in landscape-painting gives new appreciation of the beautiful in nature. As Browning has said:

'We are made so that we love First when we see them painted, things we have passed.'

RESOLUTIONS

engraved in pleasing effects of brush work and color illumination. No order too small for careful attention.

LOWEST PRICE.

Send one-cent stamp for circular.
Webster's New Standard Dictionary is the title of a new lexicon just issued by Laird & Lee, Chicago. Only a very progressive and resourceful firm could hope to be successful in the attempt to launch a new style of dictionary upon a market already well stocked with similar works. The new book is certainly a surprise in every way. Even the exterior deviates from the beaten track. Instead of a somber dead black or homely sheepskin, it presents itself in a handsome half-leather binding with an appropriate design, pressed in gold; on lifting the cover, richly tinted endpapers greet the eye, bearing the seals of all the United States and Territories; the frontispiece, which represents the House of learning, is a work of art in colors, and prepares the mind for many other beautiful, full-page colored illustrations of great educational value, the like of which has never been seen in a dictionary. The human types, according to Huxley, are presented on a finely executed double-page plate in beautiful color work, showing at a glance the various principal types of man. A two-page map in six colors gives the boundary line of the original 13 states, the Louisiana Purchase, and the new possessions. Precious stones and ores are shown in their natural brilliances, also the Flags of the Nations; but the most memorable of all the colored work seems to be that of the sun spectrum and other spectra, which is seldom seen in such perfection. It is happily combined with a special graphic lesson on primary, complementary colors, their combinations and a polychromatic scale. Nineteen full-page cuts illustrate the different styles of architecture, columns, face human features, skeleton, worms, beetles, etc., and there are portraits of all the presidents and of an equal number of world-famous men. The smaller text etchings are very numerous, carefully selected and well executed.

An examination of the dictionary itself fully upholds the excellent impression produced by the first glance. The type is exceptionally clear, the definitions are concise and comprehensive, pronunciation marked for every word, etymology made interesting by giving the meaning of the root-word where it is not self-explanatory, synonyms well selected and amplified by cross-references. The vocabulary words are printed with a capital initial only when required, and the irregular plurals and verb forms are spelled out, all of which is exceedingly helpful to the student, business man or writer.

At the end of the dictionary proper follows a remarkable number of encyclopedic features: Dictionaries of biography, geography, biblical and classical names, musical terms, abbreviations, foreign phrases, metric system tables and a page on proofreading.

The wonder is how so much can be put between two book covers. The volume is decidedly a new departure in the dictionary line, and it will, no doubt, prove a great hit.

The publishers have succeeded in making a book usually considered dry and uninteresting, a dictionary, attractive and entertaining; we predict for the work a place in all the schools and colleges.

Good Art
How to Recognize, Enjoy, and Appreciate It

This is a pen sketch from life and not a pencil sketch "inked over." The large illustration was reduced but little, being nearly as large as the original pen sketch. It was made by G. W. G. Mason, one of the most talented art students we ever knew. The fine art part of this picture is the likeness. Some might not consider it a good likeness, but it represents what the artist saw—a seriousness not surface-like in character. But it is fine art because it represents what the artist felt—it is his message, his impression. And that is what any good picture is—the artists' impression of what he saw. But this picture is a poem in light and shade and pictorial effect. See how the background has been arranged to bring out the likeness. It looks careless, but it was thought out and executed with skill. The large picture at a distance looks like the small one near at hand. Good pictures look well at a distance, even though they look scratchy near at hand.

"Liberty is of more value than gifts, and to receive gifts is to sell your liberty. Be assured that men most commonly seek to obligate thee, only that they may engage thee to serve them."

Reforms and Reformers in Writing

Part One: The Genesis of Writing

Systems and methods of writing now considered obsolete and impractical were at different times in the past considered radical and successful. The Spencerian and contemporary systems were considered in their day radical departures from the hands they superseded. The round hand was a distinct improvement upon the detached Italic which it succeeded. And thus it goes on back to the beginning of writing, at least six thousand years ago.

The first efforts to record and convey thought were along the line of pictures and symbols, not unlike the writing of the primitive North American Indians. Gradually, from these realistic pictures were evolved symbols that stood for ideas, and which conveyed thought in a somewhat crude and disconnected manner. About 2000 years B.C., symbols were evolved to stand for sound instead of ideas, and these began to be called letters or characters. Cadmus, a Phoenician, introduced letters, sixteen in number, into Greece, about 1500 years B.C. We presume many called him an extremist; perhaps a fadist. He was no doubt a reformer. He doubtless believed in progress—in leaving the world the better for his having lived. Gradually, through many years of struggle, the twenty-six letters were evolved. Then for perhaps a thousand years, only capitals were used. Finally, small letters were evolved, since which, style of letter only has been modified and improved. Many leading linguists advocate the evolution of more letters, but the conservatives are yet in the majority.

The letters that were evolved from the Egyptian, Phoenician, Greek, Roman, etc., each in its time, were many, curious, and ingenious, but they were, one and all, more or less disconnected. These characters were used more or less, on the part of the few, until about the tenth century. From the tenth to the fifteenth centuries these letters took upon themselves the form we now call Italic, and were the forerunners of the round hand. These print-like letters were used by the scribes and monks to write (print) books (principally prayer books, bibles, and law books). And they served their purpose splendidly. A book thus written was read sometimes for years, even centuries. Writing, in those days, was not written one day and read and thrown into the waste basket. It was preserved as something well nigh sacred.
The Seippel Keyboard Cover

The only device by which TOUCH TYPEWRITING can be properly and satisfactorily taught. Consists of a wire covered with cloth, completely conceals the keyboard, compels the pupil to write by TOUCH.

"DON’T MONKEY YOUR TIME AWAY"
AT HOME

Trying to become a Penman or an Artist, when you should be
AT SCHOOL

The home is all right—there is no place like it, but for learning something new in the shortest possible time, there is no place like the school. But there are all sorts of schools, just as there are all sorts of homes. Some homes are so-called, some are fair, and some are real homes—places where foundations are laid for character as well as for health. So it is with schools. Some are so-called, some are good, and a few are superior. In selecting a school, be sure to select one with an assured standing—one known to produce results. Such is the ZANERIAN ART COLLEGE. In it you can become a penman, artist, or teacher. In it you can secure that which will cause you to be in demand. Students of the ZANERIAN are always in demand. Go to the ZANERIAN with pluck and a clean character and you will go away with practical knowledge and skill. Skilled hands and trained heads are always in demand. Do you want your services to be in demand? Then go to the ZANERIAN.

Address—Attend

ZANERIAN ART COLLEGE, Columbus, Ohio.
Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books are sent at cost by mail or by prepaid express.

Zanerian Theory of Penmanship—A thought-provoking work that deals with the various problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature, All who intend to teach writing should read it. A book of 178 pages, cloth binding $1.00.

Lessons in Ornamental Penmanship—A work in slip form embodying the 10 mail course formerly given by us, with some extra plates. A thorough and complete work for home learners 45c.

Compendium of Simplified Vertical Penmanship—in book form, and for the most thorough and complete instruction in vertical writing yet published 50c.

Manual of Simplified Script—A work containing a thorough, graded course of photo-engraved copies from the pen of that master penman and artist, C. P. Zaner, all in the simplified style. For rapid business purposes many persons believe this style of writing unequalled 50c.

Zaner's Gems of Flourishing—A book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the student how to make the simplest strokes and exercises and finishes with a great variety of designs, showing the highest degree of skill yet attained in this art. Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published 50c.

Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks. Address.

ZANER & BLOSER, Columbus, Ohio.

**Remington Typewriters**

1. The most compact keyboard.
2. The slightest key depression.
3. The lightest and most even touch.

These are three reasons why REMINGTONS are preferred by all operators.

For Touch Writing

WYCKOFF, SEAMANS & BENEDICT, 327 Broadway, New York.
Are you and your School up to date, or have you fallen into the easy-going rut of continuing year after year without improvement and without strengthening your course of study?

Are you familiar with the wonderful advancement in the effectiveness of commercial publications within the last few years, and have you taken time to thoroughly investigate those publications, which have had most to do in bringing about this change?

The Sadler-Rowe Commercial Publications,

have revolutionized the older methods in the school room, and while they are conservative and truly educational in both subject matter and method, they have fixed the highest standard of teaching excellence that has ever been attained in commercial education. They are unlike any of their predecessors or followers. They have many distinctive and unique features. They have endeared themselves to thousands of practical teachers, who to-day are their warmest advocates. If you are anxious to increase the revenue and efficiency of your school, you should investigate these books.

We Publish a Complete Line of Commercial Text Books,

in the following branches: Commercial Arithmetic, Commercial Law, Commercial and Industrial Geography, Spelling, Penmanship, English-Correspondence, Shorthand and Touch Typewriting.

It is not generally known that over 60% of all the private commercial schools in the country use the Sadler-Rowe publications, the majority of them exclusively. Write for information. We think you will find we have something you want.

SEE OUR PRICE LIST.
C. A. Faust's
Compendium
of
Automatic Pen
Lettering & Designs

NOW READY!!
Over 500 advance orders filled during the past 10 days. Enlarged, beautified, and price reduced. The new edition contains seventy-two plates of alphabets and sixty-five plates of designs nearly one-half more than the old edition. The following are a few of the important additions: Eight beautiful Easter, Christmas, and New Year cards. Faust's famous shaded base writing with instructions, German text, Old English and Medieval alphabets with graded, Some unqualified testimonials received; here's a sample: "Faust's Compendium received; it is simply elegant. J. B. Critz, Columbus, Ohio, Nov. 11, '91."

Have you ever used Faust's New Improved Automatic Shading Pen? The large output during the past year has demonstrated very clearly that it is superior in every way to any other automatic pen on the market. The three main points of superiority are: Elasticity of material used, beauty of appearance and high grade corrugated holders. Why buy a common antiquated style when you can get an up-to-date one for the same price? We guarantee all our pens.

C. A. FAUST, the "Automatic Pen" President
W. J. TUXIS, Vice President and Business Manager.

THE AUTO PEN & INK MFG. CO., 73 Rush St., Chicago, Ill.

70% Off Our records show that 70 per cent of the school proprietors who have written us in the past eighteen months are now using GREGG SHORTHAND. Some of the others will adopt it in January.

There are many reasons—sound business reasons — why the Gregg System should be adopted by every school proprietor who desires to increase the revenues of his school. Write us and we will tell you a few of them.

THE GREGG PUBLISHING CO.,
57 WASHINGTON ST., CHICAGO.
Today the great nations are fiercely contending for commercial supremacy, and every power in the entire civilized world, whether great or small, seems to fully realize that its future commercially depends largely on the commercial training it gives its young men and women.

In this great struggle it seems that the United States is destined to lead. Be that as it may, however, it is certain that in the educational affairs of our country during the next generation commercial education will receive unusual attention. The demand in the commercial world for thoroughly trained young men and women has forced commercial education to the front, and it is now looked upon with favor by all. The universities and colleges of our country are adding commercial departments, and calling special attention to these departments, and even the government at Washington is considering the advisability of establishing a department of commerce. You are no doubt fully aware that the PENMAN-ARTIST AND BUSINESS EDUCATOR is the leading representative of this great and growing cause in America. Its contributions, lessons, etc., are from the pens of the ablest business educators and penmen in our country. These can certainly not be missed by any one who is at all interested in this work.

So we wish to emphasize that if you are interested in commercial education, practical or ornamental writing, drawing, lettering, engraving, designing, etc., we confidently believe that you cannot afford to be without this journal.

**Read and Then Act**

In order for the committees to do their work, it is desirable to ascertain your views at earliest a date as possible with reference to:

1st. **Where** shall the next meeting be held?
2d. **When** shall the next meeting be held?
3d. **What subjects** would you like to have discussed, and **who** would you choose to present them?

**A Word From Canan**

MESSES. ZANER & BEISER:

I am at Charity Hospital, Norristown, where on December 19, I underwent an operation for appendicitis. The doctor tells me I am getting along very nicely, and I hope to regain my health rapidly from now on. My January PENMAN ARTIST AND BUSINESS EDUCATOR should be sent to Norristown.

Very truly yours,

C. C. CANAN.

NORRISTOWN, PA., Dec. 21, 1901.

[We know all will join with us in wishing Mr. Canan a speedy and complete recovery.

EDITORS.]

**To the Commercial And Shorthand Teachers of Michigan.**

On July 10, 1901, a number of the Commercial and Shorthand Teachers of this State met at the rooms of the Detroit Business University, Detroit, Mich., and organized a State Association.

The following officers were elected:

President—A. S. Parish, Grand Rapids, Mich.

Vice-President—T. P. Twigg, Detroit, Mich.

Secretary—Cyrus W. Field, Jackson.

Three committees were appointed:

(a) Constitution and By-Laws—Mrs. M. L. Veenheit, Chairman.
(b) Program—A. S. Parish, Chairman.
(c) Membership—Cyrus W. Field, Chairman.

The next meeting was left in the hands of these committees.

**Change of Ownership**

Mr. J. C. Witter, of New York, has recently purchased the publishing business formerly known as the J. C. Witter Company, and will continue the same under the new name of J. C. Witter, Art Publisher, 20 West Thirty-third street, New York City. After a vexatious and delayed dissolution of the old company, he is now ready to begin again, and is anxious to hear from any one who may have a complaint or grievance against the old company.

"Art Study," a monthly magazine for teachers, just came to hand and bespeaks a most successful future.

We certainly wish the new firm the success it merits. Mr. Witter is one of the most industrious, progressive, intellectual and sincere men we have ever had the pleasure of knowing, and the wife who know him best know there is no limit to his capacity to push to the front among publishers.

**On to Dayton**

You are invited to our annual meeting of "The Ohio Commercial and Special Teachers' Association." It will be gratifying to all members of the Association and all others interested in the promotion of Business Education in Ohio, to know that the committee in charge has been able to make such satisfactory arrangements so far as giving promise of an unusually successful and attractive meeting. Prominent teachers all over the state have agreed to take part, and the local attractions of Dayton will be considerable.

The National Cash Register Company, in some respects the foremost factory in the world, has invited the association to visit in a body, and the president, John H. Patterson, Esq., has kindly consented to address us. He is a man of unusual power, and able to interest such a body in some educational lines which he has made a study of.

The Association will also be welcomed at the National Military Home. Its handsomely furnished auditorium is placed at our disposal, and it is proposed to hold an afternoon banquet from 1:30 to 4:30, which will be a novel and attractive feature. Ample time will be given members to enjoy the many beauties of this famous spot.

President Witt, and the very efficient Executive Committee will leave no stone unturned to insure a success.
By J. G. Christ, Lock Haven, Pa.

Lessons in Rapid Business Writing

By

E. C. Mills, Rochester, N. Y.

Number Five

Instructions, Plate Twenty

Beginning with this lesson, we introduce the capital stem letters. There is one stroke that predominates in all these capitals, and that is the compound curve principle. 161—This is the foundation exercise for these capitals. See that all the lines curve nicely and retrace four times for each one. In making 162 see that the connecting stroke is brought quite close to base line in order that all the upward strokes may be curved considerably. 164—This is the style of stem used by most business men and when once learned is seldom, if ever, discarded. The reason we make the stem in this manner is because the capital can be readily joined to small letters following. It takes some time, however, to get the idea of just how this “hook” stem is made. First make the stem in the usual way to the base line and bring it up and pretty well toward the left, forming a nice, broad turn at base line. The next thing to do is to stop suddenly and finish with a stroke, running the same direction as the broad curve. Count 1—2. The 1 count is for the stem to the hook; the 2 count is for finishing line. Now this should not be made in a slow, hesitating way, but strike out with confidence and apply the free movement. Remember that this stem, when once mastered, will help you in a great many other letters. Count 1—2—3 for 165. If the letters is too slanting, curve upward line more. 164 and 165—These are finished with the dot. 168—These letters will form an excellent combination. Follow copy carefully and do not allow the hands to turn toward the right too much as it moves across the page.
Instructions, Plate Twenty-One

Do not retrace stem in 170 more than three times for each. 170—The "G" is formed very much like the "S," only the loop part is brought lower. Both the dot and hook finishings are given. In a signature like 171 we have a good opportunity to use the dot finishing to advantage, as these capitals would not otherwise look well connected. Very often we find three capitals that do not appear well when combined, and if the letters in your name look awkward when joined together you will be doing a wise thing to write them separately, rather than to have a grotesque combination. The other copies in this plate demand careful attention. Look at the spacing, slant, height, etc., and aim to improve in all these. At any rate, do not, please do not, hurry from one copy to another, but confine your practice to one copy, and after a careful study of that copy you will see many little points that the superficial student will overlook in his anxiety to begin the next one.

185
Lake Superior is 380 miles long. L
Instructions, Plate Twenty-Two

Begin in 178 with the dot. So many have difficulty with the finishing stroke that the little tracer has been given to insure the proper motion. For 179 count 1—2—3 or dot 1—2. In 179 we find practically the same form as 179 with the exception of the upward beginning stroke. Many learners think it easier to begin with an up line rather than with the dot. The balance of the copies should be practiced in the same thorough manner as recommended in the previous instructions.

Instructions, Plate Twenty-Three

Retrace 188 three times. Be sure to make light down strokes if you would have these exercises look well. The upward beginning stroke in 187 is sometimes found a help. The "O" in 188 makes a good combination for class drill. Count 1—2—3 for each letter. In looking over scores of students practice sheets from all parts of the country I find that many spoil their pages by neglecting the little things. For instance, if a page is otherwise beautifully written and such a little thing as the dot over the i is made carelessly and heavily, it will mar the general effect of the whole page. And again, I have noticed in letter after letter I have received, how a careless, long cross over the t spoils the looks of a page. Think about these simple things and try to improve in them while practicing the sentence copies in this plate.
Instructions, Plate Twenty-Four

In order that the top part of the "T" may be made well, we suggest that the student practice that part of the letter separately at first as shown in 194. The hook form of F is found more serviceable, as the dot part can be made without lifting the pen. All these letters and copies should be written with a free muscular movement, and yet we must think of good forms, and aim in every copy we write to control the movement. Freedom of movement, movement control, and a practical application of the movement to the forms of letters is our aim in this series of lessons.

Lessons in Practical Business Writing

BY

SPOONERIAN COLLEGE.  W. P. Pichman  CLEVELAND, OHIO.

Number Five

The downward stroke of small e should be made nearly straight, and the lines should cross about one-half the height of the letter. The small c is made the same as e, with the exception of the short turn at the top. In style 2 the upper stroke does not cross the left curve which also makes a very pretty c. The r is made in two styles, either one of which will do very nicely for business writing; however, either one may be made poorly. In making the first style r you should allow the top part of the letter to extend above the line and come to a point where you join the short left curve to the straight line, which should be one space above the base line. Style number 2 begins the same as the small n, the downward stroke of which is retraced to the top, where you turn off to the right same as finishing w or v.

The s should be made a little more than one space in height, and if you combine a number of them, see that you make a very small loop or none at all. Space forbids us to give all the points concerning these letters that would even be profitable in many cases; therefore, we shall ask you to study the letters very closely. We have now gone over all the one space letters, and in the following three lines (plate five) you have the same letters arranged in proper order. Please practice them in the order they are given and distinctly separate the letters.
It will perhaps be better to leave the upper stroke open in making the small \( t \), for when you attempt to retrace it is difficult to avoid making a loop and in many cases will look more like the \( l \) than anything else, therefore, you will make a better \( t \) by not attempting to retrace. The letter should be crossed one-half space from the top. In making the \( d \) we add the oval part of \( a \), which should always be nicely closed. The small \( p \) may be finished the same as the small \( n \), or closed on the base line, either one of which will make a very pretty letter if you avoid making a loop. The stem can always be nicely retraced. The small \( q \) should be closed at the top and the stem closed on the base line. Kindly practice faithfully on these lessons and prepare for the lessons which are to come.

By mistake of the printer the plates in the November number were transposed — the combinations coming before the letters.

\[ \text{Real Rapid Writing} \]

by C.P. Zaner.

---

\[ \text{Legibility and Speed} \]

The first requisite of a practical handwriting is \textit{legibility}. By that I do not mean accuracy. The latter is a professional essential but not a universal one. Legibility is dependent upon a strong distinction between turn and angle, retrace and loop, curved and straight lines. Each letter should have an individuality peculiar to itself, and it has if well made.

The second requisite of a practical handwriting is \textit{speed}. It is dependent upon an easy action and simple, bold forms. Grace lines are out of the question when speed is demanded. Therefore the usual semi-ornamental, accurate hand is not as rapid as modern conditions demand. Simpler writing is necessary in order to reduce exertion to the minimum.
Let the hand rest and roll freely upon the little finger in making the small retrace oval. Then make the o in much the same manner. Curve the down stroke well (considerably) and then close it at the top by continuing the rolling motion needed to curve the down stroke.

Make the oval part of a much the same as o, except longer and more slanting. Take more time to make it than in the o. Close the a and do not loop the finish. Drop to the base line with the second part. Practice the word roars with watchful care. Watch spacing between letters as well as in letters.

Make the straight line and then finish much the same as the capital o. A slight pause at the point on the base line is allowable. Write the word without raising the pen and with but little finger action. Make the D exercise with a free, arm movement. Finish each letter with a quick, rolling action.

Common errors or tendencies to be avoided.

This plate is an important one. It is not pretty, neither is it suited to practice, but valuable information may be learned from it. The small forms illustrate common tendencies or causes of illegible writing. Poor writing—illegible writing, is more the result of haste and inattention to detail, than to lack of skill. The mere matter of turn and angle alone determines whether writing is plain or doubtful in nine cases out of ten. Examine your unstudied penmanship to see whether or not you are making turns where there should be turns and angles where there should be angles.

Work faithfully upon the preliminary exercises for the letter P. Make the letter without raising the pen. Use but little or no finger movement. Retrace the P about two-thirds the height. Do not make the oval part large enough to resemble D; neither make it very small. Work faithfully upon the word “Penmanship,” watching the spacing between the letters closely.

C. S.—Down stroke in “s” too nearly straight—curve it considerably. Begin “c” with small dot. Be more careful in forming shoulder of “r." Watch “a” so it does not resemble “o.” You have made a good start. Exercise more care and perhaps less haste.
The Penman-Artist and Business Educator

Practical Vertical Penmanship Copies and Hints

The execution of vertical penmanship is not unlike the execution of almost any other style of writing. One may write it slowly or rapidly, with the finger movement or with the arm movement, or with the combined. If you desire an easy, graceful handwriting, you will do well to use mainly the arm movement.

The accompanying exercises are given to encourage a very rapid arm movement. They are not accurate but were made quite freely. See if you cannot at least equal them. The secret of success in anything is in sticking to it. Therefore do not give up if you cannot succeed with the first attempt. Instead, stick to these exercises until you can make them rapidly and well. By so doing you will be in a position to handle the lesson given next without a struggle.

Send on your work for criticisms. We shall be pleased to offer suggestions through the paper free of charge. Send such practice to C. P. Zane, Columbus, Ohio.

Be careful to use good stationery, and keep a healthful position. The paper may be held parallel with the desk, parallel with the forearm, or at any angle between these two extreme positions.

One of the very finest, bold, yet dainty specimens of ornamental penmanship received at this office recently came from Mr. C. C. Canan, Duke Center, Pa., whose lesson articles we have been running have been so well awarded. Mr. Canan is surpassed by no other in his artistic lines. We are sorry the specimen mentioned cannot be successfully engraved. It is a gem of penmanship art.

A big lot of fine specimens of ornate penmanship is at hand from J. G. Cist, Lock Haven, Pa. We are in hopes of presenting some of his work in the PENMAN-ARTIST AND BUSINESS EDUCATOR from this on.

T. Escalon, Santos Anna, Republica De el Salvador, sends some specimens in ornamental penmanship, which indicate that he can become master with the pen.

Mr. W. Carver, Commercial and Penmanship instructor in Danville, Va., Military Institute, favored us with a photo of a certificate he engraved to be given to the student making most improvement in penmanship. The work was artistically done with brush and pen and is well worth getting as an honor, as well as a specimen of art.

Mr. W. A. Chew, Woodstock, N. H., sent specimens which show a good improvement as well as a good command of the pen. Mr. Chew was in the South African war, and during the past year has been writing cards on ships of war as well as in states of peace, all the while making money. He is now teaching penmanship in the Woodstock Business College.

Mr. J. W. Bowman, teacher of penmanship in the Canton, Ohio, Actual Business College, recently sent specimens of students writing, showing improvement in two weeks' time. The improvement during that time is greater than is usually shown in one month's time, demonstrating that Mr. Bowman knows how to teach practical writing.

Mr. F. W. Weatherly, teacher of penmanship in the Eartham, J. A. Academy, recently favored us with a batch of movement exercises by students who have received instructions but ten weeks. We take pleasure in saying that the work is excellent. It shows that he is directing the pupils thoroughly upon movement.

In a very elegant specimen of engraving script John Hartnett, Manchester, N. H., renewed his subscription to the PENMAN-ARTIST AND BUSINESS EDUCATOR. It is surprising how many persons Mr. Howe's lessons in the PENMAN-ARTIST AND BUSINESS EDUCATOR enthused to such an extent that they have mastered his style of money-making writing. Mr. Hartnett works very much resembles that of Mr. Howe.

Some cards and a letter in ornamental style received from P. R. Fuller, Ridgeway, Pa., show a great deal of talent for handling the pen. Some of his work looks quite professional indeed.

P. A. & B. E. Almost on a Par With His Salary

NORTH ANSON, Me., Nov. 5, 1911

DEAR ZANE & BLOSER:

When the September issue of the PENMAN-ARTIST AND BUSINESS EDUCATOR came to my desk, I thought that it largely surpassed anything I had ever seen in the form of a penmanship journal, and that it was just as good as it ever could be, which was good enough. The October number was also very fine. I have just received the November issue and am surprised, it is simply grand. I know that you were up here in the "Maine woods," but am confident that I know a "good thing" when I see it, especially if it is something in the form of a penmanship journal. If you can continue to improve your paper, it is difficult to estimate its value. I have almost placed it on par with my salary now, and am not working for my health, either.

Now, I don't know what to expect, and shall always be anxious to know what is coming. Wishing you continued success.

I am, yours very truly,

E. P. MILLER.

Very Valuable

I enclose one dollar, for which please renew my subscription to the PENMAN-ARTIST AND BUSINESS EDUCATOR. Your magazine is very valuable to me, and I would not think of getting along without it in my penmanship class.

W. O. DAVIS,

Erie, Pa.

The Davis Shortland School.
Some Obstacles to Success in High School Commercial Training

It is said that the commercial departments of our high schools are not successful in preparing young persons to hold office positions, and that the true commercial training school must always be the private business school, whose students concentrate their powers on a few subjects for a short time. Granting, for the sake of argument, that time is the enemy of the commercial, the causes of the inability of commercial instructors in high schools to obtain results equal to the best results secured in the private business school.

Intelectual weakness. Not only is this department of educational work relatively new, in our high schools, but it has hitherto chiefly the supercilious treatment that a superior often consciously bestows on an inferior. City superintendents of schools, and principals of high schools have yieldeed, in most instances, none too gratefully to the force of public opinion, in the establishment of commercial courses. Caesar and Homer still exact and receive homage quite out of proportion to their practical usefulness to the modern age. Commercial teachers must, in many instances, reckon with the apathy, or the hostility of their superiors.

The idea that a high school course of this kind should be a general, foundational character is a very good idea, but practically the courses on which most emphasis has been laid are, in every respect as much special as is the commercial. They fit a few for college or for technical schools. They are not expected to fit boys for making his living, and it is so much easier to shift the responsibility for earning his daily bread, that complacency and smiles at the rosy days of June, and hope to get forth to enter the ranks where only the fittest survive. If Youth and Hope are to be the only basis for the commercial training of the boys and girls who know well that when they quit the high school they must earn their bread and butter. There is no justification for the commercial course that does not fit young people of sufficient age, to step directly from the school into the office, able to hold a position with credit, to themselves and satisfaction to their employers. Too many so-called commercial courses in our high schools are nothing more than emasculated courses, prepared with the thought of the child growth from an English course, commercial courses, minus about everything purely commercial.

The idea that a high school course of this kind should be a general, foundational character is a very good idea, but practically the courses on which most emphasis has been laid are, in every respect as much special as is the commercial. They fit a few for college or for technical schools. They are not expected to fit boys for making his living, and it is so much easier to shift the responsibility for earning his daily bread, that complacency and smiles at the rosy days of June, and hope to get forth to enter the ranks where only the fittest survive. If Youth and Hope are to be the only basis for the commercial training of the boys and girls who know well that when they quit the high school they must earn their bread and butter. There is no justification for the commercial course that does not fit young people of sufficient age, to step directly from the school into the office, able to hold a position with credit, to themselves and satisfaction to their employers. Too many so-called commercial courses in our high schools are nothing more than emasculated courses, prepared with the thought of the child growth from an English course, commercial courses, minus about everything purely commercial.

Brief Courses

In a recent report, representing the state of the commercial schools of this country, it is found that half of the schools have a four-year course; two have a one-year course; nine, a three-year course, and the commercial high schools have no commercial work. The commercial course should be four years long. To the public a diploma is a diploma. Few ask whether it represents one year or four years of work. It is unfair to the students in other courses, that commercial students should receive a diploma for less than four years' work. It is also unfair to the one who receives the diploma, for he is entitled to four years' training in order that he may have the time to take up the trade of his father. It will even be too young to take up the profession, requiring more than juvenile judgment. It is unfair to the business public, for they have a right to expect of those who come to them from the public schools, such a mental equipment as only a four-year course can provide.

But a four-year commercial course may mean but little, for it may be so arranged that very little purely commercial work is done in it. As a commercial course, even a four-year course may well be found too short. For instance, Somerville, Mass., has Bookkeeping for one year of forty weeks, with five periods (less than an hour and a half per week), and all of the Correspondence and Commercial Law that the pupils get must be taken from the time assigned to Shorthand. Shorthand is allowed five periods, and Typewriting three periods, a week for forty weeks. Cambridge, Mass., the home of Harvard University, does practically the same as Somerville, although a class of about sixty pupils in Shorthand drifted along last year from September to January without typewriters to operate, and then in January, if we mistake not, they were generously allowed five machines. Cedar Rapids, Iowa, allows 80 periods, in all, for Bookkeeping; 391 for Shorthand, and 72 for Typewriting; and yet they are trying commendably to teach Touch Typewriting. Pittsburgh grants a maximum of 280 periods to Shorthand and five months to Typewriting. In Paterson, N. J., no typewriters are provided. In Scranton, Pa., 170 periods for Shorthand get each 200 periods: Typewriting, 280 periods. Elgin, Ill., allows 256 periods for Bookkeeping, 180 periods for Shorthand, and from 1 1 0 to 180 periods for Typewriting. Sioux City, Iowa, has longer than 200 periods for Bookkeeping, but 180 periods for Shorthand and only 90 periods for Typewriting. Thinking of learning, in about 7 hours, to operate a typewriter at a commercial rate of speed! And yet the principals of some of these schools believe the moral perversion of business school proprieers who advertise to teach Shorthand and Typewriting in six months. Verily, there is neither consistency nor virtue in such an attitude.

It is paradoxical to say that narrowness of some of the courses is so broad that they are narrow, but some commercial courses take in so many subjects that many students that have no time to teach Writing, Spelling or Correspondence, and, in some instances, Arithmetic and Law get no time for that which is parboiled from Bookkeeping or Shorthand. For example, Allegheny, Pa., takes time for Writing and Correspondence out of 300 periods allowed for Bookkeeping. Newark, N. J., has no Shorthand, Typewriting, Correspondence, or Penmanship. They study Bookkeeping two periods a week for thirty months (talk of "sweetness long drawn out")! Clark's Commercial Law for 10 recitations, and Thompson's Commercial Arithmetic for 90 recitations. It is not all that is true. How does the high school support the commercial departments of the following high schools: Cambridge, Mass.; Detroit, Mich.; Decatur, Ill.; Lawrence, Mass., and Muskegon, Mich. Most of the answers imply that Writing is not taught as a special subject, and about half the schools report that vertical writing is used in the commercial departments.}

Business practice, involving the real use of offices, is, in most high schools, as in many business "colleges" with long-tailed names, a snare and a delusion. We believe that the business course that units a thorough training in office methods is no more than elementary. And by this we do not mean to so exclude schools teaching some one of the popular forms of bookkeeping that involve the use of business papers. These are the symbols of business transactions of a varied character, is a process that, when properly conducted, is the crown and glory...
of our American methods of teaching accounting. There is no better place to exemplify this feature of a complete business course than in high schools and university work. The omission of Spelling, Writing, Correspondence, Law, Commercial Geography, Elementary Economics, and Office Practice from a business course is a serious impediment to success. Such a course is about as nearly invetebrate as is jellyfish.

Immaturity

One of the difficulties met in high school commercial teaching is the immaturity of the children. This is particularly true in schools that allow pupils to take up Bookkeeping, Shorthand, or Law, during the first year. To most of them, the subjects are more or less vague. At that age, students of Shorthand have not had a sufficient acquisition of English to make correct transcripts of, and, to them, the abstract principles of the law are but little more than a jumble of meaningless terms. Of course this difficulty may be largely obviated by deferring the more technical subjects until the last two years of a three-year course.

Space fails us to enumerate Functional the lack of proper desks, type- Troubles writers, ribbons, carbon papers, hectographs, mimeographs, neon styles, letter books, letter presses, filing cabinets, office equipment, and modern textbooks; of inexperienced, underpaid, over worked teachers; or methods that it were charitable to denominate "amateurian." But this is axiomatic that a fragmentary treatment of obstacles now being met and overcome. There is another side—a silver lining to the cloud—of which we shall be glad to write in some subsequent number. We ought to say here, however, that the schools here mentioned, and many others, have met and overcome, and are now overcoming, many obstacles. Each of them is doing highly commendable work along some line of commercial training. We should be glad to receive from commercial teachers in high schools, data relative to their work.

**Commercial Work in a Typical New England High School**

H. G. GREENE, NEBRASKA, MASS.

Continued from December Number.

**WE NEED BETTER TEACHERS**

Superintendent Balliet, of the Springfield, Mass., schools, in reporting his impressions of the schools of Germany, calls attention to their superiority in teaching power. "They teach far better than we do," he says. The concept of commercial instruction has obscured its educational possibilities. To recite the facts of a subject is one style of teaching, usually accompanied by a requisition upon the pupils to recite the same...
facts back to the teacher. To save the teacher from his part of the recitation, a text-book is provided. This is not the teaching power to which Mr. Balliett refers. He saw that teachers who could make cold facts warm and palatable. Dry discussions in their recitations became moist, and clothed with verdure. The intangible was brought down within reach of ordinary minds.

The literature of commercial pedagogy is very meagre, and the literature of the commercial subjects is scarcely more abundant. But the association of commercial teachers with workers in the public schools brings the former in touch with a vast body of educational literature. It makes accessible to them a great fund of teaching experience which has been classified so as to make something akin to a science of teaching. When commercial instruction shall have appropriated to itself this literature and this experience and shall have assimilated it into the daily work of the class-room, then will it be found that the commercial subjects have a very intimate relation to the work of the public schools. It will be found also that there is enough of interest in these subjects to command the sustained attention of the student for a long period of time. Contrary to the theory of Mr. Book-nover, our experience is that the necessary diversity of studies in the high school stimulates interest. Continuity of thought in a mind only fifteen years of age is not desirable. This style of thinking carried into work of high school grades would be out of harmony with established laws of education. Long sustained, continuous application to one subject is the function of a matured and well-trained mind.

No line need be drawn between general education and special education so as to exclude from the public schools any subject in which a large number of pupils require instruction. The care of the body, including the teaching, is a proper subject of public instruction. And for that reason that physiology is taught in the public schools. Manual training, which works with the tools of the carpenter, the blacksmith, the machinist, and the draughtsman, although a very special form of education, has found its way into public instruction, and justly so. The line of exclusion will be drawn so as to exclude subjects in which there is no living interest, and subjects not adapted to the mental capacity of children of public school age. If the commercial subjects are of such a nature that they may be mastered by a short, quick, continuous study, they are not beyond the capacity of high school children; indeed, the use of the word "children" here is misleading, since, in many high schools, pupils over eighteen years of age may be found taking postgraduate work.

The best that has been written about commerce and the arts practiced to carry it on should be found in the high school library. The commercial department should be a laboratory where materials are assembled, and pupils work out elaborate results. All the skill in teaching that makes school life a training in independent thinking, speaking, and acting should be acquired by the commercial teacher.

Commercial instruction must rest, with all other sound teaching, upon the principle, "Not to make a living but to make a life."

**EQUIPMENT**

The commercial department of this school occupies all but one of the rooms back of the corridor on the second floor, looking over the athletic field. Two of these rooms, the bookkeeping room and the shorthand room, are separated by double rolling doors. Adjoining these is the typewriting room, and connected with this is the commercial supply room. The illustrations accompanying this article, were taken while an exhibition of the work of all the city schools was being given in the high school building.

On the same floor, across the corridor, is the high school library. The science laboratories are on the floor above. These are as much parts of the commercial department, as the latter is a part of the high school. All departments are bound together by community of interest in the same pupils.

The commercial desks in the bookkeeping room were made to order for this school. They have three drawers with adjustable partitions, and a cash drawer. The structure above the writing desk contains three pigeon holes. At the left of these, is a sloping rest for the text-book, and for books from which posting is being done. The space beneath this structure is open to permit determining the corners of large books under, while working upon them. The desks were designed to give a maximum of storage and working surface, with a minimum use of floor space.

The offices are well shown in the illustrations. They are in constant use, and add much to the effectiveness of the work. A letter-press and cabinet, an Edison Automatic Mimesograph, four Remington, and four Smith typewriters, with an abundant supply of text-books, office appliances, and stationery, make up the working outfit.

This department has its corner in the high school library. A few volumes are added each year, and in time, we hope to have a fair representation of the literature of commerce.

**STATISTICS**

Melrose is a residential city, seven miles from Boston. There are no large manufactories here, if we except the Boston Rubber Shoe Company's plant, which is situated between Melrose and Malden. There are many families of means, but few of great wealth. A large part of the population is engaged in business in Boston. Many of the young people are tending toward a business career, but the city sends a fair delegation to various universities and technical schools.

To show the slight of commercial color in the high school, produced by introducing the commercial subjects on an elective basis, I offer a few figures:

**1898-99**
- Number of pupils registered in the school: 233
- Number of pupils taking some commercial work: 140
- 60.6 per cent. of the school was connected with the commercial department.
- The graduating class of the school numbered 24 of these, who had taken some commercial work.

**1899-00**
- Number of pupils registered in the school: 243
- Number of pupils taking some commercial work: 140
- 57.6 per cent. of the school was connected with the commercial department.
- The graduating class of the school numbered 24: 29 had taken some commercial work.

**1900-01**
- Number of pupils registered in the school: 266
- Number of pupils taking some commercial work: 180
- 67.6 per cent. of the school was connected with the commercial department.
- The graduating class numbered 40: 32 had taken some commercial work.

**PRACTICAL RESULTS**

The finished product of a school is its graduates. Of three classes graduated from the high school, seventy-nine out of one hundred and ten pupils, had taken some work in the commercial department, 74.5%, of the output of the school, has been directly affected by commercial instruction. Some of these graduates are now in classical colleges or technical schools. One took a course in a business college after graduation. Of those who would accept business
employment, none have failed to find it, provided they had taken enough commercial training to enable them to pass a distinction examination in their studies of education. The demand is strong for high school graduates with the comprehensive business training, which a high school can give. Our supply of pupils coming to high school is always exhausted until after another graduation.

Today the school numbers three hundred and fifteen, and of these 45.7% are taking commercial studies. This decreased percent is due to the withdrawal of pennmanship from the electives of the first two years.

Twice the commercial department has given public exhibitions of its work. The accumulated work of the pupil was displayed in an attractive way as possible care being taken that each pupil's work was represented. Recitations and drills of various kinds were conducted. The methods and material results of commercial instruction can be very completely shown in such exhibitions. In June, 1911, the work of all the city schools was shown in the high school building. Parents and children were in constant attendance afternoons and evenings, for three days. Apart from its function in showing parents what is being done in the schools, it must be that this exhibition stimulated many children now in high school to a determination to enter the high school.

Higher Accounting
By R. J. Bennett, Secretary Woodstock Business College, Woodstock, Ont.

The following quotation from Lawrence R. Dicksee, F. C. A., may prove suggestive: "That expenditure which it is anticipated, will eventually be received, is in the nature of capital expenditure; while that which it is expected will not be received eventually is in the nature of revenue expenditure.

The same remarks apply with regard to the credit side of the ledger or the credit balances therein: these are all prima facie in the nature of benefits received. The term Receipts usually implies the actual receipts of cash, though in the case under discussion this is not adhered to. As Capital Receipts may include cash or any other obligation or exchange of property, say in payment of stock issued. They indicate benefits, whether in the form of cash or anything else. The details of expenditure will be treated further down.

CAPITAL RECEIPTS
These include cash, property or value received from stockholders in payment for stock; cash received from the sale of debentures issued to produce working capital; or cash received from the sale of fixed capital, as receipts from the investment of surplus capital in outside enterprises, in the nature of dividends or interest, and premiums on stocks or bonds issued. Instead of including the last named elements of income as profits for the year, they should be credited to a reserve fund. Capital receipts then are distinguished from the proceeds of the sale of wares for which the concern is organized to handle.

REVENUE RECEIPTS
These are distinguished from capital receipts by being exclusively derived from the sale or exchange of commodities for which the company was organized to buy and sell; the excess of receipts over expenditures constitutes the net profit, and go to increase the actual capital. They are the earnings of invested capital. The excess of expenditure over receipts or income, however, represents a loss and a corresponding reduction of capital. There is a prevalence of the view that all receipts into the revenue account which should be carefully guarded against.

CAPITAL AND REVENUE EXPENDITURE

The term ‘Expenditure’ does not mean only the payment of cash, but also the exchange of property or the creation of any debt or liability as the consideration for anything received. In dealing with the financial matters of any of the above described benevolent societies, one must be careful to examine that no item of expenditure which properly belongs to revenue be included in those pertaining to capital. In times of depression in trade, or losses arising from other causes, there is often a tendency when it is desired to still make a good showing by paying dividends equal to previous years, keep down losses, etc., to write up assets by charging to capital those losses, or extraordinary charges, and thus charge to the revenue of the current period. In other words, this is considering payments made for the purpose of upbuilding property, fixed plant, etc., by way of repairs and improvements, as representing an increase in value of the capital of the enterprise, instead of being a charge to revenue. The proper distinction may be a vexed question yet it may be answered by some such reply as the following answer to the following question: "Has the particular expenditure been incurred for the sake of improving the earning capacity of the enterprise?" If so, it is a capital expenditure; otherwise, it may not be considered to be so; yet, in either case the cost of the building, or the running expenses, or the others, should be kept in mind.

Capital Expenditure, in detail, consists in exchanging one property for another, the transfer of the ownership of capital in the form of a sum of money, or securities, or goods, or the purchase of a building, or the equipment on the plant, or the purchase of tools, the purchase of machinery and plant, rolling stock in a railway company, etc.

Revenue Expenditure comprises all the expenditure which results in a decrease of capital, as against the increase thereof resulting from revenue receipts. It includes any expenditure in connection with the running expenses of a business, such as rent, taxes, salaries, advertising, insurance, commission, etc., also interest on capital, and repairs of fixed properties, depreciation, bad accounts, business losses, etc.

In conclusion, a departure may be made to remark that governments, churches, societies, associations, and capital organizations are required at certain intervals to submit to the members statements of "Receipts and Payments," and "Income and Expenditure," and to keep a record of all kinds of cash transactions usually summarized and is compiled from the Cash Book. It shows the receipts and disbursements of cash for the period. The latter shows the entire income, whether actually received in cash or not, and the entire expenditure for the period whether paid in cash or still owing. It is practically a synonymous term for Profit and Loss.

A PROFESSOR
But not the kind found at the St. Louis Federation.
Commercial Law. Its Objects, Scope and Methods

A Paper Read by Mr. L. C. Williams, Rochester, N. Y., Before the Commercial Teachers' Association of the National Federation of Commercial Teachers, at St. Louis, December, 1901

The aim in teaching the subject of commercial law in commercial schools, as I see it, should be to familiarize the pupil with a few principles and rules of law which underlie all common transactions of business life. The short period which the average pupil is able to devote to any commercial school course of studies precludes the possibility of thoroughly covering a wide range of subjects. As a rule, superficial knowledge of law is not only valueless, but dangerous, it seems to me important that only such topics be treated as can be mastered. It were much better to go over the subject of negotiable paper or partnership a dozen times than to go over a dozen topics once. Definite, available knowledge should be the aim.

I think it possible to treat four or five law subjects during the period covered by the ordinary commercial course in a sufficiently thorough manner to afford knowledge of the highest value to young people's future careers.

Those subjects, in my judgment, should be, named in the order of their importance, negotiable paper, agency, partnership and real estate. The subject of contracts, of course, underlies the whole structure of commercial law, but that subject, as a subject, should be treated with great care. Volumes have been written on it, and to master that subject alone is the work of years instead of months. Contracts, when taught by itself, is a formidable subject, but it may be introduced in connection with the other subjects named in a most practical and interesting manner.

I would open a course of exercises in commercial law with a lesson on contracts, explaining what a contract is, giving the elements of a contract, and showing how all the transactions of life are based on agreements, which must contain all the elements of a contract, or they are not binding agreements. Then I would begin with negotiable paper, and I would ring the changes on the various kinds of negotiable paper, and the parties to them, and their relations, rights and liabilities, until I was sure that I could make myself that every student in the class understood that subject. Then I would take the other subjects in the order named, and treat them as thoroughly.

Now, as to the methods of teaching commercial law. There are two general plans employed, the lecture method and the classroom method; there is also a compromise consisting of part lecture and part class drill. All sorts of methods have been employed in the school which I represent, but we long since settled down to the conviction that commercial law should be studied and taught about as arithmetic is studied and taught, by assigning to the pupil a lesson in his text-book, and requiring him to study it as thoroughly as he is expected to study his lesson in arithmetic. General discussion of questions, which are sure to arise in every exercise, by members of the class, is very helpful. The pupils will thus solve questions in such a way as to impress the matter upon their minds as it could not be if the questions were raised and immediately answered by the teacher. Citation to cases, those actually reported and hypothetical ones, has its value, but as a very slight difference in conditions may make great difference in the law principles involved, this method should be employed with great care. The analysis, or diagram, method is also valuable. The older members of the profession will remember how Prof. Calvin Townsend took the commercial schools of the country by storm with his method of blackboard analysis, as presented by him before the various schools, and incorporated in his work entitled "Analysis of Commercial Law," but that method was Professor Townsend's method. It required his familiarity with it, his belief in it, and his magnetic presentation of it, to accomplish the results with it which he produced. When Professor Townsend accompanied me to Boston in 1872, and presented his method of teaching this subject before the convention of the International Business College Association, he completely captured and captivated the delegates. Mr. Packard said, on that occasion, that he had never seen commercial law taught before, and other delegates were equally enthusiastic. A demand was put on teachers for the book which he afterward prepared, and which had a very large sale, but his method has not survived. Indeed, our teacher who succeeded Mr. Townsend in charge of our law class, abandoned the Townsend method and adopted the class repetition plan, which yielded him better results. It is apparent, therefore, that the success or non-success of any plan of teaching commercial law, and I believe the same thing is true of the teaching of other subjects, depends chiefly on the teacher. As in every other branch of study, a teacher worthy of the name will produce the best results with those methods which seem to him most rational.

Actual Business in the Commercial High School

Summary of a Paper Read at the St. Louis Convention by R. B. Van Matre, Principal of the Commercial Department of the Omaha High School, Omaha, Nebraska

In opening his paper, Mr. Van Matre took the high school principals severely to task for their indifference and hostility to commercial work. He said that one of the worst conditions that a commercial teacher engaging in such work has to meet is that of giving a theoretical and a practical education along lines in which he does not believe. Mr. Van Matre vividly described these conditions by saying that the principal commonly regards the commercial teacher as an eagle might regard a chirping sparrow, while the commercial teacher often feels that his effort to educate his principal is like talking into the head of an empty barrel. Mr. Van Matre believes...
in making the Office Practice work in the high school to fit local conditions, and he has prepared for his students the work they carry out in the Omaha High School. He says:

"It consists of several sets of manuscript work with complete directions as to what each student shall do: the prices are submitted and the buying and selling as directed constitute the regular class on the work, and, as outlined, it gives the student practice in making out notes, checks, drafts, receipts, bills, insurance policies, deeds, contracts, mortgage, leases, etc. I have two ways which I alternately use in relieving the students from the regular routine of the work, and to this special line of work I devote one day each week. First, giving the price of the commodity in which they are dealing, as they are quoted by the markets, and, secondly, I permit the students to use the next special day for making investments as a personal or private affair having no relation to their business or the firms with which they are connected, the investments are held at the option of the student, but, if not sold the same day they are purchased, they must be held just one week, or until the next "re-" lifed" day. These investments are based entirely on the daily market quotations. This kind of work makes the students very conservative and thoughtful; it causes them to constitute the regular class on the that which is most important of all, it destroys the idea that "Sufficient unto itself is the day thereof. The effect of such work is to make them prepare and prepare before the day each week, is simply wonderful. The questions, work and enthusiasm which are the results are just the things that no first-class school can afford to be without; of course the same results obtained in some other way would be just as acceptable, but some will say, "I do the same work every day in the week that you do for the one day." This may be very well, but in my own case I am sure that this kind of work every day would in itself destroy the very end or object for which I am striving.

The greater part of the Actual Business work done throughout the country is rendered almost valueless because of the daily monotonous routine without any definite object in view but to run through a certain number of transactions. The student has no definite point at which he must arrive and consequently his work is completed when he has put through a number of transactions regardless of the accuracy of the work, but accuracy is to me, the fundamental principle of commercial training and therefore should be our guiding star in commercial training, wherever that training may be given.

I know a gentleman not an active member of this Association, but holding the position of the commercial director for the public high schools of the Middle West, who, to my knowledge, has repeatedly told his classes that they were working as much for accuracy as to learn how to do it. I feel that work of condemnation too strong cannot be uttered to give such a pretence at commercial training the rebuke it justly deserves.

On the manuscript work in my school, I avoid pupils' copying by having a number of price-lists, assigning to each student a different list, or changing the discounts and advances on the same list; also by giving to the student a small amount of training for the transactions.

All of the sets have a definiteness about them at which the worker must arrive, and all of the special transactions given to each student are filed and worked out by himself, so that just as soon as the student has finished any set, we know exactly what results he should have. If he has failed to do his work correctly, he has to do the same work again. Of course this makes a held interest of work for the of the act but, after it is over, we have the sweet consciousness that we have the individual work of each student, and that it has been done correctly.

Worried to think that the student has learned a lesson of self-reliance, promptness and accuracy that he will never forget; a lesson that is of inestimable value to him, and that he can learn with less cost to himself in the high school than ever afterwards.

In connection with my manuscript work, I use seven offices in which the following lines of business are conducted: Real Estate, Fire and Insurance, Wholesale Commission, Bank, Retail, (illustrating the use of the two ledgers,) and Single Entry Retail, an investment office, which conducts in addition a wholesale and retail business.

The work or workers are supposed to be shifted each week and will be so shifted, provided their work has been correctly handled.

At the beginning, I stated that, for several years, the Actual Business work was the most difficult part of commercial work given in a large high school. First, there are so many iron-clad rules to which one must conform in order to enable the school to properly keep track of the pupils attending. Secondly, it is almost an impossibility to convince high school authorities (especially where they are inwardly opposed to commercial work) that the commercial course, and especially the Actual Business part of it, requires more time than the other courses or subjects. They are not practical enough to see that we have to judge entirely by the results and not by the time each student, as they do in many other courses and subjects. Therefore to secure such an amount of time as will enable the office workers to complete their work is the most difficult proposition that we have to the other half in a business college, if a student has not finished his work at four o'clock, he can stay until five or even six o'clock: in a great many high schools, tyranny has reached the point where every department is working morning at four o'clock. This is another feature which you would not expect to find in any educational institution, and one which is a disgrace to a modern business education, characterizing those responsible for it as shallow, narrow and conceived. But, nevertheless, these conditions do exist in a great many high schools, and you will permit me to describe the progress by which these conditions are brought about. A large high school decides to put in a commercial course. The first thing is the election of some one to take charge of the work. The person then proceeds to select a course, which the department has an antagonist in every other department in the school. It then dawns upon the high school principal that the person organizing and conducting the work...
C. C. MARSHALL, CEDAR RAPIDS, IOWA.
Chairman, Executive Committee, Commercial Teachers' Federation, 1901.

Some Extracts from President J. A. Hiner's Address
Before the National Business Teachers' Association at St. Louis, Dec. 27, 1901

Not in all the records of the past was competition so fierce, or did dull chance play so insignificant a part. The weapons of modern warfare are so varied and wielded with such skill that those who choose the best will find its temper none too good. Our commercial schools are the great armories that must supply the weapons of finance and trade and teach their mastery. These are the schools that are meeting the most pressing demands of the age. More is exacted of the commercial school than from any other institution of learning. The thousands of students who annually make failures in other schools, and have finally been dumped into a commercial school, go out and not be able to prove himself a great financier, and his Alma Mater (if it be a commercial school) will at once be condemned as unworthy of public patronage.

The commercial schools of our country today represent more nearly than any other institution of learning the manhood, stability, and government of our country, composed as they are of the wealth-producing classes, coming as they do from every walk of life, they have in their ranks all that is best and most enduring, and that which comprises the very highest type of the law-abiding and home-loving traits of the American people. The lessons inculcated in the commercial schools are always based upon duty and fidelity to business ethics, and many lessons, lasting in their effect and far-reaching in their results, have been learned in attendance at these institutions.

Edward Everett, one of the most highly cultured and polished of American scholars, as well as one of the most learned men of the day, gave it as his opinion that the man who can read in such a way as to get the thoughts from a printed page, who can write a fair hand, who can perform the fundamental processes of arithmetic with accuracy, and spell correctly the words of the common English vocabulary, has a good education. "If to this he added the ability to write good English, a fair knowledge of geography, and the principal facts of our country's history, he has," he said, "an extraordinarily good education." If to this be added the ability to keep accounts, a knowledge of business customs, and the ability to write a good hand and a plain, clear, concise business letter, we have what we term a good business education.

A student who slights his opportunities in a common or preparatory school and who goes into a business school expecting to make up in a few months what he has neglected for four or five years, always finds himself mistaken. Yet there is no other school that can, in a limited time, do as much for a young man or woman whose early education has been neglected and who seems in need of a preparation for life, as can be done by a well-regulated business school.

The public schools and other literary institutions do the best they can in the limited time allotted them, but they cannot make a specialty of these branches as do business schools. They are not finishing schools and their students cannot become proficient enough in these branches to make of them any practical use.

The commercial schools should aim to turn out their students so well prepared that they can recognize that modern books of accounts are not mere records of the transactions between men as debtors and creditors, but that they may be used to determine cost of production and manufacture, appreciation and depreciation; analysis of trade and general expense in order to guard against leakage and waste, and, from a statistical standpoint, that present and future transactions may be predicted thereon or gauged therefrom.

The simple principles of bookkeeping have been dwelt upon in hundreds of books on this subject, but it must be admitted by our profession that there is much room for improvement in the average textbook along these lines.

If commercial education is intended to serve as a special preparation for business, it becomes a technical education. Yet we must remember that the business itself, whatever it may be, must be learned in the business. In a broad sense of the word the commercial school does not teach business. It only teaches the things suited to business methods and requirements which the business man of today should know. What kind of schools are going to teach those subjects to the best advantage to the student and the greatest satisfaction to the business community? Is it to be the School of Commerce in the University? Is it going to be the commercial department of the high schools? Or will it continue to be the well-regulated and progressive commercial college? We very believe that if the commercial schools continue to improve and lengthen their courses of study, as many of them are now doing, that they need have no fear, but that these schools will remain well-patronized and distinet institutions, as much so as the colleges of Law, Medicine or Theology.

However, it must be remembered that if this progressive movement of broadening our courses of study and raising the standard of efficiency in the institutions which we represent, is carried to a full realization, the teachers in our commercial schools must be improved first in order to accomplish this. The teacher must be paid a salary that will justify him in qualifying himself for a higher grade of work. No man who spends four or five years in a special college training is going to accept the salary paid by the average commercial college.

The commercial schools are losing much of their very best material. Why? Because the universities and high schools are offering a higher premium for well-trained commercial teachers.

The commercial colleges all over the country were never in a more prosperous condition than at the present time. This welcome tide of prosperity should inspire the commercial schools to increase and strengthen their facilities for a higher order of scholarship. Yet, while we are aiming for excellency in scholarship, let us remember that we, as teachers, owe it to our pupils to so instruct them that they will endeavor to make good citizenship one of the crowning results of their lives.
Eastern School Notes, Etc.

During a recent visit to Philadelphia, we found the schools of that old city very prosperous. Pierce School had enrolled for the year somewhat more than a thousand students in the day and evening schools; Banks' Business College had a large attendance, the students being packed in until we could not doubt the assertion of Principal Archibald Cobb that there have been times recently when they could not have provided seating accommodations for three more pupils, if they had come in together. The genial proprietor of Banks' Business College is still giving the people who go to him the full value of the money that they pay him, and Dr. T. H. McCool, in the quiet, subdued manner that fits him so well, says modestly that they are having a good year. Certainly when it comes to school business, Philadelphia is not "show," as some of her environs neighbors are wont to allege.

The Central High School of Philadelphia is a splendid institution. The School of Commerce occupies enviable quarters there, and its equipment might well make the average teacher desire to be similarly ensconced in a berth in that school. However, as we looked at the beautiful double cabinets in which thirty or forty typewriters rested, we could not help wishing that the course of study allowed more than the 20 hours now allowed in which to learn shorthand and typewriting. The average teacher in a private business school would smile at the idea of teaching these subjects within 20 hours, but this is all the time that is granted to these subjects, in a four-year course, in the Central High School.

We called on the genial business manager of Palmer's Shorthand School, Dr. H. E. Randall, who has stirred up a nest of hornets in his published opinion that Touch Typewriting is not a feasible system for all kinds of students. He says that the inimitable McGurrin, in a public exhibition in Philadelphia during the autumn, wrote for speed the threadbare sentence, "Now is the time," etc., and that he made all sorts of mistakes in his work. He has seen the work of nearly all of the expert operators, but, while he admits their wonderful skill, he finds that they are inaccurate, and he does not believe that they represent what it is possible for the average student to achieve. Doctor Randall is a highly educated gentleman, with whom it is a pleasure to talk. The Palmer School makes no sporadic splurges, but it goes right on, day in and day out; from one year to another, doing high-grade conscientious work.

When the Eastern Association meets in Philadelphia in the latter part of March, visiting teachers will find it a perfect mine of institutions interesting and profitable to visit. Among educational institutions are the Wharton School or Finance of the University of Pennsylvania, Girard College, Drexel Institute, the Boys' Central High School, Temple College, The Commercial Department of The Girls' High School, The Girls' Normal School, Pierce School, Banks' Business College, the College of Commerce, and a number of other smaller business schools. Among business institutions well worth a visit, are The Bourse, The Commercial Museum, The Baldwin Locomotive Works, Cramp's Shipyard, the new Mint, The Atlantic (petroleum) Refinery, and the plant of the American Sugar Refining Company. Added to these are, of course, places of historical and literary importance almost without number. Regardless of the program that may be prepared, the meeting this year ought to be memorable for the solid information that those who attend will receive.

Our genial friend, C. E. Doner, is teaching writing and correspondence in the Heffley School of Brooklyn. Mr. Doner is in a live, aggressive school. Mr. Heffley's new quarters are almost palatial. His reception room is the handsomest apartment of this kind that we have seen in for several years. In the prime essentials of light, heat, and ventilation, Mr. Heffley's building is a model. The students of this school are to be congratulated.

While speaking of new buildings, we are reminded of a delightful surprise on a recent visit to the Lynn Business College, Lynn, Mass. Messrs. Pelton & Baxter have just moved into a building that would be an honor to any city on this continent, and it is to be understood that the entire building is occupied by their enterprising school. The structure is in the colonial style of architecture, two stories and basement.
The finishing, both interior and exterior, is in the best of taste. These gentlemen have a private office that would make many of the old-timers wince, if they could see it. Indeed, the commercial teacher or commercial school proprietor who happens to be at any time within a half-day's journey of the great Shoe City, is missing a profitable investment of time and money, if he denies himself the privilege of visiting this school.

Mr. J. F. Moor, the efficient assistant principal of the B. & S. School of Boston, is stirring up the dry bones among the public school teachers in Hyde Park, a Boston suburb in which Mr. Moor is living. He is giving the teachers a lesson, once each week, on slant writing and how to teach it. If the "powers that be" in some of the other municipalities of the land could be struck with an idea equally sane, we are sure that our friends among the business schools would soon bring about a change in the present wicked waste of time and energy in an effort to teach vertical writing.

On December 5th, the splendid new Dorchester High School in Boston was dedicated with appropriate ceremonies. Commercial teachers will be interested in this news item because the principal of the commercial department in this school is W. D. Anderson, formerly in charge of the commercial department of Temple College, Philadelphia. This fine new school is one of the best in New England. It contains seven large and seven ordinary class rooms, nine recitation rooms, four laboratories, two drawing rooms, a library containing shelves for 500 volumes, a gymnasium, a lecture room, seating 200, and an assembly hall, seating 100, besides the usual administration and service rooms. It was built for 40 pupils.

It was our privilege to visit, late in November, the commercial department of the Springfield, Mass., High School. The work is in charge of Mr. C. H. Ellis, an accomplished teacher of many years successful experience, not only in teaching in the public schools, but also in teaching in private business schools and in representing, on the road, one of the foremost publishers. He is the fiscal agent of the Chautauqua work, and spends his summer vacations in charge of this work at Chautauqua, New York. The building in which Mr. Ellis conducts his work is a noble specimen of school architecture. It cost, with land and equipment, nearly a half-million dollars. The rooms in which commercial teaching is done, are supplied with the best appliances for teaching the various subjects in this course. Mr. Ellis believes in a broad, fundamental course, but he does not forget that he is teaching boys and girls that will have to earn their own bread and butter when they shall have finished their time with him. Therefore he has not lost himself in the clones of theory, but has kept his feet on the terra firma of practical subject matter. He is diligently preparing his pupils for efficient office work. The teacher who visits the commercial department of the Springfield High School will go away profited by his experience.

Volume one, Number one, of The Rhode Island Commercial School Bulletin has reached our desk. As might be expected by those who have the pleasure of knowing its able editor, Mr. A. S. Heaney, it is full of matter worthy to be read by everybody—a comment that cannot be honestly made on every school paper that is issued. Mr. Heaney has something to say, and he says it in a frank, direct way that is sure to win attention. His school is growing very rapidly, and is destined to be one of the foremost schools of New England.

The many friends of E. M. Barber, Superintending Accountant at the Appraiser's office, New York, will learn with pleasure that he has passed the required examination, and is now a Certified Public Accountant of the State of New York; and it should be noted that it is of the State of New York, for some enterprising legislatures, desiring to accommodate accountants as other legislatures have desired to help corporations seeking an easy statute under which to organize men and women looking for a plant statute under which to obtain a license, have made it possible to wear the title, C. P. A., without having the ability that the title stands for when issued by the state of New York. The man who passes the examination in New York may safely be assumed to know something more about bookkeeping than how to get a trial balance and make statements for a dozen cut and dried short sets of bookkeeping in a text book.

The Penman-Artist and Business Educator
Character is God's knowledge of you. Reputation man's opinion of you.
Mind, Muscle, Motion
BY E. K. IXAMS, VICE-PRESIDENT LOS ANGELES BUSINESS COLLEGE

The average pupil knows something about mind. The average teacher knows more. The pupil knows in a general way what muscle and motion are. The teacher should have a thorough understanding concerning them. At a comparatively early age the pupil learns to associate mind with brain. They are synonymous to him. He cannot think of one without thinking of the other. It is like imagining a grin or a smile independent of a face to grin and to smile. The teacher may not be perfectly clean on these things himself. In trying to separate mind and brain he may have encountered the difficulty of knowing whom the arrow first hit, the egg or the hen? But while he may not have solved to his entire satisfaction all the mysteries connected with Mind, Muscle and Motion, the twentieth century teacher knew, in thirty days, and without these lines. Motion implies something that moves and space in which to move. Muscle implies—well, it may imply a "champion." It is utterly impossible to conceive of movement independent of something that moves, but fortunately for pupil and teacher, they do not necessarily have to engage in metaphysical speculations to discover what it is that moves when they move. Neither Palmer discovers something fifteen years ago whether in the body, or out of it, I know not—that muscles move in writing. No one before or since ever discovered anything to the contrary. The "muscular movement school" has been established. It was and is a good thing. Linguists may quibble about the adjectival part of the name, but our good friend Palmer, of the ever human fame, stuck it, and stuck it to the term, muscular—and with signs following: for after all, it is results we are after.

Kierling again to the proposition, that motion is a thing that fills space and moves in the process of writing. But everything is good in its place and season. Cop books with boxes and cages for restraining the movements of the untamed muscles served their purpose well in the days when the wild animal was more in evidence in the human species than now. The tiger, whether quadruped or biped, requires iron bars. The "muscular movements" of the puppy, however, are regulated by law and statute. The movements of the chirographic muscles are not regulated by intelligence; mind. And this brings us back to the proposition:

Mind, Muscle, Motion a triunity without which there could have been neither Spencer nor American, nor even a Spencer or a Zaner.

In theology we are taught that the triunity means three in one, and that that means one in three. That is not mixed when you understand that there could not be one nor one three, without being mixed.

Teachers, scientists and other wise people at times think they have evolved beyond theological dogmas; and yet, they speak familiarly about the universe, which, though containing numberless and unimaginable units, is still one.

In this digest: I do not wish to infer that a pedagogue should peddle pedantry in his class work. And yet I do mean that a "prime rose on the river's brink" should be not only a yellow flower to him, but something more.

The world needs thinkers. It is quality of thought that counts. Enthusiasm in any line of work is commendable, but enthusiasm should have a substantial background. Man does not live of bread alone, nor a penman of lines and loops. Sooner or later, as he is teaching form the question will arise in his mind, "what and whence is form?" Some day while lecturing his class on the necessity of acquiring a sharp, definite mental picture of the copy, some bright pupil will ask him what he means by a mental picture. This may possibly be the entering wedge into the realm of the metaphysical. Herebefore he has been living entirely in the objective—seeing only outward form and film and Illucce. Henceforth he begins to get glimpses of the subjective realities of life. "What is a mental picture?" asks the pupil. "A picture in the mind," answers the teacher. "But what is mind," persists the interrogator.

"Mind?" "Oh, well, never mind, we haven't time to discuss that now." And the first chance he gets he looks up Webster on "Mind," and on his way home he goes by the public library and gets a book or two on mental science and psychology. Possibly in the course, he reads—Huxley and Haeckel, Spencer and Spinoza, Balzac and Berkeley, David and Peale, and yet the subject of the pupil's simple inquiry is not exhausted. Somewhere in his reading he has come across the passage: "If a man love not his brother whom he hath seen, how can he love God, whom he hath not seen?" He interprets this to mean that if a man is not in harmonious relations with the objective or tangible things in nature, how can he know anything about that which is seen, and to him intangible things. He decides to study over again his natural sciences. He gets out his old text books on physiology, chemistry, philosophy, astronomy. They are now a revelation to him. He finds new wine in the old bottles. One day a thoughtful pupil asks him what causes the muscles to move. He answers it readily enough from a physiological basis. The answer satisfies the pupil. It formerly satisfied the teacher. Somehow it does not satisfy the pupil. As we have said, the mind moves the hand is easy enough. But he has been in the habit of thinking of the mind as something intelligent and the hand as something unintelligent. Now he begins to perceive intelligence inherent in the brain to fingertips. In other words, he no longer conceives of mind as located in and about the head, but as a vital, living and permeating principle throughout the entire body and throughout the entire universe. "Muscular movement," but what are muscles? Having pursued anatomical, microscopical and microscopic investigations of muscles, he seems to be at the limit, he finds the body a sea of cells, and each cell a universe of atoms. Then comes the intensely practical Edison with his seemingly visionary state of affairs: that every atom in the human body contains every atom in the universe—else—a point of intelligence. He reads with renewed interest the statement of scientists that matter is simply motion; that every object in the material world, the body, the mind, is composed of atoms, the ubiquity of which is equalized only by their activity. He now sees intelligence and life in things which formerly manifested to him only non-intelligence and death. Kant's "the hand assumes some tangibility." He even becomes interested in the seeming vagaries of Christian Science. He learns of what is called the New Thought movement, and inasmuch as, like the muscular movement, signs following in its wake, he concludes there is something in it. Having resolved muscle itself into motion, and all material and tangible things into the intangible and hypothetical, he learns to perceive intuitively as well as intellectually the truth of the mental science statement that all is mind. And having thus entered the threshold of the Father's house. The pupil is now preparing to see and appreciate its many mansions. He sees new beauty in the lilac and the lily, in carnation and cabbage, in pumpkin and potato, the mountain is more majestic, more serene. he sea, more stupendous the solar systems in space.

But above all, he sees the pupils under his charge in a new light. He begins to estimate human life at something more nearly proportional at its present state. And this estimate also includes himself. He had heard it said by them of old that "as a man thinketh in his heart, so is he," but had never occurred to him to apply this maxim to himself personally. He finds thought to be all pervading, and all powerful; that he himself is an incarnation of his own thoughts; that he is indissolubly linked with the universe. He begins to live things through this subtle psychic substance in which we live, move, and have our being. This gives him a new sense of power as well as a new sense of responsibility. The muscular movement, the muscular movement master to a more substantial thinking master. Nor does he value a good handwriting less because of this enlarged vision of life. He has a keener sense of the importance and of the importance all other commercial branches as evolutionary factors. For after all, he and his pupils, and all other human beings, and all living things, are included in this. Evolution is the process; mind, muscle, and motion are the means.
This is a portrait of Mr. T. Courtney, the penman and teacher in the B. & S. Business College, Providence, R. I. He was born on a farm, in Pennsylvania, thirty years ago. At seven years of age his parents moved to Ohio, and after two years they moved on to Michigan. He attended the public schools until sixteen years of age, from which time until he was twenty-one he worked in the lumber woods of Michigan and Wisconsin. In '96 he entered the Ferris Industrial School of Big Rapids, Mich., and graduated the following year.

In the fall of '94, he began teaching in the Commercial Department of Flint, Mich., Normal School. In '96, he went to North Adams, Mass., and taught in Bliss Business College. The following year, he accepted his present position and has been there continuously since.

Besides his public and normal school education he has pursued special work in languages and mathematics.

Mr. Courtney is not only a successful penman and commercial teacher, but he does engaging, etc., with pen and brush. He is a great reader, finding in books much pleasure, inspiration, and profit. He sincerely believes that there is no end in life that cannot be attained by one who has within himself the quality of patient, sincere, unceasing, unswerving application. He says: "Every man has within himself the potentiality of success; it remains with him whether he will make his life successful or unsuccessful, according as to whether or not he knows how to make his will effective. So-called opportunities and the influence of others count for little when arrayed against disciplined determination."

Those familiar with Mr. Courtney and his work know he practices that which he preaches. We wish there were more such educated, skilled, purposeful men in our profession.

We are glad to announce that Mr. Courtney intends contributing specimens of his penmanship in the form of quotations, etc., regularly to the PEXMAN-ARTIST AND BUSINESS EDUCATOR.

W. W. Bennett, formerly with the Citation Business College, Minneapolis, Minn., is now connected with the McDonald Business Institute, Des Moines, Iowa. On leaving Minneapolis, the student of Citation College presented Mr. Bennett with a very beautiful watch, chain, and gold mounted pencil holder, worth about $55. These Mr. Bennett prizes very highly. Mr. Bennett recently favored the PEXMAN-ARTIST AND BUSINESS EDUCATOR with a good deal of subscriptions.

Mr. S. McVeigh, principal of the Bliss Business College, North Adams, Mass., sends some subscriptions to the PEXMAN-ARTIST AND BUSINESS EDUCATOR, and writes that during the second week in November their school reached the largest attendance in its history. Mr. McVeigh also enclosed some movement work in penmanship by W. E. Canfield, which has quite a professional look. Mr. McVeigh states that Mr. Cady has been in his school but two months. The work certainly speaks very highly for the instruction in penmanship in this institution.

The Capital City Commercial College, Des Moines, Ia., held graduating exercises in the Y. M. C. A. Music Hall December 1. Quite an elaborate program was rendered, and everything was an enjoyable success.

The Isaac Pitman system of photography has been selected by the Christian Herald edited by the Rev. T. DeWitt Talmadge, D. D., for a complete course of lessons in shorthand which will be published during the coming year. The series is under the direction of Isaac Pitman & Sons, on the new "Twentieth Century" Edition of the Isaac Pitman Short-handing System. As the Christian Herald enjoys the distinction of having the largest circulation of any religious weekly in America, being over 500,000 copies per week, the prominence given to the subject will no doubt do much to popularize the subject of photography and bring it before the notice of thousands who would otherwise remain ignorant of its usefulness.

E. C. MILLS.
Post Office, Brooklyn, N.Y.,
will send you 10 lines of fresh from the pen for $1.00, or 20 lines for 50c, or 50 lines for $1.00. The $1.00 package is quite a complete compendium of business writing.

W. L. THOMAS.
Pen Specialist.

TRY MY WORK ONCE.

Memorials and resolutions engrossed on vellum, with gold borders, and framed. Petitions, etc., written and presented to legislative bodies as well as others. Inquiries and estimates, on request. Address W. L. Thomas, 504 W. Quay St., Charleston, W. Va.

J. S. CALDWELL.

PENMAN-ARTIST.

MILLS. B. & S. BUSINESS COLLEGE.

COMPLIMENTs OF COURTESY.
Engrossing script is a widely admired style of penmanship, and fills the adage, "The first shall be last," it having been in use for three centuries, and probably will be used much longer.

This style of script is adapted to engrossing resolutions, testimonials and memorials; filling in insurance policies, deeds, and extracts; writing professional and calling cards; and for various other uses. Compared with other script, it is easy to master, and is worth more to the penman in dollars and cents, than any other style of script. The demand is also greater today than ever before, for persons proficient along these lines, hence it is well worth mastering and will pay you good interest on the time and labor spent in acquiring it.

Materials should be the best. Use a good quality of paper; linen, bond, or wedding, is best. Avoid thin soft paper. Prepared liquid India ink, diluted with five parts water and one part of powdered gum arabic, to one part of ink, is best and makes a good ink at small cost. For general work, use Zanerian fine writer pens, and for very fine work, use Spencerian epistolaire or Gillotts No. 200. Use an oblique holder, with the point of the pen well elevated.

The movement used is mainly that of the hand and forearm, with the little finger acting as a center of control. Finger movement is used to some extent; too much of it makes the work tiresome. A steady movement is needed, and to secure it, use a combination of the three previously mentioned.

Practice the first exercise, the straight line carefully. Use pencil head and base lines. Make this exercise about half an inch in height. Aim to secure uniformity in spacing, strength of shade, and slant. In the first half of this line the ends were retouched. The last half are just as they came from the pen. Try to secure decisive beginnings and endings.

In the second and third lines, care must be taken with the upper and lower turns. Raise the pen often. The copy was prepared with the view of revealing pen liftings. Study it carefully. Notice how delicately the shades bend and diminish, as they near the tops and bottoms of letters, to assist in making the proper turn. The up strokes are on the same slant as the down, there being no connective slant. If you have mastered the first three exercises, you will have no trouble in making the letters here given.

In the words, careful investigation will show, that spacing between letters is slightly wider than in them, and wider between some than others. Space so that at a little distance it will give the effect of all shaded strokes being the same distance apart, yet near at hand, each letter will appear separate and distinct.

Go slowly at first, be patient and preserving, study the copy well, practice on the theory of: "Not how much, but how well," and you will succeed.

Students desiring their work criticised should send specimens not later than the fifth of each month to ZANER, Columbus, Ohio.

Mr. E. W. Stein, whose likeness appears herewith, was born in Southern Pennsylvania in 1879. He, like most penman and successful men, is a product of the farm and country public school. He is a graduate of Needmore academy, and after teaching four years was granted a "Teachers State Permanent Certificate" by Pennsylvania.

In 1901 he attended the Zanerian Art College, where he secured his penmanship. Mr. Stein is certainly one of our most promising young penmen. Few indeed are capable of giving lessons to the readers of the PENMAN-ARTIST and BUSINESS EDUCATOR, so soon after taking penmanship professionally. But Mr. Stein, as will be seen, brings before us not only skill, but forethought in arrangement of copies and explicit instructions concerning the learning of engrossing script.

Send your work for criticism to Mr. Zaner not later than the fifth of each month, and see what you can accomplish by following faithfully Mr. Stein's lessons. Stein is a new name in the penmanship arena. Follow closely the copies, instructions and criticisms, and see if your name may not be the next to be added to the literature of penmanship.
This is a likeness of Mr. Francis B. Courtney, Des Moines, Iowa, the penman whose skill is unsurpassed, and in certain lines, unequaled. Mr. Courtney received his principal instruction, perhaps, upward of a decade ago from the veteran penman, Mr. A. H. Hinman, of Massachusetts. Hinman is a penman of rare art, talented along the lines of ornamental penmanship and flourishing, he having received his inspiration from the famous John D. Williams, than whom there has never been a more masterful flourisher.

When it comes to dash and excellence, and penmanship of various styles, Courtney is certainly a modern John D.

But he is an artist and genius in other lines as well. He is expert on forged and disputed handwriting; writes backward, forward, and upside down with bewildering grace; and makes of the figures the twenty-six letters, capital as well as small letters.

It is with much pleasure we announce that Mr. Courtney has consented to contribute regularly to the EXHIBIT ARTIST AND SKILLFUL EDUCATOR, for an indefinite period, examples of his rare skill.

A letter just received written in a semi-engrossing hand, but so fine and delicate for photo-engraving, is the finest, freest thing of the kind we have ever seen. We have heard it stated that Mr. Courtney's page writing was not equal to his skill in dashy card writing, etc. Whoever entertains that opinion would soon have it dispelled by the sight of this letter.

The truth is, Mr. Courtney is one of the most skillful and versatile penmen that has ever lived, and all aspiring penmen and penmanship lovers should study his work carefully.

Anticipating a penmanship treat of unusual excellence, we await the coming of the months with eagerness. He starts the "ball arollin'" with a specimen of compact, backhand penmanship heretofore, with a final flourish of unbridled, but marvelously controlled energy.

UNIQUE AND GRACEFUL LINES FROM THE PEN OF F. B. COURTNEY, DES MOINES, IOWA.

TO READ EASILY, SHUT ONE EYE AND "SIGHT" DOWN THE LINES AS YOU WOULD DOWN A GUN. YOU WILL GET THE SENTIMENT.

Modern Penmanship Publications for Penmen and Teachers

Our publications are universally recognized as the finest about their lines. The prices are very low considering the quality and character of the work. All books mentioned below are sent by mail postpaid.

Zanerian Theory of Penmanship - A thought-provoking work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should read it. A book of 176 pages, cloth binding ........................................ $1.00

Lessons in Ornamental Penmanship - A work in slip form embodying the $10 mail course formerly given by us, with some extra plates. A thorough and complete work for home learners ................................................................. $1.00

Compendium of Simplified Vertical Penmanship - In book form, and by far the most thorough and complete instructor in vertical writing yet published ................................................................. $0.50

Manual of Simplified Script - A work containing a thorough, graded course of photo-engraved copies from the pen of that master penman and artist, C. F. Zaner, all in the simplified style. For rapid business purposes many persons believe this style of writing unequalled ................................................................. $0.50

Zaner's Gems of Flourishing - A book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the student how to make the simplest strokes and exercises and finishes with a great variety of designs, showing the highest degree of skill yet attained in this art. Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published. ................................................................. $0.50

Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks. Address

ZANER & BLOSER, Columbus, Ohio.
Henderson's Heads

It gives us much pleasure to announce that Mr. G. S. Henderson, the accomplished young artist, of New York city, will contribute a series of heads to the PENMAN-ARTIST AND BUSINESS EDUCATOR this year, a sample of which is herewith given.

Mr. Henderson is one of the most promising young artists of the day. His title page of this number is one of the best things ever contributed to a penman's journal, and we shall have another in the near future from the same source. All the work you have seen, admirable as it is, is very unsatisfactory to Mr. Henderson himself. Such being the case, you may rest assured that nothing trashy will come from his pen.

Mr. Henderson, while working up in the fine art world, is doing job work to defray expenses, and any one who is needing work along the commercial lines would do well to give him a call. We congratulate our readers and ourselves upon being fortunate enough to secure his services.

W. A. THOMPSON.

Herewith is a likeness of Mr. W. A. Thompson, the noted Sign Card Painter and Correspondence Instructor, Pontiac, Mich.

Mr. Thompson has had a varied and extensive experience in sign and advertising work, having traveled and done this work and taught the same to large classes in many cities. This led eventually to many calls for instruction by mail, and as he is a "home man," he decided to organize a Correspondence School, the success of which is very complimentary.

Our readers will be delighted to learn that we have secured the services of Mr. Thompson to give a series of lessons in Sign Card Work, the demand for which is pressing in all communities. The lessons will comprise brush work as well as pen work, and they will be something unique and timely in the penmanship profession.

In this as in other lines, the PENMAN-ARTIST AND BUSINESS EDUCATOR aims to lead—and succeeds.

Gems.

In this issue will be found an announcement of a new book entitled "Gems" by Mr. Cyrus W. Field, of Jackson, Mich. Mr. Field has gone to not a little expense in getting out his publication, and will no doubt be amply compensated for his efforts. The book is profusely illustrated with drawings from his own pen. Mr. Field is not only an artist and penman, but a teacher of experience as well.

These are bold, dainty, artistic, and catch the eye of the passer-by. Write today. Credit terms free.

M. S. MOORE, Box 7, MORGAN, KY.
Modern Art Publications for Artists and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books mentioned below are sent by mail postpaid.

Portraiture—The best book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book, luxuriously printed and bound, containing hundreds of examples and explicit instruction $1.50

Sketching from Nature—A most beautiful book that teaches how to sketch from nature. Contains a large number of examples with fascinating text and instruction. Get this book and go out and learn to see and sketch nature. Bound in cloth $1.50

Light and Shade—A manual on drawing by Mr. Zaner. It contains 48 pages, 5 x 7 inches, of illustrations, and plans, simple, instructive text. It is just what home students need, and what all others who are not at home is drawing need to make them feel at home. Any one can learn to draw by the aid of this book. The illustrations are lithographed from actual pencil drawings and are much finer than photo engravings 50c

Pen Studies—A portfolio of twenty-four pen drawings, consisting of scrolls, objects, birds, fruit, scenery, etc. It begins at the beginning, showing the simplest strokes and to gradually evolve the finished design 50c

The New Zanerian Alphabets—A guide to engraving, containing a great variety of alphabets, designs such as diplomas, resolutions, etc., with complete instruction. A substantial book bound in cloth. Sample pages of this book were recently sent for $1.00

Progress—C. P. Zaner's masterpiece in four-riching. It represents an eagle, forceful and lifelike, winging himself through intricate curves and branches. It is on the finest of plate paper, 22 x 28 inches. The original of this design hangs in the Zanerian Art College, and is valued at $100. "It's great." "It's certainly a bird." Are some of the expressions many have made on seeing it. Let the reader remember also that it's no Spanish bird, but the American Eagle— that old national bird of ours that must now especially proud. In tabe... 50c.

This book should accompany all orders. Result by money order, draft, or stamps for small amounts. Do not send personal checks. Address.

ZANER & BLOSER, Columbus, Ohio.
When drawing from objects, an easy method is to "block out" the object first in very light lead pencil lines to get an idea of its height, width, proportions, etc. Then make an exact outline with lead pencil. Do not make any outlines in ink. The illustrations given show different styles of technic ordinarily used. Use a bold, strong stroke in shading, directing the stroke toward you. Try to get the light effect of light and shade without going over the shading a second time. Use perfectly black ink and pure white paper for best results.

This is a portrait of Miss Alice A. Gorst, of Neligh, Nebraska. She is a native of that state, a graduate of the public schools, and a teacher of experience.

During the past year she entered the Zanerian Art College and pursued with success courses of study and practice in penmanship and drawing. Her improvement in art, coupled with her teaching experience, suggested the advisability of persuading her to give a series of lessons upon "Object Drawing" in the PENMAN ARTIST AND BUSINESS EDUCATOR.

The work, as will be shown, is specially suited to home students who have not the services of a personal, professional teacher. We believe all will be benefitted by a careful perusal and practice of the work given.

Personally, Miss Gorst is a lady of many sensible talents and of rare congeniality. Her father is a prominent presiding elder of the Methodist church, of which she is a member, and a worker in it as well.

LEARN TO WRITE 20c.

STOAKES' IMPROVED
large Taper Holder, Nickel-Plated Ferrule

FROM THE SKILLFUL HAND OF L. N. KELCHNER, DIXON, ILL.

ABCDEFGHIJKLMNOPQRSTUVWXYZ

Lessons in Engrossing—Number Fifteen—By H. W. Kibhe, 181 Tremont Street, Boston, Mass.

We will ask the student to give this plain letter particular attention, as more skill and care are required in its execution than in many more elaborate and artistic styles. After the letter has been sketched in pencil a T-square and ruling pen may be used to good advantage, especially if the letter is large. This letter will look well with a broader face and in more extended style, also with a white face. The thin lines must be strong but not broad enough to spoil the contrast with the broader parts.

E. C. Mills,
195 Grand Ave., Rochester, N.Y.,
will send you one dozen cards, your name in either plain or ornamental writing, for 25c. Address lines 10c. per dozen extra.

SELECT A PEN

Suitable for your handwriting from a sample card of 12 leading numbers for correspondence, sent postpaid on receipt of 6 cents in stamps.

SPENCERIAN PEN CO.
349 Broadway, New York.
Kansas Special Teachers’ Federation

That Kansas Special Teachers are progressive and wide awake is evidenced by the fact that in response to the invitation of the Pemmen of the state to co-operate with them and form a Federation, a major portion of the Commercial Teachers presented themselves and their theories at a day and half session on Friday and Saturday, Nov. 29 and 30, in the rooms of the Topeka Business College, Topeka, Kansas.

With the push and enterprise characteristic of Kansas, they could not await the hour appointed to adopt a constitution and organize permanently, but enthusiastically went to work, and before the meeting was half over, had a permanent organization.

The program as scheduled for Friday afternoon was carried through without variation.

"Professional Cooperation," by Prof. C. H. Shattuck, of Holton, was a splendid paper, showing the necessity of professional cooperation in carrying association to a success, that penmen cannot carry on state organization. Then he took up the cooperation of the teachers in different departments and described the correlation of the university of co-operation of the teachers to bring about the highest grade of result.

"The Business College Outlook," by Prof. L. H. Hausam, of Concordia, proves that Professor Hausam is up-to-date, and was such that would awaken the most lethargic business college proprietor to the fact that Business Education must be brought to the highest standard by longer courses and more thorough work. They must meet the demands of the future by turning out men capable of becoming the employer of the future and not the mere machine to keep books, take dictation and operate the typewriter, or be simply a time server in the office of some large institution, but comprehensive, wide awake, all around men capable of assuming control of the vast enterprises.

One of the greatest disadvantages of Specialization as depicted by E. H. Robins, of Wichita, is the tendency to narrowness on the part of the Specialist. The advantage in the demand for such, and the remuneration. His plea was for more specialists, but for specialists who are not one sided and narrow.

"Practical Education," was the subject of a very interesting paper by C. E. Birch.

The Association members were tendered a banquet by the Remington Typewriter Co., at the Triple-Hotel, Prof. C. T. Smith, of Kansas City, acted as Toastmaster, and the toasts, "Our Aim," "The Employer," "The Stenographer," "The Penman," and "Our Host," were responded to by different members of the Association.

After a most enjoyable dinner the assembly convened at the college rooms and listened to Prof. W. S. Pritchett's of Holton paper on, "What a Commercial Graduate Should Know," and "What the Business World Demands," by Mr. F. W. Koach, First Vice President, of Planter's State Bank, Salina, Kansas. These two papers were very much appreciated by many friends of practical education who were present at the evening session. Both speakers encouraged the student to be more thorough and the teacher to exact greater thoroughness.

The Assembly was agreeably surprised by the musical and literary entertainment by Prof. L. H. Strickler the host, prepared for the latter half of the evening program. The best talent the city afforded was ushered in, and music lovers were entertained by the Wyatt sisters, in four solo selections, while Miss Clara Cumn, of the school of Dramatic Art, recited a number of the selections for which she is famous.

After the scheduled program was completed for the evening, the President ordered a brief recess, and dismissed the public, after which a short business session was held and new officers elected and other business matters attended to.

As this Federation was the outgrowth of the State Pemmen's Association and the program arranged accordingly, considerable time was devoted to penmanship. Saturday forenoon was devoted almost exclusively to that subject. Prof. S. B. Fahrenstock, of McPherson, started the ball rolling by a masterful paper on "Business Penmanship," treating the subject broadly, and in general, while a free for all discussion brought out much in detail concerning individual methods of teaching and writing.

Professor Hausam then delivered a talk on the "Price of Skill with the Pen," showing that it was more the condition of mind than any other factor in learning to write. His speech provoked a lively discussion and many questions were asked and answered along the psychological line.

"A Standard in Penmanship," by Prof. H. A. Anderson, was treated from the view point of quality instead of kind and better penmanship—a higher standard in penmanship was encouraged. This did not bring up the question of slant or individual styles as was anticipated, and the discussion was carried on along a line of practical topics.

A paper that was very much appreciated by commercial teachers was "Education and Training of Commercial Teachers," by Prof. W. Koach, of Salina, Kansas.

The lack of time on "The balance of the papers to be rendered without further discussion.

The balance of the program was carried out by the shorthand teachers.

"Touch Typewriting," by Geo. E. Dougherty, of Topeka. "What Studies Should Shorthand Course Embrace?" by Prof. H. J. Powell, of Iola, and "How to Secure Speed in Shorthand," by Prof. O. K. Allen, of Abilene, aroused so much interest that they decided to formally adjourn the convention and permit the shorthanders to have a special session to discuss these papers and other subjects.

The meeting was a success. As expositions are timekeepers of national progress, these conventions and associations are timekeepers of progress along the special lines, and everybody went away well pleased with themselves and everybody else.

The Constitution adopted is identical with that of the Ohio Special Teachers' Association. The new officers are: S. B. Fahrenstock, President; E. H. Robins, McPherson, Treasurer; Prof. C. T. Smith, Wichita, Vice-President; M. A. Albin, Secretary; and Prof. C. H. Shattuck, Holton, Topeka, Kansas.

Prof. W. S. Pritchett was elected by the Kansas Weslyan Business College, at Salina, on Friday and Saturday following Thanksgiving last year.

M. A. ALBIN.

Officers of the Kansas Special Teachers’ Federation

S. B. FAHNERSTOCK, President, McPherson, Kans.
MRS. C. H. SHATTUCK, Treasurer, Holton, Kans.
E. H. ROBINS, Vice-President, Wichita, Kans.
M. A. ALBIN, Secretary, Topeka, Kans.

UNSURPASSED CARD WRITING AND FINEST SCRAP-BOOK SPECIMENS.

I am now open to the profession to receive orders for my pen work, and I can send by mail, at the lowest price, specimens of my work. I can supply a specimen of my work in any style or line, on the following terms and conditions:

A letter in my very finest ornamental style $5.00
A set of my finest ornamental capitals $5.00
One dozen reputation cards 1.50
One dozen cards, any name, any style, and very fine $1.50
A specimen showing my skill $0.50
A specimen of my work, unmounted $0.25
My work is unequalled. You will agree with me when you see it.

Address:
S. M. BLUE, 225 E. LONG ST., COLUMBUS, O.
Lettering and Designing
Number Ten
By E. L. Brown, Rockland, Maine

We give another script copy this month, which is similar to the styles previously given. This class of script admits of great variety in the way of form and finish, and designs like the copy are very well adapted to commercial purposes, as cuts can be made from them which will print well under most all conditions.

First pencil out the entire design, study the form of the letters and the arrangement of the lines. Make the letters in the words Rockland College about three-fourths of an inch high, and those of word Commercial one-half of an inch high, and three-eights of an inch for remaining words. See that all the lines are parallel, and run upward as in the copy. Aim for dashy and vigorous strokes in the pencil copy, and be careful not to lose the strength and dash of your lines in adding the ink. See that the paper or cardboard used is of the very best quality, as no one can do creditable work on poor paper. Aim for smoothness of fine uniformity of slope, etc.

Copy number two is given as a neat bit of designing. Try it. Lay off the oval with the dividers, then arrange the lettering in the centre, observing the prominence given to the different words. The ornaments are made in reverse. Make one side, trace, and fit to the other side. Study the form and shading of the ornaments carefully.

Enclose some of your best work, with stamp for its return, and I will criticise same with pleasure.

Preface to "Gems."

Penmanship is beginning to be recognized in the business world as an absolute necessity. Employers will no longer tolerate poor writing in their employes. Those of our young people who write the best, the neatest, the cleanest-cut hand, invariably command the highest salaries. Even though it be true that some business men write a proverbial scrawl, their own need causes them to be doubly particular in choosing their clerks.

It is for the purpose of placing within the reach of the young people an adequate means of learning penmanship at a minimum cost, that this little book has been prepared. That most poor writing is due to poor position at the table or desk, and awkward and unnatural holding of the pen, the experience of every teacher will verify. Many students fall into bad habits of penholding and continue in such practice, because they have no idea that they are in error, and know of nothing better, even if they could see the benefits a change would bring.

The reader of GEMS will not only find every position the author has ever seen used during his teaching experience illustrated, but will also find plain reasons why each position should or should not be used. Correct positions are carefully drawn, showing the anatomy of the right arm complete from the shoulder to the fingers. Many entirely new and deeply interesting points are brought out. GEMS contains nine hand plates with full description of each, and a series of twenty practical lessons in BUSINESS PENMANSHIP from a point of view never before taken by an author.

Besides these, ideal ornamental and business alphabets are shown, together with card plate. One of the author's specialties is CALED WRITING, and he has here shown the style always requested by his patrons. It is with the full realization of the position writing SHOULD HAVE in our public schools and colleges, and of the slighting recognition it receives at the hands of the former at large, that this volume is sent out on its mission of MAKING BETTER WRITERS.

GEMS is respectfully dedicated to all lovers of good writing, and particularly to that KING OF TEACHERS, PROF. J. F. FISH, to whose wise and careful direction the author owes his success. He taught him not only to WRITE, but to enjoy writing.

With a hearty GREETING to all, and a sincere desire to help in raising penmanship to a HIGHER PLANE, I remain,

FAMILIARLY YOURS,

Cyrus W. Field.

The book contains sixty-eight pages, and is artistically bound. Price, 30 cents per copy postpaid. $2.25 per doz., one order. Larger quantities, same price. Address the author and publisher.

Cyrus W. Field, Jackson, Mich.

 Lessons in Automatic Lettering

Number Six

By E. E. Evans, Streator, Ills.

This month's lesson is just to show a few pointers in Auto Designing. Size 12 x 12. "Wanted" is on black paper with white ink. "Fifty bright young men," with No. 2 pen. Next two lines with No. 1, and Streator, Ills. with No. 90. Next month you will get price tickets giving work with the smaller pens. Best work on lesson 4 was by B. S. Van Buyn, Brooklyn, N. Y., and A. G. Johnson, Loonis, Neb. Prize in November issue has been mailed to each.

ONE OF THE BEST

Fields for a young man to enter is the sign-card business.

My course will enable you to establish a profitable business of your own, or you can retain your present position and make money on the side. If you are a clerk you will be able to increase your salary.

MY SYSTEM IS A SUCCESS AS SHOWN BY RESULTS

Send for in stamps for sample show-card work, circulars and lettered superscriptions.

E. E. Evans,
Script Writer, Streator, Ills.

The subject of this sketch, Mr. John F. Caskey, has deservedly attained prominence in the Penmanship and Commercial Training ranks through his persistence and perseverance, of which "stock in trade" he has an abundance. Mr. Caskey was born in Guernsey County, Ohio, January 2, 1869. At the age of three years, Washington County became his home. He attended the common schools until he was sixteen, and then spent three years in the Bartlett Academy at Plymouth, Ohio. He taught a country school four terms, receiving during his last term the highest salary paid outside of the city schools. In 1889 he attended Michaels Business College, Delaware, Ohio, completing the full business and shorthand course. It was during this latter period that he received his first real instruction in penmanship from E. W. Bloser. Realizing the need of a still better education, he entered the West Va. Conference Seminary, at Buckhannon, in 1892. Although engaged in commercial work previous to his first work deserving special mention, was with Caton's College of Commerce, Detroit, Mich. Since that time he has been principal of the Commercial and Shorthand Departments of the West Va. Conference Seminary, for four years; one year as principal of the Shorthand Department of Toland's Business University, Eau Claire, Wis., he again served M. J. Caton as Shorthand Department Principal, in the Buffalo School in 1898. During the past year he has been in charge of the Commercial Department of the Elliott School of Business and Shorthand, Wheeling, West Va., where he has conducted the work with great success. Mr. Caskey's ample business and professional experience has well qualified him to give the most practical instruction to those who desire a commercial training in its broadest sense. He is an excellent disciplinarian, and is a teacher that gets results. He writes a good deal for the papers of his profession, and occasionally furnishes a specimen of writing from his masterful pen. Should anyone say to him "pennmen are born, not made," he would soon convince the strongest minds to the contrary.

As proof of Mr. Caton's estimate of his ability, we have before us several letters offering him a permanent place in the Buffalo School.

While he does not claim all the honor for the success and achievements of Mr. E. P. Miller and Mr. L. E. Stacy, he can point with pride to the fact that he gave them their start in penmanship.

W. E. Van Wert.

[Since receiving the above, we learn that Mr. Caskey and his brother, G. L. Caskey, purchased a half interest in Caton's School of Business, Buffalo, N. Y., and will begin work there January 4th. Mr. W. E. Howey owns the other half of the school. Mr. Caton expects to continue with the school as outside representative.—Editors.]
E. C. MILLS, 245A-2504 Main, Rochester, N. Y., is one of the few recognized leaders in this country in preparatory line work, lithographs, and engraving. If you have in mind script for any purpose, you should send copy for estimate.

THE FOUNTAIN AUTOMATIC SHADING PEN.

The wonder of the Twentieth Century—The Automatic of the Automatic Pen World—Promounced by experts as the ideal of perfection—a prize of worth fulfilling. Writes as smoothly and as perfectly as gold pen. From one-eighth to one inch wide. Best spring German—Highly polished nickel plate—best hard rubber reservoir—constructed entirely on scientific principles—The triumph of perfection. Sold only at best stationery stores.

To introduce, will send 1440 outfits, prepaid, and for limited time only, sample pack of 12, for cents, or send orders for agent's stock to J. M. Balder, 412 Washington Avenue South, Minneapolis, Minnesota.

We will sell our pens on automatic ink, and supplies before buying elsewhere. Special ounce bottle ink, any color, for 15 cents, 3 ounce bottle, for 25 cents. Express prepaid on all orders of $10.00 or more, to all points in the United States. Special discount on larger orders.

SOULE'S COMPANION BOOKS FOR BOOK-KEEPERS, BUSINESS MEN AND PRIVATE LEARNERS.

SOULE'S NEW SCIENCE AND PRACTICE OF ACCOUNTS.

SOULE'S PHILOSOPHIC PRACTICAL MATHEMATICS.

SOULE'S PHILOSOPHIC PRACTICAL MATHEMATICS.

This work is a Revelation of Practical and Expert Accounting of Joint Stock Company and Corporation Bookkeeping, and the Higher Work of the Accountant, Lending Errors, Voucher System, Department System, etc., etc., in extent of subjects, in thorough mastery of material, in scientific and practical forms, in arrangement of classic Oratorical work and in ethical and philosophical discussions of accounting and of financial subjects, it STANDS AND TREMENDS AS THE FIRST WORK OF THE AGE ON ACCOUNTING.

The Books Contain 44 Years of Study, Experience and Labor. They represent the advanced thought of the age on Accounting and are by many for the second term of their order and keep in harmonious revolution the financial values of the world should have copies of these books. The following are a few of the 1,200 subjects treated in Soule's New Science and Practice of Accounts:

- History and Evolution of Book-keeping.
- Laws of Accounting.
- Commercial Instruments of Writing, Accommodation Paper, Payments of Honor, Renewal of notes, Cash Notes, Powers of Attorney, etc., etc.
- Forms of Contracts, Leases, Articles of Agreement, Notice of Dissolution, Transfer of Shares, etc., etc.
- Duty of Book-keeper on Taking Charge of and Leaving a Set of Books, How to Find Errors in Double Entry Ledgers, How to Locate Errors by the Check or Key Figure System and by all known systems, Reverse Posting, How to Avoid Errors in Books, How to Correct Errors, Daily Proof of the Correctness of the Ledger.

SPE C I M E N S OF UPWARD S $8,000 TO 25 MILLIONS OF SOULE'S WORKS.

"I have studied with interest your New Science and Practice of Accounts. The best work published in Canada is only a primer in comparison with your book. It is comprehensively beyond all others."—George G. Gibson.

"It knows above all this and the majority of other books of the kind,"—C. C. Eames.

"It is an important addition to all classes of businesses and accountants as a work of reference and authority."—Albert Baldwin, Librarian, Springfield, Mass.

"I own some of Soule's works on accounting and regard them as the best that have ever been published on the subject, with which they are concerned."—W. M. Hindsley.

In article in March, 1891, number of The Bookkeeper Co., Ltd., Detroit, Mich.

We consider an accountant's library complete with our own values, works; we have other than DUGLEY & McCULLOCH.

Expert Accountants and Auditors. Bonded to the value of $20,000.00.

How to Treat Trust Funds and Payees in Opposition to the amount. R. T. Raines.

"It far exceeds any similar work. It has a higher and Joint Stock Accounting is the very best."—W. J. Wolf.

FRESHEST SUPPLIES FOR PENMEN AND ARTISTS

For Cards, Ink, Paper, Etc.

On goods listed below we pay postage on those that go by mail and purchase pays carriage charges on those that go by express or freight. Of course the cheapest way is to order in fair sized quantities and have them go by freight.

Blank Cards—White bristol with finest surface for penmanship.
- 25 by mail postpaid... 20c.
- 50 by express........... 50c.
- 100 by express........ $1.35
Black Cards—Best made for white ink.
- 100 by mail postpaid... 25c.
- 500 by express......... 50c.
- 1000 by express........ $1.35

White Cardboard—Wedding bristol for pen work. Sheets are 20 x 20.
- 6 sheets by express... $.60
- 12 sheets by express... $1.00
- 2 sheets by mail postpaid 50c.

White Cardboard—With hard finish, much like ledger paper. Sheets are 20 x 30.
- 6 sheets by express... $1.00
- 12 sheets by express... $1.50
- 3 sheets by mail postpaid 50c.

Black Cardboard—Finest for white ink.
- 6 sheets by express... $.50
- 12 sheets by express... $1.00
- 2 sheets by mail postpaid 50c.

Wedding Paper—Finest for penmanship or drawing. Sheets are 21 x 33.
- 6 sheets by express... $5.00
- 12 sheets by express... $7.00
- 3 sheets by mail postpaid 50c.

Zanerian India Ink—A fine drawing ink and best for preparing script and drawings for photo-engraving.
- 1 bottle by mail, postpaid... $.30
- 1 dozen bottles by express... 2.00

Arnold's Japan Ink
- Nearly 2 pint bottle by mail, postpaid... 40c.
- 1 pint by express... 85c.
- 1 quart by express... 1.00

White Ink—Very fine.
- 1 bottle by mail, postpaid... $1.25
- 12 bottles by express... 1.85

Writing Paper—Finest 12 lb. paper made. 500 sheets per ream, ruling wide and faint.
- 1 ream by express... $2.15

Writing Paper—Same quality as above mentioned, 10 lb. per ream. 1 ream by express... $1.85

Practice Paper—Best for the money to be had. 1 ream by express... $1.00

Send stamp for samples of paper.

Envelopes—100 fine blue by mail, postpaid... 40c.
- 100 fine white... 40c.
- 1000 either kind by express... 1.50

LARGEST ORDER EVER GIVEN FOR ANY SHORTHAND WORK

20th Century Edition of ISAAC PITMAN'S SHORTHAND INSTRUCTOR

276 pp., Cloth, Gilt, $1.50
NOW READY.

ISAAC PITMAN & SONS
33 UNION SQUARE
NEW YORK
Every Commercial Student

Has a Right

to receive the best instruction, and the use of the best text books obtainable, in his preparation for a business career.

Richardson’s Commercial Law

was designed to impart the best instruction in regard to the Laws of Business as contained in the subjects of Contracts, Commercial Paper, Partnerships, Corporations, Fire Insurance, Real Property, Surety and Guaranty, Fixtures, Bailments, Common Carriers, etc.

A few of the special features of this book are:

1. A statement of the principles of Commercial Law in simple language within the easy comprehension of the average student.

2. Typographical arrangement of these principles so that they are readily distinguishable from explanatory matter.

3. A series of analytical outlines, which are valuable in systematising the subject matter in the mind of the student.

4. The presentation of many illustrative cases to which the student applies the principles of law as explained in the body of the text.

5. A series of references which enables the student to apply accurately the principles of law to the real and hypothetical cases submitted.

This work must be examined to be appreciated. It is now in its fourth edition since its revision in 1900, aggregating a total of over 30,000 copies.

Billing’s Synthetic Method of Shorthand

is based on Pitmanic-Graham principles and is a great improvement in teaching these well tried and popular systems. Better investigate. Sample copies will be sent to teachers who are in earnest and want the best book for their classes.

Teachers and school officers are cordially invited to correspond with us in regard to text books in any commercial branch. That is our specialty and we devote our entire time and attention to making our books the best on the market.

Sadler-Rowe Company,

Baltimore, Maryland.
Isaac Pitman's "Shorthand Instructor"

"THE TEXT-BOOK OF THE AGE."

"The new Twentieth Century edition of Isaac Pitman's 'Shorthand Instructor' will make every teacher of shorthand talk. I adopted the Isaac Pitman system several years ago after a considerable acquaintance with a number of the Pitmanic presentations. I have never regretted the step — was interested from the first — now I am happy. This new Instructor not only saves time for the pupil, but it does away with all drudgery and brings happiness into the school. The introduction of the word signs and sentences at the beginning; the elimination of unnecessary rules and exceptions; and the logical and masterly style in which the subject matter is presented, places it far in the lead of any text-book on the subject I have ever seen. I am confident that anyone can now acquire a knowledge of the art in one-third less time than heretofore. It is bound to be the popular shorthand text-book of the age." — E. E. MILL, (Late Mail & Kindle's Mail's School, Broadway and 6th Street, New York City.

20th Century Edition, 276 pp., Cloth $1.50
Exclusively used in the High Schools of New York

ISAAC PITMAN & SONS, 33 Union Square, NEW YORK CITY.

NOW READY!!

Over 500 advance orders filled during the past 10 days. Enlarged, beautified, and price reduced. The new edition contains seventy-two pages sixty-six alphabets and about fifty plates of designs, nearly half a month older than the old edition. The following are a few of the important additions: Eight beautiful Easter, Christmas and New Year cards, Faust's famous shaded base writing with instructions, ten new text, Old English and Medieval alphabets with graded copies accompanied by two pages of high-class engraving in which these alphabets are used. Space does not allow us to enumerate one-half of the special features contained in the new edition. A circular giving a detailed outline of the work and one of the beautiful 3-color labels will be FREE for the asking. Price, only $1.00. Many unsolicited testimonials received; here's a sample: "Faust's Compendium received; it is simply elegant." J. B. Crisp, Columbus, Ohio, Nov. 11, 1917.

Have you ever used Faust's New Improved Automatic Shading Pen? The large output during the past year has demonstrated very clearly that it is superior in every way to any other automatic pen now on the market. The three main points of superiority are: Elasticity of material used, beauty of appearance and high grade corrugations. Why not test a few samples and send us a written report on your observations? Price, $1.10. The Auto Pen & Ink Mfg. Co., Chicago, III.

Supplies. When in need of Automatic Shading Pens, Gold or White Ink, to use with or without ordinary automatic pen, adhesive ink, screw-lead, Gross Rule Practice Paper, Japan Writing Ink, Writing or Blank Cards (white or colored), Beans, Bronze.Iaks, or writing pens, any style, write your orders to headquarters.

THE AUTO PEN & INK MFG. CO., 73 Rush St., Chicago, III.
Angular writing composed of straight lines and sharp angles similar in character to German script, was somewhat used. Lack of legibility and grace due to the absence of curved lines are serious objections to angular writing for practical purposes.

The changing conditions and tendencies of the people were preparing the way for improvement in the style of writing to something easier, more rapid and graceful. This was apparent in the hand writing of persons obliged to write much and rapidly and was especially noticeable in individuals of fine organizations.

ROBERT C. SPENCER.

The “Grand Old Man” of our Profession.

For more than two hundred years after its settlement our country remained mostly agricultural. Manufacturers were confined to the household and neighborhood, supplying the few and simple wants of the people. Transportation and communication were crude, slow and expensive, and trade and commerce were meager.

The introduction of steam and the utilization of the forces and materials of nature by the multiplication of inventions and the division and improvement of labor wrought marvelous changes in the country and the people. Factories sprang up, trade and commerce and transportation developed and business enterprises and financial institutions were organized, grew and expanded. Production and exchanges increased supplying multiplying wants and enhancing wealth, comfort and enjoyments.

These changes created a demand for business qualifications in which writing was essential. At this period there appeared one endowed with gifts peculiarly adapted to give expression to the trend toward a more practical, fluent and beautiful style of writing.

From childhood among the Catskill Mountains from whose base he removed in boyhood to the wilds of Northern Ohio on the shore of Lake Erie, in Ashtabula County, he was critically observant of writing, which he practiced and improved without masters. His temperament combined poetic, artistic, educational, practical and philanthropic elements that adapted him to the work that he achieved, as originator, author and teacher of Semangular Spencerian Penmanship that James A. Garfield in an educational address pronounced: “The pride of our country and the model of our schools.” More than any other it will probably continue to be the hand writing of America. By its legibility, fluency, beauty, variety, and adaptation to practical needs—individual tastes and characteristics it meets the requirements of business, education and art.

In the absence of other material, Platt B. Spencer, when a boy in the early part of the last century, practiced writing on the smooth sandy beach, on the snow, on the bark of trees, the fly leaves of his mother’s hibiscus, and by permission, on the leather in the corder shop of a kind old Quaker.

Toward the close of his life, Mr. Spencer gave expression in the following lines to his impressions and sentiments regarding

THE EVOLUTION OF SPENCERIAN WRITING.

Evolved mid nature’s upprised scenes,
On Erie’s wild and woody shore.
The rolling wave, the dancing stream,
The wild rose bounties—in days of yore.
The opal quartz, and Amethyst,
Glistening beneath the water’s flow.
Each gave its lesson—how to write—
In the loved years of long ago.
I seized the forms I loved so well—
Compounded them as meaning signs
And to the music of the swell.
Bent them with undulating lines.
Then be they movements bold and true,
Friend of the laboring man!
Light shade and firm entrance, the view
And glow through every line.

SPENCERIAN CHARACTERISTICS.

The distinguishing characteristics of the Spencerian style are found in the handwriting of most business penmen; in the writing generally taught and disseminated.
Lessons in Rapid Business Writing

BY

E. C. Mills.

195 Grand Avenue, Rochester, N. Y.

Instructions, Plate Twenty-five

Make 202 with reversed oval motion and keep ovals on proper slant. In making \( f \) see that the upward stroke is not curved too much, otherwise the letter would be too wide. Use the hook finish and practice with care. Count 1-2-3. Keep fingers quiet and make entirely with the arm motion. The combination of letters in 204 will be found excellent practice. Combine three in each group. The combination of letters in 205 will be a little difficult at first on account of the rapid change from one letter to another. This also gives a review of letters recently taken up that contain the hook finish. Copy 206 shows the practical use of the hook finish. Keep small letters uniform in height and in spacing. I usually do not advise running separate words together, but in copy 207 the small letters following the capital join so naturally that I have given this as an exception to the rule. Copy 208 should be studied as to form and arrangement. A page of this copy makes a nice appearance. Endeavor to secure smooth lines and keep the page neat from beginning to end.

Instructions, Plate Twenty-six

The capital \( f \) is a difficult letter to make well. The top oval should fill three small spaces or about three-fourths distance between the two blue lines. Notice that the down stroke is practically straight. Also notice that all the lines cross at base line and at the same place. Count 1-2-3. The little retracing movement, made quite narrow, will be found a help in starting the correct movement. Next, try the combination of capital and small letters as found in 212. The words in copy 213 are practical and valuable and should be practiced faithfully. Try your best to master combinations in 214. Write several pages of the sentence copies as given in 215 and 216. Do not be contented with merely passable work, but put forth every effort possible to surpass yourself in each succeeding copy. The difficult copies at first may seem hard to get right, but this kind of patient, conscientious practice will cause the different copies to grow easy if you will but persevere.
The retracing exercise in 217 will give you practice in making first part of $H$ and also the first part of a number other letters, besides giving practice in making the hook, as this is made without lifting the pen after starting. The finishing part of $H$ is difficult for most students on account of the little turn at top, see 218. Next make the $H$ and then the combination of capitals in 220. Keep about the same number of words to the line as shown in the remainder of the copies and practice in the same painstaking manner as before advised.

Havana, Harbor, Hondo, in, Yarre.

Naverhill, Noboken, Houston

Hold fast to that which is good.
Instructions Plate Twenty-eight

If the work in Plate Twenty-seven was done in a thorough way, but little difficulty need be apprehended in these copies. The first part of the K as well as that of the H is not made quite as high as last part. Notice the finishing stroke in K as shown in 22. It is a good plan to practice this separately so that a clear understanding may be had of its formation. In this we have all compound curves and a small loop about one-half height of letter. Keep both parts of the finishing stroke about equal length that the letter may be properly balanced. Study each new form as presented and see how many of these little points you can now find that perhaps you have heretofore overlooked.

Instructions Plate Twenty-nine

The beginning part of capital P is the same as in capitals H and K. Study 223. The main bulk of this letter comes on the top of the stem part. Make this very full and the finishing part narrow. If you are not very careful you will get just the opposite. The finishing part may be brought down about one-half height of letter and sometimes it can be finished to advantage by using the dot. Notice how naturally this letter gradually develops into small p, as shown in 24. If this, or any other letter in this lesson seems especially difficult, work away on that letter until you can notice a decided improvement. If you find the lines weak at any time, go back and drill on lively movement exercises until the freedom of motion is re-established. Just because the movements are not all given in every plate is no excuse for neglecting movement practice. The first few lessons should be kept constantly at your side during the practice hour and you should frequently review the fundamental movement exercises.
Lessons in Practical Business Writing

SPENCERIAN COLLEGE.  CLEVELAND, OHIO.

Number Six

The small letter \( l \) should be three times the width of the small or one space letters, and the lines should cross one space above the base line. It would probably not be necessary to make the loop quite three spaces in height if you are sure to make it not less than two and a half spaces. However, it will always be necessary to make the \( l \) much longer than any short letter. 

The \( h \) differs from the \( l \) only in the finishing part, which is made exactly the same as the finishing of the \( w \) or \( v \), and it will only be necessary for us to say, that the finishing part should never be made more than one-half space in width, and always finish with a short right curve. In making the \( h \), we add the same part that is used in finishing \( m \) and \( n \), and you should always make a short turn at the top of this finishing part, and the last downward stroke should run parallel to the first down, of a very short right curve made so as to form a very small oval, to which we join a straight line, which should in all cases touch the base line before you turn up. It takes more care to make a neat \( k \) than any other loop letter, owing to the fact that the finishing part of this letter is more difficult to make.

The small \( j \) is a reversed fourth principle which means that it is very nearly the same as the small \( l \) upside down. The beginning stroke of this letter should be only one space in height from the base line to which we join the loop. In making the \( j \) always make a short turn at the top, and on the base line of the beginning part. The \( g \) must always be closed at the top. The beginning part of the small \( z \) is the same as the beginning part of the \( n \), and therefore must have a short turn at the top, and the downward stroke must be straight to the base line where you join the loop. The small \( f \) is one of the most difficult loop letters we have. The downward stroke seems to be rather difficult to make owing to its length, which covers all the spaces used in the Standard System of writing, three spaces above and two below the base line. The loops of the \( f \) should both be as nearly the same length and width as you can possibly make them. By this we mean the loops proper. The upper loop crosses the same space above the base line, the lower should close on the base line. This, you notice, will leave one space between.

\end{align*}
\]
in any second size. Of course the m is much wider than the c or r, but if the turns are rounded and all the angles sharp, they will all appear to be about the same in size. Be particularly careful with the finish of m and r so that it does not resemble v. By keeping the finish high and the loops small, there will be little difficulty in distinguishing these letters from the rest.

We have for practice this month the thirteen minimum letters. All should be the same in height, and apparently the same in size. Of course the m is much wider than the c or r, but if the turns are rounded and all the angles sharp, they will all appear to be about the same in size. Be particularly careful with the finish of m and r so that it does not resemble v. By keeping the finish high and the loops small, there will be little difficulty in distinguishing these letters from the rest.

All of this work should be done with a large proportion of arm movement. You should use enough arm movement to make the work easy, and only enough of the finger movement to make it exact. Arm movement is difficult to manage, but when once mastered it is easy to propel. Therefore you will do well to cultivate a free, easy, graceful, rolling movement in all of this work.
The National Commercial Teachers’ Federation

The St. Louis National Commercial Teachers’ Federation is now a matter of history. It was a complete success. The president, Geo. P. Lord, the chairman of the executive committee, Carl C. Marshall, and the other officials are to be congratulated for arranging and carrying on so successfully the most enjoyable and profitable meeting thus far held.

The plan of having department meetings in the forenoon only, federation meetings in afternoon, and special meetings in the evening, is most practicable and commendable indeed, and will doubtless be adhered to hereafter. Friction and contention of interests are thereby reduced to the minimum.

In order that the whole profession may, to a large measure, enjoy the pleasures and benefits of the meeting, the Penman-Artist and Business Educator has endeavored to put forth the most complete and attractive report ever published, having devoted the previous and present issues to that end. We bid you a cordial welcome to the contents, and hereby extend to the many who have helped to make it a success, our hearty thanks, acknowledging at the same time the receipt of many compliments upon the timeliness of our January number. Again we bid you a cordial welcome to the following report.

Our St. Louis Reports

We are indebted to Mr. D. W. Springer, of Ann Arbor, Mich., for the excellent report of the general meetings of the Federation, which we are publishing this month; to Mr. D. D. Mueller, of Cincinnati, whose succinct and comprehensive report of the Shorthand Teachers’ Association, would be hard to surpass; to Mr. R. R. Seymour, of Springfield, Ill., for important data, from which we prepared the report of the Business Teachers’ Association, and to Mr. J. R. Anderson for the Private School Managers’ Association.

The New President

Everybody unites in praising the able administration of President Lord, and everyone who knows that Mr. J. A. Lyons, President-elect, was the hard working chairman of the first Executive Committee to put representatives of public schools and universities on the program, will be glad to know that the Federation has honored itself in its choice of a president.

The Next Meeting Place

Milwaukee is a little too far north, and St. Louis is too far south, to make an ideal meeting place, but the rare hospitality of Robert Spencer, the dean of the profession, would justify the entire array of commercial teachers in going even to Winnipeg to attend a convention. Let every commercial teacher plan to be in Milwaukee next holiday week.

Geo. P. Lord, Salem, Mass., President, National Commercial Teachers’ Federation, St. Louis, Mo., 1902.

J. A. Lyons, Chicago, Ill., President, National Commercial Teachers’ Federation, Milwaukee, Wis., 1902.
welcomed the teachers to St. Louis. He spoke of the city as being the center of the West and incidentally breathed the air which filled that part of the plains. He paid an especial compliment to business educators, expressing the sentiment that they had done wonders in helping the world onward. The response was made by Mr. A. C. Van Swearingen, who was not present to take the parts assigned to him. President Geo. F. Lord, of Salem, Mass., delivered his address. He congratulated the members upon the great work that was manifested in commercial education. He said that personal views as to the means of developing practical and successful men and women might differ widely, but that the object of the Convention was the hope of the cause; that there was a free discussion of those differences. He emphasized the fact that the Federation is not dominated by any particular method or branch of instruction; that personalities have no business there.

He paid a tribute to the work of the pioneers among commercial schools and acknowledged his indebtedness to the excellent work of the various committees, emphasizing the work of the special committees which were appointed at this convention for social intercourse. He spoke at some length regarding the remarkable development of commercial education among high schools, and said that the teacher dealing with pupils who have had their own tuition and the teacher dealing with pupils whose tuition is paid by the public are in a very different situation. He moved that the opening be delayed until past half two. Fifteen minutes was spent in discussing this important question, after which it was laid aside.

The next paragraph of the Federation was to have been opened at two o'clock was called to order fifteen minutes later, by the president, who announced that, if he were forgiven this time, he would not let it happen again, and that hereafter two o'clock will find the meeting under way, if he and the chairs were the only occupants of the room.

G. W. Brown, of Jacksonville, wanted a longer time to eat his mid-day lunch and moved that the opening be delayed until half past two. Fifteen minutes was spent in discussing this important question, after which it was laid aside. The president announced that all of the old ideas of Ex-comptroller Dawes, upon his arrival, D. W. Spring, of Michigan, W. H. McAuley, of Iowa, J. K. Gregg, of Illinois, J. H. Anderson, of Missouri, and H. G. Healey, of New York.

The first paper of the afternoon was read by T. W. Bookmyer, on the"Advantages of State Organization." He prefaced his paper with a history of the organization in his own state, Ohio, which had been in existence since 1898. He named as advantages, the acquaintances which would be formed with professional neighbors, the chance for interchange of ideas as to local conditions and the fact that a better standard might be secured as a result of such conferences.

He outlined two theories which he considered plausible:

Each state should effect an organization about lines which are dictated by the local needs. These organizations should contain the usual officers and a representative element. There should be a representative from each state to the sections. These representatives should constitute an advisory board for the Federation, their special duties being to aid the executive committee in compiling the program, suggesting proper persons to appear thereon, and obtaining a full attendance from several states at all meetings of the Federation. The second suggestion was, that all examiners should be appointed in each state organization whose business it should be to prepare a uniform set of examination questions, which should be given to the students of the schools composing such organization, and to those who successfully pass such examinations, diplomas of the state organization should be issued. These examinations should be properly distributed throughout the state, according to the location of the schools, so that a minimum of expense would be entailed, which expense should be assessed to the school or pupils.

This organization should provide that some of the examinations be furnished for such examinations each year and that at least a certain percentage of such candidates should be elected to the examinations, which could be adopted to the school which they represented should be dropped.

The paper provoked considerable discussion which was with difficulty closed by the president when the time arrived for the next paper. When the question was discussed, the majority seeming to indicate that the sentiment of those present would favor a state organization for mutual benefit, but that a goodly number were opposed to it. A. A. Spencer, of Milwaukee, Bartlett, of Cincinnati, Brown, of Illinois, Hussey, of Shenedoah, Iowa, Smith, of Kansas City, Parish, of Grand Rapids, all said many good and pointed things on the subject. As usual, Brown was the center of attraction.

"What," asked he, "do the hog and tommy farmers, who support my school, care where the examination questions are framed? If I have succeeded in successfully bountied my work for the year, and yet they continue to come in larger numbers than heretofore, whose business is it then, their and mine? Do you suppose I am going over into Ohio-" but before he could complete the question, Bookmyer interrupted, "You are likely to," whereupon the audience smiled. Brown got rattled, and the thread of the argument was lost.

A little later he remarked that "discussions like these, which need the attention and an exhilarating influence on their vocal chords," while someone replied that he had always talked like that before anyone else. "Our business is just as legitimate as the shay-dole or hotel man, and if we choose to run it into the ground, we should be allowed to do it without let or hindrance. To hear some men talk, you would think we were the very worst of things," he continued, and very often the man who needs to be reformed the most is the man who proposes the reform measures.

Where all eyes were directed on Bookmyer. At the conclusion of Brown's remarks, Hussey, of Iowa, quoted the familiar
The first open session of the Commercial Teachers' Federation was held at the Odeon Theatre Friday evening, with an audience of about 500, including the members of the Federation and prominent representatives of the business interests of St. Louis.

The meeting opened with a violin solo by Mr. Sidney Schiele, after which Miss Bertha Winslow Fitch, rendered a vocal solo. Prof. Edward P. Perry gave a recitation in a very acceptable manner. These numbers were so much appreciated by the audience that each was obliged to respond to an encore. Before introducing the speaker of the evening, Ex-Comptroller of the Currency, Chas. G. Dawes, the president of the Federation made a short statement as to the aims and objects of the Federation, outlining in general that for which business education stands.

Mr. Dawes spoke on "Banks of the United States and Their Functions in the Community." He noted as the more common functions, with which all are familiar, the acting as trustee for those who have money to loan, and the addition to the purchasing power to the country, which they are able to make, by reason of the check and draft system, by which they are carried on. The major portion of his address was devoted to "asset currency." The speaker believes that at the present time there is need for such currency. We have the best banking system in the world, there being 15,000 banks in the United States, with total assets of $2,000,000,000, or within $12%, of the combined assets of the banks of continental Europe and the United Kingdom. During the last ten years our assets have increased 20%, while across the water, the combined increase has been but 31%. Those who first urged the need of "asset currency," did so on the ground that it was necessary to provide against the retirement of the greenbacks, but, since the last few years, the currency has been so protected, that they are no longer a menace to our currency system. What we need is rather an emergency currency, which would be of value to us at times when there is a stringency in the money market. "Asset currency" would only increase the amount of danger at times of panic, whereas it is the opposite effect which is desired. Our present system is sufficient as is evidenced by the figures of the New York Clearing House alone, which, for 1895, were about thirty-one and one-third out of every dollar and a half billion dollars, and in 1900, nearly fifty-two billions. Except when business conditions are greatly disturbed by reason of loss of confidence, the check, draft and bills of exchange system, will entirely relieve any temporary embarrassment. Confidence in the stability and safety of the medium of exchange is the foundation stone of our prosperity. By any of the proposed systems of "asset currency," which have been presented up to this time, not a sufficient guarantee fund will be secured to make the plan both feasible and sound.

SATURDAY, DECEMBER 28.

The fourth session of the general body was held Saturday afternoon, and was an unusually interesting one. "Woman's Sphere in the Business World," was reviewed by R. L. Brucke, of New London, Conn. He said:

"Woman has dominated every age, from the time of Semiramis and Cleopatra Maria to Maria Teresa and Victoria; that in politics, poetry, charity, and war, she has been prominent through the centuries; but that in self-support, she was dependent until the nineteenth century gave her an opportunity to become a wage-earner. The first half of the century offered her only teaching, literature, and housework, but the latter half has
